INTERNATIONAL TABLE I.—*Examination of recruits during the year 1897.*

No.		White.	Colored.	Total.
1	Total number of recruits examined	12, 131	1, 006	13, 139
2	Of each thousand of these—			
3	Were accepted for service	702.10	786.71	702.19
4	Were rejected for under height	4.37	1.98	4.19
5	Were rejected for disabilities	267.17	194.44	261.59
	Of each 1,000 accepted recruits the heights were as follows (in inches):			
6	Under 6124		.23
7	61 to 6230	1.00	.43
8	62 to 63	1.19		1.09
9	63 to 64	7.59	18.62	8.54
10	64 to 65	76.01	73.14	75.77
11	65 to 66	126.53	107.19	124.87
12	66 to 67	176.69	181.59	177.11
13	67 to 68	184.51	204.29	196.21
14	68 to 69	164.59	158.89	164.10
15	69 to 70	124.15	117.28	122.58
16	70 to 71	74.94	76.92	75.11
17	71 to 72	36.76	28.48	35.89
18	72 to 73	16.48	17.05	16.59
19	73 to 74	7.47	10.99	7.79
20	74 upward	3.49	6.30	2.83
	Causes of rejection (exclusive of under height) expressed in ratios per 1,000 of examined recruits			
21	Physical debility	33		.30
22	Tuberculosis of lungs or other organs	1.57	.90	1.53
23	Imperfect vision	83.17	17.88	36.61
24	Heart disease	18.30	12.69	17.89
25	Gout41		.38
26	Varicose veins, varicocoele, hemorrhoids	33.38	14.88	21.97
27	Hernia	5.19	6.94	5.33
28	Flat feet	3.79		3.59

THE WORK OF THE MEDICAL DEPARTMENT DURING THE SPANISH WAR

The annual report of the Surgeon-General, rendered usually late in September, presents the medical and surgical statistics of the Army for the previous calendar year, the financial statements of the Surgeon-General's Office for the previous fiscal year, and those subjects of interest or importance in sanitary administration that have been under consideration up to the date of the report. The medical and surgical statistics of the calendar year 1897 and the financial transactions of the office for the fiscal year ended June 30, 1898, have been submitted above; but I find it impossible at the present time to present a full and complete discussion of the important events of recent occurrence in which the Medical Department has been concerned. This can not be done until the reports from the various regiments and field and general hospitals have been gathered in, tabulated, and studied. I purpose, however, giving a general view of the salient points of these occurrences and of the work of the Medical Department of the Army in connection therewith.

MEDICAL OFFICERS.

The number of medical officers, 192, allowed by law to the Army is inadequate in time of peace. This number includes the additional 15 assistant surgeons authorized by the act approved May 12, 1898. Later in May there were 13 vacancies; 6 officers were engaged in administrative duties in the office of the Surgeon-General and in the superintendence of the library and the Army Medical Museum, 11 were on duty at medical supply depots and as chief surgeons of military departments, 1 at the United States Soldiers' Home, Washington, D. C.; 56 at general hospitals and at garrisoned posts, 1 as colonel of a volunteer regiment, while 4 were disabled. One hundred officers were thus left for field service, 5 of whom were placed on duty as chief surgeons of Army corps, 36 as brigade surgeons of volunteers, and 59 as regimental surgeons and assistants with the regular troops. The insufficiency of the last-mentioned number was made up by the assignment of medical men under contract.

All volunteer regiments had 3 medical officers appointed by the governors of States. Volunteer surgeons to fill the staff positions authorized by the act approved April 22, 1898, were appointed by the President: Eight corps surgeons with the rank of lieutenant-colonel and 110 division and brigade surgeons with the rank of major; 5 of the former and 36 of the latter positions were filled as indicated above by the appointment of officers of the Army Medical Department. The President also appointed 3 medical officers for each of the regiments of United States volunteer infantry, cavalry, and engineers. The very small proportion of medical officers having experience of a military character impaired the efficiency of the department at the outset, but many of the staff surgeons from civil life showed great aptitude for the service, and speedily became of value as administrative and sanitary officers.

The large number of sick which had to be cared for during the progress of the war in regimental, division, and general hospitals rendered imperative the employment of additional medical assistance. Under the provisions of the act approved May 12, 1898, the services

of over 650 contract surgeons were engaged. Most of these doctors from civil life did good service. Many of them were thoroughly well equipped physicians and surgeons, with ample hospital experience, but it was impossible to make a careful selection owing to the great pressure of business in this office. Since it was impracticable to have the qualifications of each passed upon by an examining board, I endeavored as far as possible to obtain satisfactory professional indorsement before authorizing the contract.

HOSPITAL CORPS.

On April 25, 1898, in connection with the call of the President of the United States for 125,000 volunteers, I recommended that the law restricting the number of hospital stewards to 100 (see p. 14) be changed, and that for each regiment of volunteer infantry or cavalry there should be enlisted 1 hospital steward, 1 acting hospital steward, and 25 privates; for each battery of artillery 1 hospital steward and 5 privates, and for each division of the Army 1 hospital steward, 1 acting hospital steward, and 50 privates, to serve under the direction of the chief surgeon of the division. These recommendations were acted upon so far favorably that by the act approved June 2, 1898, Congress suspended during the existing war all provisions of law limiting the number of hospital stewards at any one time to 100, and requiring that a person to be appointed a hospital steward shall first demonstrate his fitness therefor by actual service of not less than twelve months as acting hospital steward, provided that the increase of hospital stewards under this act shall not exceed 100. In addition to the 200 stewards thus authorized, each volunteer organization received into the service was allowed 1 hospital steward for each battalion (act approved April 26, 1898). There was, however, no provision made for Hospital Corps men for the volunteer troops except that which empowered the Secretary of War (act March 1, 1897) to enlist as many privates of the Hospital Corps as the service may require.

To provide this corps with the necessary number of men recruiting officers were urged to secure suitable men and medical officers to effect the transfer of men from the line of the Army. Letters were sent to superintendents of training schools for male nurses in the prominent cities advising them of the need for desirable men and asking their assistance in securing unemployed nurses. A number of medical students, pharmacists, and young graduates in medicine enlisted in the Hospital Corps for service during the war, and it is believed that the efficiency of the corps was thereby raised considerably.

Recommendation was made May 14, 1898, that mustering officers be instructed to enlist desirable men approved by medical officers at the rate of 5 for each battalion, and subsequently that these be permitted to accompany the regiments on their future service. This recommendation was reiterated June 18 in a communication to the Adjutant-General. Meanwhile General Orders, No. 58, Headquarters of the Army, Adjutant-General's Office, May 31, 1898, authorized the transfer of men from the line of the volunteers to the Hospital Corps of the Regular Army, upon the recommendation of the chief surgeon, and suspended the provisions of Army Regulations governing the Hospital Corps so far as they were inapplicable in time of war and with troops in the field. Commanders of corps and of independent divisions and brigades were charged with the full control of the transfer from the line, the enlistment and discharge of members of the Hospital Corps, the detail of acting hospital stewards, and the

appointment of stewards, the last limited by subsequent orders to 10 stewards for an Army Corps in addition to those authorized for the volunteer regiments. Authority for immediate enlistments, without reference to this office except in cases where slight defects existed, was also given to a number of chief surgeons.

The number of men enlisted and transferred was approximately 6 000

CONTRACT NURSES.

The want of a sufficient body of trained Hospital Corps men necessitated the detail of enlisted men from the regiments for hospital duty in several of the camps and the employment of trained nurses at the general hospitals. Foreseeing the necessity for a large force of the latter, I applied to Congress April 28, 1898, for authority to employ by contract as many nurses as might be required during the war, at the rate of \$30 per month and a ration, the pay proper to be paid from the appropriation for the Medical and Hospital Department. This was promptly granted. About the same time the National Society of the Daughters of the American Revolution offered its services as an examining board for female nurses, and a committee, of which Dr. Anita Newcomb McGee was chairman, was designated to take charge of the work. Thereafter most of the female nurses employed were selected by this committee, with the exception of those immune to yellow fever, who were recruited in New Orleans and other Southern cities, and a few who were enrolled at Montauk Point, Long Island, and Jacksonville, Fla., by the chief surgeons at these places. A number of patriotic societies offered to provide the hospitals with nurses, but the committee referred to answered its purpose so well that I did not feel the need of additional assistance, and was relieved from what would otherwise have been a serious responsibility.

Over 1,700 female nurses have been employed, at first at the general hospitals and later at the field division hospitals, when it became evident that the field service purposes for which the latter had been organized would have to give place to the imperative need of caring for the many sick men coming from the regimental camps. These hospitals ceased to be ambulance hospitals and their character of fixed field hospitals was promptly recognized by assigning contract surgeons and nurses to duty with them and providing them with articles of equipment which can not be carried in the hospital wagons of a marching command. Female nurses were not sent to these field hospitals until their original function as an essential adjunct to a command mobilized for active service became lost in the current of immediate necessities. Many of the trained nurses were Sisters of Charity, whose services were highly appreciated by medical officers in charge, as well as by the individual sick men, who benefited by their ministrations. Others were obtained through the kind assistance of the Red Cross Society for the Maintenance of Trained Nurses, Auxiliary No. 3, and I desire to express my high appreciation of the valuable services rendered to the Medical Department by this organization.

MEDICAL AND HOSPITAL SUPPLIES.

The authorized strength of the Army, April 1, 1898, was a little over 28,000, officers and men. This force was stationed as garrisons at military posts, and while the supplies furnished were more especially adapted to the medical wants of troops serving under such conditions,

there was ample provision for field service, especially at posts where active service against Indians or riot duty was possible. Further than this, it is believed the available medical supplies were sufficient for the then existing Army for any duty, though, necessarily, additions would have to be made in mobilizing for foreign service.

Up to the time that war was declared it was not practicable to take any immediate steps to obtain supplies, as it was not known until that date that the troops would actually be called out, nor were there funds available from which to make purchases. But already, before April 1, in view of the possibility of future needs, orders were given to have the field medical outfits, medical and surgical chests, instruments, etc., at the supply depots put in order for issue in case of need, and early in March the preparation of new pattern medical and surgical chests was begun so as to have them ready for manufacture should the necessity arise.

Immediately upon the declaration of war, April 21, steps were taken to obtain medical supplies for the new Volunteer Army. For the more important articles, and those of highest cost, bids were invited at short notice, such, for instance, as medical and surgical chests, litters and slings, field operating cases, pocket cases, orderly and hospital corps pouches, etc. Orders were given and the manufacture expedited with the utmost dispatch. Requests for proposals for the usual spring purchases had been made in March, but to obtain medicines and other additional supplies, in view of a state of war, advantage was taken of the authority granted by act of Congress and purchases were made in open market, the interests of the Government being guarded by obtaining informal bids when the amount was large and time permitted.

On May 3, foreseeing that it would be impossible to have ready for issue to the volunteer regiments, as soon as they were mustered in, the medical and surgical chests above referred to, as well as other articles of field equipment, although their preparation was pushed with the utmost dispatch, I telegraphed the governors of the several States for authority to utilize the medical equipment of the National Guard in the service of the State Volunteers until our army medical supplies were ready for issue.

Most of the governors of the States who had field equipment responded promptly and satisfactorily, but, unfortunately, many of the State medical departments had no such equipment. These deficiencies were supplied by the issue of the advance field regimental outfits referred to hereafter. Most of the State field medical equipment so loaned has been, or probably will be, eventually paid for by the United States.

Meanwhile the officers in charge of the medical supply depots in New York and St. Louis were directed to make arrangements so that supplies could be immediately obtained for 100,000 men for six months.

As the supply table published in 1896 was prepared for garrison use in time of peace and was inappropriate for the use of troops in the field, a field supply table was prepared and approved by the Secretary of War May 9, 1898. This supply table specifies the contents of the medical and surgical chests, the hospital corps and orderly pouches, field operating, surgeons' field and pocket cases, mess chest, food chest, and field desk, and gives the allowance of medicines and disinfectants, hospital stores, stationery, furniture, bedding, clothing, and miscellaneous articles for field hospitals and ambulance trains. It was intended to provide for the needs of commands in

active service where only a limited supply of articles could be carried owing to the necessity of restricting transportation. But as soon as it was evident that the troops were likely to be retained in camps of instruction, notification was given that articles on the regular supply table could also be obtained. On August 12, in Circular No. 6, from this office, I again called attention to this subject, directing chief surgeons of army corps, of divisions, and of smaller commands to make timely requisition for supplies, by telegraph if necessary, and to see that field hospitals in which typhoid fever and other serious cases were treated were liberally supplied with all articles necessary for the treatment and comfort of the sick.

The patterns of the new medical and surgical chests were prepared in this office under my immediate supervision, and the chests for issue were put up at the Army Medical Museum in this city. This was done to insure satisfactory workmanship and prompt delivery.

New patterns for the field operating case had been already fixed upon in the fall of 1897.

New forms of surgical dressings especially designed for field use, composed of sterilized, sublimated, and iodoform gauze; sterilized gauze bandages, absorbent cotton, catgut, and silk, sterilized and packed in convenient envelopes; tow, compressed cotton sponges, and plaster of paris bandages were also prepared under the immediate supervision of this office. Samples of these were sent to the three supply depots, New York, St. Louis, and San Francisco, and all issues directed to be in conformity therewith. Forty boxes of these specially prepared dressings were put up at the temporary supply depot, Army Medical Museum, Washington, D. C., and sent to Tampa, Fla., for the use of the army about to sail for Cuba.

To provide temporarily for volunteer regiments organized and ordered to camps before the new medical and surgical chests were ready for issue, supplies of medicines, instruments, hospital stores, stationery, and miscellaneous articles, according to a prescribed list and packed in convenient boxes, were prepared at the supply depots.

An important article to be provided was the first-aid packet, containing antiseptic dressings for immediate use in emergencies and intended to be carried by each individual soldier. These were promptly and liberally supplied.

Whenever notice was received from the Adjutant-General's Office that commands were to be moved or camps formed, I endeavored to anticipate the wants of the troops by telegraphing the officer in charge of the nearest supply depot to forward supplies for the stated number of men according to the field supply table.

Requests from medical officers for supplies and orders based thereon transmitted to the supply depots were largely by telegraph, and orders were given that when the supplies were needed promptly they should be forwarded by express to their destination. When a medical officer desired to purchase medical and other supplies for use in emergencies authority to do so was always granted.

Extensive purchases of medical supplies were made direct from this office from dealers in Washington, Baltimore, and Philadelphia to provide for the immediate wants of the troops at Camp Alger, Va., and the general hospitals at Fort Myer, Va., Washington Barracks, D. C., and Fort Monroe, Va. This was done not only to meet with promptness the urgent needs of troops and hospitals in this vicinity *but to relieve somewhat the great pressure upon the supply depot at New York.*

In addition to the field-supply table issued May 9, 1898, a revised edition of the Manual for the Medical Department was published. These, together with 2,400 copies of a revised edition of Lieutenant-Colonel Smart's handbook for the Hospital Corps, were freely distributed throughout the Army, so that medical officers might become acquainted with the proper mode of obtaining supplies and their many other important duties.

It is impossible to give a full list of the medical supplies that were provided, no complete report of purchases having as yet been received from the medical-supply depots, but the following will give an idea of the amounts of some of the principal articles:

First-aid packets.....	number..	272,000
Hospital-corps pouches.....	do.....	5,797
Orderly pouches.....	do.....	509
Pocket cases.....	do.....	962
Surgeons' field cases.....	do.....	369
Field operating cases.....	do.....	328
Medical and surgical chests.....	do.....	1,204
Litters.....	do.....	2,259
Litter slings.....	do.....	7,600
Cots and bedsteads, with bedding.....	do.....	18,185
Blankets, gray.....	do.....	23,950
Field desks.....	do.....	440
Quinine pills.....	do.....	7,500,000
Chloroform and ether.....	bottles..	13,220
Gauze, sublimated, 1-meter packages.....	packages..	100,625
Gauze bandages, 3 sizes.....	number..	331,776

The medical supply depot in New York, Lieut. Col. J. M. Brown in charge, supplied the posts in New England, the Middle States, and along the Atlantic coast, including Florida, and the troops that have been sent to and are now serving in Cuba and Porto Rico. Ordinarily requisitions received from officers serving in the localities mentioned were acted on and sent by the next mail to the depot for issue, but as already stated the telegraph and express companies were brought into use where the necessity called for prompt action.

The pressure on this depot was at times extremely great in supplying the troops sent to Cuba and Porto Rico and the large camps at Falls Church, Va.; Middletown, Pa.; Hempstead and Montauk Point, N. Y., and Jacksonville, Fernandina, and Miami, Fla.

On account of the urgency attending the establishment of Camp Wikoff the officer in charge of the New York supply depot was directed to honor all requisitions made by the chief surgeon at Montauk Point without referring them for approval of this office.

The medical supply depot at St. Louis, Mo., under the charge of Col. J. P. Wright, assistant surgeon-general, United States Army, supplied the States of the Mississippi Valley and region east of the Rocky Mountains, including Texas. The large camp at Chickamauga was supplied entirely from this depot, together with the camps formed at Knoxville, Tenn.; Lexington, Ky.; Anniston, Huntsville, and Mobile, Ala., and New Orleans, La. Many articles were sent from this depot to the supply officer at San Francisco, Cal., for the use of the Philippine expeditions. To provide for the large aggregation of troops at Camp George H. Thomas, Chickamauga, Ga., a subdepot, drawing its supplies from St. Louis, was organized and put under the charge of Maj. E. T. Comegys, surgeon, United States Army. This subdepot was discontinued on the departure of the troops from Camp Thomas. Owing to the distance of the camps at Lexington, Knoxville, Huntsville, and Anniston from this city the chief surgeons of these several

camps were authorized to draw upon the depot at St. Louis for any articles on the supply table without submitting requisitions in advance to this office.

The officers in charge of the depots at New York and St. Louis were directed, July 8, to keep in stock 1,000 iron beds or cots, with a full supply of bedding, ready for immediate issue.

The responsibility of supplying the posts on the Pacific coast and of outfitting the troops leaving for the Philippine Islands was placed upon Lieut. Col. J. V. D. Middleton, deputy surgeon-general, United States Army, in charge of the supply depot at San Francisco, Cal. As much delay and expense of transportation would have been incurred by sending supplies from Eastern depots to San Francisco, Colonel Middleton was authorized to purchase at discretion all necessary medicines, hospital stores, instruments, and miscellaneous supplies of every kind needed for the troops going to Manila. Articles of special manufacture, such as medical and surgical chests, litters, and litter slings, hospital-corps and orderly pouches, and the specially prepared field dressings already referred to, were shipped to San Francisco from St. Louis, not being obtainable on the Pacific coast. The distance of San Francisco from the center of the Government was so considerable that the officer in charge of that depot was necessarily given large discretion in the purchase of supplies and expenditure of funds. Lieutenant-Colonel Middleton deserves great credit for the efficient service rendered by him both as medical supply officer and as chief surgeon of the Department of California.

RAILROAD AMBULANCE TRAIN.

A railroad ambulance train was, in my opinion, essential to the well-being of the sick and wounded during transportation from Tampa, Fla., the probable base of operations against Cuba, to general hospitals in the interior. Accordingly, on May 30, 1898, I recommended the equipment of a train to consist of ten tourist sleepers and a dining car. This was approved, and on June 16 I was informed that a train of ten Pullman sleepers, a dining car, a private car, and a combination car was ready for service. The train was inspected by Maj. Charles Richard, surgeon, United States Army, who was placed in command. One assistant surgeon, 2 stewards, 20 privates of the Hospital Corps, and 3 civilian employees were assigned to him for service. The train was amply provided with all the medicines, hospital stores, and comforts required for the patients to be transported. The first trip made was from Washington, D. C., to Tampa, Fla., for the purpose of transporting sick from the latter place to the general hospital, Fort McPherson, Ga. Tampa was reached June 19, and Fort McPherson June 22. Here the Pullman cars were exchanged for the tourist sleepers originally requested. The latter were much better adapted for hospital purposes on account of their general arrangement, better ventilation, and convenience for cleanliness and the handling of patients. They had 134 lower and 136 upper berths, giving a total carrying capacity of 270. It was impracticable, however, to use the upper berths for severe cases, on account of the impossibility of giving proper care and attention to such patients occupying them.

Several trips were made between Tampa and Atlanta, on each of *which great delay, involving inconvenience and anxiety to all concerned, and discomfort and even harm to the sick, was occasioned by*

the difficulty of obtaining a prompt response from local quartermasters to requisitions for the necessary transportation. On one occasion, after a delay of twenty-four hours, telegraphic communication with Washington had to be established before a movement was made. However, on July 4, Capt. H. R. Stiles, assistant surgeon, United States Army, on duty with the train, was appointed an acting assistant quartermaster, with authority to issue transportation requests. Major Richard reported of this:

Not only has this change given me more time to attend to the more important functions of my charge, and has avoided many vexatious delays, but it has enabled me to come in direct communication with the railroads and a better understanding is reached regarding speed, routes and care of train en route, all of which factors should be considered in a service which has for its object the comfortable and rapid transportation of the sick and wounded.

On July 9 the hospital train met the transport *Cherokee* at Port Tampa, Fla., on her return from Santiago with 323 sick and wounded; removed 87 that same night to the hospital on Tampa Heights, and on the following day left for Atlanta with 235 patients. This number, together with the Hospital Corps detachment and civilians, taxed the capacity of the train to its utmost, especially in the way of serving meals, but all wants were fully supplied. During this trip, while the engine was taking on water, the hospital train was struck in the rear by a passenger train. A caboose on the rear of the train was completely shattered; the private car used by the medical officers was so badly injured as to necessitate its abandonment, and many of the platforms were splintered, while the sick and wounded were severely shaken up by the collision, but fortunately no serious casualty resulted.

During the latter part of July excessive heat and dust rendered a trip from Tampa to Newport, Ky., extremely trying to the sick, and largely contributed to the fatal ending of two cases en route. A large proportion of the total number of cases transported were of typhoid fever, usually in the first week of the disease. Under certain circumstances the loading of the train at night was necessary, and in one instance loading was completed during a severe rain storm. Up to August 31 the hospital train had run about 17,500 miles and transported 1,935 patients with only four deaths.

Notwithstanding the large number of typhoid cases transported and the difficulty of handling such cases on this train, disinfection was so efficiently carried out that no case of this disease occurred among the personnel of the train. The utmost care was given to the disinfection of excreta to prevent any danger of the dissemination of the disease during the transportation of the sick.

HOSPITAL SHIPS.

The hospital ship Relief.—On April 15, 1898, I applied for a ship to be used as a hospital ship. After an inspection had been made of various ships offered I recommended, April 23, the purchase of the steamship *John Englis* as well adapted for the purpose in view—a floating hospital for the care of the sick and wounded at any point on the Cuban coast, for their transportation to any point on our own coast, and to act at the same time as a depot of reserve medical supplies for troops in the field. This recommendation was not approved at the time, and various other ships were inspected, but none found to be suitable. On May 18, by direction of the President, the *John Englis* was purchased, and the Quartermaster's Department took

charge of her to prepare her for the special service required. Maj. George H. Torney, surgeon, United States Army, was directed to make recommendations with reference to necessary alterations and apparatus, and was subsequently placed in command of the ship. The necessary work upon the vessel required much more time than was anticipated.

On June 12 I wrote to Major Torney:

The hospital ship will be required at the earliest possible moment to go to Santiago, where you are likely to have plenty of sick and wounded men awaiting your arrival. I trust that you will do everything in your power to have the ship ready for orders at the earliest possible moment. Be sure to get everything on board as soon as possible, for when you get your orders we want no delay on the ground that certain articles for which requisition has been made are not yet on board ship.

Again, on June 22, I wrote:

You will do everything in your power to expedite the work upon the hospital ship *Relief*, and when she is ready for sea report to me by telegraph. Upon receiving telegraphic orders to that effect you will proceed directly to Santiago de Cuba, reporting your arrival to the commanding general at that point. Your ship should be anchored in a safe harbor at such point as may be designated by the proper authorities, and as near as possible to the seat of active operations. You will receive on board up to the full capacity of the ship the sick and wounded of the Army and Navy and care for them exactly as if they were in a general hospital. The *Relief* is regarded as a United States general hospital, and you will be expected to make such reports and returns as are required by regulations for a general hospital. Your attention is especially invited to Army Regulations, 1433, and should anyone attempt to exercise unauthorized authority over you or your ship you will invite their attention to this regulation. When in your judgment or that of the commanding general or the chief surgeon of the troops at whatever point you may be located it is desirable that you should proceed to a home port for the purpose of landing the sick and wounded, you will, if practicable, communicate with me by telegraph, and orders will be sent you designating the port for which you should sail. If it is not practicable to communicate with me by telegraph you should apply to the commanding general of the troops for orders to proceed to such home port as may seem desirable, and immediately upon your arrival you should communicate with me by telegraph in order that arrangements may be made to transfer the sick and wounded to a general hospital. You will issue medical supplies upon properly approved requisitions to troops in the field, and will do everything in your power to aid the medical officers with these troops in providing for the comfort of the sick by the issue of ice, hospital stores, and such delicacies as you may have at your disposal. When practicable, you will send to me once a week a telegraphic report showing the number of patients of the Army and of the Navy on board the hospital ship. You should make timely requisition for necessary supplies for use on the ship and for issue to the troops in the field.

Further instructions were sent June 27:

You should keep in view the fact that the *Relief* is a well-equipped floating hospital and a depot of supplies for troops in the field. It is important, therefore, that she should not be taken away from the scene of active operations unless it is absolutely necessary for the purpose of landing the sick and wounded at a home port. You should avail yourself of every opportunity to send proper cases by the navy ambulance ship, the *Solace*, or by army transports returning to home ports. As a rule, the more serious cases of injury and sickness should be retained on your ship, as the disturbance incident to a sea voyage would be injurious to them. Convalescents and those sick and wounded who can be transported without injury to themselves, and who are not likely to be fit for duty within a short time, should be sent to a home port whenever an opportunity offers.

The *Relief* sailed from New York July 2 and arrived at Siboney on the 7th. She left Siboney July 19 with 254 sick and wounded and arrived at New York on the 23d. She sailed for Ponce, Porto Rico, August 3, and returned to New York on the 19th with 255 sick and wounded. The vessel made another trip to Ponce, Porto Rico, return-

ing with sick, September 6, to Philadelphia, whence she went to Montauk Point to transport sick to hospitals in Boston, Mass., and Philadelphia, Pa. Another trip to Porto Rico was then made, the vessel returning October 11 to Fort Monroe, Va.

The hospital ship Missouri.—On July 1, 1898, Mr. B. N. Baker, president of the Atlantic Transport Line, Baltimore, Md., tendered the steamship *Missouri*, with her captain and crew, to the Government as a hospital ship. This generous and patriotic offer was accepted by the Secretary of War, and Maj. W. H. Arthur, surgeon, United States Volunteers (assistant surgeon, United States Army), was ordered to take charge of her preparation for service and subsequently to command her. It was recognized that considerable refitting would be required before the vessel could be utilized. Ten days or two weeks was the period estimated as needful to permit of making the necessary alterations and providing the vessel with a steam laundry, steam sterilizing apparatus, and ice and carbonating plants, but it was not until August 23 that the ship was reported ready to sail, and even then a good deal of work had to be done on board during a stormy passage to Santiago. She returned from Cuba with 256 sick men, who were landed at Montauk Point. Her second voyage was to Porto Rico, whence she brought 270 patients to the Josiah Simpson Hospital, Fort Monroe, Va., on October 6.

The hospital ship Olivette.—This vessel was a steamship which had been doing service as a water boat for the fleet of transports when Lieutenant-Colonel Pope, chief surgeon of the Fifth Army Corps, selected her for use as a hospital ship during the voyage from Tampa, Fla., to Santiago, Cuba. The equipment of one of the field division hospitals of the corps was used in outfitting her for this work. On the arrival of the fleet at Daiquiri she relieved the transports of their sick, many of whom were later transferred to the steamer *Iroquois*, so that room was made on the improvised hospital boat for the wounded expected from the impending battle. The *Olivette* answered her extemporized purpose excellently. She left Santiago July 9 with 279 wounded officers and men and reached New York on the 16th. She returned to Santiago with medical supplies for the troops, and on August 15 sailed with 203 sick men, who were distributed in Boston city hospitals. The *Olivette* sailed August 25 from Boston under orders to Fernandina, Fla., for the purpose of bringing sick to the general hospital at Fort Monroe, Va. On August 31, while coaling in stormy weather off quarantine at Fernandina, she listed heavily, filled with water; and sank in 20 feet of water. No loss of life occurred.

THE HEALTH OF THE TROOPS.

Promptly following the declaration of war, arrangements were made by the War Department to recruit the Regular Army to its war strength, and to muster in the volunteer troops called out by the proclamations of the President. The Regular Army at that time consisted of well-developed men, sound in physique, and well drilled and disciplined. In its ranks were only about 40 boys under 21 years of age enlisted as musicians; but when recruiting was begun the minimum age for enlistment in the regulars was reduced to 18 years, and boys of this age were accepted for the volunteers. In my opinion, this reduction of the age limit had a notable influence in increasing the prevalence of disease among the troops. All military experience shows that young men under 21 years break down readily under the

strain of war service; and every regiment had many of these youths in its ranks.

I am of the opinion, also, that the haste with which the volunteer regiments were organized and mustered into the service was responsible for much of the sickness which was reported in the early days of their camp life. Medical examiners were appointed to testify to the physical qualifications of each man before acceptance, but, notwithstanding this, which at the time was characterized in the press as a very rigorous procedure, so many men were afterwards found on the sick lists of the camps unfit for service, from causes existing prior to enlistment, that special arrangements had to be made for their discharge.

Soon after the newly raised levies were aggregated in large camps sickness began to increase progressively from causes that were so general in their operation that scarcely a regiment escaped from their harmful influence. These causes may all be referred to ignorance on the part of officers of the elementary principles of camp sanitation, and of their duties and responsibilities as regards the welfare of the enlisted men in their commands. Officers who were responsible for the clothing and equipment of their men, for their shelter, drill, discipline, and personal cleanliness—in fact, for their comfort, well-being, and sound physical condition—were to a large extent ignorant of how to act in order to sustain their responsibilities, and others were even ignorant that these responsibilities rested on them. Medical officers, as a rule, were also without experience in the sanitation of camps and the prevention of disease among troops. The few who knew what should be done were insufficient to control the sanitary situation in the large aggregations of men hastily gathered together. As a result officers and men appear to me to have regarded the deplorably insanitary conditions under which they lived in their camps of organization as the inevitable conditions of camp life preparatory for field service, and to have accepted them without question until general attention was attracted to them by an outbreak of typhoid fever. Officers and men in these camps were rife for war, and drill, parades, practice marches, and military-camp duties occupied the whole of their time and energies. Considerations of domestic economy and sanitation in the companies and regiments were not given proper consideration, and men who were being taught to meet the enemy in battle succumbed to the hardships and insanitary conditions of life in their camps of instruction.

The sites of certain of the camps have been instanced in the newspapers as the cause of the sickness that was developed in them. It is true that in some localities the sinks could not be made of the proper depth on account of underlying rock; in others a substratum of impermeable clay, and in others again a high level of the subsoil water interfered with a satisfactory condition of the sinks. At Miami, Fla., the water supply was generally regarded as not good, and at Camp Merritt, Cal., the climatic conditions were such as to lead to its speedy abandonment. But these were local conditions, while the sickness which invaded the camps was general in its onset. A review of the whole situation shows that it was not the site but the manner of its occupation which must be held responsible for the general spread of disease among the troops.

The primary evil was overcrowding of the site. The aggregation of the troops was effected hastily. On his arrival at Camp Alger the medical officer assigned to duty as chief surgeon found a number of

regiments already in camp; "troops were arriving with every train, generally without previous announcement, and these camped where they saw fit." As a general hygienic, as well as a military principle, troops in the field should encamp in rear of their color line. The area occupied as a camping ground should be as wide as the color line is long. This gives wide streets, ample space for the separation of tents, and a front which affords room for the needful sink accommodation. But no principle of this kind was manifest in the regimental camps of the newly organized commands. On the contrary, the idea seemed to prevail that the troops should be compacted as much as possible. Both at Alger and Chickamauga the companies of a regiment were crowded on an area insufficient for those of a battalion, and brigades were packed together with scarcely an interval between the regiments. Lieutenant-Colonel Smart, in his inspection of Camp Alger, found company streets hardly wider than the intervals between adjacent companies should have been, and tents of the same company in contact with each other on the sides and in contact on the ends with those of the adjoining company, so that the double row of tents between the narrow company streets made a continuous canvas covering 70 to 80 feet long and 16 feet wide, under which 100 men had to find shelter. Even when space was allowed between the tents of the same and adjacent companies, it was wholly insufficient for proper trenching, ventilation, and passageway. With streets reduced in some instances to a width of only 13 feet, the natural surface of the ground with its matting of grass roots is speedily eroded and the camp surface converted into a layer of dust or mud, according to the character of the weather. This constitutes a serious evil, but the great sanitary objection to crowding the area in this way is that the slops and garbage of the kitchens and the excreta of the sinks are too near to the quarters of the men. Fecal odors were perceptible in many of the camp streets; and of certain regimental camps it is reported that their odors were in themselves a veritable nuisance. The contracted front of the camp gave no room for a sink of the proper size for each company. A battalion of troops had to use a sink insufficient to accommodate a company. It was impossible to keep these pits in good condition when used by so many men. Covering the excreta at regulation intervals was unsatisfactory, as fresh deposits were made while the police party was at work. Efforts were made to remedy this by requiring the individual men to cover the deposits as soon as made. There was no room for the only efficient remedy, a sufficient number of properly constructed and well-cared-for sinks, 150 yards in front of the color line, or at a corresponding distance on the flanks of the camp. These small sinks had the further disadvantage that they were filled up almost as soon as dug and had to be replaced by freshly dug pits, so that in a short time the whole of the contracted front of the camp was converted into sink surfaces. On April 25, 1898, foreseeing the likelihood of insanitary conditions in the camps of our newly raised troops, and with the view of preventing them, I issued Circular No. 1 from this office impressing upon medical officers their responsibility in sanitary matters, and the necessity for a strict sanitary police, particularly in the care of the sinks and in the preservation of the camp area from contamination. But the density of the military population on the area of these contracted camps prevented the possibility of a good sanitary condition. Camps of this character may be occupied for a week or two at a time without serious results, as in the case of *national guardsmen* out for ten days' field practice during the

summer, but their continued occupation will inevitably result in the breaking down of the command by diarrhea, dysentery, and typhoid fever.

Not only was the area crowded by the tentage, but the individual tents were overcrowded. Four to seven men were crowded into the small, wedge-wall tent which covers an area of only 7 by 8 feet. Some company or regimental commanders encouraged their men to build sleeping bunks, or rather low platforms, for the area under canvas would not permit of a separate bunk for each man; others directed the men to carpet the floor of their tents with pine twigs or a layer of bark. Others again had straw littered on the floor; but most of the commands lay for weeks upon the ground, their blankets soiled and matted with dust, and their clothes, even to their change of under-clothing, soiled and dusty, for it was impossible to preserve anything clean under such primitive camp conditions. Facilities for bathing were rarely found in the camps, and laundry and lavatory facilities were not always readily available.

These troops were subjected to most of the discomforts, hardships, and climatic exposures inevitable to an active campaign, while nominally enjoying the comforts of a fixed camp of instruction. Only on active service in front of an enemy should it be allowable to have men sleep on the ground for weeks at a time, under insufficient shelters, and with inadequate facilities for personal cleanliness. On active service many of the insanitary features of their surroundings would have been removed. While campaigning they would have changed camp sites from time to time and would have been freed from the harmful influence of accumulated filth, while opportunities for bathing would have been presented occasionally in passing or camping near streams. The only explanation that can be given is that the officers, military and medical, having no experience of military life in the field, assumed that the deplorable condition in which they were living was the usual mode of life of soldiers situated as they were, and that their duty as true soldiers was to endure, not only without complaint, but with a certain pride, the hardships of their camp life.

Practically nothing was done to make the men comfortable or to remedy the insanitary conditions until these were brought to the attention of the Secretary of War by inspectors sent out by special orders from the War Department. Then the camps held for so long were abandoned, but not before the manifestations of typhoid infection were rife in them, new sites were carefully selected, regimental camps were expanded, company tentage increased, and board flooring provided. Then, for the first time, the troops went into camps suitable for the occasion.

An increased prevalence of diarrheal diseases was the first manifestation of danger in the early camps. Much of this was no doubt due to chill to the surface in cooling off after the perspirations attending drills in hot weather, much to sameness of diet and bad cookery, much to over-indulgence in fruit of doubtful quality, pies, etc., purchased from peddlers of food and soft drinks who were established in business in or around most of the camps, and much to similar indiscretions following the arrival of boxes of dainties from friends at home. Chill to the surface was aggravated by the ignorance or recklessness of the men, few of whom appreciated its danger. The *same-ness of diet* led to criticism of a ration which is not only more liberal *than that of any foreign military service*, but more liberal *than that*

which sustained the volunteers of the civil war during their arduous campaigns. Regimental commissaries and company commanders require experience which few of our volunteer officers possessed. The annual outings of the National Guard, with a caterer to provide special diet for the men, gave no opportunity for line officers to learn how to use a fixed ration to the best advantage or to exercise the needful supervision over cooks of doubtful qualifications. But notwithstanding the disadvantages arising from this ignorance, medical officers generally report that so-called delicacies purchased by individuals or sent by sympathizing friends was the cause of more sickness than the sameness of the Government's ration aggravated by bad camp cookery. It is hardly needful to cite reports to sustain these statements. Many medical officers noted each of these causes and cautioned commanding officers against them. Testimony of a similar kind comes from Porto Rico and the Philippines. General Brooke attributed the diarrheal troubles which affected his command to the excessive indulgence of the men in the fruits of the island, and the chief surgeon of the Department of the Pacific, in referring to the prevalence of diarrhea and dysentery, attributes these diseases to the difficulty experienced in restraining the men from eating and drinking unwholesome articles.

One prominent cause of the increase of sickness in the early camps has been commented upon by only a few of our medical officers. These cite the prevalence of drunkenness and of venereal disease due to the facilities and temptations afforded by the proximity of cities to the large camps. They hold that if the systems of the men had not been weakened by dissipation they would not have succumbed so readily to the other influences which affected them.

Malarial fevers added to the sick lists of camps in Florida, and of southern regiments in the camps in Georgia and Virginia.

It was, however, typhoid fever which broke down the strength of the commands generally, the outbreak becoming distinctly manifest in July. Sporadic cases appeared in most of the regiments in May and June, these cases having been brought, in many instances, from the State camps. In fact some regiments, as the Fifteenth Minnesota, suffered more from this disease at their State rendezvous than any of the regiments in the large Federal camps. A few of the regimental commands in the latter may be said to have escaped visitation. The sanitary conditions affecting the commands in the various camps have been studied in connection with the prevalence of typhoid fever among the men by a board of medical officers consisting of Majors Reed, Vaughan, and Shakespeare, but the results of the investigations of this board have not as yet been reported in full. It appears to me, however, from a general review of the sanitary reports already filed, that the prevalence of the disease was proportioned to the insanitary camp conditions which I have described above. My circular No. 1, already cited, was intended to bring the danger from this fever to the notice of medical officers with the view of obviating it. The probability of its communication to soldiers in camp through the agency of flies was pointed out as a reason for insisting on a sanitary police of the strictest character. At the time of the outbreak and rapid spread of the disease all the camps were suffering from what many reports characterized as the "plague of flies." Clouds of these insects swarmed about fecal matter and filth of all kinds deposited on the ground or in cesspools or sinks, and conveyed foul and infectious matter thence to the food exposed while in preparation in the *company kitchens or while being served to the men.*

It is well known to the medical profession that this fever is propagated by a contaminated water supply, and it is now recognized that the great prevalence of this disease in an aggravated form in the camps of the civil war was due to the use of surface and shallow well waters infected by typhoid excreta. To prevent transmission by the water supply I recommended the use of boiled and filtered water when a pure spring supply could not be obtained, and to enable an efficient filtration of suspected waters to be made field filters of approved construction were issued on my recommendation by the Quartermaster's Department. Circular No. 4, of May 31, 1898, was issued from my office that medical and company officers might have a thorough understanding of the intention and action of these filters and that the full benefit of their use might be secured to the troops.

Chief surgeons were instructed to forward samples of water to this office for analysis whenever a doubt existed as to its quality, and the water supply of several of the camps was thereafter kept under analytical observation. This care exercised in the exclusion of typhoid infection from the water did much to retard the epidemic progress of the disease. Regiments camped near each other and using water from the same sources were not equally affected, thus showing that the cause was disseminated in other ways than by the water supply. The disease was slow in its development at Jacksonville, Fla., which had a water supply from artesian wells. But the infection once introduced into a camp, from State rendezvous or by sporadic infection from the neighborhood, began slowly to spread on account of the close contact of the men through overcrowding and the bad condition of the sinks.

Undoubtedly the very dust of the camp site became a medium for the transmission of the disease from the drying up of deposits of filth on the neighboring surface, and from the breaking up of the dried soil over disused sinks. At Tampa, Fla., many of the sinks were shallow, and heavy rains flushed their contents over the surface of the ground to become afterwards dried and pulverized; and at Jacksonville, where barrels were used instead of privy pits, it is reported that there was much carelessness in the handling of the tubs, and that during their transportation through the camps the contents were frequently spilled. Troops camped on the leeward side of the line of transportation suffered heavily from typhoid fever.

The prevalence of typhoid fever was lessened in some instances by leaving the infected locality, and exercising greater care in the arrangement and sanitary administration of the new camps. This was illustrated by the record of the Second Army Corps after its removal from Camp Alger, Va., to Camp Meade, Pa.

The infection was carried by the Fifth Army Corps from Tampa to Santiago where, under the unfavorable conditions affecting the troops in the trenches, its rapid spread, together with the occurrence of yellow fever and the general prevalence of malignant malarial fevers, occasioned the utter breakdown of the health of that command. The infection was carried also to Porto Rico, but its spread, so far as I can learn from the reports that have been rendered, has not been as rapid as in the home camps, probably on account of the movement of the troops from place to place in the advance from Guanica.

The disease prevailed to a considerable extent among the regiments aggregated at Camps Merriam and Merritt, San Francisco, Cal., for embarkation to the Philippine Islands, but according to the latest advices from the chief surgeon at Manila it has not reappeared to any extent in the command there. This is probably to be attributed to

the use of distilled water during the long voyage and the flushing of the latrines on board ship by a constant stream of sea water. All men notably sick were left behind at the division hospital at the Presidio; and it must be assumed that the cases embarked in the incubatory stage were prevented from infecting the command by virtue of the excellent sink arrangements. Only 14 deaths from typhoid fever were reported from the expeditionary force of 18,000 men from May 25, when the first vessels sailed, to August 31, the date of the last report received.

THE CARE OF THE SICK AND WOUNDED.

Each regiment of the Volunteer Army was authorized by law to have 1 surgeon, 2 assistant surgeons, and 3 hospital stewards. Inasmuch as at the time of its muster into the service of the United States it was of necessity a separate organization, the sick had to be cared for by the regimental medical staff, assisted, in the absence of hospital corps men other than the stewards, by enlisted men of the line detailed by the regimental commander for duty as hospital attendants. Each regiment of the Regular Army had one or more medical officers, and its quota of hospital corps men detached from the military stations at which the companies of the regiment had been stationed prior to the outbreak of the war; and each had an ample provision of medical supplies derived from the same sources. Some of the regiments of the Volunteer Army were provided by State authorities with more or less of the equipment needful to establish a regimental hospital, but the majority had little or nothing in the way of medical supplies. I have already stated (p. 691) the measures adopted by me to supply the necessities of these regiments.

As soon as the regiments were organized into brigades and divisions, preparatory to active service, it became the duty of each chief surgeon of an army corps to see that the medical department of his command was organized to meet the casualties of battle. The object of the concentration of the troops was to accustom the regiments to operations in which they constituted the units of a higher organization. The experience of the civil war demonstrated that for efficient service in an active campaign the medical department also required a higher organization. Circular No. 3, from this office, dated May 18, 1898, in specifying the duties of the various medical officers in an army corps, indicated the character of the organization to be adopted. The seriously sick were to be treated in division field hospitals (unless their transfer to a general hospital was advisable) under the care of the most experienced physicians and able surgeons on duty with each division. Medical officers left on duty with their regiments were to exercise sanitary supervision over the well men and to determine whether a soldier reporting himself sick should be sent to hospital or remain as a trivial case under treatment in quarters. This consolidation of the medical force by divisions, implying as it did the breaking up of the regimental hospitals, met with a strong opposition from regimental medical officers, particularly from those who were not detailed for special service at the division hospitals. Regimental commanders were also, in many instances, opposed to it, forgetful that the object of the medical department, as of the line, was to get into training for field service. Similar objections were raised in 1862 and 1863 to the establishment of field hospitals and the practical disestablishment of the regimental institutions, but the civil war lasted long enough to demonstrate the efficiency of the system.

The Fifth Army Corps.—The organization of the division hospitals of the Fifth Army Corps was begun May 3 at Tampa, Fla. Long before the corps embarked for Cuba its field hospitals were in condition for efficient service, and although its ambulance companies were not filled up to their intended strength nor fully equipped with ambulances, wagons, horses, and harness, such sections of them as had their equipment completed were well drilled in hospital corps work and ready for active service. Each hospital had about eight 6-mule wagons to haul its tentage and supplies. The equipment of the Second Division hospital was completed at an early date. It contained 85 cots, with a sufficiency of furniture and necessary fixtures, and as the demand for extra accommodations increased, the capacity of the hospital was augmented to 150 beds. The operating tent was provided with enameled-steel folding operating tables, steam sterilizers and water heaters, bath tubs, and other necessary appliances. The hospitals of the First and Third divisions and of the cavalry division were similarly outfitted. In addition to these hospitals certain medical supplies, with 1 acting steward, 1 private, 1 hospital and 1 common tent, 1 ambulance wagon, and the necessary animals fully equipped were retained as a minimum allowance with each regiment. (General Orders, No. 14, Headquarters Fifth Army Corps, June 6, 1898.)

Subsequent events, however, rendered valueless these preparations of the medical department for active service in Cuba. When the command embarked on the transport vessels, the baggage wagons and mules were left behind "and were never seen again by the medical department of the Fifth Army Corps." The ambulance trains of all the divisions, with a large part of the outfit of each of the hospitals were also left behind. Three ambulance wagons were taken apart and stored on one of the vessels. These did excellent service at San Juan and El Caney and showed how efficient the ambulance companies would have been had they not been deprived of their equipment. Ten of the ambulances of the third or reserve divisional hospital were subsequently shipped to Cuba, where they arrived July 2, and were of value in moving the sick and wounded to the hospital at Siboney and to the hospital ships and transports. The ambulance service of the division hospitals of this command was thus practically destroyed by these failures to embark or disembark its wagons, harness, horses, and mules. Part of the tentage and property of the hospitals was left at Tampa with the sick left there. Of the property and supplies carried to Cuba, a portion was not available for service at the time it was most needed, to wit, on July 1, 2, and 3, when the wounded from El Caney and San Juan were coming from the front for care and treatment. This was because, in general, no opportunity was afforded to land the medical property, because there was no transportation on shore for such articles as might be landed, and because the masters of transports took their vessels out to sea after the debarkation of the troops because of their fear of wreck by collision with each other or by drifting on the rocks. Earnest efforts were made by medical officers to have supplies at the front with the troops. Some having succeeded in getting their medicine chests and other articles of medical property ashore had these carried forward on litters by hospital corps men to the camps near Sevilla, while others turned their private mounts into pack horses for this purpose. A reserve supply of medicines shipped on the *Segurança* from the purveying depot at Tampa was landed June 27. These, issued to regimental medical officers, materially relieved the stress caused by the failure to land their regimental medicine chests.

The tents and property of the First Division hospital were landed by the efforts of the hospital corps men, under the direction of Maj. M. W. Wood, surgeon, United States Army. The hospital outfit was carried to the front by hand and on litters used as handbarrows by the nurses and attendants.

The second field hospital landed was that of the cavalry division under Major McCreery, but the transport put to sea before the whole of the property was removed from her. This, with the immediate incoming of the wounded from the fight at Guasimas, led Major Havard, the chief surgeon of the division, to look for assistance from the Red Cross Society. Assistance was freely given then and afterwards, but a misunderstanding, the particulars of which have been specially reported by Major Havard, gave origin to many press accounts of the refusal of Red Cross assistance by medical officers. Both Major Havard and Lieutenant-Colonel Pope, the chief surgeon of the Fifth Army Corps, have testified to the value of the field supplies received from the *State of Texas*, the Red Cross supply ship, and to the earnest and untiring work of Miss Barton and her assistants in caring for the wounded.

The Third Division hospital, which was landed from the *Saratoga*, after many delays, afterwards became the base hospital at Siboney. To this were sent all the medical supplies recovered from the transports or landed from the hospital ship *Relief*. The fourth divisional hospital of the corps was retained on the steamer *Olivette*, which was thus extemporized into a hospital ship. The tents and camp outfit of this hospital were landed for service at Siboney. During and after the battles at El Caney and San Juan there was an insufficiency of tents, cots, bedding, and medicines, due to the causes already stated, but all the hospitals were well equipped for surgical work.

Early in the second week of July a few cases of yellow fever appeared among persons who had occupied the huts at Siboney, and day by day thereafter a steady and rapid increase of the disease was observed. This necessitated the establishment of a yellow-fever hospital and of a detention hospital in which cases of a suspicious character coming from the camps were held pending a decision as to their nature. The want of shelter was seriously felt at these hospitals, and was, under the circumstances, corrected but slowly when tents could be spared from the base hospital at Siboney, and from the first divisional hospital as its wounded were removed for transportation from Cuba.

After the capitulation of Santiago the troops at the front broke down rapidly under the fatigues they had undergone and the malarial influences to which they were exposed. Remittent and typhoid cases became exceedingly common.

By this time an ample supply of tents, furniture, bedding, clothing, and medical stores had reached Siboney, together with a corps of trained nurses and a force of surgeons, those sent to duty at the yellow-fever hospital being immune to that disease. Meanwhile, to relieve the pressure on the field hospitals, such convalescents and sick as could bear the journey home were sent to the United States on transport vessels.

This was an emergency measure to relieve the hospitals at Siboney and permit of the transfer to them of the men who were sick in regimental camps. It should have been carried out under the supervision of the military authorities at Santiago, who alone were cognizant of the necessity and of the means available for effecting the transfer. My circular of July 18, 1898, defining the duties of army medical

officers, requires that the chief surgeon of a corps "should supervise the movement of sick and wounded to the base or general hospitals, providing transportation and detailing medical officers and attendants for their care." The lack of surgeons and nurses on these vessels was probably unavoidable, this lack, because of sickness and other causes, being one that pertained to all the hospitals of the corps at that time and to many regimental organizations also. Furthermore, the convalescents were supposed to be practically well men, and at least able to care for themselves, excepting during such illness as might break out during the voyage, and for this contingency provision supposed to be reasonable was made by the presence of one or more medical officers and the supply of some of the most necessary medical stores.

The transfer of troops from Santiago to Montauk Point, New York, was also an emergency measure, but it was conducted under proper supervision by the military authorities concerned. The great responsibility of excluding yellow-fever infection from every transport rested on the medical officers who had charge of the embarkation. Had they failed in this duty the effect would have been disastrous during the voyage to the men confined on shipboard, and the risk of importing the disease into this country would have been greatly increased. Fortunately the delicate task was accomplished without the occurrence of any such outbreak of disease among the troops as was anticipated by many medical men and others who could appreciate the deadly character of the risks involved.

The sanitary conditions on board of most of these transports were fairly good. According to reports rendered by Maj. Walter D. McCaw, surgeon, United States Volunteers, who accompanied the Sixth and Thirteenth United States Infantry on the *Vigilancia*, the ventilation of the sleeping quarters of the men was satisfactory—plenty of deck room was available and the berths below were not overcrowded. The ship's officers and crew were attentive to the wants of the command, aiding the men in the preparation of their meals and in making them comfortable in their quarters. The water supply was plentiful and good. The weather was excellent during the short voyage, and the health and spirits of the men improved every day.

In view of the necessity for the return of the troops of the Fifth Army Corps from Santiago, Cuba, preparations were made for encamping them at Montauk Point, Long Island. These included the establishment of temporary tent hospitals, not only for the treatment of the large number of sick brought by each command from Cuba, but for the isolation and treatment of those from transports lying under the suspicion of yellow-fever infection.

The detention hospital received its first cases on August 15. At that time it consisted of separately pitched hospital tents, but as the cases received from the transports increased in number, framed and floored tent pavilions were erected, consisting of six tents pitched end on to each other, with a fly inserted in the middle length of the pavilion to promote ventilation. On August 31 fourteen of these pavilion wards were in use, with 40 tents pitched singly for convalescents. At this time there were 15 medical men on duty at the hospital. At first the corps of nurses comprised only 41 members of the Hospital Corps and 4 volunteer Red Cross nurses. Policing was done by hired laborers. A temporary detail of men from the Two hundred and third New York was obtained to increase the hospital force until the arrival of trained female nurses. Sixty of these were employed at the hospital. The patients were provided with cots, bed linen, and

blankets, and the limit of 5 patients to each tent was seldom exceeded. This hospital had about 500 beds. Civilian cooks were employed. Milk and eggs were always plentiful for special diet. Medicines were drawn from the Montauk Point hospital, which was but a few hundred yards distant. The difficulties in the way of administering the affairs of this establishment were very great, owing to the rapidity with which the transports followed each other in their arrival. As many as four reached the Point on some days from August 13 to 31, most of them bringing sick requiring detention for medical observation. The obviously temporary nature of the establishment prevented efforts to provide it with fixtures or furniture when the purpose could be effected by extemporizations. Thus, in the tents used as offices, dispensary, and storehouses, empty packing boxes were utilized as desks, washstands, etc. This no doubt created an impression of discomfort and privation in the minds of superficial observers, but the sick men were as well cared for and as comfortable in their cots here as afterwards when transferred to the general hospital at Montauk Point. There was an excellent steam disinfecting plant on the grounds, with a formaldehyde chamber attached. The laundry work was done at a steam laundry near the hospital.

The temporary tent hospital, which was locally known as the general hospital, Montauk Point, consisted of eighteen pavilions similar to those of the detention hospital. A central corridor running east and west had nine of these pavilions opening on it on each side. An annex had speedily to be constructed to accommodate the large number of sick arriving on the transports, transferred from the detention hospital, or received from the regimental camps of the Fifth Army Corps. This annex consisted of fourteen tent pavilions, arranged seven on each side of a central corridor. Other pavilions were added in parallel rows as an extension of the accommodations became necessary. Tent pavilions were used as dining rooms, but frame buildings were erected for use as kitchens. The capacity of this hospital was 1,600 beds. Its personnel consisted of 40 medical men, 3 stewards, 10 acting stewards, 120 privates of the Hospital Corps, 15 cooks, 50 male nurses, and an average of about 200 female nurses, one-half of whom were Sisters of Charity. Supplies of all kinds were amply provided on timely requisitions. Emergency calls were met by direct purchase in New York City. Large supplies of milk, eggs, chickens, canned articles, and other material for special diets were always on hand. Provision for special diet was made not only by the hospital, but by the Massachusetts Volunteer Aid Association, the Red Cross Society, and the Women's War Relief Association. Cooks and helpers were kept on duty night and day to meet emergencies in special cases.

In one or two instances inquiry has been made as to the treatment of the body in the case of soldiers who died at these or other military hospitals. As a rule, immediately after death the body was washed, the jaws bandaged, and the rectum closed. When cold the body was dressed in uniform and placed in a coffin. If the relatives of the dead soldier desired his body to be sent home for burial an undertaker removed it to his establishment, where he embalmed it and expressed it to its destination in a hermetically sealed zinc-lined coffin. If no communication was received from the relatives it was buried in a suitable place twenty-four hours or more after death unless hot weather rendered an earlier burial necessary. The grave was properly marked for identification.

The Medical Department has been criticised adversely for granting *furloughs to go to their homes* from this camp and its hospitals to

men who, it is claimed, were obviously unfit to travel, and cases were cited in the newspapers to sustain this criticism—cases of men who had fainted by the way and had to be cared for by the Red Cross agents or sympathizing strangers. To correct this abuse and prevent a recurrence of such cases it was not the carelessness or recklessness of the army doctors which had to be restrained, but their sympathy with the patient and with the desire of the patient's friends to be intrusted with his care in view of a speedier recovery in the atmosphere of home. As a matter of fact, the officers charged with the duty of furloughing the sick men were kindly and sympathetic, and such mistakes as were made were attributable to the great pressure brought to bear on this side of their nature.

It is needless to refer at this time to the complaints of starvation which appeared almost daily in the newspapers during the occupation of Camp Wikoff, for it is now generally understood that the weakness, prostration, anæmia, and emaciation of so many of the troops were the results of malarial, typhoid, and yellow fever, from which the army suffered as a consequence of its exposure to the climatic influences and local infections of Santiago and its neighborhood pending and subsequent to the surrender of the city.

The Medical Department has been criticised also for moving typhoid cases from the camp to hospitals in various cities, with the attending risk of propagating this dangerous disease not only in these cities, but throughout the country while en route to them. The movement was made to have these cases of prolonged duration carefully sheltered before the oncoming of the chilly and stormy weather which is usually expected on that coast about the equinoctial period, but as it was effected by steamship the spread of the disease by cases en route was prevented, and as the city hospitals to which the sick men were transferred had all the needful facilities for disposing of infected material without danger to the community, it is seen that there was no basis for the criticisms cited.

Troops in the home camps.—The regiments composing the other corps of the Army were camped at first in State camps and afterwards aggregated in camps of organization and instruction. The First and Third Corps were organized at Camp George H. Thomas, Chickamauga Park, Ga.; the Second at Camp Russell A. Alger, near Falls Church, Va.; the Fourth at Mobile, Ala., and Fernandina, Fla.; the Seventh at Jacksonville, Miami, and Panama Park, Fla., and the Eighth near San Francisco, Cal., preliminary to its embarkment for Manila.

The method of hospital organization in all these camps was practically the same, and there was much similarity in the conditions affecting them, and correspondingly in their history. Regiments reported, as already stated, provided in but few instances with the material and supplies for their medical care, and in no instance with that liberality which by consolidation or concentration of regimental supplies would permit of the formation of a well-equipped hospital for a division. But they brought sick men with them, and these required immediate care. Provision had to be made for division hospitals in view of future field service, and for regimental hospitals in view of the immediate necessity. The difficulties in the way of the contemporaneous accomplishment of these two objects were great, and they were greatly augmented by some of the very men who should have aided in overcoming them. The inexperience of a majority of the regimental medical officers and of many of the chief surgeons prevented them

from seeing beyond the immediate necessity. The sick had to be cared for, and to this end medicines and other things had to be procured. Relief societies offered assistance, and this was eagerly accepted by many of these medical officers, not alone for delicacies or luxuries not otherwise provided for, but for supply table articles which could have been had from the medical purveyors in their camps or by telegraphic requisition on the Surgeon-General. It was easier to accept what was so freely offered than to learn how to obtain the articles from the proper source. The aid given by the relief societies did harm indirectly by demonstrating this fact. To explain their prompt acceptance of this assistance these officers referred to the red tape of the War Department methods, and the insinuation that the said methods were beyond the comprehension of the ordinary intellect was accepted by the sensational press as an explanation in full. In these early days of the camps the exuberance of the patriotic spirit of the people which led them to aid the sick soldiers did much good, but, as I have implied, it also did much harm.

Meanwhile chief surgeons of corps and divisions began the organization and equipment of their field division hospitals and ambulance companies, but they were met at the outset by the apparent impossibility of securing men for service as cooks, nurses, litter bearers, ambulance drivers, teamsters, etc. The Hospital Corps of the Regular Army could not supply these men, because recruiting for this corps progressed slowly. The popular tendency to volunteer led men away from the regular recruiting offices. In the regimental hospitals the sick were cared for by details from the companies, but when transfers from the volunteer regiments to the regular Hospital Corps were authorized (see p. 14) these men did not care to leave their local connections for service in the Army at large as regular soldiers. Concessions were made to them—among others, that when their former regiment became attached to another corps, camp, or duty they also would be detached to accompany it—but notwithstanding these the Hospital Corps was recruited so slowly that had the military necessity required one or more army corps to take the field their medical service could have been perfected only by drafting men from the incomplete hospital organizations of those corps that remained in the home camps of organization and instruction. It may be mentioned also as a well-recognized fact that the transfers so much desired by the Medical Department to enable it to complete its organization were not regarded favorably by line officers, for, although every line officer will probably acknowledge as a general principle that only the most intelligent and capable men should be employed to care for the sick and wounded, he is not likely to act on this general principle when it is a question of withdrawing for such service the most intelligent and capable men of his own company or regiment.

The division hospitals of the First and Third corps at Camp George H. Thomas, Chickamauga, Ga., and of the Second Corps at Camp Russell A. Alger, Falls Church, Va., were usually established in the immediate neighborhood of the regimental camps of the divisions. They consisted of two or three hospital tents pitched end on to each other as pavilion wards, or of four or five tents, two or three end on to each other at each end of an intervening fly, the latter inserted to break the continuity of the wall and thus to promote ventilation. The pavilions were arranged in various ways, according to the configuration of the area available as a site, but in general there was a tendency to crowd the area. In none of the camp hospitals were the

pavilions separated from each other by a space equal to twice their width, a distance which is necessary to give restful quiet to the inmates, free ventilation and good policing, and to lessen the danger from fire. Surgeons in charge recognized that a tent should not be occupied by more than six patients, but sometimes this number was exceeded temporarily while waiting an increase of tentage. The intention of chief surgeons was to have each hospital equipped for 200 patients, but in some the number of beds had in July to be increased to 250. In some when first established there were not enough cots for all the patients, the convalescents or lighter cases sleeping on bed sacks on the ground, but this was promptly remedied when observed by chief surgeons or reported to them. As a rule the hospitals were kept in campaigning condition—that is, the tents were neither framed nor floored—until the increased prevalence of typhoid fever attracted attention to their crowded condition, when the object of their existence became suddenly changed from a school for field service to a hospital for the treatment of a local outbreak of disease. The pavilions and other tent shelters of the hospitals were usually well trenched and the camp surface well policed. A small pavilion did duty as an office and dispensary. A surgical ward was connected with an operating tent suitably fitted for antiseptic work. Bath tubs were provided to insure a cleanly condition of the patient before admission to the wards and for the subsequent treatment of cases requiring them. In most of the hospitals there was also a special ward for venereal cases, and isolation wards for cases of measles and mumps. Commodes and bedpans were used in the wards with disinfectants, and the preliminary reports of the medical board which investigated the propagation of typhoid fever in the camps show that the medical officers on duty in these hospitals realized the importance of the use of disinfectants in limiting the spread of the disease, but it was difficult for them to have efficient service in this regard with untrained hospital corps men and details from the line with even less experience. Sinks were dug for convalescents and attendants, but at first these were like those in the regimental camps, not far enough removed from the occupied tents and not cared for with that strict attention which their importance demanded. Special efforts were made in all the hospitals to have good cooks. Seldom, however, was there that knowledge on the part of the medical officers which enabled them to accumulate a hospital fund for the purchase of special articles of diet for the sick, but this did not operate to the detriment of the patients, as special-diet kitchens, under the management of capable individuals, were opened at most of the hospitals. Money for this purpose was sent to them by me from funds contributed and placed at my disposal. Money was also sent directly by individuals and by representatives of aid societies, and the Red Cross committees supplied quantities of ice and milk, chickens, eggs, lemons, etc. Pajamas, night shirts, and other articles of hospital clothing were also provided by the Red Cross and other aid societies. Subsequently the order authorizing the commutation of the sick soldiers' ration at 60 cents rendered these hospitals wholly independent of outside assistance.

In the Third Army Corps, particularly in the Second Division, many of the regiments continued to maintain regimental hospitals after the organization of the hospital for the division, because the epidemic of typhoid fever interfered with the progress of preparation for field service. As illustrating the condition of these field hospitals, it may

be stated that on July 27, 1898, the hospital of this division consisted of 37 hospital tents, 8 conical and 6 common tents, with 285 cots, 250 of which were occupied by patients, cared for by 8 medical officers, 6 stewards, and 138 privates, of whom 25 were detailed from the line of the Army. The hospital streets were broad and the general police excellent. The general wards were in good condition, but the typhoid fever wards were crowded. Assistance was given by the Red Cross, including milk, special articles of food, comforts, and ice.

The division hospitals of the Second Corps at Camp Alger were relieved by transfers to the general hospital at Fort Myer, Va. The overflow from the division hospitals of the First and Third corps was at first received at the Leiter Hospital, at Chickamauga Park, Ga., but as this proved insufficient, a large hospital was established in August to receive the rapidly increasing number of cases of sickness occurring in these corps. This hospital early in September was officially recognized as the Sternberg General Hospital. Its first report showed a capacity of 750 beds and a personnel of 15 medical men, 1 steward, 6 acting stewards, 107 privates of the hospital corps, and 167 female nurses. On the movement of the Third Division, First Army Corps, from Camp Thomas to Lexington, Ky., its sick and the equipment of its field hospital were left in situ, the establishment, then containing 500 beds, being known first as the Sanger and afterwards as the Alexander H. Hoff General Hospital. It was discontinued September 25, when its sick were in condition to be furloughed.

The division hospitals of the Seventh Army Corps, at Jacksonville and Miami, Fla., consisted of 6 tent pavilion wards of 5 tents each, with a fly between the second and third tents of each ward. The pavilions formed a semicircle of radii from a central point, at which was established the office, dispensary, etc., of the hospital. Two pavilions were to be regarded, under ordinary conditions, as the allowance of accommodation for each brigade; and the attempt was made to keep men of the same regiment together to satisfy the desire of the volunteer troops to preserve the regimental organization in the medical service of the corps. The prevalence of measles and mumps necessitated the pitching of extensive isolation wards in connection with the formally planned pavilions.

In August preparations were made at the First Division hospital at Jacksonville to give a better shelter than that afforded by the tents. The proposition to build frame pavilions, each for 60 beds, was approved, and building was begun under contract. Concerning the hospitals of this corps a board of medical officers convened by Special Order 194, Adjutant-General's Office, August 1, 1898, reported favorably. The board considered the equipment ample as to tentage, cots, bedding, etc., and was well pleased with the care and treatment given to the patients. The cots and bedding were sent from the supply depot in New York City.

A rapid increase of sickness in the Second Division, at Miami, as compared with the First Division, at Jacksonville, led to a thorough investigation as to its causes. The tents were pitched a short distance from the town on a rough tract of ground of coralline formation. The troops were fairly well supplied with tentage and cooking utensils and the camp was well policed. Sinks were not generally used, as it was difficult to make them of the proper depth. Metallic troughs or latrines flushed into the ocean by a constant stream of water were used in the First Brigade, while the Second Brigade was

provided with galvanized iron tubs, which were taken away twice daily to be emptied into the ocean. Garbage was collected and carried to the municipal dumping ground. Water was delivered by pipe lines from the supply of the town. It was derived from a pond or lake in the everglades, and was reported as being warm and having a disagreeable taste and odor, on account of which the men used that from wells. These wells were regarded by many as contaminated with surface drainage. In fact, the opinion that the water supply was the cause of the prevailing sickness was generally entertained. Samples analyzed at the laboratory of this office gave results confirmatory of this opinion. The division hospital was established on a vacant lot in the center of the town, an unsuitable and insanitary location. On account of insufficient area, cases of measles, many of which were under treatment, could not be properly isolated. Sinks and garbage, emitting an offensive odor, surrounded the lot. The hospital was fairly well provided with tents, folding cots, medicines, and other needful supplies to care ordinarily for the sick of a division. Early in August the troops were moved to Camp Cuba Libre at Jacksonville, Fla.

The hospital of the Third Division was established at Panama Park, about 6 miles from Jacksonville.

In connection with the division hospitals of this corps a convalescent camp was established July 27 at Pablo Beach, 16 miles from Jacksonville, for the recuperation of men who had become debilitated through climatic influences.

The Fourth Army Corps.—A few regular and volunteer regiments concentrated at Mobile, Ala., formed the nucleus of the Fourth Army Corps and of the cavalry division. A division hospital of 200 beds was established here, but shortly afterwards the corps moved to Tampa and Fernandina, Fla. Tent hospitals were established and an excellent reserve ambulance company was manned and equipped for service with troops expected to operate in Cuba or Porto Rico. The sanitary conditions in the camps at Tampa were not good. Malarial fevers became prevalent and typhoid fever common. The division hospital had to be relieved by removing serious cases in the hospital train of the medical department (see page 106), to the general hospital at Fort McPherson, Ga. About August 1 an overflow hospital was organized in a school building at West Tampa.

The spread of disease among troops remaining in Tampa after the departure of the Porto Rican expedition led to the removal of many of the regiments to the neighborhood of Fernandina. The hospital of one division was pitched on the beach about 3 miles from Fernandina. A convent in the city was also used for hospital purposes.

About July 20 the troops for the invasion of Porto Rico embarked and sailed. The field-hospital accommodation with this expeditionary force was ample and the supplies abundant. The chief surgeon of the Fourth Corps urged the shipment of his reserve ambulance company with this expedition, but General Brooke considered this to be unnecessary.

A short time after the arrival of the troops at Ponce, malarial fevers appeared among them, and typhoid infection, brought from Chickamauga, Ga., and Tampa, Fla., manifested its presence in the camps. Some of these cases were sent home on returning transports, but as the voyage was found to be very trying to severe cases of typhoid fever I telegraphed Colonel Greenleaf, chief surgeon, to establish a general hospital at Ponce for such cases. Tent wards were

considered to be preferable to the use of any of the buildings in the city. Two hundred hospital tents were sent by the *Concho* on August 13, and furniture, supplies, medical officers, and nurses on the *Relief*, *Obdam*, and other vessels. Colonel Greenleaf was also well supplied with funds to provide everything necessary for the well-being of the sick. No special report of the conditions of this hospital has yet been received.

Troops on the Pacific coast.—The troops on the Pacific coast were concentrated mostly at San Francisco, Cal. Camp Merriam came first into existence on the Presidio reservation near the Lombard-street entrance. Nearly 10,000 men were encamped here, but when it was understood that the expeditionary force to the Philippines was to be increased to 20,000 men a new camp had to be established. The site selected was near the northern boundary of the Golden Gate Park, including the sand dunes in its vicinity. This was Camp Merritt, at which 18,000 thousand troops rendezvoused for shipment to Manila. Much sickness occurred among the regiments in this camp. Some of the commands brought with them the infection of measles, and this disease spread rapidly. The cases were in many instances complicated with bronchitis and pneumonia on account of exposure to the cold, raw winds which blew constantly over the site, a site selected without consultation with any representative of the Medical Department. Cases of typhoid fever also appeared, with a few cases of cerebrospinal meningitis.

Camp Merritt was therefore abandoned, and the troops of the independent division of the Eighth Army Corps were removed to the grounds of the military reservation at the Presidio.

Eighteen thousand of the troops from Camp Merriam and from Camp Merritt were dispatched to the Philippine Islands. They were carried on twenty transport steamers, the first expedition sailing on May 25. Each steamship, before being accepted by the Government, was inspected by a board of medical officers, and in each instance the vessel was thoroughly disinfected before the troops went on board. Two or three medical officers, as many hospital stewards, and ten to fifteen privates of the Hospital Corps, equipped for field service, were assigned to each ship. With each expedition was a large quantity of medical supplies to provide the troops for six months and to equip suitable hospitals at Manila. These supplies included medicines, surgical instruments, dressings, hospital furniture, beds and bedding, and all the miscellaneous articles required for the proper treatment and care of the sick. Many articles believed to be necessary in the treatment of the diseases incident to the climate of the Philippine Islands were largely in excess of the allowances of the supply table. Large reserve supplies were sent on the *Arizona* and the *Scandia*, which sailed late in August, to replenish the stores already sent. An additional supply was also placed on both ships in case they should be required to make the return voyage in the capacity of hospital ships.

The precautions taken to secure a good sanitary condition of the vessels prior to embarkation and the sanitary supervision exercised over the men during their long voyage must be credited with the excellent condition in which the troops arrived at Manila, for if any notable sickness had occurred on these vessels its presence would certainly have been announced in the press dispatches. I have received but few reports, as yet, from medical officers who accompanied this expeditionary force, but those which have come to hand give a most gratifying view of the conditions affecting the men while on board the

transports. During the attack on the Spanish lines at Manila, August 13, the field hospitals were established at Camp Dewey, 4 miles from the scene of action. All the wounded, 45 in number, were in hospital and comfortably cared for by 7 p. m. of that day.

The service of the division field hospital, Presidio of San Francisco, Cal., began June 2, 1898, at Camp Merritt, with tents for 48 patients. At this time serious cases, mostly complications of measles, were treated in various civil hospitals in San Francisco. The site of this camp was, as stated above, unsuitable. Its surface was a cold, damp sand, continually exposed to chilly winds and heavy fogs, which saturated the tents, clothing, and bedding of the men with moisture. On July 21 the hospital was moved to the Presidio, where two large brick barrack buildings and a few hospital tents constituted the accommodations. The ventilation was poor; water had to be carried from the lavatory, and the sewerage system, if not faulty, was at least inconvenient for hospital purposes. All necessary supplies and furnishings were promptly furnished by the chief surgeon of the department. A separate special diet kitchen, which gave satisfaction, was maintained. After the departure of the last Philippine troops on the *Scandia*, August 26, the hospital force consisted of 5 hospital stewards, 7 acting stewards, 73 privates of the Hospital Corps, 33 female nurses, and 10 Sisters of Charity, the capacity of the hospital at the time being 320 beds.

The ladies of the Red Cross Society of San Francisco established a convalescent hospital of 25 beds in a sheltered place at the Presidio, to which patients were transferred from the division hospital to recuperate before going on furlough or being returned to duty. The chief surgeon of the department testifies to the value of the assistance given by these ladies, not only as regards this hospital, but in feeding troops on their arrival and departure, and in providing clothing and delicacies for the sick in the camps, hospitals, and transports.

To complete this general review of the camp hospitals a further reference is needful to the history of the regimental hospitals. At first when regimental commands ceased to be separate commands, in becoming the constituent units of brigades and divisions preparatory to operations against the enemy, the regimental hospitals were disbanded to consolidate the working force of the Medical Department and Hospital Corps into division hospitals and ambulance companies. The objects in view were, first, to complete the field organization of the department and, second, to instruct untrained officers and men in their respective duties, so that when field service was undertaken the Medical Department would be efficient in rear of a marching or fighting command.

The want of hospital corps men was the main cause of the failure of chief surgeons to accomplish their purpose promptly. Instead of organizing for field service their time was occupied and their energies spent in endeavoring to procure the necessary men by enlistment or transfer. Instead of instructing for field service they had to instruct untrained men in caring for the ordinary percentage of sick in a healthy command. But after a time, when sickness invaded the camps and the division hospitals became filled, preparations for field service had to give place to the immediate necessity of caring for the sick. The division hospitals became expanded, as at Siboney and Tampa, into base hospitals with increased needs and increased responsibilities. To these I sent with the utmost dispatch physicians and *surgeons under contract*, to relieve the strain on the medical officers *attached to the troops*, and trained nurses to relieve the details from

the regiments who were temporarily acting as hospital corps men. At Camp George H. Thomas, Chickamauga Park, Ga., the expansions of the division hospitals, under the conditions brought about by the typhoid invasion of the camps, became officially recognized as general hospitals and were promptly provided by me with the best available medical service, with trained nurses, with all permissible medical and hospital supplies, and with funds for special purchases.

The altered conditions under which the division hospitals were operating were immediately recognized by the chief surgeon of the Fifth Army Corps at Santiago on the breakdown of that corps after the surrender of the city, and the efforts of his medical officers to care for their sick locally were encouraged by giving them every available facility. The effect of this was seen in the camps at Montauk Point, Long Island, where regimental medical officers cared for many sick under hospital or line canvas, with details by regimental commanders as hospital attendants.

Similarly in other camps regimental hospitals were in many instances equipped to meet the necessities of the occasion. In view of the insidious progress of typhoid fever in infected individuals, febrile cases in the regimental camps required such close attention as could not be given when the men were scattered in quarters, and this called for hospital shelter and supplies. There were, therefore, in some of the camps regimental hospitals in which very serious cases were treated and in which deaths occurred, but these latter were few in number, as a transfer to the division hospitals was usually effected when the dangerous character of the disease became manifest.

The tabulation which I submit below does not include all the cases and deaths in the field hospitals, because medical officers have not in every instance rendered the required reports. The work, for instance, of the hospitals of the Second Army Corps is on this account not fully represented in the tabulation, and the reports for August from the command in the Philippine Islands have not been received. Were all the reports available that are due but not rendered the figures in this tabulation would be materially increased.

Besides this, the cases enumerated below do not represent all the men that were taken on sick report. They do not include the trivial cases that were treated in quarters, nor those cases of a serious character which were treated in regimental hospitals when the accommodations of the division hospitals were temporarily under strain. They do, however, include most of the cases that are tabulated (see p. 131) as admitted into general hospitals, for the majority of those admitted into the general hospitals passed through the division or other field hospitals en route.

Cases and deaths reported from field hospitals to September 30, 1898.

Army corps.	Location.	Cases.	Deaths.
First	First Division, Chickamauga Park, Ga.....	981	25

GENERAL HOSPITALS.

Up to September 30, 11 general hospitals were established and fully manned and equipped. These had a capacity of nearly 7,000 beds. At the same time certain post hospitals having good accommodations were used for the treatment of army cases generally, without alteration of their official status as post hospitals. Those, for instance, at Forts Columbus, Hamilton, and Wadsworth, N. Y., in the East, and at the Presidio of San Francisco, Cal., and Vancouver Barracks, Wash., on the Pacific coast, were expanded in this manner. The vacant beds in the hospitals of the Marine-Hospital Service of the Treasury Department were placed at my disposal and the civil hospitals of the country were ready on call to receive and care for sick and wounded soldiers. These offers of hospital accommodations and medical care were accepted by me in many instances, particularly in New York, Boston, Philadelphia, and Providence to relieve the tent hospitals at Montauk Point when crowded by the rapid transfer of sick from Santiago.

1. *The Leiter General Hospital, Chickamauga, Ga.*—The building occupied was a summer hotel converted to hospital uses. It is a modern and apparently well-constructed building, well furnished throughout, heated by steam, and lighted by electricity. It is situated in 5 acres of ornamental grounds near Crawfish Springs, on a railroad direct from Chattanooga to Camp George H. Thomas. It was estimated to accommodate 175 patients, but cots for 30 convalescents were placed in the verandas, and two wards of 16 tents in all, with an occupancy of 80, were established in the grounds—total capacity, 285 beds. The water supply is pumped from Crawfish Springs into a distributing tank. The personnel of this hospital consisted of 14 medical officers, 38 members of the Hospital Corps, and 34 female nurses. Its kitchens, including special diet, are reported as excellent. The hospital was established June 6, 1898.

2. *General hospital, Key West, Fla.*—On April 20, 1898, the convent and two school buildings and grounds of the Sisters of Mary Immaculate, Key West, Fla., were turned over by agreement to the Medical Department of the Army for use as a hospital during the war. Cots with bedding for 500 patients were immediately forwarded, and the surgeon in command was instructed to call for such supplies as were

needful. The post hospital at Key West Barracks afforded many desirable facilities for the establishment of the general hospital at this place." Frame buildings were erected on the convent grounds for use as isolation wards, earth closets, etc. A pesthouse for the treatment of yellow fever and smallpox cases was established in connection with the general hospital. The personnel consisted of 7 medical officers, 34 members of the Hospital Corps, 9 contract nurses, 23 sisters of the convent, and 29 employees, cooks, laborers, teamsters, etc.

3. *General hospital, Fort McPherson, Ga.*—This hospital may be said to have been established May 14, 1898, when a train load of patients from Tampa, Fla., was received for treatment. Certain of the barrack buildings of the post were used in connection with the wards and offices of the post hospital. On June 20 the accommodations were extended by the use of 35 hospital tents, and shortly afterwards 100 more tents were pitched on frames and floors for use. The number of available beds for patients is 922. The general mess hall of the post is used as a dining hall for convalescents, hospital-corps men, trained nurses, and employees. There are also 4 special diet kitchens, which suffice for the needs of those seriously sick. The personnel consists of 14 medical officers, 3 stewards, 5 acting stewards, and 112 privates of the Hospital Corps, with 2 hospital matrons, 71 female nurses, and 92 other civilian employees, cooks, waiters, and laborers. The patients were mostly derived from the camps at Tampa, Fla., but one train load was received from Chickamauga, Ga., and two from Fernandina, Fla., with a number of cases from the large body of recruits (2,000 to 3,800 men) aggregated at the post.

4. *The general hospital at Fort Monroe, Va.*—Orders were issued June 26 for the establishment of this hospital in connection with the post hospital of the fort. One hundred hospital tents were furnished by the Quartermaster's Department, cots and bedding for 500 patients by the Medical Department, and the surgeon in charge was directed to make requisition for other necessary supplies. The tents were pitched end on to each other in threes and fours, forming pavilion wards with streets between. They were raised from 1 to 2 feet above the surface of the ground, floored, framed, and raftered to give them stability, and connected with other parts of the hospital camp by a board walk. A frame building was erected for use as a kitchen and dining hall, the latter capable of seating 250 persons. Other buildings were constructed for use as water-closets and bath houses, the latter furnished with hot and cold water. Water from the post supply was conducted to all parts of the camp and a condensing plant provided a sufficient supply of distilled water for drinking. All sewage was delivered by sewers into the mains of the sewerage system of the post. This hospital was strengthened by the conveniences of the post hospital, including, besides its wards, an operating room, laboratory, dispensary, X-ray room, offices, special-diet kitchen, and storage rooms. The first patients were received July 13, 244 officers and men from the *City of Washington*, a transport from Santiago, Cuba. These were accommodated in the tent pavilions, but as the kitchen and mess hall building was yet unfinished, Buzzacott ovens under tent flies were used until July 18, when the hospital buildings were completed. This hospital received sick and wounded from the transports *City of Washington*, *Breakwater*, *Solace*, *Hudson*, *Obdam*, and *Lampasas* and from the camp at

Newport News, Va. The medical force attached to the hospital consisted of 15 officers, 2 stewards, 4 acting stewards, and 94 privates of the Hospital Corps, and 43 female and 11 male contract nurses.

5. *General hospital at Fort Myer, Va.*—On May 13, 1898, the Secretary of War approved my request to utilize the vacant barrack buildings of Fort Myer, Va., in connection with the post hospital at that place as a general hospital. The buildings were speedily fitted up and the hospital provided with all needful supplies. One building had to be erected as a deadhouse. The riding hall of the post was floored and converted into a ward for 175 patients. At each end of the riding hall, but detached from it, two water-closets were constructed for the disinfection and disposal of typhoid excreta. Water was brought into this hall, with two faucets at each end of the building, for use in filling tubs for baths. The hospital kitchens were supplemented by a Red Cross special-diet kitchen. The capacity of this hospital is 544. Most of the cases were derived from the Second Army Corps at Camp Alger, Va. The personnel consisted of 18 medical men, 2 stewards, 9 acting stewards, 67 privates of the Hospital Corps, 49 female and 12 male contract nurses, and 28 laborers.

6. *General hospital, Fort Thomas, Ky.*—On April 27 I requested authority to make use of the vacant barrack buildings at Fort Thomas, Ky., as a general hospital. This was granted, and I immediately sent 200 beds and bedding with instructions to the surgeon in command to make use of the quartermaster's bedsteads then in the barracks and to make requisition for the necessary personnel and supplies for active service in his hospital. The proposed establishment was intended as a reserve hospital, and patients were not sent to it until July 7. The number of available beds was 416. Ten medical men were on duty at this hospital, 1 steward, 3 acting stewards, 67 privates of the Hospital Corps, 33 female and 3 male contract nurses.

7. *General hospital, Washington Barracks, D. C.*—This hospital consisted of a tent hospital expansion of the hospital accommodations of the post. The tents were framed and floored; the boards of the flooring were waxed lightly before the cots were put in. Four medical officers were on duty at this hospital, with two stewards. No female nurses were employed, as the surgeon in command had a hospital-corps company of instruction to draw upon according to his needs.

8. *The Josiah Simpson Hospital, Fort Monroe, Va.*—This is a frame pavilion hospital of 1,000 beds, arranged en échelon, on the plans which gave the best satisfaction during the civil war, with an administration building, quarters for medical officers, hospital-corps men, male and female nurses, etc., and buildings for kitchens, dining rooms, storerooms, laundry, chapel, crematory, workshops, etc., all connected by covered board walks and lighted by electricity. Authority for the building and equipping of this establishment was granted by the Secretary of War, on my application of July 12, 1898. It was opened for the reception of patients in September.

The Sternberg and Sanger general hospitals in Chickamauga Park, Ga., and the Ponce general hospital, Porto Rico, have already been briefly described.

The post hospitals, which did duty as general hospitals during the war period, were chiefly six, although many others cared occasionally for sick and wounded men not members of the local garrison. The hospital building at each of these posts is in excellent condition. It formed the administration building of the extended hospital and provided commodious wards for cases of grave sickness. Fifty or more

tents with cots, bedding, etc., for 250 or more patients were sent to the surgeon in charge of each with orders to get in readiness for immediate service. These movements were instituted July 17-28. The tents were floored, framed, and pitched in pavilion wards, and prior to the reception of sick the personnel of the establishment was increased to meet the necessities of the case. At Fort Hamilton, for instance, there were assigned to duty 5 medical men under contract, 1 steward, 6 acting stewards, 24 Hospital Corps privates, and 4 male and 15 female contract nurses. Details made by the commanding officer from the troops in garrison did the policing and other heavy work of the extemporized hospital.

The appended tabulation summarizes the cases and deaths reported to September 30, 1898, from the general hospitals and the post and civil hospitals.

Cases and deaths reported from general, post, and civil hospitals to September 30, 1898.

THE MEDICAL STATISTICS OF THE WAR.

The work of gathering up the records of sickness of the various commands in service during the war has been one of great difficulty. Volunteer medical officers were ignorant of the methods of keeping their records, and many failed to appreciate the importance of what was frequently regarded as "mere paper work," which had no practical bearing on the welfare of their men. Notwithstanding repeated calls from this office and from chief surgeons, many regimental surgeons failed to report concerning their commands, even up to the time when the order was issued for their muster out. War Department instructions to mustering officers have recently succeeded in bringing in many reports of sick and wounded that would otherwise have probably never been rendered.

The work, however, of volunteer surgeons in this regard must be considered as satisfactory when compared with that of the volunteer medical officers of the war of the rebellion. In August, 1862, over four months after the President's call for 75,000 volunteers and five weeks after his call for 500,000 men, the medical reports represented a strength of only 109,054, in September 162,217, and in October 252,037, whereas in May, 1898, while many of the 275,000 men authorized as the war strength of the country had not yet been enlisted, medical reports representing 151,685 men were rendered.

It is to be noted, also, that the reports sent in during the recent war give a complete record of the individual cases, whereas the reports called for during the civil war were merely numerical, and specified the names of the affected soldiers only in the cases of death, discharge for disability, transfer to general hospital, etc. Thus, where a regimental surgeon of the civil war reported 15 cases of diarrhea, all ending in return to duty, the regimental surgeon of the present time reports of each case the name, rank, company, regiment, date of admission to sick report, complications, etc., and date of return to duty. Our present reports are therefore of much greater value for Pension Office purposes than were those of the civil war.

The following tabulations compiled from reports received up to October 25, 1898, are submitted to show the incidence of sickness and mortality on the troops during the five months, May 1 to September 30, 1898. The first presents the absolute number of admissions and deaths from typhoid fever, malarial fevers, diarrheal diseases, and from all causes, during each of the months, while the second gives the ratios per thousand calculated from these numbers.

Our medical officers have reported in full concerning 1,715 deaths,* of which number 640 were occasioned by typhoid fever, 97 by malarial fevers, and 39 by diarrhea and dysentery. The fact that the mean strength for September is only 130,763 shows that all the reports for that month have not as yet been received.

The table giving the ratios per thousand of strength enables comparisons to be made with facility. The death rates for May and June were not in excess of those of the Army in time of peace. In July the rate became somewhat higher than that of most well-cared-for cities, 2.15 for the month, or the equivalent of an annual rate of 25.80 per thousand living. In August it became excessive, 4.08 for the month, equal to an annual rate of 48.96 per thousand. In September the influence of the energetic measures taken in July and August to improve the health of the Army becomes manifest in the falling of the death rate to 2.45 or the equivalent of an annual rate of 29.40. The same progression to an acme in August, with a sudden fall in September is seen in the various ratios given under the specific titles typhoid fever, malarial fever, and diarrheal diseases. This is exceedingly gratifying, and must be credited, as stated, to the sanitary measures adopted, for our experience in the civil war demonstrates that in the absence of these measures the high ratio of August would have been continued for many months to come.

*Reports to the Adjutant-General to September 30, 1898, show 345 killed and died of wounds and 2,485 died of disease in a mean strength of 275,000 men.

Admission to sick report and deaths in the United States Army, May to September, 1898.

[Reported to October 25, 1898.]

I submit herewith for comparison with the statistics given above two tabulations from the records of the Medical and Surgical History of the War of the Rebellion. The first gives the absolute figures reported monthly by medical officers for the thirteen months, May, 1861, to May, 1862, inclusive; the second gives the ratios deduced from these numbers. Attention is invited, in the first place, to the relatively large number of admissions from all causes reported monthly during the civil war, and secondly to the high death rates. Even in May, June, and July, when the army consisted only of the 75,000 volunteers called out by the proclamation of April 15, 1861, the death rates were higher than during the first three months of our recent aggregation of more than three times as many raw troops. And these high death rates continued month after month, becoming higher as the new levies under the 500,000 call were gradually enrolled and became exposed to the insanitary conditions of the camps of that period. In November, 1861, the death rate was higher than that of the month of August last, which so alarmed the country and virtually broke up the army as a fighting machine. December, 1861, and January and February, 1862, had equally high death rates. Disease increased its ravages in March to 6.08, and in April, 1862, it reached its acme, with 3,331 deaths during the month out of a force of 395,703 men, or 8.42 deaths out of every thousand men, as compared with 4.08, the maximum monthly rate of the Spanish-American war.

Similar remarks might be made concerning the relative prevalence and mortality of typhoid and malarial fevers and diarrhea and dysentery, but what I have already said will suffice to direct attention to the points of interest in these tables.

Admissions to sick report and deaths in the United States Army, May, 1861, to May, 1862, inclusive.

I submit also tables of absolute numbers and of ratios by which the incidence of sickness and mortality of the regular and volunteer troops may be contrasted. From these it will be seen that the exposures of the regular troops during the Santiago campaign gave them from June to September a higher death rate than the volunteers, and that the rate of the latter during August, the month of maximum mortality, was 3.62, as compared with 5.89 among the regular troops:

VOLUNTEER RELIEF WORK.

My attitude toward relief organizations is shown by an indorsement dated May 5 upon a letter addressed by Rev. Henry C. McCook, of Philadelphia, to the President and referred to me for remark:

MAY 5, 1898.

Respectfully returned to the Adjutant-General of the Army.
The plan proposed for the organization of a relief association appears to have been well considered, and the object in view will commend itself to every patriotic citizen. But it is a question whether the President should give special privileges to any particular organization. Other prominent individuals in different parts of the country may be organizing for the same purpose. One such proposition has come to me from Chicago. While I approve in a general way of organization for the relief work proposed, it appears to me that it will be best not to give in advance exclusive privileges to any one particular organization. In case of need assistance should be accepted from any organization prepared to give it.

This has been my guiding principle throughout, that relief when needed should be promptly accepted without reference to the source from which it comes. The relief afforded by the National Red Cross at Siboney was promptly accepted by the surgeons on the spot, but it is evident that it was entirely inadequate to meet the emergency.

A committee of the American National Red Cross Association called upon me in my office in Washington some time in advance of the landing of our troops in Santiago, making an offer of assistance. I received them most courteously and advised them to use their resources in fitting up a hospital ship, telling them that a hospital ship was now being fitted up for the use of the Medical Department, but that it was not at all improbable that an emergency would arise which would overtax our resources, and that in such an event a hospital ship properly equipped, having on board a corps of doctors and nurses, would be a most valuable auxiliary.

The American National Red Cross Association has had full authority to send agents and supplies to all our camps since June 9, 1898.

The following letter was sent by me to every chief surgeon of a department or independent army in the field on June 9, 1898:

The Secretary of War has approved of the following proposition made by the American National Red Cross Association, and the chief surgeons of army corps and divisions will cooperate with the authorized agents of this association for the purpose indicated.

"We can put any desired amount of hospital supplies—ice, malted milk, condensed milk, Mellin's food, etc.—into any of the volunteer camps in a few hours. Will you be kind enough to bring this letter to the attention of Secretary Alger and ask him if there is any objection to our appointing a Red Cross representative to report to the commanding officer and the chief surgeons in every camp, confer with them as to their immediate needs, and, if anything of any kind is wanting, open there a Red Cross station and send in the supplies. We can do this, not in a few weeks or a few days, but in a few hours, and can furnish any quantity of any desired luxury or delicacy for hospital use. We hereby tender our aid and put our organization at the War Department's service for cooperation in this field."

In accordance with their promise the American National Red Cross Association has had agents in all of our principal camps and has contributed supplies of various kinds in a most liberal manner for the use of our field hospitals. The value of the assistance rendered by them has been highly appreciated by medical officers generally. Other organizations which have rendered very valuable services are the National Relief Commission, having its headquarters in Philadelphia, and the Massachusetts Volunteer Aid Association, with headquarters in Boston. Both of these organizations fitted out hospital ships, which were placed at my service for the transportation of our sick from Porto Rico, and I take pleasure in testifying to the valuable services rendered by the yacht *May*, of the National Relief Commission, and the hospital ship *Bay State*, of the Massachusetts Volunteer Aid Association.

SPECIAL FUND.

Sums of money, varying from 33 cents, sent by Master Oliver S. Whitaker, of Detroit, Mich., to \$5,000, by Mr. Cleveland H. Dodge, chairman of the supply committee, National Red Cross Society, have been sent to me to be used according to my discretion for the benefit of our sick and wounded soldiers. In all, I have received \$24,244.94. The largest contributors have been: The Colonial Dames of America, through the treasurer, Miss E. B. Nicholas, of Washington, D. C., \$3,500. The Red Cross Society, through Mr. Cleveland H. Dodge,

chairman supply committee, \$5,000. The Red Cross Auxiliary, No. 3, through Mrs. Winthrop Cowdin, of New York, \$2,000. The Women's War Relief Association, through Mrs. Victoria Raymond, treasurer (contributed for hospital ship *Relief*), \$2,275. The Colonial Dames of New York State, through Mrs. Mary J. Chauncey, secretary, \$500. The War Emergency Relief Board, Cleveland, Ohio, through Mrs. K. V. Painter, \$600. The Blue Anchor Society of New York, through Miss Alice Sandford, \$250. The Rhode Island Sanitary Relief Association, of Newport, \$500. The Society of "Spinners," through Mrs. Harriet T. Thorne, Bridgeport, Conn., \$300. The Women's Aid Society, of Rhode Island, through Mrs. Wm. M. Greene, \$600. The Brooklawn Country Club, through Mr. Charles Sherwood, of Bridgeport, Conn., \$110.50. The ladies of Jersey City, through Mrs. James H. Noe, \$600. Mrs. Jonathan Thorne, of Bridgeport, Conn., \$300. The General Council of Colonial Wars, of Philadelphia, \$1,200. The Daughters of the Revolution, of Wheeling, W. Va., through Mrs. R. M. Baird, \$60. The Martha Washington Chapter, Daughters of the American Revolution, New York City, \$335. The Spanish and Portuguese Congregation and Sisterhood of Shearith Israel of New York City, through Mr. Albert J. Elias, \$494. Women's Relief Corps, Yankton, S. Dak., through Mrs. S. Nevada Hereford, \$50. The Ohio National Women's Relief Corps, through Mrs. I. T. Bagley, of Zanesville, \$700. Mrs. Robert Patterson, Chicago, Ill., \$100. Mrs. Courtland Hoppin, Pomfret Center, Conn., \$125. Dr. Annie H. Pierce, Perry, N. Y., \$125. Sale of bale of cotton at New York, Boston, Chicago, St. Louis, and Kansas City, \$2,261. W. J. A. Bliss, Lynton, England, \$100. Mr. I. I. Bargaen, Mountain Lake, Minn., \$76.14. Mrs. Kate A. Wolf, Bordentown, N. J., \$60. Mrs. Paula Bronson, Summit, N. J., \$76.41. Mrs. Imogene Granbery, Lotus Lodge, Essex County, N. Y., \$100. Miss Louise Hoppin, \$380.

This money has been sent by me principally to general hospitals, to chief surgeons of army corps in the field, and to commanding officers of hospital ships, for use in the purchase of delicacies for the sick.

THE MEDICAL CORPS.

Before concluding my report of the operations of the Medical Department during our short and glorious war with Spain I feel it my duty to call special attention to the efficient services rendered by the medical officers of the Army in the various responsible positions which the exigencies of the service have made it necessary for them to fill. The inadequacy in the number of trained and experienced medical officers has been very evident and has been a source of great embarrassment to me in my efforts to meet the demands of the service; but, as a rule, our medical officers have performed the duties imposed upon them in a most loyal, intelligent, and zealous manner. They have shared with line officers the dangers of battle, and they have encountered with unflinching courage the more difficult and protracted combat with the infectious diseases which have invaded our camps and filled our hospitals. Many of them have suffered attacks of typhoid and malarial fevers, and at one time no less than 15 per cent of the corps was disabled by sickness. Of those who accompanied General Shafter's army to Santiago very few escaped serious sickness, and two of those who distinguished themselves for devotion to duty lost their lives as a result of exposure to the malign

influences which in so short a time sapped the vitality of the flower of the American army during the operations in the vicinity of Santiago. But credit is due not alone to those in the field. The labors of those on duty as chief surgeons of military departments and in charge of medical-supply depots have been enormously increased and it has required unremitting effort to meet the exigencies of the war. One officer, Lieut. Col. J. V. D. Middleton, deputy surgeon-general, has been called upon to do the double duty of chief surgeon of the Department of California and medical-supply officer at San Francisco. He has had the responsible duty of supplying the troops going to Manila, and has acquitted himself to my entire satisfaction as was to have been expected of an officer of his intelligence and experience.

Col. Charles H. Alden, assistant surgeon-general, has been next to me in responsibility, as he is in rank in the Medical Department. During the five years that he has been my principal assistant he has distinguished himself by his indefatigable industry, familiarity with all that pertains to the administration of the Medical Department, and conscientious devotion to duty. During the greater part of the war, as previously, he has had general charge of two of the most important divisions in my office—that pertaining to the purchase and issue of supplies and the hospital corps division.

The sanitary division has for many years been under the charge of Lieut. Col. Charles Smart, deputy surgeon-general, who is a recognized authority upon hygiene, sanitary chemistry, and army sanitary statistics. I can not speak too highly of his zealous and intelligent performance of the responsible duties connected with this branch of the medical service. But in addition to this he has acted as a disbursing officer, as a sanitary inspector on several occasions, and has been charged with various other important duties.

Col. Joseph P. Wright has been in charge of the medical-supply depot in St. Louis, and Lieut. Col. J. M. Brown, deputy surgeon-general, of that in New York. The demands upon these supply depots have called for the most unremitting labor, and the results accomplished under the most difficult conditions entitle these officers to special commendation.

The medical officers selected to take charge of our general hospitals and hospital ships have all distinguished themselves by their intelligent devotion to their responsible duties.

The duties imposed upon Maj. Charles Richard, who has had charge of the hospital train, have been especially important and arduous, and have been performed in a manner most creditable to him and to the medical corps. Although nearly 3,000 cases have been taken by this train from field hospitals in the camps to our general hospitals, not a word of complaint from any source has reached me with reference to this transportation service.

The chief surgeon of the army in the field, Col. Charles R. Greenleaf, assistant surgeon-general, United States Army, and the chief surgeons of the several army corps have been unremitting in their efforts to organize an efficient medical department for active military operations; but, as was to have been expected, this proved to be a task requiring both time and patience. The result has, however, been all that could have reasonably been expected when the difficulties encountered are taken fully into consideration. The amount of sickness from diseases classed by sanitarians as “preventable” has been excessive, but the conditions which have led to the wide prevalence of these diseases in our camps of instruction have been to a large extent beyond the control of the Medical Department, which has, nev-

ertheless, heroically and successfully met the difficult task of caring for a large number of seriously sick soldiers in field hospitals. The care of the sick in the field and in hospital and the administration of medical affairs in our camps has been to a large extent in the hands of the enlarged Medical Department, resulting from the organization of a volunteer army. Many of the division and brigade surgeons appointed by the President upon my recommendation and a considerable proportion of the regimental surgeons have proved themselves to be well qualified for the important duties devolving upon them, and after a few months' experience in camp have acquired a satisfactory knowledge of matters pertaining to army administration, camp sanitation, etc., which for a medical officer are quite as important as his professional qualifications.

Before closing this report I desire to call attention to the patriotic devotion to duty of the clerical force of the Surgeon-General's Office, and especially to the efficient services rendered by Mr. George A. Jones, chief clerk, and other clerks in charge of the principal divisions in my office. The enormous increase in the amount of work to be done as a result of the war, and the want of experience on the part of clerks temporarily employed to meet the emergency, has made it necessary for a considerable number of our most experienced clerks to remain at their desks until long after office hours, and often to return to their work in the evening. This they have done cheerfully and without complaint, and as a result the work of my office has not at any time fallen behind to any considerable extent.

RECOMMENDATIONS.

The increase of the enlisted strength of the Army to a total of 60,000, and the large number of new stations to be garrisoned in the islands acquired and occupied by the United States, makes an increase in the Medical Corps absolutely essential. I therefore recommend an addition to the number of medical officers now allowed by law of 2 assistant surgeons-general with the rank of colonel, 6 deputy surgeons-general with the rank of lieutenant-colonel, 30 surgeons with the rank of major, and 50 assistant surgeons with the rank of first lieutenant.

This recommendation is based upon the present organization of the Army. Any increase made by Congress during the coming session will necessitate a further increase of the Medical Corps.

REPORTS AND PAPERS.

Lastly, I invite attention to certain circulars issued by me and to reports and papers rendered by medical officers which illustrate the work of the Medical Department and the many difficulties under which it was accomplished:

CIRCULARS FROM THE OFFICE OF THE SURGEON-GENERAL OF THE ARMY.

[Circular No. 1.]

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, April 25, 1898.

In time of war a great responsibility rests upon medical officers of the Army, for the result of a campaign may depend upon the sanitary measures adopted or neglected by commanding generals of armies in the field. The medical officer is responsible for proper recommendations relating to the protection of the health of troops in camp or in garrison, and it is believed that, as a rule, medical officers

of the United States Army are well informed as to the necessary measures of prophylaxis and the serious results which infallibly follow a neglect of these measures, especially when unacclimated troops are called upon for service in a tropical or semitropical country during the sickly season. In Cuba our armies will have to contend not only with malarial fevers and the usual camp diseases—typhoid fever, diarrhea, and dysentery—but they will be more or less exposed in localities where yellow fever is endemic and under conditions extremely favorable for the development of an epidemic among unacclimated troops. In view of this danger, the attention of medical officers, and of all others responsible for the health of our troops in the field, is invited to the following recommendations:

When practicable camps should be established on high and well-drained ground not previously occupied.

Sinks should be dug before a camp is occupied, or as soon after as practicable. The surface of fecal matter should be covered with fresh earth or quicklime or ashes three times a day.

New sinks should be dug and old ones filled when the contents of the old ones are two feet from the surface of the ground.

Every man should be punished who fails to make use of the sinks.

All kitchen refuse should be promptly buried and perfect sanitary police maintained.

Troops should drink only boiled or filtered water and coffee or tea (hot or cold), except where spring water can be obtained which is pronounced to be wholesome by a medical officer.

Every case of fever should receive prompt attention. If albumen is found in the urine of a patient with fever it should be considered suspicious (of yellow fever), and he should be placed in an isolated tent. The discharges of patients with fever should always be disinfected at once with a solution of carbolic acid (5 per cent) or of chloride of lime (6 ounces to gallon of water), or with milk of lime, made from fresh quicklime.

Whenever a case of yellow fever occurs in camp, the troops should be promptly moved to a fresh camping ground located a mile or more from the infected camp.

No doubt typhoid fever, camp diarrhea, and probably yellow fever are frequently communicated to soldiers in camp through the agency of flies, which swarm about fecal matter and filth of all kinds deposited upon the ground or in shallow pits, and directly convey infectious material, attached to their feet or contained in their excreta, to the food which is exposed while being prepared at the company kitchens or while being served in the mess tent. It is for this reason that a strict sanitary police is so important. Also because the water supply may be contaminated in the same way, or by surface drainage.

If it can be avoided, marches should not be made in the hottest part of the day—from 10 a. m. to 5 p. m.

When called upon for duty at night or early in the morning, a cup of hot coffee should be taken.

It is unsafe to eat heartily or drink freely when greatly fatigued or overheated.

Ripe fruit may be eaten in moderation, but green or overripe fruit will give rise to bowel complaints. Food should be thoroughly cooked and free from fermentation or putrefactive changes.

In decidedly malarious localities, from 3 to 5 grains of quinine may be taken in the early morning as a prophylactic, but the taking of quinine as a routine practice should only be recommended under exceptional circumstances.

Light woolen underclothing should be worn, and when a soldier's clothing or bedding becomes damp from exposure to rain or heavy dews the first opportunity should be taken to dry it in the sun or by fire.

[Circular No. 3.]

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, D. C., May 18, 1898.

For the information of chief surgeons in organizing the medical department and hospital corps of their commands, the following, relating to the duties of medical officers in the field, is published.

Duties of chief surgeons of corps.—The chief surgeon of a corps is held responsible for the proper and effective management of the medical service of the command.

He should keep a register of the medical officers and hospital corps, making assignments and issuing orders and instructions with the approval of and "by

order" of the Major-General Commanding, if authorized to do so. He should make himself acquainted with the sanitary conditions affecting the troops, the efficiency of the field hospitals and of the ambulance companies, and should call for weekly reports of sick and wounded and of the personnel and means of transportation of the hospital corps. All reports and papers not requiring special action should be checked off and receive the stamp of his office before transmittal. Such papers include personal reports of medical officers, monthly reports of sick and wounded, of the hospital corps and of the hospital fund, and sanitary reports from chief surgeons of brigades and divisions; also the lists of wounded called for after an engagement. A copy of the action taken on all papers referred to him or forwarded by him should be made in an indorsement book. Such papers include those relating to resignations, leave of absence, or discharge on account of disability, requisitions for medical and hospital and hospital corps supplies, and all recommendations or complaints referring to the medical service or affecting the health and well-being of the troops. Copies of orders and letters should be made and placed on file, and all circulars and orders from the Surgeon-General or the Chief Surgeon of the Army should be published without delay to the chief surgeons of divisions.

Prior to a movement, the chief surgeon should verify, by personal inspection, the condition of the hospitals and of the hospital corps companies and their trains, and should make all the arrangements needful for the probable exigencies of the campaign. He should see that the assignments by chief surgeons of divisions to positions on the operating staff of the field hospitals include the best surgical skill of each division. On the march, he should accompany the staff and acquaint himself with the topography of the country; and when an engagement is imminent he should indicate to chief surgeons of divisions the localities best suited for the establishment of the field hospitals. He should inspect these from time to time, and exercise general supervision over the first aid and ambulance stations and the movement of the wounded to the hospitals. He should also supervise the movement of sick and wounded to the base or general hospitals, providing transportation and detailing medical officers and attendants for their care. When absent on such duties he should leave a competent medical officer with the staff to represent him and to inform him of important changes in the military conditions. The Commanding General should be kept informed of the work of the Medical Department, and should always be consulted in matters of importance.

Duties of chief surgeons of divisions.—The chief surgeon of a division supervises the medical and hospital corps service of the division. He should transmit official reports and papers, with the stamp of his office if routine in character, or with his views indorsed thereon if the subject appears to call for this action. He should have frequent personal communication with the chief surgeon of the corps, and should endeavor to carry out the views of the latter on behalf of the troops. His usual position is with the staff, but he should make frequent visits to the division hospital and the ambulance company, to oversee their work. He should detail one medical officer in rotation as officer of the day, who, on the march, should keep him informed of any noteworthy occurrence, and who, in camp, should visit each regiment of the division to report on its hygienic and sanitary conditions. Before an engagement he should see that the field hospital is properly established and that the operating surgeons and their assistants are at their proper stations. During and after the engagement he should supervise the movement of the wounded from the ambulance stations to the hospitals.

Duties of chief surgeons of brigades.—The chief surgeon of a brigade is the adviser of the brigade commander in all medical and sanitary questions concerning the command. He should call for a weekly (or daily, as may be required) report of sick and wounded from regimental surgeons, and of the detailed members of the hospital corps on duty with them. He should forward the formal reports of these surgeons, and promulgate orders from brigade and higher authorities. He should keep careful watch over the health of the brigade, reporting in writing from time to time, as may be required, and consulting in emergencies with the chief surgeon of the division. During and after an engagement he should supervise the work at the first-aid stations and the removal of the wounded to the ambulance stations, unless on account of his superior ability, he has been assigned to duty at the operating tables, in which case a competent officer should be detailed to represent him temporarily on the staff of the brigade.

Duties of regimental surgeons.—The regimental surgeon is in sanitary matters the adviser of the regimental commander. On the march and in camp he should examine the sick with a view to their proper treatment and disposition. He is responsible for any unexpendable medical and hospital property issued for the use of the regiment. His supplies of medicines, etc., should be renewed by requisition

on the surgeon in charge of the hospital. Members of the hospital corps on duty with the division are detailed to duty with him. Daily, after sick call, he should send a morning report of sick and wounded and of the hospital corps to the regimental commander, with a duplicate to the chief surgeon of the brigade. He should keep, as a register of sick and wounded, a retained copy of the monthly report forwarded through the offices of chief surgeons to the Surgeon-General; cases treated in the division field hospital should be borne on this report as so treated. He should forward monthly or when his official station has been changed a personal report on a memorandum slip. After every engagement a list of wounded of the command should be forwarded. If the regimental surgeon is, by order of the chief surgeon, placed on temporary special duty, the senior medical officer with the command will perform the duties of the regimental surgeon. During an engagement he should serve at the first-aid stations.

Duties of surgeons in charge of division hospitals.—The surgeon in charge of a division hospital is responsible for the care of the sick and wounded on the march and in camp, and for the comfort and general welfare of the wounded when brought to the hospital by the ambulance service. He should direct the unpacking of the wagons for the establishment of so much of the hospital as may be necessary, and the subsequent repacking when the march is to be resumed. He should superintend the admission, return to duty, or transfer to base hospitals of his patients. As commanding officer of the hospital corps detachment he should keep the accounts of the enlisted men on duty at the hospital. He should make timely requisition for medicines, medical and hospital stores, supplies and property, for the care, expenditure, and use of which he is held responsible. He should supply regimental and other medical officers of the division with such articles as may be required and are available for the treatment of the sick. He should send a daily report of sick and wounded and of the hospital corps to the chief surgeon, and transmit to the Surgeon-General similar reports for the month, with a statement of the hospital fund. After an engagement he should forward lists of wounded, and on sending patients to base hospitals he should furnish transfer lists to the senior surgeon accompanying them. Medical officers may be assigned to assist him in the management of the hospital. One of these should act as executive officer, aiding the surgeon in charge in the work of supervision, and having special charge of the records. Another should superintend the cooking and diet of the hospital, drawing rations from the Subsistence Department, and issuing them for use and keeping the accounts of the hospital fund. He should also have special charge of the hospital stores, and of such articles of property as are connected with the cooking and serving of food. Others should be assigned as attending surgeons to care for the sick on the march and in camp, and during an engagement to look after the management of the wards, and to make notes of operative procedures, deaths, and of the progress of cases for subsequent report to the surgeon in charge and entry on the records of the hospital.

Duties of medical officers in command of ambulance companies.—The medical officer, in command of the ambulance company is charged with the care of the pay, clothing, and subsistence of his men, and is held responsible for the care of ambulances and other wagons, tents, horses, mules, forage, etc. His subaltern officers assist him in the discharge of these duties. During and after an engagement he is responsible for the safe and speedy transportation of the wounded on litters and in ambulance wagons from the field to the hospital by way of the first-aid and ambulance stations, which latter he should organize.

Medical officers of the Volunteer Army should make themselves familiar with the provisions and requirements of the Manual for the Medical Department, the paragraphs of Army Regulations relating to the Medical Department, the Drill Regulations for the Hospital Corps, and the chapters in Part I of the Handbook for the Hospital Corps, by Deputy Surg. Gen. Charles Smart.

[Circular No. 4.]

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, May 31, 1898.

The Quartermaster-General has been authorized to provide filters for the use of the Army. The filters recommended by the Surgeon-General are the Berkefeld cylinder and the Maignen asbestos filter. These filters are intended to supplement each other, and the use of both is required to obtain a plentiful supply of water free from the germs of disease. Medical and company officers should

have a thorough understanding of the intention and action of each of these filters, that the full benefit of their use may be insured to the troops.

The Berkefeld filter is a specially prepared earthenware cylinder, through the pores of which the water has to be forced by the exercise of considerable piston pressure. The pores are so small that they exclude or filter out, not only all particles which would give a turbidity or cloudiness to the water, but those more minute particles which are the active agents in the production of typhoid fever and other camp diseases. The filter is, therefore, an efficient filter, but the smallness of the pores which gives it its efficiency constitutes an objection to its use in practice. Its pores speedily become choked by a coating of filtered particles. If greater pressure be used to increase the rapidity of filtration, the connections of the cylinder may become strained and the filter be rendered valueless, while if the cylinder be removed and its surface scrubbed, it is exposed to the risk of fracture unless handled with the utmost care.

The Maignen asbestos filter has larger pores than the other. Water passes through it more readily and under slight pressure. The coarser particles which give a cloudiness or turbidity to a water are strained out, but as the germs of disease are not excluded, the filtration from a sanitary point of view is not efficient.

It will be seen, however, that the Maignen filter may be put advantageously to use in preparing water for purification by the Berkefeld cylinder. By straining out the particles which otherwise would choke the Berkefeld filter, it enables the latter to operate as rapidly as itself and does away with the necessity for increased pressure or frequent interruptions for scrubbing the porous cylinder.

To use the two filters in combination, the bucket or other receptacle containing the unfiltered water and the asbestos filter should be securely fixed at a height of 5 or 6 feet from the ground. From this bucket, the clear but not necessarily pure water is delivered by the rubber tube of the filter into another bucket properly placed to receive it, and to admit of the pumping of the filtered water through the Berkefeld cylinder into vessels for storage or use.

It has been found that asbestos-filtered water can be rendered sterile by the Berkefeld apparatus at the rate of about 5 gallons in twelve minutes, the pump working easily.

The outer covering of the Maignen filter should be kept free from deposits of clay or other matters by brushing or scrubbing. If need be, the outer casing of asbestos cloth may be removed, washed, and replaced. The filter as a whole may be sterilized when necessary by boiling in water. When not in use it should be exposed to the air as much as possible.

The Berkefeld filter is worked by placing the pump in the vessel containing the asbestos-filtered water, with its nozzle resting firmly on the bottom. The piston is then worked without jerking, while counter pressure is made with the left hand on the top of the barrel. To keep the cylinder in perfect condition, when thus used, it should be sterilized every fourth day. The thumbscrews on top should be unloosed, and the cylinder, having been lifted carefully from its metal case, should be put in water of ordinary temperature, which should be brought to the boiling point and kept at this temperature for five minutes. When removed from the hot water it should be allowed to cool before being replaced for use. The cylinder is liable to become cracked and useless by sudden changes of temperature. If a cracked or worn-out cylinder has to be replaced, the small wheel should be unscrewed from the lower end of the old cylinder and screwed upon the new one. The nut at the bottom of a cylinder should never be unscrewed.

[Circular No. 5.]

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, August 8, 1898.

The attention of medical officers is invited to Circular No. 1 from this office, dated Washington, April 25, 1898.

The extensive prevalence of typhoid fever in camps of instruction indicates that the sanitary recommendations made in this circular have not been carried out. If medical officers have failed to make the proper recommendations as indicated, the responsibility rests with them. If the recommendations have been made and not acted upon by those having authority in the various camps, the responsibility is not with the Medical Department, but these recommendations should be repeated and commanding officers urged to move their camps at frequent intervals and to maintain a strict sanitary police.

[Circular No. 6.]

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, August 12, 1898.

Chief surgeons of army corps, of divisions, and of smaller independent commands are expected to make timely requisition for medical supplies. It must be remembered that some delay is often unavoidable in putting up supplies at the supply depots and in their transportation to the point at which they are needed. In an unexpected emergency telegraphic requisition must be made and supplies will be sent by express; but it must be remembered that this mode of transportation is very expensive and that failure to make requisition in advance of immediate needs entails unnecessary expense upon the Government. Division and field hospitals in which typhoid fever and other serious cases are treated should be liberally supplied with all articles necessary for the treatment and comfort of the sick. The field supply table applies only to mobile commands and division hospitals to accompany them on short notice.

[Circular No. 7.]

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, September 5, 1898.

The attention of chief surgeons and of all medical officers on duty with troops in the field is called to the following paragraphs from the Manual for the Medical Department:

"92. When accumulations of organic material undergoing decomposition can not be removed or buried, they may be treated with an antiseptic solution or with freshly burned quicklime. Quicklime is also a valuable disinfectant, and may be substituted for the more expensive chloride of lime for disinfection of typhoid and cholera excreta, etc. For this purpose freshly prepared milk of lime should be used, containing about 1 part, by weight, of hydrate of lime to 8 of water.

"93. During the prevalence of an epidemic, or when there is reason to believe that infectious material has been introduced from any source, latrines and cess-pools may be treated with milk of lime in the proportion of 5 parts to 100 parts of the contents of the vault and the daily addition of 10 parts for 100 parts of daily increment of feces."

Quicklime should be purchased in such quantities as may be necessary for the purpose of carrying out these instructions, and vouchers sent to the Surgeon-General of the Army for payment from the medical and hospital appropriation.

REPORT OF OPERATIONS OF THE MEDICAL DEPARTMENT AT SANTIAGO, CUBA,
 AND IN PORTO RICO, BY COL. CHARLES R. GREENLEAF, CHIEF SURGEON ARMY
 IN THE FIELD.

[Dated August 24, 1898.]

Leaving Charleston, S. C., on the 8th of July, 1898, by the U. S. S. *Yale*, we found on board the Sixth Massachusetts Volunteers and one company of the Sixth Illinois, with General Garretson's brigade headquarters, these troops having previously been at Camp Alger. During the voyage to Cuba a number of cases of typhoid fever developed. They were as well taken care of as circumstances would permit, under the direction of Maj. George W. Crile, brigade surgeon of volunteers.

Arriving at Siboney, Cuba, twenty cases were sent during my absence from the ship, by order of Captain Wise, of the Navy, and transferred to the steamship *Seneca*, to be sent north.

It was at once reported to me that yellow fever had made its appearance among the troops in Cuba, and I proceeded to the shore to investigate the matter. I found that immediately upon landing the troops had occupied all the houses in the little town of Siboney, and along the line of march into the island had also occupied blockhouses or native huts without taking any measures for their disinfection or fumigation; they had also been brought in contact with refugees from Santiago.

Prior to leaving the United States I had drawn up very carefully, after consultation with Dr. Guiteras, the yellow-fever expert, and others, a system of preventive measures to be put in force as soon as the troops should land; this was

communicated to the chief surgeon of the Fifth Corps. Having been informed by the officers of the Jaragua Iron Company, located at Siboney and Daiquiri, that the buildings occupied by their operatives had during each year been inhabited by persons with yellow fever, explicit directions were given to destroy by fire immediately after landing every building at this place and on the line of march of the troops. These directions were, at my suggestion, telegraphed from Washington by General Miles to the commanding general of the Fifth Army Corps. A small yellow-fever hospital and a camp of detention close to the borders of the town had been established before our arrival, but the large number of nonimmunes continually coming into the town and entering these infected buildings was rapidly adding to the number of these infected cases. I therefore, by authority of the general commanding, proceeded to have every building in the town that had been occupied as habitations destroyed by fire, hoping that by this action the source of infection at this place would be removed and a sufficient surface of sterilized ground obtained for the location of a large camp of detention. It became apparent within a few days that the entire army had become infected, as the reports from medical officers showed that every organization furnished one or more cases. I accordingly recommended the immediate removal of such troops as could be moved without detriment to the military situation, and after the capitulation recommended the removal of the entire army from the trenches, either towards Santiago, making fresh camps every second day, or backward into the mountains, and in the event of failure to stamp out the disease by this method, to ship the army as rapidly as possible back to the United States. To all these recommendations General Miles gave his cordial assent, and promptly issued the necessary orders.

I was much embarrassed in taking care of the sick by the lack of nurses and proper guards, and applied twice to the general commanding the Fifth Army Corps for troops to perform this duty, but he declined to furnish them; on my appeal to General Miles, however, he promptly ordered the whole of the Twenty-fourth Infantry to report to me for duty. This regiment made a night march, arriving at Siboney early the next morning; the necessity for aid was so urgent that I requested the commanding officer to call for volunteers from that regiment to serve in the yellow-fever hospitals; this request brought forth a prompt response, more than twice the number of men required volunteering for this perilous duty. I desire to bring to the notice of the General Commanding the Army the conduct of these men; the cheerfulness with which they did their duty under the most adverse circumstances, and the promptness with which they volunteered for any service with the sick deserves in my opinion a special commendation.

The hospital accommodations at Siboney were very limited owing to a lack of tentage. The number of medical officers for duty with the sick was inadequate, and the quantity of medical supplies on shore was insufficient; the reasons for this were a depletion of the personnel for service with transports returning wounded to the States, and a lack of facility for unloading either the transports or the hospital ship *Relief*, on board of which ample supplies were stored; it was only after forcible removal of pontoons, upon my own responsibility, from a transport loaded with engineering material, that the supplies from the *Relief* were unloaded.

Two immune medical officers were taken from the *Relief* for duty in the yellow-fever hospital, and all loose tentage that could be obtained was sent to increase its capacity. The peculiar conditions made it impossible to furnish such care and attention to the sick as we desired, but not in the history of any war did medical officers of the army labor with more zeal and more self-sacrifice than did the officers under my personal observation at Siboney and its vicinity.

To Maj. Louis A. La Garde, surgeon, United States Volunteers, and Capt. M. W. Ireland, assistant surgeon, United States Army, too much praise can not be given for their untiring devotion in the arduous and trying duties that were imposed upon them, and if there is any promotion the Government can give them for their service I most cordially commend them for it.

Leaving Siboney on the 18th of July we proceeded to Guantanamo Bay, the rendezvous for the Porto Rican expedition. At this place we found a detachment of doctors and female nurses on board the steamship *Lampasas* that had been sent to work with the Red Cross Association. As they could not go into Cuba or land from their own ship, I determined to use them in the Porto Rican expedition, and subsequent events demonstrated the wisdom of this action, since the increase of typhoid-fever cases on board the steamship *Yale* was very large, requiring the transfer of some 80-odd to the ship on which these nurses were quartered, which I converted into a quasi-hospital ship, notifying the medical officers in charge of the various transports to send their sick to it, and with them descriptive lists, complete transfer lists, and sufficient quantities of medical supplies and rations

to last during the return voyage to the States; the only things, however, that the doctors furnished were the patients. When en route to Porto Rico two deaths occurred on the transports, the interments in each case being at sea. To avoid a repetition of the disregard of sanitary measures that occurred in the army in Cuba, other and more explicit directions were recommended, which General Miles promulgated in orders.

Arriving at Guanica on the 25th of July, the town and harbor were occupied, and the next morning a sharp engagement occurred, in which we had four men wounded. These were cared for at the brigade hospital. Their wounds were so slight that transfer to the *Lampasas* was not considered necessary. More transports arrived while we were at Guanica, each one bringing a large detachment of typhoid cases, which were transferred to the *Lampasas*. The health of the troops on shore while we were at Guanica was good, although some typhoid cases developed, but later, heavy rains occurring, a large sick report speedily resulted.

Arriving at Ponce on the 28th July, I found a large and well-appointed military hospital on the outskirts of the town, containing 44 sick Spanish soldiers who had been abandoned by their army in its retreat. As they were without proper food, medicines, or medical attendants General Miles instructed me to provide for them, and I employed a Porto Rican physician for that purpose, who has done excellent service up to this time. The men as they recovered were paroled, and finally the few remaining were removed, leaving the large hospital free for our own sick.

The appointment of Maj. J. McG. Woodbury, surgeon, United States Volunteers, was recommended as sanitary inspector, and instructions were given him to put the town of Ponce, which was in a filthy condition, into as clean a state as possible. He convened a meeting of the local physicians, organized a board of health, and caused a vigorous cleaning up of the streets and alleyways of the town. All buildings that were likely to be occupied by troops were cleaned, disinfected, and fumigated, and no one was permitted to enter them until a certificate from the sanitary inspector as to their cleanliness was given. Major Woodbury's report on this subject is herewith appended. Similar sanitary precautions were taken with the camps occupied by our men, and every effort was made to prevent the introduction of sickness.

As soon as practicable after our arrival the sick on the steamers *Obdam* and *Lampasas* were sent north, with a sufficient number of medical officers and hospital attendants and such dressings and comforts as could be spared. Similar difficulties were encountered at this place in the unloading of medical supplies from the transports to those we met at Siboney, although in a minor degree; and the sick were subject to much discomfort from the lack of tentage, ambulance transportation, and medicines for several days until these could be gotten on shore. Instances occurred where the hospital supplies would be on one transport, the tents on another, and the medical officers on a third.

The military hospital before referred to was in an exceedingly filthy condition, the privies overflowing with liquid excrement and the various rooms being indescribably dirty. I placed the matter of cleaning these rooms in the hands of Major Daly, surgeon, United States Volunteers, who performed this work in a most efficient manner, and within ten days after arrival we were able to use the building as a hospital for our own men. I placed Assistant Surgeon Ten Eyck, United States Army, in charge, drawing details from the various commands for nurses, and immediately commenced the admission of patients. I also detailed Assistant Surgeon Hartsock, United States Army, as medical-supply officer, making the basement of the hospital his depot. The troops in the field were supplied with barely a sufficient number of medical officers and hospital attendants to care for such wounded as might occur in the actions that were anticipated, and I did not feel justified in drawing upon their slender resources, for which reason the service of this hospital was not as efficient as it should have been.

On the evening before the troops left their camp near Ponce to march against the Spaniards, the chief surgeon of the several divisions informed me that about 50 men would have to be left in the hospital, and I made the necessary arrangements for their reception; but during the night the building was invaded by a promiscuous crowd of stragglers, numbering nearly 150, not over two-thirds of whom required hospital accommodation. There was no guard at the hospital, and the surgeon could not control them; hence there was a good deal of confusion. I established as soon as possible a convalescent camp, under charge of the Nineteenth Infantry, to which most of these men were removed. The hospital ship *Relief* arrived at this time, and about 250 cases of sickness, together with the wounded from our immediate front, were transferred to her to be taken north. She also took on board at Mayaguez the wounded from the engagements in Gen-

eral Schwan's brigade. While she was here I took advantage of the presence of Lieutenant-Colonel Senn, chief surgeon, to investigate the cause of typhoid among the troops. His report is herewith appended. A large force of quartermaster's men was engaged to police the grounds, and within a few days the hospital and its surroundings were in very good condition. About this time instructions came from Washington to send no more sick north; but, realizing that the conditions here were not understood, I telegraphed for permission to make tent hospitals and continue shipping sick on such properly equipped hospital ships as might be sent here. My request being promptly complied with, the country in the immediate vicinity of Ponce was carefully investigated for a proper site, which was finally located on the grounds in the immediate vicinity of the military hospital. These were cleared of underbrush; roads leading to them were made and graded by the engineers, who also staked out the general plan for the hospital, and the necessary flooring and plank walks were laid by the quartermaster's department. The Surgeon-General had cabled me that 200 hospital tents would be sent here on the *Concho*, but I found on her arrival that they had been put in the bottom of the hold, the entire cargo being on the top of them, and could not be unloaded for seven or eight days; this delay led to considerable embarrassment in caring for the sick.

The continued rains, followed by the fierce heat of the sun, now began to produce a depressing effect upon the troops at the front. While the progress of typhoid seemed to be checked, it was followed by a rapid increase in the number of intestinal disorders and malarial fevers, which ran the aggregate sick report up closely to 8 per cent of the effective force, with the prospect of greater increase in the future. This fact I communicated to the Surgeon-General, and requested that hospital ships should be sent here in order that the sick might be removed from the island as quickly as possible.

The depressing effect of this climate upon northern men can only be appreciated by medical men who have served with them. They seem deprived of all recuperative power, and no sooner do they fall sick, even with slight ailments, than a physical and nervous depression follows, which aggravates the existing disease and renders the patient entirely unfit for service.

I have established camp hospitals in the several divisions comprising the army, namely, one each in Generals Brooke's, Wilson's, Henry's, and Schwan's commands, and have given orders that so soon as the central hospital at Ponce is emptied by transfer to hospital ships the ambulance trains shall be utilized to transfer the sick from the camp hospitals to the central hospital, thus being ready at all times to load any transport that may arrive in the harbor.

The medical supplies on hand are ample for current use, and due requisition has been made for their replenishment by transports that may arrive from the north.

Valuable assistance has been given by the National Relief Association of Pennsylvania in a shipload of groceries and medical comforts that was brought here on the steam yacht *May*, belonging to Mr. Van Rensselaer, of Philadelphia. These were transferred to me and distributed among the hospitals by Dr. Groff, a member of the association, under my direction.

The National Red Cross Association has also sent a considerable amount of supplies, which are, however, still unloaded on the steamship *Concho*, but will be distributed by the agent of the association under the direction of the chief surgeon.

In conclusion, I desire to bear testimony to the zealous and faithful manner in which their duties have been performed by most of the medical officers of this command, oftentimes under difficulties which appeared to be insurmountable. To Lieutenant-Colonel Huidekoper and Majors Woodbury and Crile special commendation is due for the faithful manner in which their duties have been performed; also to Assistant Surgeon Ten Eyck and Major Birmingham, now in charge of the United States general hospital at Ponce.

On the 24th instant orders were given for the return to the United States of certain of the troops on supply transports in the harbor. Recommendation was made and order issued for a careful examination of the sick by a board of medical officers in order that no person should be shipped who was unable to bear the journey. A similar examination of the entire company was ordered after arrival on the ship, and no ship was allowed to leave port until it was reported by the officer in charge to be in good condition.

REPORT OF COL. CHARLES R. GREENLEAF, CHIEF SURGEON, ARMIES IN THE FIELD.

[Dated November 5, 1898, covering the period May 3 to July 8, 1898, at which time he accompanied the Major-General Commanding the Army to Cuba and Porto Rico, and the period September 6, the date of his return to this country, to November 1, 1898.]

I assumed charge of the office of chief surgeon May 3, 1898, the duties embracing a general direction of the affairs of the medical department in the field. The wide separation of the several army corps from each other necessitated the direct transmission of records to the Surgeon-General, and I therefore have no statistical data to furnish.

As the troops then camped in their respective States were to be mobilized and prepared as quickly as possible for active service against the enemy in Cuba, my first steps were directed to an organization of the medical department for that purpose.

The acts of Congress approved April 22, 1898, increasing the military establishment and organizing a volunteer army, made no provision for the muster into service of privates of the hospital corps for the volunteer army or for commissioned medical officers additional to those of the regular and regimental staff for service in hospitals and to meet deficits made by casualties. The Surgeon-General informed me that he had asked legislation, through the Secretary of War, for the muster in of 25 privates of the hospital corps for each volunteer regiment and 50 privates for each division hospital, but up to this time no action had been taken on his recommendation. The matter was referred to the Judge-Advocate of the Army, who decided that the existing law, if slightly amended, was sufficient for the purpose, and that the force could be obtained by transfers from volunteer regiments into the regular establishment. He prepared a bill embodying these amendments, which was submitted to Congress, passed both Houses, and became law. The available personnel thereafter consisted of the hospital corps of the Regular Army, augmented by transfers from the Volunteer Army on the basis fixed by the Surgeon-General, namely, 25 men from each regiment and 50 for division hospitals, aggregating a little over 3 per cent of the effective force in the field.

The Medical Department of the Army in the field during the last three years of the civil war was administered as a composite organization, of which a division hospital in three brigade sections was the unit. Its personnel and material were drawn from the regiments and from a staff corps of surgeons of volunteers. In operating it the sick and wounded were removed from the regiments into brigade and division hospitals, from which they were transferred to large general hospitals in the North, and after recovery were sent to convalescent camps, to be finally returned to their regiments, the object of these transfers being to avoid overcrowding of the division hospitals and to keep their bed space as free as possible for emergencies caused by battle or camp disease. The success of this organization was complete, and its main features were subsequently adopted by foreign armies. Its enlisted personnel represented a little more than 5 per cent of the effective force of the Army.

Although the available force under existing law was but a trifle over 3 per cent of the effective force, it was believed by the Surgeon-General that the full quota (5 per cent) could be obtained in time of need by detail from the line of the Army, which for several years had been instructed in the elements of first aid and could therefore be depended upon to meet the emergencies of the battlefield.

Upon this basis I formulated a scheme of sanitary organization by consolidating the regimental personnel and material into division hospitals, each with a capacity of 200 beds and with an enlisted personnel of 99 men and 6 officers; a corps reserve hospital of equal size was also organized. Ambulance companies were similarly organized as auxiliaries to the division and corps hospitals, each with an enlisted personnel of 114 men and 6 medical officers. The cavalry, artillery, corps, division, and brigade headquarters were supplied independently and there were left with each regiment 1 medical officer, 1 hospital steward, and 1 private of the hospital corps.

In anticipation of a necessity that might arise during the campaign for changing the details of this scheme, authority was given chief surgeons to depart from it at their discretion, "to meet the exigencies of the camps or battlefield."

The plan was submitted to the Major-General Commanding, approved by him, and published and put in operation by me on the 20th of May. It should here be stated that an effort was made to accomplish the "muster in" to volunteer regiments of members of the hospital corps on the basis of a State quota, but through

some objection made to the method by the Adjutant-General it fell through. The publication of the orders necessary to carry out this organization was delayed, and when put in force it met with opposition from many regimental colonels, who either objected to giving up men whose places they were obliged to fill by immediate recruitment, or transferred men who were useless to the regiment by reason of vicious habits, physical disability, or stupidity. It was a repetition of the antebellum story of giving to the Medical Department worthless material. In some instances medical officers opposed the work under the impression that their prerogatives were infringed upon.

At this time also there was lack of material with which to work; tents, ambulances, litters, medical and surgical chests, and a variety of material absolutely necessary in the establishment of hospitals were not manufactured and were therefore not to be had. Other material equally necessary that had been issued by the Department was not available, because still in the hands of the Quartermaster's Department in transit, and the ignorance of many willing medical officers in matters of military administration made the task of perfecting this organization a difficult one.

Most of the obstacles were, however, overcome, and at my first inspection of the Army in May I found the hospital and ambulance organizations progressing toward a fair state of efficiency.

Of sanitary recommendations made to the General Commanding were:

First. The limitation of numbers in any one camp to a brigade, or at most a division.

Second. Time of remaining in camp not to exceed thirty days.

Third. Frequent inspections of camps by inspectors of the Regular Army.

Fourth. Stringent regulations regarding the care of sinks, the management of the ration and its cookery, the personal cleanliness of the men, and the general police of camps.

These were considered prime factors in the sanitation of camps and subjects which were especially liable to be disregarded by undisciplined troops, whose officers were, as a rule, as ignorant as the men in the details of military life. In all of my inspections I witnessed frequent violations of these matters and directed renewed vigilance by corps surgeons to prevent their recurrence.

My first inspection included the camps at Tampa, Fla., Mobile, Ala., Chickamauga, Ga., and Falls Church, Va.

The sanitary condition of these camps, with the exception of the one at Tampa, was what might be expected of undisciplined troops. In Tampa, mostly occupied by regular troops, the difference between the conditions of disciplined and undisciplined soldiers was well marked. The camps of the former were comparatively clean, their sinks were well attended to, their cooking properly done, their rations ample. In the latter the camps were badly located, tent space ignored, streets, etc., dirty, sinks badly policed, and the cooking indifferently done.

In all the quantities of the medical and hospital supplies were limited. As a rule, the regular troops brought with them sufficient supplies to last about three months, but in many instances the volunteer troops were destitute in this respect. Before leaving Washington the Surgeon-General informed me he had ordered, in anticipation of formal requisitions, ample supplies from the New York and St. Louis depots, but at the time of my inspection they had not arrived; and in order to meet the immediate wants of the sick of the volunteers it was necessary to draw upon the slender supplies brought by the regular troops, which were soon exhausted.

At Tampa, Mobile, and Alger the corps chief surgeons, and at Chickamauga the chief surgeon, were authorized by telegraph from the Surgeon-General to purchase in local markets such medicines as were necessary to meet the emergency. Outfits for hospitals could not, however, be obtained, and the value of the division-hospital organization was immediately demonstrated by the ability of the Medical Department to utilize such supplies as it had and care for the sick of both volunteers and regulars. At my suggestion the Surgeon-General had, early in the campaign, requested the governors of the respective States to furnish their troops with the State medical outfits until such time as he could replace them by regular supplies, since the manufacturers had not yet furnished enough for all the troops. I was informed by several of the surgeons that, while the State authorities supplied the medicines in State camps, they refused to allow them to be taken outside the limits of the State, and for this reason regiments reached camp without supplies. Fortunately the sick report was small, the aggregate not exceeding 2 per cent in any camp. This favorable condition could not be expected to last if the troops were to remain any length of time in this country, and in anticipation of a

larger sick report the Surgeon-General had ordered the construction of large general hospitals and the organization of a railway hospital train service in order that the sick might be speedily removed and the overcrowding of division hospitals avoided.

I also found that the physical examinations of soldiers at muster-in stations had been carelessly made, and a large number of men incapacitated for active service were in the ranks. Boards of medical officers were organized for the purpose of examining these men and recommending their discharge by reason of disabilities existing prior to enlistment, with a view of protecting the Government against the claims for pensions, which would at the end of the campaign undoubtedly be made.

At my second inspection in June I was met at Tampa by a report that seven cases of yellow fever had occurred at McHenry, a lumber camp in Mississippi, practically on the lines of communication with the military camps in Alabama and Florida. A conference with Dr. Guiteras, the yellow fever expert attached to the Army, Dr. Porter, the health officer of the State of Florida, and several medical officers was held at Tampa, Fla., and it was agreed that if the disease invaded Alabama it would be necessary to place the army at Mobile and Jacksonville in quarantine at points which could be best protected from invasion. The points selected were Tampa, Fernandina, and Miami, since they were each to be reached by a single line of railway and access to them could be completely controlled. The maximum force to be sent to Miami was fixed at one regiment, which was to be detained there only a few days before embarkation for Cuba. Fortunately, the disease was held in check at McHenry, and movements of troops on that account were rendered unnecessary. At the conference referred to, general recommendations for the protection of troops about to leave for Cuba, against yellow fever, were also formulated, and Colonel Pope, the chief surgeon of the Fifth Corps, was furnished with a copy of the proceedings.

While at Tampa I inspected some of the transports that were loaded with troops and supplies awaiting departure for Cuba. The condition of these vessels from a sanitary standpoint was very bad. They were overcrowded to such an extent that the men could not properly attend to the ordinary wants of nature, or keep themselves reasonably clean. The cooking arrangements were defective and the fresh air and water supply were entirely inadequate. Attention was called to the matter, but it was too late to rectify it. The general commanding, however, authorized me to appoint a board for the sanitary inspection of the transports intended for future embarkation to Cuba, and this was done under the direction of Lieutenant-Colonel O'Reilly until the arrival of a line officer, who took the matter out of his hands.

Provision for the care of the sick of the command that was about to start was also meager; a fully equipped ambulance company, as well as a division hospital, having been left on shore for want of room on the transports. No provision was made for a hospital ship to accompany the expedition; but the chief surgeon finally succeeded in obtaining the *Olivette* for that purpose and partially outfitting her. My assistant, Major Daly, later in the day had her painted, in accordance with the requirements of the Geneva Convention, and the supply officer at Tampa succeeded in placing on board of her two wagonloads of extra medical supplies.

Complaint having been made regarding the water supply at Camp Alger, I made an inspection of the camp and recommended that if it was to be retained an additional supply was necessary. The location of one of the division hospitals was bad, and was changed to a more suitable point, the corps surgeon being cautioned to watch the sanitary condition of the camp and the character of the sick report with great care, taking every precaution to prevent an increase and to transfer promptly cases that required it to the nearest general hospital.

At this time (July 8) I accompanied the General Commanding on the expedition to Cuba and Porto Rico, returning with him to the United States September 6, when I was directed to proceed to Camp Wikoff, Montauk Point, Long Island, N. Y., for the purpose of expediting the transfer of the sick from that camp to city hospitals in its vicinity. This work having been accomplished, I commenced on the 6th of October an inspection of the military camps at Jacksonville, Fla., Anniston and Huntsville, Ala., Knoxville, Tenn., Lexington, Ky., and Camp Meade, Pa., a specific duty being the instruction of the medical officers in the purpose and function of the regimental hospitals, the establishment of which had recently been ordered by the Secretary of War, and to see that they were properly equipped prior to the projected movement into Cuba.

The unexpected cessation of the war and the consequent retention of large numbers of troops in the United States had materially changed the conditions under which the field service of the Medical Department was originally organized. Camps which at first were assumed to be of the most temporary character,

intended for the organization and equipment of troops soon to face the enemy, had now become vast camps of instruction. The division hospitals, originally designed for mobile commands, had been extended into quasi-general hospitals, some of them with a capacity of 800 beds, the change in their function necessitating not only a greatly augmented force, but one of a different character, the trained female nurse and the Sister of Charity appearing in camp as a necessary part of the hospital personnel; and the presence of modern apparatus for the medical and surgical treatment of disease gave an appearance of stability to these institutions that seemed foreign to their original purpose.

As a rule, the hospitals were well administered, and some were models of neatness; supplies of all kinds were abundant, and the sick apparently received every attention and comfort it was possible to give them in camp.

I, however, recommended to the Surgeon-General that the large field hospitals be emptied as rapidly as possible by transfer to general hospitals in the North, until their bed capacity should be reduced to its original number.

In nearly all of the camps the discretionary authority given to chief surgeons to vary from the original scheme of organization for the field had been exercised, and many regiments were already equipped with their own hospitals, varying in capacity from ten to sixty beds.

Every regiment in these camps was visited by me and its surgeon carefully instructed in the views of the Surgeon-General regarding the function of the hospital to be established: the necessity of preparation for a movement of the regiment was emphasized, and particular caution given against the retention of any cases that might under such circumstances prove an embarrassment because of their serious nature.

Instructions had already been given for the construction of wooden pavilion hospitals at the sites selected for winter quarters of the troops, and my inspection closed with a feeling of satisfaction that the sick of the troops now in the field would be properly cared for during their stay within the limits of the States.

DOCUMENTS ATTACHED TO COLONEL GREENLEAF'S REPORTS.

1. *Memoranda of sanitary precautions adopted at a conference in Tampa Bay Hotel, June 12, 1898, by Colonel Greenleaf, Dr. Guiteras, Major O'Reilly, Major Pope, and Major Daly.*

For the troops in the United States.—On the appearance of yellow fever at Mobile, Ala., all troops at Tampa and other points in Florida to be moved to Fernandina and Miami, Fla. The establishment of sanitary inspectors on all railways leading into the State from the West and on all roads communicating with the camps from the West and North. All persons coming from the West for service in Florida to be sent to McPherson Barracks, Ga., for detention during ten days. Extra precautions to be taken regarding the policing of the camps, and a house-to-house visitation in the town of Tampa.

For the troops in Cuba.—Extra precautions regarding diet and personal cleanliness of soldiers. All water to be boiled before used. All intercourse with natives to be prohibited. Immediately after the landing of troops, all buildings that have been used by the inhabitants to be destroyed by fire, as well as all clothing of refugees. A camp of detention to be formed for prisoners of war and refugees, to be guarded by immunes, if they are to be found; if not, by a guard that shall be permanent for at least five days, after which, if no yellow fever appears, they may be changed. Should yellow fever make its appearance, the camps of the command should be moved to new sites, the brush and undergrowth being first destroyed by fire. Suspected cases to be isolated in temporary camps of detention. For convalescents from yellow fever, the clothing to be destroyed by fire and new clothing issued.

2. *Extract from letter of Colonel Greenleaf to the Adjutant-General, headquarters of the Army, dated July 7, 1898.*

Finally, and by far the most serious, is typhoid fever, of which in each camp there is a number of cases, which, in spite of preventive precautions, is steadily on the increase. As this is a water-borne disease the greatest care has been exercised in the selection of the sources of water supply, and of the examination of the water by every means known to science, the result showing that the regular water supply at the several camps is as yet free from any dangerous element;

and there is a consensus of opinion among the medical officers that the germs of this disease are obtained from infected water sources outside the camp limits, such as wells in the neighboring farms and infected water in adjoining towns, which are constantly visited by the troops. How long the camp sources can be kept free from infection is hard to say. Among the sanitary precautions taken are the recommendation of boiled water as a constant beverage for the soldiers, the perfection of drainage systems, and the disposal of the excreta, either by burying in pits or by cremation. If the former precaution should be carried out we might feel assured that further cases of typhoid fever would not occur, but as a practical fact it is as yet impossible to secure compliance with this order by the soldiers. The number of diseases attributable to malaria is comparatively small.

Considering the fact that troops are living under conditions entirely new to them, including insufficient tentage and clothing, indifferent cooking of food, and unaccustomed exercises, I think the general sanitary condition is good, but this should not be taken as an index of continued improvement. On the contrary, it is my opinion, in spite of the sanitary precautions, the percentage of sick will increase until the discipline of the volunteer troops has so far improved that we may be assured of compliance with the orders that are given for the preservation of their health.

Regarding the health of the troops now operating in Cuba, I feel that there is reason for grave apprehension. Added to the conditions I have mentioned above as existing in camps of instruction, there are in Cuba climatic and other conditions infinitely more harmful and difficult of control; the long-continued and excessive daily heat of the climate, with rapid lowering of temperature at night; the necessary exposure to rain in the absence of tentage; the scarcity and poor cookery of food; the effect of prolonged physical exertion on the battlefield, inducing nervous exhaustion, are all factors which must be seriously considered in forming an estimate of the health of the troops if their continued residence in Cuba is contemplated. To this should be added the almost certain appearance of yellow fever. While the medical officers are fully alive to the gravity of this situation, and have prepared with the utmost care the sanitary measures which are necessary to prevent disease, and have ample medical supplies to control it should it appear, it must be borne in mind that the military situation renders the carrying out of most of these precautions an impossibility. Without proper tentage and clothing the ill effects of temperature and moisture can not be prevented; without the necessary means of cookery proper food can not be supplied. Under existing circumstances the sterilizing of water supply for the entire command by boiling may be said to be an impossibility, and should yellow fever make its appearance it will be almost equally impossible to thoroughly prevent its spread.

3. Lieutenant-Colonel Senn's report, dated August 10, 1898.

I have the honor to report to you the results of my investigations concerning the origin of typhoid fever among our troops in the city of Ponce and its vicinity, as requested in your order of recent date. There are at present about 250 cases of typhoid fever in the army of invasion at this point. A careful study of 200 cases of which I have reliable information shows that the disease in every instance was contracted before leaving the United States. By far the largest number were contracted in Camp George H. Thomas, Chickamauga, Ga. The Second and Third Wisconsin Volunteers furnish the largest contingent, followed by the Sixteenth Pennsylvania and Second Massachusetts. Camp Alger comes next; the fewest cases from Tampa. Typhoid fever is indigenous in Ponce to some extent throughout the entire year, and from the large number of infected cases extra precautions will become necessary to prevent further spread of the disease among our troops. In view of the great prevalence of the disease in Camp George H. Thomas it appears to me that the Medical Department of the Army should recommend immediate evacuation of the camp.

4. Major Woodbury's report, dated August 6, 1898.

Upon receipt of Special Orders, No. 3, I immediately inspected the caserne, the jail, and the Spanish hospital, and the camping ground of the troops. Finding the city to be without any health organization, I summoned all the medical practitioners to meet me and organize a board of health. They chose for their representative Dr. Moret, who graduated at Bellevue Hospital Medical College in 1880, who, with the mayor of the city and the syndic ex officio, now compose the board of health of Ponce. The regulations issued to the inspectors of the board, who are four in number (one for each ward in the city), are as inclosed. The imme-

ciate questions pressed upon the board, with whom I meet three times per week, are: First, street cleaning. This has been begun, and in some districts is being carried on quite well, and will be pushed. Second, the public water supply. This is derived from the Rio Portegese. The intake of the aqueduct is at a pond formed by a dam about 6 feet high across the river. This pond has been almost filled with silt and the deposit caused by the wash of the heavy rains. It will be cleared out and another heavy galvanized iron strainer placed over the intake. As soon as possible a filter will be placed at the city end. The valley of the Rio Portegese, which I have carefully inspected, is clean, and only occupied by infrequent coffee estancias, the drainage from which is not considerable.

The disposition of the public dead must be immediately changed. The present method is to inter them five tiers deep, and in five years to dig over the same ground and begin again. I have begun arrangements for a new public cemetery outside of the city proper, all interments being heretofore intramural. As soon as the purchase of land is completed and the ground consecrated the new cemetery will be in use.

I have thoroughly disinfected and in part repaired the city prison. I am clearing the drain of the Spanish military hospital, which, with fumigation and cleaning, will render it suitable for immediate occupancy, as it is but one year old. I have fumigated and cleaned the caserne and rebuilt and cleaned the sinks therein, rendering it fit for use. All captured woolen uniforms and clothing have been immediately burned. Several bales of cotton clothing that were new have been boiled for an hour and might be used.

The troops are quartered in buildings, save the prison guard on the roof of the jail; one company of the Third Wisconsin in the caserne, as guard over the large quantity of ordnance stores therein, and two companies of the Sixth Illinois, which are acting as provost guard at Playa. The latter are partially sheltered by the sheds of a lumber yard.

I have inspected the sheds which the Government has used at the Playa as storehouses, and find them, after their policing, clean and proper for use.

The camps of our troops are so situated as to render them dry and well drained in the showers, and I can only beg strict regimental orders against the men filling canteens in the streams where the inhabitants are washing their clothes.

We have here at present 10 cases of smallpox and a few cases of measles. There is no yellow fever and no report of a case for three years. No typhus and but few cases of typhoid among the inhabitants. As soon as the proper virus can be obtained from New York, I shall begin compulsory vaccination of the inhabitants. On August 3, in accordance with your orders, I went to Arroyo, 45 miles east along the coast, obtaining transportation in New York Sun dispatch boat *Kanapaha*. Upon landing, I found a small Spanish town in the form of the letter T, with head toward the beach. It was fairly clean and well policed. The local medical authorities report no yellow fever and no smallpox in town; some cases of the latter in the surrounding country.

General Brooke is quartered in the second story of a building on the beach, General Hains in the custom-house, the staff in a large house in the village, and the troops in tents about a mile back from the beach. No buildings are used as storehouses. All officers will go into camp as soon as the tentage can be brought ashore.

REPORT OF LIEUT. COL. A. C. GIRARD, UNITED STATES VOLUNTEERS, CHIEF SURGEON SECOND ARMY CORPS.

[Dated October 21, 1898.]

I was ordered to report to Maj. Gen. William M. Graham, commanding Second Army Corps, on the 19th of May, 1898, at Camp Alger, Va. I received the order on the 20th, and proceeded the same day to Camp Alger—a point 7 miles from Washington, D. C.—in the State of Virginia, the nearest site of the camp being 2½ miles from the railroad, and extending eventually 2 miles farther toward the Potomac.

On reaching the camp I found that the corps commander had not yet arrived, and reported to Major-General Guenther, commander of the First Division. He, however, had no knowledge of the corps organization. I remained in camp the only officer of the general staff, and the next morning, on the arrival of the adjutant-general of the First Division, I ascertained that a number of regiments were in camp; that they were coming in with every train, generally without previous announcement, and camped where they saw fit.

I inquired about the water supply, and was informed that there were supposed to be a number of fine springs on the place, which was a water shed for the city of Alexandria. I succeeded in obtaining the services of Lieutenant Ames, of the Sixth Massachusetts, as engineer, and, accompanied by the proprietor of the place. I started out to locate these springs, the engineer noting them on a map. I found the tract of land which was supposed to be occupied by the troops to be composed of woods, with open places of from 20 to 100 acres each. The country was uninhabited, with the exception of two homesteads, and only a few fields were cultivated. A large number of springs could be found all over the grounds. Their capacity, however, was small and evidently insufficient for a large command for any length of time. In addition to these springs there were two wells at the homesteads, which were said to give an abundance of water. I at once repaired to division headquarters and recommended that these springs be placed under guard to prevent the defiling of the ground in the vicinity, and that an engineer officer be supplied with a sufficient force to excavate these springs into sink-barrels, in order to utilize them to the best advantage. The quantity of water soon proved insufficient for the increasing number of the troops, and great complaints were made of its scarcity. I was in great doubt as to what my duty was in the premises.

The camp had been selected by the War Department, which must have been fully apprised of its facilities for water supply; and considerations of which I could have no knowledge were, in my opinion, the reasons for the selection of this ground. I therefore deemed it my duty not to impede the Government by entering a formal protest, but to make the best of the situation, hoping that the stay of the troops would be but temporary, and that meanwhile the water supply might prove sufficient. In order to increase the quantity of water available, I recommended that details be ordered to gather the water at the springs during the night, and, as very soon the question of purity became a burning one, I recommended the water to be boiled by the detail and supplied the troops in barrels at the company streets. An order to that effect was issued by the commanding general, but very imperfectly carried out—partly for the lack of barrels, partly for the lack of utensils for boiling the water, and partly from indifference.

I had at the same time made recommendations for the proper care of the privies and their disinfection, which were ordered carried out; but the orders were obeyed in a very indifferent manner, the regimental surgeons proving particularly indifferent to the care of the privies.

I found the cooking done in a very careless and unskillful manner and recommended simple cooking regulations, which were ordered, but never enforced.

While attempting to have the sanitary condition of the camp regulated I was forced into making provisions for the care of the sick of the command. I had understood that you had requested the governors of the several States to provide the regiments with their equipments at the expense of the General Government, but found that this request had either not been complied with at all, or, by the lack of judgment of the medical officers as to the quantity needed by these large commands, had been so inefficiently complied with that there was a great lack of medical supplies, some regiments having a large number of sick without tentage or medicines to take care of them, and I was compelled to establish at once a division hospital, the supplies for which I obtained by calling in all the medical supplies of the command on an order from the commanding general. This gave me time to obtain the most necessary medicines before the first supply was exhausted, and I obtained everything needful. Naturally I incurred the ill will of those regimental surgeons who had come well supplied with the regimental hospitals and who could not realize the situation. The supply of medicines, however, of all was very limited, but the wants could be met by frequent issues in small quantities.

Not knowing the intentions of the Government with regard to the command, I used the most strenuous exertions to equip the hospitals for the field, and succeeded in providing three brigades with a complete outfit, which were detached for service in Cuba or Porto Rico. I had to do this again by depriving some of the well-equipped regiments which were to remain in camp of their equipment, which, however, had to be replaced as soon as possible. The medical and surgical chests and orderly pouches, which required special preparation, were very slow forthcoming, as the troops which were first destined for Cuba had to be supplied first, as I was informed.

I had no intimation until late in the summer that Alger was to be a camp of instruction, and that the troops were not destined to take the field immediately. The camps of the regiments at first were badly laid out, the tents crowded, the

privies too close to the camps, but gradually the matter was remedied, and whenever I found that the health of a regiment was deteriorating I caused the regiment to be removed to a new site.

As early as the 3d of June I recommended individual covering of fecal matter in the privies. This was generally disregarded until the commencement of August, when, on my recommendation, an order was issued enforcing this necessary sanitary measure, and since that time, by close watching, it has been the rule of this camp.

Shortly after the fact had become plain that the water supply from the springs would not be sufficient for this command drive wells were commenced and the work continued day and night until every regiment was furnished with a pump. These wells were, on an average, 120 feet deep, and driven through clay until they reached shale rock, in which the water supply lay, and then driven still further into the solid rock. In this manner no subsoil water could reach the water supply. The water from these wells was analyzed in your laboratory and found pure excepting two instances, which revealed organic matter. These wells, although completed, were at once condemned.

About the middle of July the Second Division of the corps was suddenly ordered one night to start on the march to Thoroughfare Gap, Va., at 7 o'clock the next morning, leaving their tents standing and taking only shelter tents. Very hasty and imperfect provisions were made for the supply of the troops with food, causing much complaint and no doubt sickness. This command was unfortunate in encountering very severe rain storms on its march, and ordinary sanitary precautions were then ignored, as I was informed. I was not with that command.

The First Division was moved from its camp site to one where there was more space at Dunn Loring as fast as wells could be driven. On the 14th day of August it was decided to move this command to Middletown, Pa., to which place I accompanied the commanding general in a train preceding the troops. I drove with him over the Young's farms, which had been selected by the commission from the War Department, of which Deputy Surg. Gen. Charles Smart was a member, and found that the most level camp sites were in the valley of the Susquehanna, too close to the river, and I recommended that no locations be chosen below the second bench, which necessitated the camp to be spread out over a number of miles, on account of the broken condition of the grounds.

The water supply here also was precarious, the Quartermaster Department having had a well driven which gave about 50,000 gallons in twenty-four hours. The plan was to pump this water into tanks, and thence to distribute it by pipes over the camps. The troops arrived, however, before this water supply could be completed. Fortunately a pure limestone spring was found within convenient distance, and the water supply of the town of Middletown was available. All three sources of water supply were chemically examined in a laboratory, which I had established in one of the division hospitals in this camp, and found pure. For several weeks the water had to be hauled in barrels to the different camps, and every possible precaution was recommended by me to insure its delivery in a pure condition. In order to guard against any possible contamination affecting the health of the troops I caused a set of Maignen and Berkefeld filters to be issued to each company with orders to detail a special man for the care of the filters and one of the junior medical officers in each regiment to superintend the work. This duty was omitted or carelessly performed, like most of the sanitary duties of the volunteer officers. Some regiments did not even unpack the filters; others used only the Maignen. Still, a gradual improvement in the care of the filters took place by the appointment, on my recommendation, of an inspector. My object was not so much to purify the water, as the supply was pure, but to educate the troops in the use of the filters and to insure a sufficient supply of them for each command as experience would teach me to find necessary.

Every possible sanitary precaution was recommended by me to improve the health of the command, which had severely suffered from typhoid fever, of which I will speak hereafter. Orders were not only issued but carried out, and compliance was watched by the commanding general, corps, division, and brigade inspectors, sanitary inspectors, and by myself.

The composition of the command entirely changed after the troops reached Camp Meade, some regiments of the corps not even arriving at this camp, but being sent to their States from Camp Alger to be mustered out. In their place came 12 regiments from various parts of the country, most of which had been in regimental camps and were ignorant of the sanitary regulations carried out in this command, and had generally ignored sanitary rules and thereby added to the number of sick in the command. It is impossible in this résumé to refer to each

particular sanitary recommendation, but a copy of every one has been appended to his report with a carefully prepared index, so that the sanitary history of this command can be better followed up by reading these letters than by mere description. [These letters and recommendations are too voluminous to be printed in this place.]

Every sanitary recommendation made by me was made the subject of an order by the commanding general, and in order to insure prompt action and no delay from pressure of other administrative business, I supplied, in nearly every instance, the Adjutant-General's Office with the necessary copies in the form of an order, until we came to this camp.

The health of the command.—Soon after the arrival of the troops at Camp Alger cases of typhoid fever developed. At first they could be ascribed to well-defined outside infection. They were at once removed to Fort Myer, which was about 10 miles distant, first by ambulances, later on the trolley line, on which two hospital cars had been equipped. After these original cases, which had clearly received their infection before their arrival in camp, others occurred more and more frequently after a perfectly pure water supply had been provided for the camp. The number of those actually taken sick with typhoid fever could never be accurately ascertained. As soon as a man showed indications of typhoid fever in division hospital he was removed to Fort Myer before an accurate diagnosis could be made. Many men who felt ill obtained furloughs and proceeded to their homes, where they were taken with the fever. It was evident, however, that the number was steadily increasing, and that it was absolutely impossible to hedge in the cause of the infection. By the careless and filthy habits of the men the woods surrounding the camps became generally the receptacle of fecal matter. Sentinels who were placed to prevent this use of the surroundings of the camp failed to report their comrades, and I do not believe that in a single instance an arrest took place for this cause, which was one of the principal ones of the infection of the camp.

In spite of the fairly sufficient water supply of the pumps, the men, in violation of orders, would go to the so-called springs and quench their thirst. The heavy rains had washed the fecal matter into these water courses, and thus infected them. There were hundreds of these springs in all sorts of hidden places in the woods, and it was a physical impossibility to place them under guard. There is no doubt that the indifference of the officers in looking after this matter is largely responsible for the great amount of typhoid fever.

As another source of the disease, I would indicate the probability that the wells in the farm houses surrounding the grounds were more or less infected. I was credibly informed that every fall a number of typhoid cases, particularly in Washington, occur among people who had made these farm houses their summer resorts. The same applies to the water supply of the wells of Dunn Loring and East Falls Church, where several companies were stationed to control the undisciplined mob of volunteers which composed the command.

Another source which could be but imperfectly controlled was the reception by many soldiers of boxes of all sorts of food from home, which either caused indigestion and thereby liability to disease, or actual infection. Another source were the venders of ice cream, sandwiches, pies, cakes, and every possible indigestible food, which the soldiers purchased principally because it was prohibited. Orders issued to suppress this trade on my recommendation could not be carried out, because the venders established their stands on land 60 feet each side of the public roads, which the proprietor had reserved for himself. The only possible measure was to station sentinels at each booth to prevent the men trading there, but these sentinels were no more efficient than those who were supposed to watch the surroundings of the camp from contamination by fecal matter.

After I had sent about 200 cases of supposed typhoid to Fort Myer, it was found that preparations for the reception of this class of sick had not progressed rapidly enough, and orders were issued to me by your office to discontinue sending typhoid cases to Fort Myer for one week. This was at a time when the disease had become general, and I received your authority to take care of the typhoid cases in camp, as their transportation to Fort Myer after a certain stage of the disease was detrimental to their recovery. By this time I had accumulated a sufficient amount of tentage and appliances to care for all the sick of the command, which did not exceed 600 at the worst stage. On its arriving in the vicinity of Manassas, the Second Division found itself encumbered with a small number of incipient typhoid cases, and on being asked for instructions I telegraphed to establish a field hospital at the most convenient place, and Bristow was selected by the commanding general. The command from Bristow proceeded to Thoroughfare Gap, and the typhoid cases from that place were sent back to Bristow. On the arrival of the command at this place it appeared for a time that the infection had been shaken off by the command, but very soon the hospitals became filled again, especially when the Fifteenth Minnesota, the Thirty-fifth Michigan, and the Two hundred

and third New York arrived. The Fifteenth Minnesota had left one-third of their command sick in the hospitals of St. Paul and Minneapolis. The Thirty-fifth Michigan came from an infected camp, and the Two hundred and third New York had had several hundred cases before coming here. Every possible precaution, that will be seen from the appended recommendations, was taken by me within the means at my command to prevent the spread of the infection. I failed to secure one very important agent by the refusal of the Quartermaster Department to supply a portable engine and steam disinfecting apparatus, which I believe would have been of inestimable value.

As soon as I found that the hospitals were filled to their utmost capacity, I accepted, with the consent of the commanding general, the hospitality offered by the city hospitals of Philadelphia, Harrisburg, Reading, Lancaster, Norristown, West Chester, Pottsville, Pottstown, Lebanon, York, and Columbia, partly to relieve the engorged condition of the hospitals, partly to remove the infection from the camp to places where it could be handled better than it could be with the crude appliances of the field. At that time, I also was offered by you the use of the field hospital of the Associate Society of the Red Cross of Philadelphia, which I made part of the Second Division hospital, for the reception of such typhoid cases as became too sick for transportation by rail and the seriousness of their condition was realized. The Red Cross Society furnished female nursing and the care received by the patients from ~~these~~ skilled attendants was far superior to any which could be given in any of the field hospitals by the untrained men of the Hospital Corps.

As a résumé, I desire to state that the appearance of typhoid fever in this command was a natural result of the gathering together in crowded camps of untrained soldiers with ignorant officers, and that a careful review of the past convinces me that no feasible measure to prevent the spread of the disease was left untried, and that every recommendation possible under the circumstances was made by me.

Division hospitals.—As mentioned above, I was compelled by the force of circumstances, in order to provide for the sick of those regiments which had come without any medical equipment, to establish division hospitals. They were crude affairs at first. The men who assisted me were details from a few regiments, whose colonels or medical officers were public spirited enough to assist me in my efforts to have the sick cared for. I had to rely on details made from the regimental medical officers, and found them, as a rule, fault-finding, disinclined to incommode themselves for the welfare of the sick, and unable to adapt themselves to the peculiar circumstances, besides being hostile to a measure which appeared to be an infringement upon what in their militia notions they regarded their rights. They have not learned yet to consider themselves part of an army, and each regiment and each State was for itself.

As I found it impossible to obtain a hospital corps for the camp, I had to resort to the transfers from the regiments and met with innumerable obstacles. The medical officers did not inform the men of the terms of the transfer; if transfers were insisted on they palmed off on the medical department the most undesirable element in the companies, men whom the captains wanted to get rid of, although they certified on the transfer papers to the efficiency of these men. The result was that the medical service in the hospitals was very unsatisfactory.

In the early days of our service at Camp Alger I made no effort to provide for the hospital commodities which were enumerated on the supply tables, as I was then under the impression that we were preparing for actual war and that it would not be to the best interests of the sick for them to become accustomed to conveniences which could not be carried into the field. For this reason I made no effort to provide the beds with sheets and pillowcases, as they were articles which could not be carried into the field, and after being carried they would only become an incumbrance, for the lack of facilities for washing.

As soon as I learned that Camp Alger was to be only a camp for instruction, I obtained a large number of articles desirable for the care of the sick which usually do not belong to the equipment of a field hospital. At no time was the medical service satisfactory until I received your consent for the employment of contract surgeons, who, as a rule, were not appointed like the volunteer surgeons as a reward of political preferment; but, knowing that their stay in the service depended on their usefulness and zeal, they devoted their best efforts to the welfare of the sick.

I had a fund intrusted to my care by you to meet extraordinary demands, and this enabled the hospitals to provide the sick from the very start with the necessary food, independent of that furnished by the ration. Owing to the lack of ability of managing the allowance made by the Government on the part of the surgeons and the wastefulness of the cooks, the expenses which for milk and eggs alone I had to meet in one of the division hospitals amounted to over \$300 in one

month. The ice was paid for through the generosity of the National Relief Commission, and was unlimited.

At the very outset of the camp I had established a supply depot for the corps, and in this manner succeeded in having on hand a stock of medicines from which division hospitals were supplied; and at no time was there an absolute insufficiency, although at times there was a scarcity. I can attribute this only to wanton waste, which I could not locate, but which I tried to prevent wherever possible by stringent regulations.

The first hospital established on the grounds was the First Division hospital. I was compelled to place it in an undesirable location, as I desired to have it in the vicinity of the only available well and within reasonable distance of the troops which it was to supply with shelter for the sick. I had it soon placed on a more desirable ground, but at no time was the hospital under sufficiently competent charge to effect what I thought it ought to accomplish. The main reason for this was the apathy of the officers in charge and the indifference of the men composing the hospital corps.

When the Second Division was organized I was fortunate enough to secure the services of Maj. F. C. Stunkard, surgeon of the One hundred and fifty-ninth Indiana, who had assisted me in establishing the First Division hospital, and had thereby acquired some knowledge of matters of administration. I placed him in charge of the Second Division hospital, and by his personal magnetism he succeeded in bringing about a friendly feeling among the colonels and the medical officers of a number of regiments, thereby enabling me to secure the transfer of a more desirable class of men; and the hospital, even after Major Stunkard returned to his regiment, retained its higher grade of efficiency.

On being notified that the Second Division was to make its march to Thoroughfare Gap, I prepared a complete brigade hospital and had it sent with that division, expecting to supply any deficiencies, as they were to remain on the line of the railroad.

As mentioned above, I had to establish the hospital at Bristow, and in order not to deplete the brigade hospital of the Second Division I sent the supplies for that hospital by ambulances across country, not willing to trust to the delays of the railroad, and in that manner completely equipped it. Having received information that the Second Division continued its march from Thoroughfare Gap to Middletown, Pa., I transferred all the sick and the necessary tentage and supplies from the Second Division hospital, which had remained standing in camp, with 300 sick, to the First Division hospital, and completed, as far as I could, another brigade hospital, which, with the brigade hospital that accompanied the Second Division, could supply these troops with sufficient facilities for the care of the sick. These orders were changed, however, and the whole move was to be made by rail. I therefore telegraphed to have 50 additional tents meet us at Middletown, and with the equipment of the Second Division hospital sent the hospital force of that hospital on the second train to Middletown, and as soon as a suitable place could be secured established a hospital in advance of the arrival of any of the troops. I then caused the corps reserve ambulance company, of whom about 100 had accompanied headquarters, to establish a hospital in readiness for the First Division. The organization of the First Division hospital on the departure of the troops from Dunn Loring was left standing under the charge of the best officers I could find, and after disposing of the sick, was with the personnel moved to this camp.

The Hospital Corps.—The difficulty of obtaining a sufficient number of men from the regiments to give 2 per cent of the force allowed for the Hospital Corps and the impediments thrown in my way were so great that the commanding general determined to stop all transfers and to send out a recruiting party to fill up the Hospital Corps. I was fortunate in gaining the good will of the colonel of one of the Ohio regiments, who, not understanding the system of the division hospitals at first, had been very hostile to any transfers or the detail of his officers in the division hospitals. He not only offered me a full quota of the hospital detail of his regiment, but also sent an officer with a party of noncommissioned officers to recruit desirable men in southern Ohio. In this manner in a very short time I not only succeeded in filling the quota of the divisions, but also in organizing a full corps reserve company, and had at least then the men necessary for the service. The inability of medical officers to grasp the company organization and its papers and lack of mental force or training to control the men led finally to my requesting authority to place one of the officers of the line, who are allowed as quartermasters in the division hospitals, in command of the Hospital Corps companies, and gradually matters became systematized. The reserve company was of the greatest use to me, since from it I supplied 25 nurses to the general hospital at Fort Myer, 75 to the hospital at Bristow, and still had enough left to organize the second section of the First Division hospital at this place. As soon

as I obtained its personnel I started regular mounted drills, litter exercises, and general instructions in first aid and nursing, and hoped in this manner to supply the divisions with well-trained men and call in those that needed instruction. The move to Camp Meade, however, frustrated this design. When the order for muster out came, more than one-half of the Hospital Corps left with their regiments, under an agreement which I had to make in order to get any men at all, that should any of their regiments be mustered out they would return home with them. Fortunately here again the reserve corps stepped in, and by dividing it between the two hospitals I succeeded in retaining a sufficient number of men who by that time had become very well trained to perform the service in the hospitals with the aid of detailed men from the regiments under General Order No. 126. I then applied for the detail of an officer of the Fifteenth Minnesota to recruit the hospital corps in Minneapolis, and am now getting recruits and hope to fill the corps to its full quota before starting for the South.

On arrival in Augusta, I propose to reorganize the reserve company and, if circumstances permit, turn it into a training school, from which to replenish losses in the division hospitals or transfer men thence to the school.

I desire to add the following conclusions and recommendations as further results of my experience in the performance of my duties as chief surgeon of the Second Army Corps:

First. Regimental medical officers and hospital stewards: I believe that this method of supplying volunteer troops with medical attendants should be done away with, as it has been abandoned for many years in the Regular Army. Instead of the medical officers being selected for their superior aptitude, they have been relics of the National Guard service, in which, as it is known, these offices are filled with men, by the colonels, regardless of professional standing, generally for personal reasons of political preferment. The medical officers in this manner are too much dependent on their colonels, who, instead of looking upon them as medical advisers, consider them only ornamental additions to their staff. This cripples the independence which a medical officer ought to have of his commanding officer, and makes him useless as a sanitary adviser with an ignorant or opinionated colonel. I have also found that the medical officers were so wedded to their regiments that any duty outside of the regiments, either of a sanitary nature or in division hospitals, was resented by them as an imposition.

The hospital stewards of the regiments were fully equal to the medical officers in their regimental adhesions, and proved, as a rule, useless in division hospitals. In the regiments many of them did the real professional work, as they were physicians, while the administrative work in hospitals was new to them, and they worked at a disadvantage. I would recommend that regimental surgeons therefore be abolished, and that some measures be taken to obtain a reliable medical corps for the volunteer service, even at a sudden call like the one of the war with Spain.

Second. Much of the enmity displayed against the division-hospital system was due to the belief of the regimental medical officers that I was introducing notions of my own into the administration of the medical service. It seems very desirable that a carefully prepared code of regulations be worked out and printed for the field-hospital service in the style of those of foreign armies, thus not only bringing about uniformity in methods, but a possibility for the medical officers of inferior rank to become acquainted, by study, with the administration of the Medical Department.

Third. It was very fortunate that I was authorized to increase the small number of acting hospital stewards allowed in the organizing order, and recommended that such an increase be made permanent, on the same basis as noncommissioned officers are appointed for the troops of the line. I found that since I received this authority, and the men knew that they had something to gain by good behavior, and the stewards something to lose by incompetency, I obtained much better service than ever before.

Fourth. One of the principal sources of infection in the command is the fecal matter, and a permanent system for the disposal of this question in the field appears very desirable, and the equipment necessary for the purpose should form part of the regimental baggage. It should therefore be of imperishable material, easily kept clean and easily transported, and I believe that the best method is to provide each company with two cast-iron troughs, on cast-iron wheels, the front axle on a pivot. These troughs should be about 10 feet long and have a circular opening with a cast-iron cover, opening downward, 1 foot in diameter at the bottom. They should have two movable lids, one supplied with four holes, the other as a cover to prevent unsightly appearance in the removal of the trough.

Fifth. The question of water supply for the troops in camp and on the march should also receive serious and permanent consideration. I believe that one or more water carts should form part of every regimental equipment, to carry

the water to the camps where hydrants are not available, and to make a suitable water supply accessible to the men on the march. I believe that this necessary article of diet should be issued to the troops with the same care as the components of the ration. In this manner only can the proper sanitary supervision be carried out. If necessary, a system of filtration could be connected with these carts.

Sixth. As a considerable part of the army will hereafter be stationed in sub-tropical countries where pure water supply can not always be obtained, a nest of boilers in a box, supplied with hinge lids and hasps, should form part of the equipment of every company, to render the boiling of water possible. As the nest of boilers can be utilized for the carriage of sugar and coffee and similar components of the ration, it is believed that it will not be left behind like other more complicated apparatus, and will always be carried with the cooking outfit; consequently remain with the troops.

Seventh. Contract surgeons: The position of the contract surgeons is an anomalous one. They are civilians performing the duty of officers, and have the rights of neither, if it suits the commanding general to deny them. The method of employing this useful class of officers in the Navy seems to offer a remedy, as there they obtain the warrant from the Secretary and form part of the establishment. They would in this manner also be more secure against arbitrary dismissal, and, as in the Medical Department of the Navy, a list of qualified men examined by the medical board could be appropriately kept on file in the Department, from which, in case of necessity, the proper men could be recommended to the Secretary of War for warrant. They would in this manner become eligible to the military orders which perpetuate the associations of the wars, and no doubt would add to the inducement for a suitable class of men to present themselves for admission to the rolls.

Eighth. Division and brigade surgeons: The division surgeons of this corps are men of high professional standing and status in the National Guard service, but absolutely ignorant of administrative work in the Army. I therefore recommend that only trained medical officers be in the future made eligible for the high offices in the Medical Department, and in this manner the War Department will be relieved of the political pressure which brought about the selection of men who were not suited for these positions.

The brigade surgeons should likewise be trained medical officers, as their duties, as a rule, call them to duty in division hospitals. Their name, brigade surgeon, appears to be a misnomer, and has caused in this corps frequent attempts on the part of brigade commanders to have these officers attached to their staff, where they occupied more ornamental than useful positions.

I believe that the system of the war of the rebellion of appointing surgeons and assistant surgeons, United States Volunteers, throughout the service would meet the requirements of the Volunteer Army better than that which now provides for officers performing duty under the misnomer of brigade surgeons.

For duty in the colonies which have passed into the possession of the United States, medical officers of the Regular Army should receive at least one grade increased rank, in order to enable them to better meet the expenses of keeping two households, and to make them equal in rank to brigade surgeons or whatever the title may be of the superior medical officer, with the proviso that where officers of equal rank serve together the medical officers of the Regular Army, irrespective of the date of appointment, shall be considered the seniors.

I trust that in considering this report you will bear in mind that my duties with this corps were entirely of an administrative character, and as I had to follow up and supervise duties which usually are performed as a matter of course by medical officers of inferior rank, I was less able than I would have been under other circumstances to closely observe the etiology of epidemics or to make observations of a clinical or purely professional character.

REPORT OF LIEUT. COL. CHARLES SMART, DEPUTY SURGEON-GENERAL, UNITED STATES ARMY, ON SANITARY CONDITIONS AT CAMP ALGER, VA.

[Dated July 13, 1898.]

I have the honor to report that, in accordance with paragraph 33, Special Order 157, Adjutant-General's Office, Washington, July 6, 1898, I proceeded, on July 8, to Camp Alger, Va., and inspected the camps of the First Division, and on the 11th the camps of the Second Division, Second Army Corps, having meanwhile investigated the condition and clinical histories of the cases of typhoid fever that had been removed from these camps to the general hospital at Fort Myer, Va.

I found two troops of New York cavalry encamped in conical wall tents on the slope on which the headquarters of the corps are established. These had ample

camping ground, which was well drained, but had no shade. Their water supply was derived from the same source as that of the headquarters.

The striking characteristics of the camps of the First Division were overcrowding of tents on the camp site, overcrowding of men in the tents, dust, sun glare, and fetid odors. The Eighth, Twelfth, and Thirteenth Pennsylvania were packed closely together, with scarcely an interval between the regiments, the company streets hardly wider than the intervals between adjacent companies should have been, tents of the same companies in contact with each other on the sides and of adjoining companies in contact by the ends. The double row of tents between the narrow company streets thus made a continuous canvas covering with double partitions dividing it up into small sections, under which it was impossible for the 5, 6, or 7 men in each section to get a breath of fresh air. The Eighth Pennsylvania had their common or wedge-wall tents floored with boards, but so close to the ground that there was no air space beneath the flooring. These tents had a ground area of about 56 feet. In addition to wedge tents the Twelfth and Thirteenth Pennsylvania had some conical wall tents, which also were overcrowded. In many there was no flooring, the men lying on the ground, their blankets and clothing matted with dust. The kitchens were close up against the company tents, with uncovered cesspools for kitchen slops and garbage, and the sinks also were so close that, although some care was given to cover the deposits with earth, the sink odor pervaded the company streets. The sinks were too small for the accommodation of the regiments, so that they were in constant use and always contained reeking and uncovered excreta. The streets and the open ground in the neighborhood of the camps were kept clean and free from excremental or garbage contamination. Under such conditions of overcrowding on a dusty site it was impossible for men to keep themselves clean or free from body vermin, if the latter were introduced, while typhoid fever or any other infectious disease might be expected to spread quickly. That serious consequences have not been developed is due to the heat of the weather, which has led the men to seek as much as possible for ventilation.

The walled wedge tents of the First New Jersey were similarly crowded on each other, but only four men occupied each tent. The streets were only about 13 or 14 feet wide. The sinks were manifestly cared for, but were so near that the odor pervaded the camp. The men slept on their dust-matted blankets on the ground, and nothing in the line of spare underclothing in the blanket roll could be kept clean under these conditions. Adjoining tents of the same company in the Seventh Ohio were separated from each other by about 3 feet, insufficient to give a passageway between the guy ropes, and there was no passageway between the tents of adjoining companies, these being pitched end to end in contact. The streets in this command were wider than those heretofore mentioned, and the men were building low bunks about 8 or 10 inches from the ground to keep themselves out of the dust. All these camps were on open ground, originally grass-covered, but now trampled under foot into a garish and dusty surface. A slight incline gave good surface drainage to the westward. No brush awnings or fences had been erected, and the sinks in most instances were protected merely by a strip of canvas. Practically the only sign of the existence of available wood and brushwood in the neighborhood of the camps was the building of the low bunks in the last-mentioned command. The Sixty-fifth New York had more space. It was camped in a grove of young trees, which, while giving little shade, lessened the garishness by their greenery. Its conical wall tents were separated from each other and well trenched, but no bunks had been built; its sinks were well kept, and so far out that there was no taint in camp. The camps of the Sixth Illinois, Sixth Massachusetts, and Eighth Ohio, on a rising ground north of the hospital of the First Division, were evacuated on the day before my inspection by the departure of these regiments for the front.

The regimental camps of the Second Division were generally more expanded than those of the First Division. In none was the odor of the sinks perceptible in the company areas. The streets and surroundings were clean in all, with the exception of the Seventh Illinois, where filth was deposited by the side of the pathways to the sinks. The Sixth Pennsylvania was camped in an open space in walled wedge tents 7 by 8 feet, with a height of about 7 feet to the ridge, 18 inches of which was constituted by the wall. Four and 5 men were in each of these. Some had bunks of forked uprights supporting a platform of saplings, but many were lying on the dusty ground. The Second Tennessee was similarly situated, but in conical wall tents. The First Rhode Island, also on open ground, was in small wall tents, 6 men in each, all on bunks raised about 18 inches from the ground, except a few who had bunks of evergreens on a bark-covered floor. Care was evidently exercised here to have the men clean and comfortable. The *Twenty-second Kansas* had the same kind of tents as the Rhode Island regiment.

but each was made to accommodate 8 men. All lay on the ground; a few with pine twigs under them to keep them from the dust. The One hundred and fifty-ninth Indiana was in walled wedge tents, 4 men in each; some having shelter-tent extensions to lessen crowding. The tents were pitched too closely, and the men lay on the ground, dusty and dirty. The Third Missouri had 5 men in each walled wedge tent, and no flooring nor bunks. The Third New York had its streets narrow, its conical wall-tents set too closely; the men lay on the ground on their dusty blankets. The Fourth Missouri had the advantage of shade by being camped in a wood. The wall tents were well spaced and the streets comparatively wide. All were furnished with raised bunks; and the regiment would have had a model camp had care been given to the policing of the interior of the tents. The Seventh Illinois also was favorably camped in the edge of a wood with every facility at hand to have made a model camp, but the conical wall-tents, instead of being furnished with well raised bunks, were littered with dirty straw.

The chief surgeons of division and the regimental surgeons in each instance accompanied me in my inspection.

The great faults in all the camps were the tendency to crowding the tents on each other, the overcrowding of the individual tents, and the want of care for the comfort, cleanliness, and health of the men in failing to have them build bunks, fences, and awnings, when the materials for these purposes were at hand.

The natural drainage in all the camps was good, but in some lying near the margins of a run the subsoil water is too near the surface for health later in the season when heavy rains fall. A thick stratum of clay underlies a few feet of pervious surface soil, and in some of the camps cesspools for kitchen slops consist of basins in this clay, which retain the liquid contents, fermenting in the heat and infecting the neighborhood with bad odors and flies.

The water supply obtained by the Engineer Department is from a series of about 28 driven wells over 100 feet deep, all furnishing a soft and organically pure water. Prior to the sinking of these tubes water from springs of uncertain quality was used by some regiments, while others used water from the sluggish runs, which is manifestly impure, and would undoubtedly have occasioned disease if used without boiling.

These camps, notwithstanding their many insanitary features, are unusually free from disease. Vaccinia, measles, a few venereal cases from proximity to Washington, and some diarrheas from irregularities in diet, or from chill after perspiration, and the difficulty of attending to personal comfort in the crowded tents, constitute the sick list. In addition to these, I found that since the camp was established, in May, 39 cases of typhoid fever have been reported and sent to hospital for treatment. Of these 39 cases, 4 have died—2 from the incidence of the fever and 2 from intercurrent pneumonia. Although not verified in any of these cases by post mortem observation, there is no doubt of the diagnosis, for the clinical features were well marked, and Widal's test has given positive reactions. Abdominal, not cerebral, symptoms have characterized the cases. Four occurred during the month of May, 23 in June, and 12 up to the date of my inspection in July. Taking the month of June as the second month of the aggregation of troops after the call of the President, and rating the strength at Camp Alger during that month at 20,000, the fever rate for the month would be 1.15 cases per thousand men. When we compare this with the July and August record of typhoid among the troops gathered around Washington in 1861, 2.2 in the one month and 6.14 per thousand in the other, we have reason to feel satisfied that the efforts to reduce the typhoid fever rate at the present time has been so successful. The 39 cases were distributed as follows:

Command.	May.	June.	July.
6th Pennsylvania.....	1	1
8th Pennsylvania.....	2
12th Pennsylvania.....	1	3
13th Pennsylvania.....	1	1
65th New York.....	1
159th Indiana.....	2	1
3d Missouri.....	2	1
4th Missouri.....	1
2d Tennessee.....	1	1
3d New York.....	1
3d Virginia.....	1
6th Massachusetts.....	4	3
6th Illinois.....	2
New York cavalry.....	2	5	1
Total.....	4	23	12

The regiments which have not as yet been affected with typhoid fever are the First Rhode Island, Twenty-second Kansas, Seventh Illinois, Seventh Ohio, First New Jersey, and to these must be added the Sixty-fifth New York, for this regiment brought one case of fever with it to Camp Alger, but has had no case since then. It is evident that the crowding on the camp sites, in the tents, and the dusty condition of the men from sleeping on the hard-trampled ground, are not factors in the causation of the typhoid cases that have occurred, for, although the First Rhode Island, which was tolerably free from these insanitary conditions, had no case, the First New Jersey, which had all of these conditions in an aggravated form, also had none. From the manner in which the cases are scattered through the camps, it seems clear that the infection is due to causes which are not general, but which operate on the individual or on two or three closely related individuals in the same command. This excludes all emanations from the camp site or its surroundings, and all matters relating to the subsistence of the troops, including the general water supply. We know now that the great prevalence of typhoid fever in the camps around Washington in 1861 was due to the use of surface water in runs and creeks contaminated with infected excreta from the carelessly policed camps of those days, and the more closely the present cases are investigated the more evident does it appear that the sporadic cases that have occurred are due to the occasional use of surface or farmhouse well waters that have not been sterilized by boiling. Before the deep-well-water general supply was obtained, many of the regiments made use of waters from springs of uncertain quality and from surface streams of certainly bad quality, and that this was not followed by widespread evil consequences is due to the care taken that such waters should be boiled before use. The largest number of cases occurred among the troops of the New York cavalry, the members of which on orderly duty are frequently away from camp, and while on such duty are in the habit of drinking from the most available source of supply, irrespective of quality. I feel confident that with the present general water supply and the prompt removal of sporadic cases to general hospital there need be no fear of any epidemic visitation of typhoid fever in the Second Army Corps. I would suggest, however, that due care be given to the removal of the insanitary conditions which I have pointed out, as these would be very apt to promote the spread of the disease were many sporadic cases to appear.

REPORT OF LIEUT. COL. RUSH S. HUIDEKOPER, CHIEF SURGEON, UNITED STATES VOLUNTEERS, FIRST ARMY CORPS.

I arrived in Chickamauga early in the morning on May 26, and reported immediately in person to Major-General Brooke. I found that no organization of the medical service had been made. Major-General Brooke was in command of the entire forces of Camp George H. Thomas, and was also the immediate commander of the First Army Corps. He had a general staff for the entire forces, and I was one of the first officers directly assigned to the staff of the First Corps who had reported. The deputy surgeon-general of the Department of the Lakes, Colonel Hartsuff, was the senior medical officer on General Brooke's general staff. I found that a medical supply depot had been established at the railroad station in charge of Major Comegys, who was dispensing medical supplies in small quantities on irregular requisitions approved by Colonel Hartsuff.

I applied to the Adjutant-General for a list of the troops of the First Army Corps, and immediately proceeded to visit their camps and personally to obtain information in regard to the available material for the medical service. The First Corps consisted of twenty-seven regiments of infantry, as follows:

First Division.—First Brigade: First Ohio Volunteer Infantry, Third Wisconsin Volunteer Infantry, Fifth Illinois Volunteer Infantry. Second Brigade: Third Illinois Volunteer Infantry, Fourth Ohio Volunteer Infantry, Fourth Pennsylvania Volunteer Infantry. Third Brigade: Sixteenth Pennsylvania Volunteer Infantry, One hundred and fifty-seventh Indiana Volunteer Infantry, Second Wisconsin Volunteer Infantry.

Second Division.—First Brigade: Thirty-first Michigan Volunteer Infantry, Third Pennsylvania Volunteer Infantry, One hundred and sixtieth Indiana Volunteer Infantry. Second Brigade: Sixth Ohio Volunteer Infantry, One hundred and fifty-eighth Indiana Volunteer Infantry, First West Virginia Volunteer Infantry. Third Brigade: Second Ohio Volunteer Infantry, First Pennsylvania Volunteer Infantry, Fourteenth Minnesota Volunteer Infantry.

Third Division.—First Brigade: First Illinois Volunteer Infantry, Twelfth Minnesota Volunteer Infantry, Fifth Pennsylvania Volunteer Infantry. Second Brigade: Twenty-first Kansas Volunteer Infantry, Eighth Massachusetts Volunteer Infantry, Twelfth New York Volunteer Infantry. Third Brigade: Second

Missouri Volunteer Infantry, First New Hampshire Volunteer Infantry, Ninth Pennsylvania Volunteer Infantry.

I spent the next few days visiting the camps of these regiments. I found that some of them had brought with them, especially in the case of some Western regiments, liberal supplies of medicine and convenient boxes for holding them. In other cases they had come absolutely unprovided with medical supplies. I found in each regiment 3 medical officers, consisting of a surgeon, with the rank of major, and 2 assistant surgeons, with either the rank of captain or first lieutenant, which varied with the States from which the troops came. From some States 3 hospital stewards had been appointed to a regiment, while from others but a single hospital steward had been appointed. I found in some regiments a fairly good-sized detail or so-called hospital corps, consisting of druggists, young physicians, medical students, and other men, selected for the special work, who wore brassards. In some regiments both the commanding officer and the surgeon were extremely satisfied with and proud of the medical organization which they had provided for their regiments. In other cases no organization whatever had been attempted. I issued a circular requesting a roster of medical officers and available men for Hospital Corps service, which was in most cases complied with. During this preliminary inspection I visited, with the regimental surgeon, the company streets, line of company cook tents, and sink line of each regiment, and looked into the water supply. By the 1st of June I had obtained a fair idea of the material from which I could organize; but just at this moment an order came detaching a provisional brigade of four regiments under General Snyder to proceed to Tampa, and the First Ohio Volunteer Infantry, One hundred and fifty-seventh Indiana Volunteer Infantry, Third Pennsylvania Volunteer Infantry, and the First Illinois Volunteer Infantry were sent to Tampa. The vacancies caused by the detachment of these regiments were rapidly filled by the First Kentucky, in place of the First Ohio; the Third Kentucky, in place of the One hundred and fifty-seventh Indiana; the First Georgia, in place of the Third Pennsylvania, and the First South Carolina, in place of the First Illinois, requiring revision of the data which I had collected.

Up to this time I had no intermediate medical officers between myself and the regimental surgeons. Each regiment had more or less of a regimental hospital, mostly supplied with material which had been brought from their respective States. In some cases organization was so complete as to include special cooking outfits and details of men for regular service. In other cases the sick in the regimental hospital were supplied with food from their respective companies.

By permission of Major-General Brooke, I verbally requested the division commanders to appoint the senior regimental surgeons, so far as the rank of them could be determined, as acting division surgeons, which was done; and in some cases other regimental surgeons were appointed acting brigade surgeons, which gave me a medium of communication to the regiments and a means of collecting data which was more systematic than personal communications between regimental surgeons and myself.

On June 1 the three regiments of cavalry were organized into a brigade, and were temporarily attached to the First Army Corps.

This brigade consisted of the Third United States Volunteer Cavalry, First Ohio Volunteer Cavalry (temporarily), and First Illinois Volunteer Cavalry.

Organization.—With the three typewritten circulars issued by the Surgeon-General during the month of May, and General Orders, Nos. 58 and 76, from the Adjutant-General, I found my instructions and authority for organizing the medical service. As I interpreted it, I was directed to establish three division hospitals and one reserve hospital, and three division ambulance companies and one reserve ambulance company, which would furnish the entire care for the absolute sick of the command. I was authorized to leave one surgeon with each regiment, whose duties were to look after the hygienic condition of the command to which he was attached, to hold the morning sick call and determine what sick needed hospital care, and what sick could be treated (as at a dispensary) at the regimental surgeon's office, and be placed in quarters or on light duty, with the understanding that these latter men, though not capable of doing heavy duty, were still not so ill but that in case the regiment should be suddenly ordered to move they could be left to take care of themselves until otherwise provided for. I was instructed to have an administrative force, consisting of 3 chief surgeons of division, 9 chief surgeons of brigade, and a medical inspector. The hospitals were authorized to have 6 surgeons each and the ambulance companies were authorized to have 6 surgeons each. The organization, therefore, was to consist of the chief surgeon, with a medical inspector, 3 division surgeons, 9 brigade surgeons, 27 regimental surgeons, 4 hospitals with 6 surgeons each, and 4 ambulance companies with 6 surgeons each; a total of 89 medical officers.

I found available for immediate organization 27 regiments with 3 surgeons each, a total of 81. With the 12 surgeons to be appointed by the President for divisions and brigades, a medical inspector, and myself, I had a prospect of 95 medical officers. The difference between the 89 medical officers authorized and 95 left a very narrow margin for cases of illness, leaves of absence, or other causes of diminution in the service.

My authority for organization provided for 1 hospital steward for each regiment, 1 hospital steward for each division headquarters, and 1 for corps headquarters, 7 hospital stewards for each ambulance company, and 6 hospital stewards for each hospital. I found that the hospital stewards, like the regimental surgeons, were component parts of the regiment, appointed by the governor of the State or the commanding officer.

I was authorized to furnish each regimental surgeon with 1 Hospital Corps private, each brigade surgeon with 1 Hospital Corps private, each division surgeon with 1 Hospital Corps private, and 2 Hospital Corps privates for my own office. Ninety Hospital Corps privates were required for each hospital and 104 for each ambulance. These Hospital Corps privates did not exist.

The act of Congress which provided for the organization of the Volunteer Army had neglected to provide for its Hospital Corps, but General Orders, No. 58, charged the commander of the army corps "with full control of the transfer from its line of members of the corps."

On arriving at Chickamauga Park I found in the First Division, First Corps, a hospital of some 120 beds. It had been established by the deputy surgeon-general, and was in a way taking the place of a general hospital, as it received sick not only from the regiments of the First Corps, but from the artillery and from other organizations. This hospital was in charge of Captain Wakeman, an assistant surgeon of the Regular Army.

Early in June Maj. J. H. Hyssell, assigned as chief surgeon to Second Division, First Corps, and Maj. J. D. Griffith, assigned as chief surgeon to the Third Division, First Corps, arrived, and I immediately undertook the organization which I was instructed to carry out.

I took the list of names furnished me by the commanding officers or surgeons of regiments of the men whom they had brought for hospital purposes, and requested the adjutant-general, First Army Corps, to transfer these men to the Hospital Corps, which was done.

From time to time I requested the detail of various medical officers of the regiments for duty with the medical service, First Corps, and they were ordered to report to me for assignment to duty. I also requested the detail of the hospital stewards of the various regiments for duty with the general medical service.

When these details of medical officers and hospital stewards were made I was able to furnish the division surgeons, Second and Third Divisions, and Captain Wakeman—in charge of First Division hospital—with medical officers, stewards, and a certain number of privates, legally assigned to the medical service.

At this point I met with a sudden and, in some cases, violent opposition. Some commanding officers of regiments whom a few days before had furnished me, with pride, a list of their regimental hospital service, suddenly changed their view and objected to any transfer from their regiments. In one regiment which had 48 men with brassards on their arms, the brassards disappeared entirely, and on my next visit I was told by the regimental surgeon that these men were nothing but company bearers, detailed from time to time for local work. In another regiment after the order of transfer had left the Adjutant-General's office and was on its way through division and brigade headquarters, the regimental commander returned the men in his hospital to the ranks and claimed they were not intended for hospital service. Considerable objection and, in some cases, formal protest was made to the detail of the additional surgeons in each regiment to the general service. In one division five regimental commanders went so far as to hold a meeting and send their respective governors a 200-word telegram against being deprived of these component parts, in the shape of regimental surgeons and hospital stewards, of their regiments. However, before their protest could be of value the Adjutant-General had issued his order and had made details. On the 29th day of June the Adjutant-General had detailed every medical officer of the twenty-seven regiments for assignment to duty by me, and on June 30, pursuant to Army Regulations, No. 11, I had the medical officers report to me in person at the First Division hospital and draw lots for relative rank in the cases where the commission had been the same day.

I then made final assignment of 1 medical officer to each regiment and 6 each to the hospital and ambulance companies.

Late in June Major Parkhill, assigned to the First Division, First Corps, had reported for duty, but in the meantime Lieutenant-Colonel Senn, chief surgeon,

Sixth Army Corps, and Maj. John Woodbury, a division surgeon, Sixth Army Corps, had also reported to General Wilson, and from having no chief surgeon of the First Division I found the administration of this division somewhat complicated by an excess of chief medical officers.

During June all the chief surgeons of brigade, appointed by the President, had reported for duty. I then had, so far as officers were concerned, my complement of 3 division surgeons, 9 brigade surgeons, 27 regimental surgeons, and 48 surgeons appointed respectively, 6 to the four hospitals and four ambulance companies. Of the details of regimental hospital stewards I had reassigned 1 hospital steward each to the regiments from which they came and the others to the hospitals and ambulance companies. In addition to the Hospital Corps men transferred from the regiments, I had received from various recruiting stations 95 Hospital Corps privates and had a total of 454 Hospital Corps privates.

The growth and demand for immediate work in the three division hospitals had limited me in establishing all hospitals and ambulance companies. I therefore had deemed it expedient to hurry the organization of the three division hospitals, and early in June had organized the reserve ambulance company, which I used as a training school, and which furnished the ambulance service for the three divisions during the month of June.

I selected for command of the reserve ambulance company, Maj. James Johnston, surgeon Sixteenth Pennsylvania Volunteers, an officer whom I had known in the National Guard of Pennsylvania, and whose energy, and faithful, conscientious work and executive ability through the entire summer has justified my selection of him. Major Johnston entered heartily into the system of organization and furnished me most valuable service; he, from study with me of the organization and of what was needed, and from daily conversation and consultation, understood thoroughly the details of the work which we had to do, and knew, as I did myself, much of what was still in such a condition that it could not be put on paper.

During the month of June all the later transfers of Hospital Corps men from the regiments and the recruits received from the recruiting stations were sent directly to him at the Reserve Ambulance Company, where as rapidly as possible the qualifications of the individual men were studied, and it was determined whether they were best fitted to be assigned to hospitals or to ambulance companies.

We followed throughout, however, the principle of assigning the transferred Hospital Corps men back to the hospitals and ambulance companies from the divisions from which they had come, so far as it was practicable and proper. Early in July I commenced to reassign medical officers who had been serving in the Reserve Ambulance Company back to the division from which they came to take charge of the division ambulance companies which I then organized. At this time I organized the reserve hospital and placed in it, again as a training school, the surplus Hospital Corps men who exceeded in numbers the 114 men authorized for the Reserve Ambulance Company.

At this time, however, I met with a sudden and unfortunate obstacle to the organization. The protest of regimental commanders through their Governors and Senators, and the support which they received from sensational public opinion and the press bore effect. The first orders came detaching portions of the First Division, First Corps, and ordering them to Charleston, and Major-General Brooke instructed me that regimental surgeons who had been detailed for general service should be returned to their regiments. The first officer I lost was my valued assistant, Maj. James Johnston. Fortunately he had an able successor, Maj. Frank Boyd, Third Kentucky; but Major Boyd, with all his ability, was not familiar with the details as his predecessor had been.

As the First Brigade and Second Brigade, First Division, First Corps, left Chickamauga, I was obliged not only to lose certain officers who had already been trained in the Reserve Hospital and Ambulance Company, but the hospital service of the First Division hospital was broken up by the loss of men who were familiar with the details of its routine.

During this entire organization of the personnel and in the reassignment of medical officers to regiments, I took special pains through the chief surgeons of divisions to use every courtesy possible in consulting the wishes of the regimental commanders as to what medical officer of the three they wished left with the regiment. I met with very little gratitude for my courtesy. I used every courtesy possible in consulting regimental commanders and the senior surgeons of regiments as to the privates to be transferred to the Hospital Corps, and for my courtesy in a majority of instances I met a rebuff or vigorous protest. In many regiments privates made application on official blanks to the Adjutant-General through military channels for transfer to the hospital service, and had their papers

stopped at regimental headquarters. The surgeons with the regiments were forbidden in many cases by their commanders to furnish me with the names of the men who had enlisted for hospital purposes, or desired transfer.

By July, as the hospital service and need of ambulance service had grown, and it was an absolute necessity for me to have a larger number of nurses, I made a final appeal to Major-General Brooke, stating the opposition which I had found from the regimental commanders. He authorized me to take 150 men, selecting them with as much judgment as possible.

I made a list based upon the personal applications which individuals had made to me, stating that their commanding officers had refused to forward their applications, and based upon recommendations of regimental surgeons who desired to aid the organization. When this became known, a few commanding officers immediately sent in lists of men to be transferred, and the entire transfer was made by the Adjutant-General in one order. When these men reported, I found that certain officers had selected drunkards, epileptics, and other worthless men not wanted in the regiment and had sent them to me. In one case the detachment of men transferred to the hospital service was called by the regimental commander, and, in the presence of their comrades, the men were told as a farewell that he, their commander, was ashamed of them and all that he could imagine was that those who made application for Hospital Corps service had done so because they were cowards and afraid to go on the firing line; that the best thing he could wish them would be that they would go to Cuba to nurse the yellow-fever patients (the inference being, and there die). This was the material provided for and furnished me to take charge of and nurse the sick in the First Army Corps.

The organization of the hospitals of the Second and Third divisions.—We drew new tentage in limited quantity at first, gradually increasing the size of the hospitals as the demands required; but the demands grew rapidly, and we were hampered by a limited supply of hospital tentage and a still more limited supply of cots and bedding, so that it was only well on in July before we obtained proper supply. Ambulances, wagons for hospital transportation, and other quartermaster supplies were obtained with scarcely any delay. The quota for the Reserve Ambulance Company was filled early, but those for the division ambulances were drawn slowly throughout June and early July, as I had not a sufficient number of Hospital Corps men to properly care for them. It was a constant strain through this period to furnish enough men for the absolute work required in the hospitals.

Supplies.—When I first reached Chickamauga I found the regimental surgeons drawing medicines in small quantities on informal requisitions or slips of paper which were passing through the deputy surgeon-general for approval before reaching the purveyor's depot. Many medicines were unobtainable or obtained only with the greatest difficulty in limited supplies. We were instructed to confine requisitions to the medical supply table.

Early in June, when I was ordered by the deputy surgeon-general to have requisitions made out based on the medical supply table for a three months' supply for the regiments, I attempted to carry this into effect. I found that medicines did not exist in quantities which allowed of this being done, and I steadily continued to approve the informal requisitions for such medicines as were immediately needed, and for such as I could learn were in the purveyor's depot and were obtainable.

I was further instructed to have the issue of medicines to the regiments made through division hospitals. This was carried into effect at once in the First Division hospital, but was ordered for the Second and Third divisions at a time when these hospitals had not been completely organized, and were not in such shape that they could issue medicines. For a time in the Second and Third divisions medicines were obtained only in small quantities and with the greatest difficulty. I continued to persistently approve requisitions for small quantities, which I believed obtainable, on the ground that the regiments had not yet been issued the medical chests and means of taking care of large quantities of medicines, and many of the regimental requisitions were as persistently disapproved by the deputy surgeon-general, and refused at the medical purveyors. I constantly requested that the medical chests should be issued to us. At the outset there were no desks for medical officers or stationery of any kind. I was obliged to go personally to a printer in Chattanooga and at my own expense have printed blanks on which the morning reports of sick could be made.

On June 11 I forwarded my Saturday report to Washington and requested that proper supplies be furnished me.

When finally early in July a limited number of medical desks arrived we were obliged to rob them of the reports of sick and wounded and other stationery to supply surgeons of regiments who had not yet been supplied. In addition to these

Saturday reports which I made during June to the assistant surgeon-general at Washington, I made daily at 4 o'clock a report of the condition of the medical department and its needs to the deputy surgeon-general, which reports I was told were embodied with similar ones from the Third Corps and sent in the evening telegram to Washington. I was constantly assured that medical supplies of surgical chests, medical chests, field desks for the medical officers, mess chests, food chests, cots, bedding, and other hospital supplies and medicines in proper quantities would arrive. After one urgent appeal through Major-General Brooke the deputy surgeon-general purchased medicines in Chattanooga or elsewhere, but until toward the middle of July many of the regiments were obliged to obtain their medicines through the generosity of neighboring regiments generously supplied by their State governments, or by direct purchase themselves of necessary articles, which was done at their own expense.

When in July the movement of the troops from the First Division to Charleston and Porto Rico began, supplies had commenced to arrive in large quantities, but I was obliged to furnish the reserve section of the First Division and the First Brigade, First Division, with sufficient supplies. When later headquarters First Corps and the Second and Third brigades, First Division, were ordered to move I found many supplies not obtainable. The deputy surgeon-general disapproved my requisitions and those of the chief surgeons, Second and Third divisions, as being in excess of what was allowed by the medical supply table. I then made a final appeal to Major-General Brooke, who, over the disapproval of the deputy surgeon-general, approved my requisitions and ordered the supply-depot to furnish what I required.

I then found, however, that the purveyor's depot did not contain supplies which it was supposed to have. I telegraphed to the Surgeon-General, who authorized me to purchase at Newport News such supplies as I could which had not been obtainable at Chickamauga.

In order to fit out the brigades, First Division, First Corps, for their immediate movement, I was obliged to restrict the Second Division and the Third Division somewhat in their supplies, but approved their requisitions for complete supplies; and as I was assured that supplies were on their way to Chickamauga I supposed and trusted, although I have never heard, that they were given their full quota by Colonel Hoff, chief surgeon Third Corps, who took charge of these two divisions as chief surgeon when headquarters First Corps left Chickamauga.

Sanitary condition.—By reference to my communication of June 11, referred to above, it will be seen that I considered then, as I do now, that Chickamauga Park afforded and is an excellent location for a camp. As I then said, the water was good, but deficient in quantity, which was being remedied by the introduction of a pipe line and the sinking of drilled wells, which it was supposed would supply water in ample quantity. The troops of the First Army Corps were already located when I reached Camp George H. Thomas. At the outset I visited each and every regimental camp in company with the regimental surgeon, recommending to him what changes and precautions should be taken in regard to cleanliness, the company kitchens, the men's sink, and the water supply.

From that time until I left Chickamauga on July 23, I visited the entire three divisions every two or three days. I usually visited two divisions on one day and one on the alternate day, except at times when excess of office work prevented me covering the ground in less time than three days. Upon the arrival of the division surgeons I visited the entire division of each with him. The camps of the First Division had the inspection of the division surgeon, Major Parkhill, aided for a time by Lieutenant-Colonel Senn, and at all times by Maj. John Woodbury. This division had its hospital under the charge of Maj. William Wakeman, United States Volunteers, a promoted Regular Army surgeon. Two of the three brigade surgeons, Majors Stevenson and Birmingham, were Regular Army officers.

Maj. J. H. Hyssell, chief surgeon Second Division, and Maj. J. D. Griffith, chief surgeon of the Third Division, were medical officers of ability, thoroughly conscientious, and untiring in their inspections of camps and in attention to their division hospitals. Of the six brigade surgeons in these two divisions, three, Majors Kendall, Glennon, and Mearns, were Regular Army officers of recognized ability.

On July 1 Maj. Charles F. Mason, United States Volunteers, a Regular Army surgeon, was appointed medical inspector of the First Corps. It will therefore be seen that we had in the First Corps seven medical officers of the Regular Army charged with administration and inspection of hygienic conditions.

Until the end of the third week of June we had had excessively dry weather, and the diseases had been of a trivial character, such as diarrheas in new recruits, caused by the sudden change of food and surroundings; outbreaks of measles, which never proved serious; an outbreak of mumps in one regiment of considerable extent, and a large number of venereal cases. There existed in the First

Division a few cases of typhoid fever, which had been left at the time of the departure of the regular United States troops.

It was with extreme difficulty that proper policing, the cleanliness of the company streets, and the digging of sinks to the proper depth and keeping the contents covered with fresh dirt could be enforced. Again, there was a tendency after reviews and other large functions, where bodies of troops were kept out for some hours during the day, to be lenient with the men upon their return to camp on the ground that they were "volunteers" and "recruits," and it was claimed could not be worked as regulars could have been. It was no unusual sight to find junior line officers resting in their tents and the men left to their own devices while policing was put off until the morrow. It then too frequently happened on the next day that some other demand for military maneuvers allowed the policing to again be neglected and delayed until the morrow.

Much has been said in regard to the proper distance at which the men's sink line should be placed from the camp. While it is recognized that the distance should be as great as possible, yet placing the sinks at too great a distance had at times the disadvantage of placing them beyond the sight of the officers of the camp, and of the guards, who were instructed to keep the surrounding parks clean, and when sinks were placed at a considerable distance from the camp it was frequently found that the shady spots under trees of the surrounding ground were indiscriminately soiled, while with the sink closer to camp and under the eye of the guard they could be kept neat and properly covered.

Toward the end of June we had for the first time a considerable amount of rain, lasting several days. The collection of water from this rain showed that the sections of the ground in the center of the First Division, First Corps, and in several smaller localities in the Third Division, First Corps, lay upon a substratum of clay, which acted as a natural basin. In these localities the sinks filled with water, overflowing and contaminating certain springs and wells which, until that time, had furnished pure and good water. A week later, during the last few days of June, a number of cases of typhoid fever developed, when an immediate special inspection was undertaken, and the direct source of origin of some of the cases of typhoid fever was proven. The following table gives the sick report of the First Army Corps on the days of the adjutant-general's trimonthly report, and below is appended the reports from the three divisions showing the number of cases of typhoid fever existing on the last day of June:

Aggregate strength, number, and percentage sick, First Corps, taken from adjutant-general's trimonthly report.

Division.	June 20.			June 30.		
	Strength.	Sick.	Per cent.	Strength.	Sick.	Per cent.
1st Division	9,490	206	10,832	180
2d Division	9,197	831	11,107	296
3d Division	8,431	279	10,126	315
Cavalry brigade	3,127	99	3,295	147
Total	30,245	910	2.99	35,360	938	2.65

Division.	July 10.			July 20.		
	Strength.	Sick.	Per cent.	Strength.	Sick.	Per cent.
1st Division	10,803	214	10,759	318
2d Division	11,535	299	11,666	396
3d Division	10,909	477	11,683	556
Cavalry brigade	3,314	123	2,470	149
Total	36,561	1,113	3.04	36,578	1,419	3.88

FIELD HOSPITAL, FIRST DIVISION, FIRST CORPS,
Camp George H. Thomas, Ga., July 1 1898.

CHIEF SURGEON, First Division, First Corps.

SIR: I have the honor to report that of 69 cases, typhoid fever diagnosed in 61; typhoid fever is suspected in 3; convalescent from typhoid, 5; total treated as typhoid, 69.

Respectfully,

H. E. BRADLEY,
Major and Surgeon United States Volunteers,
In charge Hospital First Division, First Corps.

HEADQUARTERS THIRD DIVISION, FIRST ARMY CORPS,
OFFICE OF CHIEF SURGEON,
Camp George H. Thomas, Chickamauga Park, Ga., June 30, 1898.

Respectfully forwarded.

There are 9 cases of typhoid fever in division hospital and 19 cases of "suspects."

Twelfth Minnesota, 3 cases; Ninth Pennsylvania, 2 cases; Second Wisconsin, 1 case; Twenty-first Kansas, 1 case; First New Hampshire, 1 case; First South Carolina, 1 case.

Suspects brought in this a. m., 1 from First New Hampshire, 3 from Ninth Pennsylvania, 1 from Twelfth Minnesota. In hospital, 7 from Twelfth Minnesota, 2 from Ninth Pennsylvania, 3 from Fifth Pennsylvania, 1 from First South Carolina, 1 from First New Hampshire.

Supposed origin of fever in Ninth Pennsylvania, contamination of water with surface drainage.

In Twelfth Minnesota, from ("suspects") (typhoid malarial?) bathing in Chickamauga Creek.

J. D. GRIFFITH,
*Major, Chief Surgeon, United States Volunteers,
Chief Surgeon Third Division, First Army Corps.*

On July 1 in the Second Division, First Army Corps, there were but 7 cases of typhoid fever, of whom 2 were convalescent. This division, with its strength of over 11,500 men, only had 12 additional cases during the first three weeks in July. It will be seen, therefore, that of typhoid fever on July 1, there were:

	Diagnosed.	Suspect.	Total
1st Division	66	3	69
2d Division	7	7
3d Division	9	10	19
Total	82	22	104

Previous to July 1 a number of applications had been made for the issue of disinfectants. At this time an urgent appeal for the issue of disinfectants came from the regiments in the center of the First Division and from the brigade surgeons, Majors Glennon and Mearns, Third Division. These requisitions were approved by the chief surgeons of divisions and were approved by me, but when carried to the deputy surgeon-general of Camp George H. Thomas, they were disapproved, inviting attention to Army Regulations, 1462, forbidding the routine use of disinfectants. The disapproval of the deputy surgeon-general as to the use of disinfectants was carried to such a point that carbolic acid, desired for the treatment of chancroids and other surgical purposes, was obtained with difficulty on the ground that it might be used as a general disinfectant.

From this time during the three weeks which I remained in Chickamauga I visited the division hospitals each at least once in every two days, and was in daily consultation with the chief surgeons of divisions in regard to the hygienic conditions of the camp. The Second Division, First Corps, was located on a sloping shale soil with good drainage, and with the exception of the outbreaks of measles, had but few cases of contagious diseases. The hospitals, Second and Third divisions, were neat and clean and were most faithfully administered by both the surgeons directly in charge of them and by the chief surgeons of division, and were beyond criticism, except for the lack of sufficient medical supplies and sufficient number of Hospital Corps men.

At this time I had frequent consultations with Major-General Brooke as to the removal of the camps of the First Division and of the Third Division, which were located upon clay soil, and twice had been instructed to consult with the commanding officers of the divisions as to the removal of the troops from the site on which they were located to new camping grounds, when telegrams from Washington notifying Major-General Brooke that the First Corps would be immediately removed from Chickamauga caused delay in taking action.

During July the troops of the First Division commenced to break camp. Twice brigades were reorganized and camps partially broken, when the order was revoked and the men reestablished themselves in their original location. Finally the newly formed First Brigade, First Division, was sent to Charleston, leaving its sick in hospital and a large number of slightly ill cases in quarters attached to

the Fifth Illinois Regiment, to which was also added a large number of recruits recently received. The departure of the First Division headquarters, the First Brigade, and then the Second Brigade, immediately preceding the departure of First Corps headquarters, caused the withdrawal of a number of surgeons from the First Division hospital, in order that they might accompany their respective regiments. To supply the places of the Hospital Corps privates apportioned to the departing brigades, I was obliged to detail a number of men temporarily from the reserve hospital and ambulance company and from the other divisions. This confusion of departure accounted reasonably for the somewhat demoralized condition of the First Division hospital, which, as already stated, with reasons already given, had never had the systematic organization which existed in the Second and Third divisions.

On July 23 headquarters First Corps left Chickamauga for Newport News. It was accompanied by the reserve hospital and ambulance company completely organized, with 12 commissioned officers, 213 enlisted men, 24 ambulances, 20 army wagons, and tentage and supplies for a hospital of 200 beds.

At Newport News this was augmented by the brigade hospital section, Second Brigade, First Corps, consisting of 3 medical officers, 60 Hospital Corps privates, 6 ambulances, 5 wagons, and tentage and hospital supplies for a hospital of 50 beds.

At Newport News the Second Brigade was encamped for several days. Instructions were issued to the brigade surgeon to have a thorough investigation made of the commands in this brigade and to eliminate the sick, who were left at the general hospital at Old Point Comfort.

Headquarters First Army Corps and the Second Brigade, First Division, First Corps, were embarked on six transports and left Newport News on July 28. The first transports reached southern Porto Rico on the evening of July 31, and after touching at Ponce reached Arroyo and commenced landing on August 2. Four transports with the headquarters, the troops of the First Illinois Volunteer Infantry, Fourth Ohio Volunteer Infantry, and Fourth Pennsylvania Volunteer Infantry, and with the ambulances and wagons belonging to the Hospital Corps, landed at Arroyo. On the *Seneca* there were 1 medical officer of the reserve hospital and 16 Hospital Corps privates.

The entire remainder of the Hospital Corps, officers and men, and the animals for transportation were on the other two transports—the *Massachusetts* and *Roumanian*—which, as we learned later, had grounded near Ponce, and the men only joined us more than a week later by coming overland. Immediately on landing the troops were placed in temporary camps at a short distance from Arroyo, and were rapidly scattered in small outpost detachments and in advance battalions toward the direction of Guayama.

In Arroyo the medical inspector and surgeon of the Third Illinois had established a small hospital in the building of the town cocking pit, which we were obliged to use temporarily for a number of cases which had developed sickness, and we were obliged to ask for a detail of privates from the commands to take the place of the Hospital Corps men who had not arrived.

Having but 1 officer and 16 Hospital Corps men to look after the unloading of the ambulances, wagons, and medical supplies which were being unloaded from lighters, mixed with the supplies of three infantry regiments who had ample force to look after their own stores and who acquired much which did not belong to them, a certain amount of property belonging to the reserve hospital and ambulance company was lost.

Some of this property was afterwards found in the various camps and recovered, but a portion of it was totally lost. As soon as the ambulances and wagons could be put together and the property had been collected and placed in them, they were removed by the use of bull teams to a well-located gravel field on the Arroyo, where a hospital camp was formed and was ready for occupancy by the hospital corps when it arrived from Ponce.

By this time the troops had taken possession of Guayama and had moved the advance outposts to the mountains beyond. On the afternoon of August 12 a general advance was ordered, and the entire hospital with its sick, then numbering some 120 cases, was moved during the night to a knoll at the edge of Guayama. During the remainder of August the troops were scattered for a distance of several miles around Guayama. Efficient service was rendered by the ambulance company making the regular tours twice a day at fixed hours, and being always ready in cases of emergency.

Here again difficulty occurred with the regimental commanders in the attempt of the regimental surgeons to establish and maintain regimental hospitals. For several reasons I was called upon to act energetically in checking them and consolidating the sick at the reserve hospital.

In the first place, I had my orders as to the organization of the medical service. In the second place, the constant military reasons for movement of troops rendered it important that they should not be hampered by having sick on hand, and the establishment of the regimental hospitals prevented the surgeons of the regiments from accompanying the commands and giving them proper attention. In the third place, I had just received a peremptory telegram from the assistant surgeon-general at Ponce, calling my attention to the fact of a building having been occupied at Arroyo. I was obliged again to resort to Major-General Brooke's never-failing justice and respect for orders for authority to consolidate the sick in the field hospital.

A week later I was furnished with a hospital building at Guayama, which, after a thorough cleansing and disinfection, was made into a ward of the hospital, in which were placed 30 beds, to treat the more serious cases of fever. At both the field hospital and at the ward in Guayama we had built ovens of brick, and with crushed and dried sugar cane for fuel. I ordered the complete destruction of all fecal matter and garbage. Notwithstanding the inspection which had been ordered at Newport News, it was found that, either through neglect on the part of one or two surgeons or a false courage on the part of men, who would not answer sick call for fear of not being allowed to accompany their comrades on the expedition, a number of cases of typhoid fever developed. In addition to these cases the other serious cases were malarial fever, of which the remittent type and a continued climatic fever lasting from five to six days were most common.

Considerable confusion existed at the outset in regard to the discipline of the hospital corps. Maj. Lawrence Smith, surgeon, First Pennsylvania Volunteers, who had been surgeon in charge of the hospital, had been taken ill while on the transport and had been returned to the United States, and unfortunately died. The books of the reserve hospital, including the personnel of the hospital corps and the list of property, could not be found.

As before stated, just before leaving Chickamauga, Major Boyd, surgeon, Third Kentucky Volunteers, had assumed command of the ambulance company. However, it required but a few days to completely reorganize. Major Boyd, assisted by Captain Taylor, assistant surgeon, Fourth Ohio. Lieutenant Colby, assistant surgeon, Thirty-first Michigan, in the ambulance company, and Major Bain, surgeon, Second Ohio Volunteers, in charge of the reserve hospital, with his hospital staff of assistant surgeons, deserve the utmost credit and recognition for the faithful way in which they overcame lesser obstacles and for the devoted, untiring energy to the performance of their duties.

In addition to the three regiments forming the Second Brigade, First Division, First Corps, we had at Guayama Troop H, Sixth United States Cavalry, Company F, Eighth United States Infantry, a battalion of four batteries, commanded by Major Rodney, a battalion of four companies of the Signal Corps, commanded by Colonel Glassford, and the First Troop Philadelphia City Cavalry.

On September 2 the troops in Guayama were left under command of Brigadier-General Grant.

Major-General Brooke, accompanied by his staff, Troop H, Sixth United States Cavalry, and Company F, Eighth United States Infantry, proceeded across the island to Rio Piedras, on the outskirts of San Juan. Here the troops were placed in a small camp, and the detachment of reserve hospital corps which had accompanied headquarters was placed in charge of Maj. Charles F. Mason, medical inspector.

On September 15 General Brooke assumed command of the United States troops in Porto Rico, and announced his former staff, First Army Corps, to their respective positions on his staff as a commanding officer of the United States troops in Porto Rico.

I had received absolutely no information in regard to the condition of the medical service in western and southwestern Porto Rico. On September 17 I was ordered to make an inspection of this portion of the island.

I left Rio Piedras on September 18 and made the inspection, making daily reports by telegraph and by letter to Major-General Brooke. I collected during this inspection a roster of the medical officers and Hospital Corps men, with an inventory of medical supplies, a copy of which I left for the chief surgeon sent to relieve me.

I beg to call attention to the valuable services rendered both at Chickamauga and in Porto Rico by Maj. H. P. Birmingham, chief surgeon, Third Brigade, First Division, First Corps, who had charge of the hospital at Ponce, which he administered with method, system, and a display of energy remarkable considering the conditions with which he had to deal.

On October 8 I was furnished by the adjutant-general, United States troops in Porto Rico, a copy of paragraph 34, Special Orders, 224, Adjutant-General's Office, *Current Series*, ordering me to report to the Surgeon-General in Washington. No steamer was available until October 18, when I left San Juan.

REPORT OF LIEUT. COL. A. A. WOODHULL, DEPUTY SURGEON-GENERAL UNITED STATES ARMY, ON CONDITIONS IN CAMP GEORGE H. THOMAS, CHICKAMAUGA PARK, GA.

[Dated August 7, 1898.]

In compliance with a War Department order (Special Orders, No. 162, July 12, Adjutant-General's Office, current series) I have made a sanitary inspection of the various camps and field hospitals at Camp Thomas, Ga., and of the Leiter General Hospital, and report as follows:

I personally examined every regiment in camp, excepting one or two that arrived during my visit and were assigned to brigades already inspected, and those that were ordered from the camp before I reached them in regular course. I also inspected all places where the sick are cared for.

The latest return gave 43,723 officers and men present, and 2,988 of these sick, exclusive of those sent to general hospital and those who have died or have been discharged for disability. This represents 6.83 per cent present sick, of which at least 4 per cent is grave, and both the rate and the gravity are increasing.

The determining conditions are (1) site, (2) water supply, (3) character of troops, (4) climate, (5) shelter and occupancy of camp, and (6) employment and control. These are not independent, but are conjoined factors treated separately in this report for convenience, but exerting their influence together.

(1) *Site*.—The camp includes an irregular area 10 by 12 miles square, or about 70,000 acres, bounded on the west by the Chickamauga Creek. The surface is both rolling and level, partly wooded and partly entirely cleared. The greater part has sufficient grade to carry the surface water into natural channels, that are dry except after rainfall. The timber is not dense and is free from undergrowth, so that the sun reaches the ground in nearly all places. There are no distinct swamps or morasses, but what are known locally as the "flat woods" should not be occupied, although some were camped in. The whole region is underlaid with magnesian limestone, which in some places crops out at the surface and in others is covered with dense and tenacious clay, varying in depth from a few inches to many feet. There are a few hillocks of gravel, I am told, but I saw none opened. The rock is irregular in density as well as in disposition. A part requires blasting and a part is fragile. Borings show different strata of varying degrees of hardness, with intermediate layers of dense clay. Communicating rifts may be expected in such limestone, permitting contamination of water over considerable distances. It is claimed, however, that no such rifts have been recognized in boring more than 30 wells. Their occurrence large enough to allow a free flow of water is nevertheless possible. These wells go to a gravel from which water rises near to the surface, but the engineer does not know whether the same bed is always reached. There are "sink holes" in various places that are not filled by any waste flowing into them, and some wells are roily after rain. It is manifest, therefore, that there is, at least, occasional intercommunication. When clay is encountered, and most of the camps are over clay, it holds water almost as cement would, making the construction and care of the sinks very difficult. In other cases the nearness of the rock to the surface makes them very shallow. The camps that are in low ground are consequently wet and very imperfectly drained. Since the middle or 20th of July a good deal of rain has fallen; previously the dust was spoken of as intense. There is a good deal of local feeling in favor of vacating the woods altogether and encamping entirely in the open. I think no camp should be in the "flat" or "low" woods, but the high woods are dry and are too sparse to interfere seriously with the sunlight.

(2) *Water supply*.—(a) From the Chickamauga Creek, which runs through an alluvial bottom, an extensive pipe system has been introduced from which water may be drawn by frequent taps. At the time of inspection this water was very muddy from repeated rain. In other respects there was no gross contamination, as far as recognized, except such as would naturally be found in a sparsely settled agricultural and somewhat malarious region. The sewage from the Leiter Hospital does not flow into the Chickamauga, as has been charged.

(b) There are numerous surface "springs," the most of which should not be used, but from which the men have drunk freely. The park commission has filled the more objectionable of these.

(c) More than thirty driven wells have been bored to water-bearing gravel. Four of these are less than 50 feet deep; the others range from 64 to 156 feet in depth—fourteen of them being more than 100 feet. The construction of the wells themselves is very good; the casing is iron hammered into a tight joint running down 15 feet, and the pump is placed on a tight cap elevated above the surface. I think no surface contamination need be feared, but it is probable that some are directly polluted through neighboring sink holes. Several have been condemned.

on suspicion, of which a part at least is well founded. In one instance (the Jay's Mill well) the pump has been placed in a so-called spring that receives a great deal of objectionable waste, and after a heavy rain the wash runs into the top, as is shown by the flood mark.

(d) There are also on the grounds, and within a few miles of the park, very large springs having a prodigious flow, from which some regiments haul their water in barrels or tanks for their immediate supply. I was unable to examine the springs that are beyond the park limits. One large spring a few hundred yards from its camp, from which the First Mississippi is drawing water, seemed liable to be hurtful unless the water is boiled.

The effort has been to limit the drinking water to the wells and the safe springs, and, after precautions, to the pipe line; but there is no doubt that water from all sources—from the pipes and from the surface springs—has been freely used without preparation. This occurred repeatedly within my personal observation; and, before the supply was as general as now, doubtless was much more common.

Filters of two varieties, both of which require to be used with the same water, have been introduced, but only recently. There is general complaint, which I think is well founded, that under the conditions the apparatus is insufficient and inefficient. It was repeatedly reported that the Berkefeld filter would require cleansing after preparing half a bucket of water, and many have been broken in the very act of filtering. In very few regiments are all the Berkefeld filters in operation, and in some they were distinctly abandoned after a few days' use. Practically, as already remarked, a great many men drink without discrimination any water they find. Without doubt, the best arrangement is that of the Third Tennessee, where all the 11 filters supplied to the regiment are concentrated into one battery under the charge of an officer; but even here, where extreme care appears to be taken, four bougies were broken already. The supply of water is insufficient, and has been more so. Where the filters are depended on the flow is not adequate. The very best showing is that of the Third Tennessee, just quoted, which gives 1 barrel and 4 buckets, or, at the outside, 66 gallons per company of more than 100 for twenty-four hours for all potable and culinary purposes. Including unavoidable waste, that does not allow more than 5 pints per man. This is a probable maximum, and from this it dwindles to a zero of filtered water, and a very small amount of that which has been boiled. There are general instructions to boil all the water, whether filtered or not. In the only regiment where I could be sure that order was actually enforced (Eighth Massachusetts) no typhoid has yet been recognized, and although the camp is very low and wet and remittent fever has occurred within the last fortnight the general sick rate is only 2.56 per cent. As will appear later I do not think the water is solely at fault in the spread of typhoid, but the more copiously and the purer it can be furnished the better will be the general health.

There is a general complaint of the difficulty of getting barrels for the storage of water, and, where it is hauled from springs, for its transportation. Some regiments have bought their own barrels, and occasionally a tank has been procured. Barrels are not particularly costly, and it is recommended that the Quartermaster's Department be authorized and required to supply these freely, and that those necessarily abandoned be expended.

(3) *Character of troops.*—As is well understood, the regiments at Camp Thomas have all been newly raised. Some of them contain many immature men; others have an undue proportion of men positively unfit for service from preexisting disability; the most come from very different climates; for some the food is unusual and difficult of assimilation; the most of those who have had field experience have been in military camps of short duration, where there was no occasion to take especial care of themselves. As a consequence, in everything pertaining to field hygiene, the mass are sadly deficient. Not only are the most of the officers practically as ignorant as the men, but the regimental discipline varies very much, and in many cases appears still extremely lax. This is important in its bearing upon the apparently little things that in the aggregate make up the foundation of camp sanitation. The dirty camps are the sickly camps here as elsewhere. But discipline and intelligence have their reward also. Without specifying instances low in the scale, attention is invited to the Eighth Massachusetts, already cited, where the positive enforcement of orders by punitive measures when necessary has resulted in the actual use of only boiled water for drinking, with exemption from typhoid fever and a low sick rate as a probable consequence. Again, in the case of the Fifth Missouri, I was informed by the colonel that especial pains had been taken to exclude lads, and that the average of his men was 28 years. In this command, whose surroundings were extraordinarily bad, where 1,300 men had been confined since May 27 on an area 320 by 230 yards, shut in by other regiments

with sinks immediately about them and constantly encroaching nearer and nearer, with necessarily narrowed and crowded streets, although typhoid fever has appeared, the actual sick list was relatively low, being 3.2 per cent. This I attribute to the greater resisting power of these full-grown men. An immature regiment must have been badly shattered under such conditions.

(4) *Climate*.—The heat and humidity at Camp Thomas are very great now. Early in the season the weather was dry, with occasional showers. Since the 20th of July, and perhaps earlier, copious rains have fallen. At first there were clouds of dust: later, the heavy rain has run off by the natural channels, except in the "flat woods," but has made the sinks still more difficult to take care of, has rendered the tents damp, and doubtless is increasing the causes of malarial disease.

(5) *Shelter, occupancy, and arrangement of camps*.—All the troops are under canvas and nearly all the canvas is overcrowded. The tents are of many patterns—a few shelter, more conical and conical wall; some State tents of various sizes, the most of which are so-called "flood" tents of the Mississippi Valley, very old and nearly all leaky, and the greater part the improved common or A-wall tent. The occupants vary from 2 in the shelter to 4 and 5 in the A, 6 or 8 in the "flood," and 15 or 16 in the conical.

Many of the regimental sites are precisely the same as those occupied from the beginning. A few of the regiments have been moved, and it is probable that more are now being changed, but at the time of my observation many of the commands had been in absolutely the same position for two months or more. Not only were the camp sites the same, but in the most instances the tents themselves stood where they had first been placed. In scarcely any instance was fresh ground available, as it should be, upon which the tents might be moved laterally every week or ten days. Consequently the ground itself is being poisoned imperceptibly, but persistently, by the human body without the disinfectant and redeeming action of direct sunlight upon it. The contents of the tents, such as blankets, straw, and the like, have been irregularly removed into the open air, but, as a rule, not often enough. Direct touch showed in many instances that these articles and the ground were damp. The camps, speaking generally, were crowded not merely as to inhabitants but as to neighborhood. There was abundant room between divisions and generally between brigades, but many of the brigade camps were too compressed, and with some of the regiments the compression was extreme and in defiance of all sanitary laws; this in addition to the tents themselves having too many occupants. The difficulty probably arose originally from the expectation that many more troops would be sent into the park, for whom space must be reserved. In some cases higher authority arbitrarily established the regimental lines. Whatever the reason, the effect is clear—the tents are overcrowded and without sufficient adjoining space, the streets are narrow, and the soil is becoming more and more charged with filth. Owing to reasons previously explained, competent sinks were made with difficulty and were multiplied on account of their shallowness and the rapidity with which they filled with water. They thus encroached more and more upon the open space and intruded toward the camps. For instance, in the Second Arkansas, Second Brigade, Second Division, Third Army Corps, the men's sinks were within 30 yards of the kitchens, and were very offensive. The kitchen sinks were intermediate and so full and so foul that maggots were abundant on the surface. In the Fifth Pennsylvania the camp site was lower than the sinks, and during recent rains they overflowed and flooded the camp. The sick report of that regiment was 11 per cent, including 25 cases recognized as typhoid and 15 supposed to be of that disease, with the sick rate increasing.

More than half of the men slept on the ground. In some regiments the tents were floored, in others cots and field bedsteads were arranged, but always at private or regimental expense. The motive in many instances doubtless was comfort, but in one regiment (Third Tennessee) the men bought the cots because they had learned by experience in civil life that it was harmful to sleep on the ground in that climate. In a very sickly regiment (Ninth Pennsylvania) the medical officer pointed out a very high three-story bunk, whose tenants he declared the healthiest in the command. A group of three is too small to reason from, but it is significant that among much sickness these men escaped. The sanitary advantage of being on the ground is freedom from dampness, and especially escape from the immediate influence of the ground air, which, under the conditions described, must be peculiarly deleterious. It is recommended that in all camps of position in southern climates the tents be floored, with a considerable space beneath, and that the floors be portable, so that they may be moved (within the camp) when necessary for change of site or for police. The expenditure of a few feet of lumber

when the regiment departs is well balanced by the greater physical efficiency of the men.

Quite independently of any specific contamination of the water supply (and were the general water supply thus contaminated the typhoid fever would also be general, which it is not as yet), the pollution of the soil by fecal discharges, specifically diseased or healthful, leads to the occurrence of diarrhea, to general physical depression, moderate fever, and undermining the man's health, and whether an imported case or not is necessary to fire the train, it is the universal experience of armies that outbreaks of typhoid fever will occur under just such circumstances. This is perfectly understood and always anticipated by sanitarians where precautionary measures are not carried into effect. In this case, besides having a congenial soil fertilized day by day for such seed, the seed itself was introduced directly by various regiments, as Thirty-first Michigan, First South Carolina (as reported, regiment has left the park), Fifty-second Iowa, which brought no acute case but was infected before arrival, and Ninth Pennsylvania, which has had nearly 100 cases in all. Besides which, certain regiments (Fourteenth Minnesota, Second Ohio, Third United States Volunteer Cavalry) have treated cases for considerable periods in the camps themselves. It can not be necessary to enlarge on the facilities for the spread of this disease that are afforded by fatigue, heat, moisture, overcrowding, dust, and flies; and all these are present.

(6) *Employment and control.*—The physical and the moral influences of occupation are factors that, speaking generally, do not seem to be thoroughly appreciated in this camp. I received the impression—it is only an impression and may be erroneous—that the most of the men were overdrilled. Nearly constant occupation or amusement is the best antidote for the ennui that extinguishes some soldierly vitality, and idle men are likely to be sickly men, but monotonous drills in hot climates have their limits, and should be arranged with discretion. In at least one command drill was from 6 to 8 a. m., and with parades from 3.30 p. m. until dusk. So far as temperature is concerned, the hours were well suited, but to fall in at 6 o'clock implies for the majority of men, where the sinks are few to a regiment, extreme discomfort in the matter of physical relief. The afternoon cessation of such exercises leaves the clothing drenched with perspiration and the men without opportunity to dry it or themselves before sleeping. I was told, but did not verify it, that some drills had been held at 1 o'clock, but that seems hardly credible. As far as I could learn, no attempt has been made to carry out practice marches or to move the commands from the park itself, but those battalions that have moved out for two or three days' target practice always return in much better health. In my judgment systematic military excursions should be utilized for the health, to say nothing of the efficiency, of the men. The discipline of the several regiments varies greatly, but where it is intelligently exercised the condition of the men is the better, as shown by their camp police, their personal appearance, and especially their abstinence from unauthorized water supply.

The refuse from the thousands of animals and the other insoluble débris of the camp add to the aerial and indirectly to the aqueous pollution. A few of the regiments attempt to burn their kitchen garbage in extemporized furnaces, but there has been no systematic arrangement, as might easily have been made, for formal crematories.

Some officers attribute much of the sickness to the sale by numerous vendors of milk, pastry, fruit, and vegetables, a considerable part of which is supposed to be not in the best condition. It is probable that some of these comestibles lead to moderate diarrheas, as in fact the natural water does, and predispose to other intestinal troubles. With a fair inspection I believe that these peddlers add to contentment of the men, to many of whom the ration is not yet perfectly satisfactory. (I verified occasional complaints of unsound beef and spoiled bacon, but they were not numerous.)

This outline, which might be filled with very copious detail, for which I have the notes made on the spot for every regiment, should suffice to account for the serious and increasing sickness in that part of the army.

The inspection of the hospitals and of the sick lists of the regiments shows a complementary condition. My orders did not cover any question of supply or of administration, but it was absolutely necessary to touch these subjects at certain points in order to obtain an intelligent view of the situation.

Under the general plan of field administration all the sick who may not properly be cared for in their own tents, the "quarters" of garrison, are expected to be treated in the hospitals of their appropriate divisions, which are conveniently situated for access by ambulance. These division hospitals are in turn subdivided in theory into brigade hospitals, both as to personnel and material, so that if neces-

sary its proper allowance of men and supplies can accompany such a detached command. At the time of my inspection there were four intact divisions in the camp, a cavalry brigade, an artillery brigade, and a headquarters escort, provost guard and employees. When the First Division, First Corps, left Camp Thomas about the 23d of July, it left 153 cases in the division hospital, doubtless because the general hospital could not receive them. The hospital was placed under Major Brechemin, United States Volunteers (captain, Medical Department, United States Army), with four contract surgeons as assistants. At the date of inspection, August 3, 88 cases remained, 60 of which were typhoid fever. There had been 17 deaths at the hospital in all, and several of those remaining were critically ill. When the change of administration was made the general condition of the hospital and of the patients must have been deplorable, judging from special reports in the office of the chief surgeon Third Corps, that I had the opportunity to read. From those reports some of the patients had bed sores, and the general administration lacked order and care.

At the time of my inspection there were six beds to a tent, including the typhoid cases. The general police of wards and grounds was fair and evidently improving. The natural drainage was good, but the site was bordered by low ground on three sides and any considerable enlargement would have been impossible. Of 33 privates of the Hospital Corps 20 were on duty as nurses in reliefs of twelve hours each. Originally there were no sheets, but these had been supplied by the Red Cross. There was no hospital fund. There was extreme difficulty in obtaining medical supplies, a week being named as the ordinary limit. For two days there was no corrosive sublimate to disinfect the bedding. No strychnia at all was obtainable. The hospital then needed both strychnia and whisky. Water was formerly obtained from a large spring, but now from a well. There is no filter, but it is supposed to be boiled. It is doubtful whether it all is boiled. The sinks which the patients are able to use are bad. A detail of 50 men sent by the Second Division from a Minnesota regiment the previous day to dig sinks declined to do so under the alleged orders of the division adjutant-general and merely policed the grounds. As no more patients were likely to be received, the condition of this hospital will improve, and under Major Brechemin's intelligent energy the confused records will be made more plain. In my judgment there should be hospital accommodation to which all the remaining cases might have been transferred when the division moved, but there was none. There were 5 cases of venereal disease awaiting discharge, although the command had actually left the park ten days previously.

Hospital, First Division, Third Corps.—At the time of my inspection, July 27, the hospital control was just being assumed by a newly-arrived officer, who could not be regarded as responsible for its defects nor be credited with its advantages. The staff consists of 5 medical officers, and the enlisted force was 95 noncommissioned officers and privates of the Hospital Corps. The hospital consists of 30 hospital tents for all purposes, containing at this date 179 patients. The tents are too crowded, containing 8 patients apiece, and they have had 10. There is insufficient space between the wards, the grounds are not adequately ditched, and the approach to the patients' sinks is very poor. The sinks themselves are very bad. The hospital is not divided into brigades. The Red Cross supplies about one-half of the clothing and the bedding. The floors that have been supplied the tents were furnished by regimental means. The hospital fund started with \$50, and there was \$48 at the end of the month, but considerable expenditures had been made by emergency funds supplied by the regiments. Very serious complaints are made as to the inadequacy of the medical supplies. No atropine is on hand, and the salol has been bought by private means. The chloroform supplied 1st-10th of June was regarded as inert, although this might depend on the inexperience of the administrator in open-air work, but the bottles contained a small part of the marked contents. Chocolate-coated quinine tablets in stock, Parke, Davis & Co., tablet 125 (563360 in red), are insoluble and found in the stools. I am informed in Washington that this is not supplied by the medical department. It was evidently regarded there as part of the regular supplies. The food as a whole is good, and the special diet kitchen was very neat and appeared excellent. Two of a case of 12 sides of bacon then on hand were bad, and I personally observed the maggots in them. There was only one very small coffee mill, apparently belonging to a mess chest, for the whole hospital and one man was employed all day in grinding coffee. The average duration of treatment, excluding the typhoid cases, is stated at three or four days. Cases are transferred to Leiter and to McPherson general hospitals. Fifty men are employed as nurses and are on duty from twelve to eighteen hours continuously, day by day. As far as observed, all the hospital cases of this division were taken into the hospital.

Second Division, Third Corps.—Nearly if not all of the regiments in this division maintain regimental hospitals. For instance, the Ninth New York has from 6 to 8 men in a local hospital out of 60 supposed to be in quarters. In the division hospital are 33. The regiment has had about 30 cases of typhoid, but the proportion of malarial cases is now large. First Arkansas has 37 in hospital and 85 in quarters. When examined there was a small regimental hospital maintained by individual subscription, in which were 3 cases of dysentery alleged to have been returned from the division hospital. First Maine has 7 men in the regimental hospital. Of the 42 officers, 7, or 16.67 per cent, are sick—all with typhoid fever.

The hospital of this division (Major Bradbury, First Maine, in charge) consists of 37 hospital, 8 conical, and 6 common tents, containing 285 cots and 250 patients. Eight medical officers are present for duty, with 6 stewards and 138 privates. Of the latter, 45 were men of the line detailed from regiments. To this date 1,190 patients had passed through the hospital, and 56 typhoid cases were present. Were all the men in the division who should be in hospital present it would be overcrowded, as it has been when men were at times literally upon the ground, and at other times medical officers have given up their own accommodations to them. Sometimes typhoid patients are returned to their regiments for convalescence in order to make room. Speaking generally, the condition of the hospital is very good. The streets are broad and well policed; the general police is excellent; the ordinary wards are very good, but the typhoid ward is too crowded, and formerly was still more so, when the cots touched each other. There is great difficulty in disinfecting the bedding. The hospital is brigaded, but not the attendants, and there would be difficulty were the command suddenly broken up. There are several brigade surgeons at this hospital, and it is plain that they do not regard that as their proper sphere. The records are well kept, but great difficulty is experienced in obtaining supplies. This seems to be partly technical and partly from insufficient stores. I examined the record of a requisition made on the 1st, acted on on the 13th, 17th, and 19th, and on the 22d filled in part. I saw another where two articles were supplied out of seventeen authorized. The hospital finds it practically impossible to get intestinal antiseptics, such as salol, or strychnia, or subgallate of bismuth. It is very largely dependent upon regimental and Red Cross funds, and a case of boxes to hold regimental supplies has been arranged to stimulate regimental interest, which is quite foreign to the principle of these organizations. The Red Cross supplies 1,500 pounds of ice daily; milk, food, comforts, and some absolute necessities, as medicines, themselves.

Second Division, First Corps.—Brigadier-General Poland, since deceased, particularly requested me to recommend that the water which is being drawn for his command from the spring of the Rev. Mr. Park, outside of the public grounds, should be paid for. He made this request with much earnestness, and it has proved to be one of the latest of his official acts. I heartily commend his request.

The hospital cases of the First Brigade doubled in July. The Second Ohio has 13 men in the regimental hospital regularly cared for by 2 men permanently and 4 men detailed day by day. The Fourteenth Minnesota has 5 in its regimental hospital, several of whom are quite ill, 1 being a typhoid fever case which there is no pretense of sending to the division hospital. In the Thirty-first Michigan 10 cases are being treated in the regimental hospital, which is evidently a fixed arrangement, and there is great unwillingness to send men to the division hospital. On the other hand, I questioned a man (Private Dyer, Company F) who had been sent to the division hospital 29th of July, but was not admitted. There was serious complaint as to the detaching of medical officers and noncommissioned officers and the employment of such men of high social and scholastic standing on menial duty—for example C. O. Ryan, I Company.

Regimental hospital, First Georgia, was equipped at Griffin partly by the Surgeon-General and partly by private means. The Fifth Illinois claims great difficulty in discharging men for disability, and has now a dangerous epileptic (David D. Edwards, Company A), who is a menace, but whose discharge has long been delayed.

Hospital Second Division, First Corps.—This contains 150 beds, but has 172 patients present. More cots have been sent for. There are 6 medical officers, 1 line officer as quartermaster and acting commissary subsistence, 5 stewards, and 39 privates. Occasionally individual nurses are sent for special cases from the regiment. The tents are too crowded—8 men each—and the tent police is not good. There were 20 cases there fit for a general hospital which could not be sent without orders. A greater capacity is much needed. There were 11 tents in possession not erected. The washing is done by contract, and the clothing disinfected, but not boiled. The hospital fund is \$33. There is no money from private funds. The Red Cross sends daily 200 pounds of ice, 10 gallons of milk; 4 chickens

weekly; eggs and lemons irregularly. Pajamas and night shirts are furnished by benevolent societies. There have been 586 patients all told, with 4 deaths (1 accidental, 1 from cerebral hemorrhage, 1 when a patient had been under treatment for typhoid fever for ten days in his regiment). Forty-two cases have been sent to the general hospital. There was serious complaint that the supplies were defective in strychnia, nux vomica, belladonna, opium (except camphor and opium and dovers powder), and the liquid preparations of opium and deodorized opium are much desired. There was no ophthalmoscope or no rectal speculum available. The diagnoses were not well kept in the register, little correction being made in the original ones sent from the regiments; but a distinction was drawn between "enteric" and "typhoid" fevers, with the claim that they are distinct.

Third Division, First Corps.—The Twelfth Minnesota, with a constant sick rate of 13 per cent, claims great difficulty in getting lime and vessels for boiling water. The Fifth Pennsylvania has a sick report of 11 per cent, with many typhoid cases. The police is not good and sickness is increasing. It is said that the quartermaster department declined to supply vessels and barrels for water, but boiling has begun lately. The sinks were infected and no disinfectant allowed. (This is the regiment already reported as being overflowed by its sinks.) Medicines have been very difficult to procure. It was supposed that they were "held in reserve." Consequently they have been purchased, and strychnia, which could not be had on requisition, was finally bought by direct authority of the Surgeon-General. The Eighth Massachusetts, whose discipline is good and which boils its water, has a sick rate of 2.56 although its camp site is bad. The Twelfth New York, in the same brigade, has a rate of 8.5, rapidly increasing, of which 95 per cent is believed to be typhoid. The regimental hospital has 19 cases. The regimental fund equipped the hospital and the medicine and food are supplied by charity. The Ninth Pennsylvania has a sick rate of 13 per cent. It brought 2 cases of typhoid fever into camp and has had nearly 100 altogether. It has 80 cases in general hospital and 30 in division hospital, which declines to receive more. In the regimental hospital are 28 men with detailed nurses, and there are reported by the surgeon a number of cases in the camp in quarters (tents) with high temperature. The Second Missouri has no field desk, and its reports of sick and wounded have been returned for quite unnecessary corrections. There are 15 men in the regimental hospital, which is floored and furnished by private means. There is the perfectly just complaint that no whisky and other necessary medicines can be had for the men who have been permitted, whether necessary or not, to be treated in camp. The First New Hampshire has more than 70 men under treatment in quarters, besides 25 on sick report on light duty and 25 in the division hospital. It has 20 typhoid cases, the first occurring about six weeks ago. The regimental surgeon reports 18 or 20 fit for the division hospital and many men in camp unable to attend sick call and who must be visited. There is also the repeated complaint of the difficulty of obtaining discharges.

Hospital, Third Division, First Corps.—This has 5 medical officers, 1 line officer, 8 regimental stewards, 89 privates, including 18 sick. Forty of these men are employed as nurses, but as they are untrained their value is small. Twenty-four of the detachment were transferred voluntarily and are good, but the Hospital Corps recruits are very poor as received. The nurses go on in two reliefs of twelve hours each, and special nurses are also obtained from the regiments for particular cases as required. There is also a daily regimental detail of 15 men. The capacity of the hospital is 30 tents with 206 beds, leaving 7 tents and 50 beds not pitched. The hospital is not brigaded. To the 10th of July there were 658 cases, and 26 deaths, chiefly from typhoid. Some cases appear to be delayed in reaching hospital, and the Second Missouri was cited as a regiment that preferred to treat its sick in camp. Some of the tents were crowded with 8 beds and others contained 6. The typhoid cases are not kept in distinct wards, but are mingled among the others. The police is fair, and the patients' clothing, wrapped in a poncho, is kept under their respective beds. The stools are disinfected with the bichloride and the clothing is washed by a woman living near, after chemical disinfection. The clothing is not boiled in camp. The hospital ground is small but the drainage is good. Fifteen barrels of water from the park spring are received daily. The water is boiled and partly filtered. Major Clark, Twelfth Minnesota, is in charge, and all the medical officers are regimental, who desire to rejoin their regiments when the command moves. Their present detached condition is resented by the line officers. It was not thus noted on the spot, but it is believed that this hospital, in common with the others, is largely dependent on the Red Cross and similar voluntary associations for support. The defects reported by the officers concerned are as follows: The Myers stove is inferior to the Buzzacott oven,

because it soon fills with ashes and requires specially short wood. But a single coffee mill was available, and it ground badly. Salol and other necessary medicines require to be bought. The medical field supply was pronounced insufficient and inappropriate for the climate. Some articles were in excess, but the most are deficient. The quinine is insufficient for the conditions, and there should be more condensed food, as beef and milk; and malted milk, which was spoken of very highly, was desired. It was charged that the needle holder broke the curved needles very easily, so that four were destroyed in an operation recently.

Besides these organized hospitals there are four others necessarily required. The cavalry and artillery brigades, each practically independent commands, have no reserve hospital, but care for their sick regimentally—namely, the Third United States Volunteer Cavalry, the First Illinois Cavalry, and the various batteries together. There is also a small hospital for the troops and others directly attached to headquarters.

Third United States Volunteer Cavalry has a sick report of 16.47 per cent., which is increasing. The first recognized typhoid fever case occurred in the previous week, and five were sent to the general hospital. There is reason to suppose, however, that a case now convalescent is actually one of that disease. There were 375 cases to July, but the July record was not yet entered. There are now 20 in the regimental hospital, chiefly remittent, and 139 in quarters. This regiment had just changed its camp to a new site, but its old one from want of police had been an offense to all who observed it.

The First Illinois Cavalry lying by the side of the last, also having just changed camp, has a sick report of 3.8 per cent. The regiment has been in the park since the 1st of June, and typhoid fever commenced about eighteen days ago, since which time there have been 5 cases. There were 19 cases in hospital, chiefly remittent and 29 in quarters. The hospital, which is regimental property of a unique pattern given by friends, was very neat and well kept.

The artillery brigade of seven batteries has a sick rate of 8 per cent, but unequally distributed, the most of the cases being in the Georgians. The hospital tents are of a somewhat larger pattern than the present regulation, but are neatly floored and contain six beds each. All the hospital water is boiled and filtered, but this is difficult of general application. It was complained that the Myers quinine was insoluble.

The headquarters sick report showed a rate of 2.8 per cent. The hospital was neat and the patients few.

Besides these conditions, chiefly physical, affecting the men, there are others that disturb the medical officers and are discouraging them. Excepting a very few regulars scattered among them, all of these volunteer officers, although filled with a laudable desire to do their best, are in an unaccustomed atmosphere, and what is plain to men of long experience is obscure to them. The stated reports, the requisitions, the certificates for discharge have given great trouble and have consumed time, often ineffectually, that might be otherwise occupied. Until very recently there have been two heads of corps and a chief surgeon superior to both, and the methods used do not appear to be uniform. One of the effects has been to cause great delay in the distribution of supplies, and, wherever the fault, there has certainly been great inconvenience to all concerned. There has been also not only delay, but, regardless of theory, deficiency which has been real and prejudicial. This matter of supply I touch with diffidence, as not coming strictly within the scope of my orders, and yet both it and administration have a marked bearing on the sanitary condition of the men. It is clear to me that filters, if they were to be used, were withheld too long and are insufficient in number; that the field desks for convenience of administration, and in view of their contents necessary for it, were not supplied in time (all have not yet been issued); the field chests have reached the most of the regiments only very recently; the standard allowance for a "brigade or division field hospital," one of which is normally three times the size of the other, is grossly inadequate under the conditions of a permanent camp such as this, that contains numerous and very serious fever cases; and, however it may come about, the hospital supplies are not replenished with freedom and dispatch.

Stated briefly, the troops at Camp Thomas are suffering not from special infection of water or from peculiarly malarious conditions of locality, although the latter will increase with the advancing season, but with the inevitable results of crowd poisoning, soil pollution, insufficient water, insufficient and imperfect shelter, a very great lack of facilities for the disposal of refuse, and the indirect consequences of ignorance in camp sanitation on the part of practically all the men and nearly all the officers. The regiments are very large and the medical staff, besides being almost entirely inexperienced, is too small in numbers. Much

of the time of all of them is occupied with preparing, correcting, revising and completing papers with which very few are familiar. The methods of getting supplies, of discharging the unfit, of accounting for persons are strange, and they naturally are discouraged. I think every medical officer in the camp is overworked, and some of them severely.

Added to all this, the hospital accommodation has been exceedingly inadequate. For a camp of more than 40,000 new troops—I exclude those that have been detached—there are four division hospitals, with an aggregate capacity of 850 beds in which to treat every case not fit to remain in his own tent, or about 2 per cent of the gross amount. Added to this is a neighboring general hospital of nominally 255 beds, whose normal capacity is not more than 130, which has been overcrowded from its opening. The consequence has been that the camps are dotted all over with a vicious system of regimental hospitals not recognized, and properly not recognized, by orders, but tolerated as a makeshift. In a camp of this kind, filled with raw, poorly selected troops, 300 should have been the minimum for each division hospital, with the ability to increase to twice that number without delay, or large, well-appointed, easily accessible general hospitals should have been at hand. The eruptive diseases always ravage new rural commands, diarrheal diseases of varying intensity furnish their contingent for hospitals, typhoid fever should constantly be apprehended, and the malarious diseases, as the season advances, will add to the cases. For these reasons there should be a surplus rather than a deficiency of canvas.

My orders do not call for recommendations, but, under the verbal instructions of the Secretary of War to make such immediately on the more pressing points, which I have done already in a brief preliminary paper, I add, to complete this section of this report, that in my judgment rules to this effect should be applied to the troops at Chickamauga Park, and, *mutatis mutandis*, the same applies to all similar large commands:

(1) Every regiment (of new troops) that has occupied its present site more than thirty days should be moved.

(2) Wooden floors, to be movable within camp limits and to stand at least 4 inches above the ground, should be supplied all tents.

(3) All leaky canvas should be replaced.

(4) In a camp of this kind the occupancy of a common tent should be limited to 3 and of a conical wall tent to 10 men.

(5) All tents should have an area equal to their own base of free ground between them and the adjacent tents, and to and from this fresh ground they should be moved every week or ten days.

(6) At Camp Thomas quicklime should be very freely furnished for disinfection, although the rainy weather will make storage and transportation difficult.

(7) Facilities for boiling the drinking water and for storing it in barrels should be given each regiment at Camp Thomas.

(8) Crematories for all combustible refuse should always be supplied to each division of a permanent camp when such refuse can not be otherwise consumed. Much of the existing waste at Chickamauga should be burned by the park commission.

(9) Practice marches over short distances and of short duration should be put into operation for the Camp Thomas troops. These can not be made too long, because nearly all the regiments are charged with typhoid fever, and for the next ten days or fortnight new cases already infected will appear.

(10) It would probably be better to remove the Third United States Volunteer Cavalry (Grigsby's) altogether, although arrangements must be made to care for its present sick and those taken on the way.

(11) The division hospitals should be increased by one-half at least; the camp hospital about to be established be put into immediate operation, and the regimental hospitals be absolutely and incontinently abolished as soon as this new canvas is ready.

(12) A medical officer of experience, discretion, and energy should be attached temporarily to those headquarters, whose sole duty it should be to examine men presented for discharge, to prepare the certificates, and get them before the commanding general with the least possible delay. He should visit the various regiments and hospitals for this purpose, act independently of existing boards, and trouble the chief surgeon of the camp with them only for the purposes of record. There are many such cases to be acted on whose consideration occupies much time of the chief surgeon that might be more profitably employed, and the presence of the unfit men in the commands is harmful.

I also inspected the sanitary condition of the Leiter general hospital, as required by my orders. The building is that formerly known as the Park Hotel, and at

the time of my visit, July 31, its capacity was reckoned as for 255 patients. On that date there were 19 vacant beds. The hospital is commanded by Maj. E. C. Carter, who is his own executive officer, quartermaster, and subsistence officer. His medical staff consists of Major Bayne, United States Volunteers, and 5 contract surgeons. He has 2 stewards, 1 acting steward, and 30 privates, Hospital Corps, including 2 absent and 3 present sick. There are 30 female contract nurses, 10 Red Cross nurses, and 2 excellent volunteer nurses. Half of the Hospital Corps are on nursing duty. There are 10 authorized civil laborers, among whom are 4 vacancies. There are three large rooms on the lower floor, formerly the dining, reading, and billiard rooms, and a detached dancing pavilion in the grounds. There are also a number of small chambers on the second floor, a number of beds not occupied at the time stand in the second story hall, and 30 convalescents sleep on the veranda. Two wards of 16 tents in all, each to contain 5 beds, a total of 80 beds, are in the grounds as yet unequipped.

All the large rooms are greatly overcrowded, the detached pavilion alone giving no odor. It has abundant eaves ventilation and tolerable cubic capacity. The floor space in these rooms is 46.5, 58, 59, and 65 square feet, respectively, and all but the reading room have four rows of beds, the ends of those in the central rows being in contact. There is very little working space, the floors in the nature of the case can not be kept clean, and, in general terms, these rooms contain twice as many patients as they should, for there are practically no vacant beds and the cases are all serious. None of these rooms has immediate closet facilities, and the discharges from the dining room and reading room have to be carried through the lower part of the building to the closets adjacent to the billiard room. The floor of this ward is below the level of the surrounding earth. There is a basement water-closet now undergoing repair, in which 4 closets and 2 urinals were about to be introduced. The walls of the first floor are dirty throughout and require kalsomining. In the upper story the rooms have too many patients, considering their character. The walls here are clean. There are water-closets on the halls of this floor.

I am told that when the hospital was first occupied the sewer was occluded for a considerable distance, that the sewage debouched so that ultimately it might have polluted the Chickamauga Creek, and that the closets within the house were untrapped. Manholes have since been introduced, a masonry basin, discharging the fluid contents automatically, and from which the solid residuum is removed by hand, receives the sewage and protects the river. The closets are now all trapped, and the building appears to be properly protected in that direction. In one outhouse closet, when inspected, insoluble waste was found in the bowl, and the apparatus was temporarily disarranged. The rain-water leaders discharge into the sewer, and the pipe for flushing the sewer proceeds from the base of the tank that supplies the house with water.

The water is drawn from the adjacent Crawfish Spring, whose flow is estimated at 60,000,000 gallons per diem. To the eye that seems an exaggeration. The tank and the engine belonging to the hotel proved insufficient, and a 30-horsepower engine, furnishing 3,000 gallons an hour, has been in operation since June 25, and a new tank of sufficient capacity is in process of erection. The spring is essentially a pond, somewhat liable to contamination, although there is no direct evidence thereof. Distilled water has been offered by a trustworthy company in Chattanooga at 2½ cents per gallon.

Besides the hospital fund there has been spontaneously sent \$240 from private sources, which has been spent chiefly for cows and food. Many gifts have been sent and offered, including one of a carload of milch cows from some one in Chicago. The slowness by which certain wants are supplied through the regular channels has made such extraneous aid very acceptable.

The hospital corps is not only ill disciplined, but is very poorly clothed. The female nurses are said to be efficient.

To the end of July there had been 350 admissions to the hospital, all from the neighboring camp, and 80 per cent of the cases were of typhoid fever. It had happened that the place has been overstocked, as when 30 patients were sent to fill 20 vacancies.

There is no guard for the public property, such an application having been refused. One noncommissioned officer permanently detailed and 1 private by roster act as watchmen. There is no stable for 10 head of stock that are herded.

The commanding officer expresses a desire for a line officer to act as quartermaster and commissary; he wishes more and better clerks; he desires an executive officer; he would prefer half of his contract surgeons to be more experienced men.

According to my observation the hospital is well managed. It is, however, *sadly overcrowded*. In my judgment the buildings should not contain more than

130 beds. It is possible to put up in the grounds 4 more groups of 40-bed wards, making 240 under canvas, or 370 beds in all. Perhaps room could be found for 400, but the kitchen and other administrative facilities would be strained. The lower story should be thoroughly kalsomined, the floors carefully cleaned, and in the unventilated large rooms some of the simpler forms of ventilation by tubes be introduced. In one of those rooms there are electric fans, but their chief value is to stir up the air, not to replace it.

As a whole, the sanitary condition about Chickamauga Park is not good, owing to preventable conditions, and I believe that measures similar to those herein suggested should be carried out.

REPORT ON THE OUTBREAK OF TYPHOID IN CAMPS AT JACKSONVILLE, FLA., BY
LIEUT. COL. L. M. MAUS, UNITED STATES VOLUNTEERS, CHIEF SURGEON SEVENTH ARMY CORPS.

[Dated August 22, 1898.]

I have the honor to state that we have quite a large number of cases of typhoid fever undergoing treatment in the three division hospitals of this corps. A large number of these cases, in my opinion, resulted from the use of infected water in the various State camps from which regiments were sent. I am, however, of the opinion that a great many of them originated around and about Jacksonville also. The water system of Jacksonville is artesian, and may be regarded as excellent. It is saturated with sulphureted hydrogen when coming to the earth's surface, but this gas soon evaporates, leaving the water very pleasant to drink. Unfortunately, around the suburbs of Jacksonville are a large number of surface and driven wells. Many of these wells are but from 18 to 20 feet deep, and are located close to the habitations of the people who use this water. The soldiers going out on drills and target practice, etc., frequently, I have been informed, use water from these wells. I believe that this may account for a great many of the infected cases. Then, again, the milkmen who live in the suburbs rinse their cans in this water, and at times leave some in the cans, which mixes with the milk, and this probably is productive of typhoid infection.

One company of the First Wisconsin has suffered considerably from typhoid. This company was located on the main street, over which was hauled the fecal matter by the scavengers at night. It is believed that a good deal of the fecal matter splashed out on the road and was absorbed by these men, who were sleeping near by, through the medium of the dust, which probably was infected. The First Wisconsin has suffered more than any other regiment here in regard to the number of typhoid cases.

Of course a great many cases would naturally occur in a Southern climate, because, in my experience, I have always found that men sent South in midsummer are liable to become enervated and more susceptible to fevers than the natives. A part of these cases were of a very malignant type and proved to be fatal. Autopsies, as a rule, have been made and exposed ulcerations and perforations in some cases.

One company of the Second Illinois ate on the 29th of May a lot of tainted meat, and within ten days or two weeks thereafter a large number of cases of typhoid fever appeared in that company. It would seem as if the ptomaine poisoning in some way made these men susceptible to the typhoid poisoning. This company enjoyed the same surroundings as the others, and there is no way to account for this large number of typhoid-fever cases except in the way indicated. I will also state that many of these men were quite ill for a week or ten days after eating this meat, suffering from gastrointestinal irritation.

The regiments of the Second Division have been removed to fresh camping grounds, and everyone is more keenly alive to the necessity of looking after the sanitary condition. Of course, medical officers can not accomplish all that is necessary single-handed, and it is very difficult at times to have their suggestions carried out by those in command.

I have recommended to the corps commander that small pavilion hospitals, made out of rough lumber, be constructed near each division hospital, with a capacity of 100 beds, for the treatment of the serious typhoid cases. I desire that these men shall receive every care, and for this reason have asked that these buildings be constructed, so that they can get regular hospital treatment. I also believe it for the best interests of the service that we should have a number of trained female nurses, as well as male nurses, to care for these cases. It is very likely that we will have more fever cases during the month of September than at

present, as that is the most sickly season of the year here, and I wish to prepare for any emergency. I, therefore, would like to have at least 50 well-trained female nurses sent here within the next week, and hope that Dr. Brien, who has gone North to get male trained nurses, will be successful in getting 100 of them.

I intend to make requisitions for bath tubs on wheels, in order to give them the tubbing process, because I believe that better results can be obtained from that method of treatment than any other. It is almost impossible to give patients tub treatment in hospital tents, especially when there are six or more patients in each one. I am glad to say that we are getting along here very nicely. Barring the large number of typhoid-fever cases, we have practically very few sick men.

The three division hospitals have been in operation for a long time and seem to have given general satisfaction. It is not to be expected that everybody will be satisfied, and hence there has been a good deal of criticism from various sources, emanating from women and others who are not capable of appreciating the difficulty of caring for the sick in the field. I believe our division hospitals are far ahead in every way of what was contemplated in the original orders by the War Department. I have had furnished to the hospital, in addition to what is supplied by the Government, pajamas, nightshirts, sheets, mattresses, pillows, electric fans, foods of all sorts; in fact, hundreds of dollars have been spent on the division hospitals of this corps in addition to what was allowed by the Government.

I wish to thank you for your generous support in granting me everything that I have asked for. I wish to state that nothing of any moment has been refused me that I have asked you in regard to providing for the sick of this corps.

REPORT OF THE CHIEF SURGEON OF THE FIFTH ARMY CORPS, GIVING A BRIEF ACCOUNT OF THE OPERATIONS OF THE MEDICAL DEPARTMENT FROM APRIL 23, 1898, TO JULY 23, 1898, BY LIEUT. COL. B. F. POPE, CHIEF SURGEON, UNITED STATES VOLUNTEERS.

In compliance with telegraphic instructions from the Secretary of War, dated April 16, 1898, I proceeded on the 19th day of April with the Seventeenth United States Infantry from Columbus Barracks, Ohio, to Tampa, Fla., arriving there about the 21st of April. This organization, and a number of other regiments rapidly following, were placed in camp on Tampa Heights, an elevated plateau, about 2 miles from the center of town. The ground was apparently well adapted for camping purposes, being a sandy loam, subsoil water, at that time about 13 feet from the surface. There was good shade from pine trees and scrub oaks. The water supply from the city reservoir was delivered by hydrants through 8-inch mains. The quality was good and the quantity ample for all purposes of men and animals.

Within the next few days there were gathered the following regiments of infantry, which went to form what was later known as the "Second Independent Division:" The Sixth, Tenth, Twenty-first, Thirteenth, Ninth, Twenty-fourth, Twenty-fifth, Twenty-second, Seventeenth, and the Fourth, to which was later added the Eighth, Sixteenth, Twelfth, Seventh, and Second United States Infantry, these latter regiments forming a camp below the Tampa Bay Hotel.

On the 23d of April, by the operation of General Order, No. 3, as senior medical officer of the command I was announced chief surgeon, and reported to the commander, Brigadier-General Wade, accordingly.

With the approval of the general commanding, Maj. Henry S. Kilbourne, surgeon, and Capt. William F. Stephenson, assistant surgeon, were announced as chief surgeons of brigade; and later, as the number of commands increased and the organization of the Fifth Army Corps was completed, the following chief medical officers were designated:

Lient. Col. B. F. Pope, chief surgeon, United States Volunteers, chief surgeon of the corps; Maj. Valery Havard, chief surgeon of the cavalry division; Maj. Henry S. Kilbourne, chief surgeon of the Second Division; Maj. M. W. Wood, chief surgeon of the First Division; Maj. F. J. Ives, brigade surgeon, United States Volunteers, as chief of General Bates's independent division.

With a view to ascertain the amount of supplies on hand, I at once proceeded to obtain from medical officers accompanying the command a list of such medical and surgical stores and instruments, tents, ambulances, public animals, etc., as they had brought with them from their stations, directing them at the same time to make requisition for such supplies as they might need, forwarding the same to the chief surgeon. A consolidated list of these memoranda, prepared for future reference, was left with the acting medical supply officer at Tampa, Fla., and is not now accessible.

It was found that while nearly all of the regiments had brought with them their medical and surgical chests, field cases of instruments, and camp outfit of mess chests, food chests, etc., there were many regiments which were lacking in surgical dressings and medicines, and most of them in transportation for such supplies as they had brought.

For this reason on April 27 I telegraphed the following to the Surgeon-General:

"Please have forwarded by express 8 pack saddles complete for medical and surgical chests, 10,000 first-aid packages, 1,000 rolls wire splints, 100 rolls of adhesive plaster, 1,000 rolls of cotton batting, 1,000 yards of absorbent gauze, 100 bottles of sterilized catgut, 1,000 packages of absorbent cotton, 500 grams of silk ligature, 500 packages of sheet lint, 50 dozen towels, 50 pounds of soda sulphate, 10 Arnold sterilizers, 60 yards of rubber sheeting, 10 yards of rubber drainage tube, 3 sheets of rubber intestinal cylinders, 100 boxes of roller bandages, and 300 tubes of vaccine virus."

In reply to my telegram, I was informed that the supply of antiseptic dressings, according to list selected by the Surgeon-General, was being made up and would be forwarded shortly, and later some 20 boxes of surgical dressings were received at Tampa, which were issued to the various regimental surgeons as they arrived. These boxes were complete and in every respect fitted for antiseptic surgical work.

The arrival of the cavalry commands and the batteries of light artillery rapidly followed, and their camps were located partly at Port Tampa, near Tampa Bay Hotel, and some at Lakeland. The supplies brought with the cavalry commands were ample in every respect, both in medical and hospital material, tentage, and ambulances. The batteries of light artillery were practically destitute of hospital tentage, and several of them of medical and surgical chests, the batteries from the Pacific coast being best equipped.

The vaccination of troops began early in May and was continued without interruption until the protection of the whole command was assured.

Field hospitals.—The establishment of field hospitals other than regimental early occupied the attention of the chief surgeon, although he was informed that it was the desire of the War Department that the regimental system should remain intact, it being the intention to have 1 medical officer of the Army with each regiment of infantry, 1 steward or acting steward, 10 privates of the Hospital Corps, tents, field furniture for a field hospital to accommodate 10 patients, and field supplies for three months. (See letter Surgeon-General's Office, April 20, 1898.)

With a view to the establishment of a divisional rather than a regimental system of hospitals, I succeeded in having the following orders promulgated by the commanding general:

[Special Orders, No. 2.—Extract.]

HEADQUARTERS UNITED STATES FORCES,
Tampa, Fla., May 3, 1898.

2. A field hospital for the troops at Port Tampa will be located on convenient ground adjacent to the camps of the two commands now at that point.

Major La Garde, surgeon, is relieved from duty with the Ninth Cavalry, and will establish the hospital above indicated. His assistants will be designated in further instructions. In addition to his duties as commanding officer of the hospital, Surgeon La Garde, as senior medical officer present, will have general supervision of the medical officers with the cavalry and light artillery at Port Tampa, Fla. He will report to the chief surgeon at these headquarters for further instruction in regard to his duties.

By command of General Shafter:

J. B. BABCOCK,
Assistant Adjutant-General.

HEADQUARTERS UNITED STATES FORCES,
Tampa, Fla., May 3, 1898.

The COMMANDING GENERAL,
Infantry Division, United States Forces, Tampa, Fla.

SIR: The commanding general desires that a division field hospital be established in your command at Tampa Heights. The chief surgeon at these headquarters has been directed to designate to you from the medical officers of your command the commanding officer of the hospital and his assistants.

Very respectfully,

J. B. BABCOCK,
Assistant Adjutant-General.

To regulate the formation of these hospitals and the transfer of regimental hospital equipment and personnel, the commanding general issued instructions which were afterwards promulgated in the general orders following.

[General Orders, No. 14.]

HEADQUARTERS FIFTH ARMY CORPS,
Tampa, Fla., June, 6, 1898.

The chief surgeon of the Fifth Army Corps will assign for division hospital and ambulance train service such members of the Hospital Corps detachments, tentage, ambulances and wagons, animals and their equipments, hospital and medical supplies and field equipments, as may be required and designate the medical officer to receipt for the same.

A minimum allowance to be retained with each regiment will be as follows:

One acting hospital steward and 1 private, 1 hospital and 1 common tent, 1 ambulance and necessary animals fully equipped in order to preserve the regimental organization.

Officers detached for duty at division hospitals are authorized to take with them their allowance of tentage, giving receipt for the same.

Whenever necessary, the chief surgeon is authorized to take any or all ambulances assigned to regiments for temporary use of the field hospitals.

The commanding general also authorizes the chief surgeon to instruct chief surgeons of divisions to make transfer for temporary service with field hospitals, ambulance trains, dressing stations, or regiments, of such regimental medical officers, members of the Hospital Corps, ambulances and medical or hospital supplies at any time when such action becomes necessary for the proper care of the sick or injured under their charge.

By command of Major-General Shafter:

E. J. MCCLERNAND,
Assistant Adjutant-General.

Under the operation of these orders the formation of four field divisional hospitals was begun, the preliminary steps being to gradually enlarge the regimental field hospital of the Ninth Cavalry under Major La Garde, surgeon; that of the Thirteenth Infantry under Maj. A. H. Appel, surgeon; later the regimental hospital of the Sixth United States Cavalry under Major McCreery, surgeon; and lastly, that of the First Division under Maj. M. W. Wood, surgeon. This latter hospital was formed too late to open for the reception of patients before the embarkation, but after the landing of troops at Siboney it became the advanced field hospital and nearest the line of action at San Juan Hill, near Santiago de Cuba. The gradual absorption of regimental hospitals went on until Major La Garde's hospital was expanded and equipped to accommodate nearly 150 patients; that of Major Appel, 150; and that of Major McCreery, for the cavalry division, about 65 patients. Later the hospital of the Twenty-second Infantry was moved to Jacksonville, Fla., where it became the nucleus of the field hospital of the Seventh Army Corps.

The equipment of the second divisional hospital under Major Appel was made complete at an early date. It contained about 85 cots, a sufficient outfit of furniture and messing fixtures. The operating tent was well supplied with enameled steel folding operating tables, steam sterilizers, and water heaters; a bathing tent, bath tubs, wash basins, and other extra appliances were purchased under authority of the Surgeon-General. As the demands for space increased additional tentage was received by Major Appel until the capacity was increased to nearly 180 patients.

The personnel consisted of Maj. A. H. Appel, surgeon, in command; Asst. Surgs. Deane C. Howard, and L. P. Smith, United States Army; Acting Asst. Surgs. W. E. Parker and U. S. Bird, United States Army, as assistants. There also was allotted a detachment of acting stewards (number not recollected) and about 85 privates of the Hospital Corps.

The hospital at Port Tampa, known as the reserve or divisional hospital No. 8, was about the same size and similarly equipped; Maj. Louis A. La Garde, surgeon, in command, Asst. Surgs. M. W. Ireland, H. A. Shaw, James M. Kennedy, and later Asst. Surg. P. C. Fauntleroy. I am unable to recollect the number of hospital stewards, but the Hospital Corps detachment numbered some 37 privates and noncommissioned officers.

The tentage was received partly from the various commands centered at Port Tampa and partly from the depot quartermaster at Tampa on requisitions approved by the chief surgeon.

Divisional hospital No. 1, under command of Maj. M. W. Wood, surgeon, was formed late in the month of May, and much difficulty was experienced by that officer in securing an adequate amount of tentage and furniture, the regimental supply being nearly exhausted by drafts made for the other hospitals. A special

requisition for 30 hospital tents was made by the chief surgeon and approved by the general commanding. On receipt from the depot quartermaster a very large number were found to be unserviceable from lack of guy ropes and former wear, so that the second divisional hospital was drawn upon to assist the equipment of No. 1. Major Wood's surgical outfit proved later to be an admirable one, the supply of instruments, dressings, sterilizers, and tables sufficing to meet the great strain put upon it by the battles of July 1 and 2, 1898.

The personnel of this hospital consisted of Maj. M. W. Wood, surgeon, in command; Maj. R. W. Johnson, surgeon, United States Volunteers; Asst. Surg. G. C. M. Godfrey; Acting Asst. Surgs. Hamilton P. Jones and F. J. Combe. Later Acting Asst. Surg. T. H. Marshall, United States Army, was attached to the hospital.

Ambulance trains.—With the formation of the several field hospitals came the simultaneous formation of two ambulance trains. That at Port Tampa was made up by drawing in ambulances from the Ninth Cavalry and the several artillery commands adjacent, also by requisition upon the depot quartermaster. Mules were received later and harness last of all. The train was placed under the command of First Lieut. J. M. Kennedy, assistant surgeon, and although left behind for lack of transportation on embarkation of the Fifth Army Corps a part of it was forwarded in time to render most valuable service in the campaign against Santiago de Cuba.

The train of the second divisional hospital consisted of some seven ambulances. While its formation was completed prior to embarkation, it also was left behind with a portion of the hospital at Tampa Heights, for lack of transport room.

The first divisional hospital had a few ambulances, which were left behind on embarkation. Three ambulances which had been taken apart and stored on one of the transports were later assigned to this hospital and became of much service under charge of Assistant Surgeon Godfrey in removing wounded from the field at San Juan Hill and El Caney.

Wagon transportation.—To every hospital it was designed to assign a sufficient number of 4 and 6 mule wagons to haul all of the tentage and supplies. For this purpose the second and third divisional hospitals had about eight wagons each, with a complete equipment of mules and civilian drivers. I can not recollect how many were with the First Division or the cavalry command under Major Havard. At all events they were all left behind on embarkation and never seen again by the medical department of the Fifth Army Corps.

Hospital Corps companies.—The next step in organization of the medical department of the corps was the formation of Hospital Corps companies, which was authorized by the commanding general in the following general orders:

General Orders, No. 3 (new series).

HEADQUARTERS FIFTH ARMY CORPS, *Tampa, Fla., May 29, 1898.*

Upon recommendation of the chief surgeon, the following will be the organization of the members of the Hospital Corps now on duty with or hereafter attached to the Fifth Army Corps.

There will be three companies which are to be known as Hospital Corps companies and all of them under the control of the chief surgeon of the corps.

Each company will be commanded by an officer of the Medical Department, selected for that purpose by the chief surgeon, and to these companies will be transferred all Hospital Corps privates, hospital stewards, and acting hospital stewards, except the following, who are retained with the several commands to which they are now attached:

To every regiment of infantry, 1 acting steward and 1 private as orderly. To every regiment of cavalry, 2 acting stewards and 2 privates as orderlies for medical officers. To every battalion of artillery, three batteries each, 3 acting hospital stewards and 3 privates.

Descriptive lists will be prepared and forwarded to the officers designated by the chief surgeon, and later invoices for the Hospital Corps, quartermaster, and ordnance department equipments for each Hospital Corps man.

Receipts will be given by the commanders of the several Hospital Corps companies for the property transferred.

According to the necessities of each organization, as represented by their medical officers, details from the Hospital Corps companies will be made by the chief surgeons of division for temporary duty with the several commands, which detail will terminate at any time at discretion of the chief surgeon of the corps.

By command of Major-General Shafter:

FRED. A. SMITH,
Captain, Twelfth Infantry, Acting Assistant Adjutant-General.

The work of organizing the first of these companies was assigned to Capt. E. L. Munson, assistant surgeon, who was attached to the office of the chief surgeon for that purpose, and also to act as his executive office. But before the necessary books and blanks could be obtained and the transfers made, the embarkation of the corps took place, and the work was indefinitely postponed. It was the intention of the chief surgeon to draw into these divisional companies all of the Hospital Corps men, so as to have them entirely under the control of the medical department and not subject to the control of regimental commanders. In case of necessity the number of Hospital Corps men could be increased with any command or be drawn from other commands by mere detail without the intervention of higher authority than the division surgeon, who would be the best judge of the needs of his troops in any given emergency. To give effective working to the plan a company of at least 104 enlisted men would be necessary, exclusive of those employed in divisional hospitals and on regimental service.

Mounts for Hospital Corps privates, etc.—The question of mounts for Hospital Corps men and for acting assistant surgeons was taken up as early as practicable, as there was an almost universal demand on the part of medical officers that the provision of the regulations in this respect should be complied with if possible.

On requisition being made to the depot quartermaster for the necessary animals, it appeared that neither animals nor equipments were on hand, nor were they likely to be unless provided from some other point than Tampa.

On May 11 the Surgeon-General was asked to confer with the Quartermaster-General with view to securing the mounts if possible. This request elicited the information that at Chickamauga there had been some 200 horses purchased for the purpose, and directions were given that efforts be made to locate them in Tampa. On the 15th of May I replied that the 200 Hospital Corps horses could not be located by the quartermaster at that point, but on the 17th of May it was reported to me that the 200 horses had arrived, and I at once directed the preparation of the necessary requisitions, so that they could be distributed according to the requirements of the command. Later instructions were received that only the Hospital Corps men attached to mounted commands should be mounted, the orderlies of medical officers, acting assistant surgeons, and hospital stewards being excluded from the provisions. Saddles and other horse equipments were secured later, after much difficulty. In the meanwhile the horses had been issued by the depot quartermaster as requisitions were made, so that very many of the 200 had been distributed, which furnished a mount for nearly every one of the Hospital Corps privates requiring the same then on duty with the command.

Under date of May 27, and in reply to an inquiry on part of the Surgeon-General, who wished to know the number of horses required, I wired that "according to the scheme published May 20, 1898, from the Surgeon-General's Office, 293 mounts would be required, but according to present assignment about 170."

This closed the incident of mounts for the medical department, so far as the Fifth Army Corps was concerned, as on embarkation of the command they were all left behind for the lack of room on the transports to carry them to Cuba.

NOTE.—The following telegram sent by me is of interest as bearing upon the case: "May 18. Tampa, Fla., to Surgeon-General, Washington, D. C. Authority is requested to provide mounts for all acting assistant surgeons; also for one orderly for every medical officer serving with foot troops. There are more than enough horses for the hospital corps now at this place. We have 167 privates and 29 acting stewards present with the command."

Transfer of sick to Fort McPherson, Atlanta, Ga.—In reply to inquiry in regard to the disposition of patients who might be too ill to accompany the command in case of embarkation, the Surgeon-General wired the following under date of May 2, 1898: "Men too sick to go with command should be sent to hospital at Fort McPherson, Atlanta, Ga."

In compliance with these instructions I proceeded, about May 11, to gather from the several field hospitals a number of men in whose cases there was no prospect of early return to duty. Many of them were venereal bubos, which unfitted the men for marching and made them a burden upon the medical department. Others were convalescent from typhoid fever of a mild type, rheumatism, etc. Cases of measles and severe typhoid were not forwarded. A small detachment of Hospital Corps men accompanied them, and they were supplied with food and medicines for three days. Necessary amount of hospital fund to purchase delicacies for the trip was directed to be turned over to the Hospital Corps man in charge. The party, I was informed, arrived safely.

About two weeks later a second party was fitted out, numbering some 34 patients, and placed in charge of Assistant Surgeon Woodson, United States Army, and 3 Hospital Corps men as nurses. All reported as arriving safely.

About this date the chief surgeon recommended that a number of so-called tourist cars be chartered and fitted up for special service in the transfer of patients to the North. As the Plant System and the Southern railways did not have these cars in stock they were difficult to get at the point indicated. After our departure I believe that a regular hospital train was established and run from Tampa and Jacksonville to the northern hospitals.

Medical supplies.—The establishment of a medical-supply depot at Tampa became an early necessity, and, as already stated, a storeroom was secured from the depot quartermaster, where all stores received from New York could be placed and unpacked for issue. A large number of requisitions, forwarded by medical officers on duty with regiments arriving from Chickamunga, were sent to the chief surgeon from Washington with directions that they be filled from stores in the Tampa depot. As other requisitions were coming in the chief surgeon directed the acting medical-supply officer to consolidate all of them, with the view of making a general requisition according to the supply table approved by the Secretary of War under date May 9, 1898. His most pressing needs were wired to the Surgeon-General, as follows:

“May 16, 1898. Surgeon-General, U. S. Army, Washington. Send one medical and surgical chest, a case of surgical instruments, one desk, mess and food chest, commode chest for Engineer Battalion. All of above supplies have been issued to other commands.”

“May 17, 1898. Tampa, Fla. The Surgeon-General. Send to me at Tampa 144 cans condensed milk, 180 cans beef extract, 60 cans tea, 300 bottles chloroform, 10,000 first-aid packets.”

“Tampa, May 17, 1898. The Surgeon-General. Chloroform and beef extract sent May 9 have been distributed to regiments. The amount requested is for regiments arriving from Chickamunga.”

In reply to the above, the chief surgeon received the following telegram:

“Washington, D. C., May 18, 1898. * * * Beef extract and chloroform ordered from New York to-day.”

In addition to the above the chief surgeon received information that advance medical chests for issue to troops and other medical supplies had been ordered from New York. But as the stores were late in arriving, and as the demands for medicines continually increased, the chief surgeon wired the following:

“May 25. Tampa, Fla. Surgeon-General, U. S. A., Washington. Authority to purchase medical supplies for volunteer regiments is asked. They have nothing. My supplies are nearly exhausted. Gandy relieves Woodson at medical depot. Send 2,000 vaccine bulbs (for volunteers).”

In reply to the above, two orders were received, one from Col. C. R. Greenleaf, under date of May 26:

“Pope, chief surgeon. Deliver to Admiral Remey at once 300,000 quinine pills. Purchase for daily needs of troops here, until supplied by the Surgeon-General.” And another under date of May 28, 1898:

“Gandy, supply officer, Tampa, Fla. Buy medicines absolutely necessary. Ample supplies will be sent in a few days. Sternberg, Surgeon-General.”

“Washington, D. C., May 29. One million quinine pills sent to your supply office. Sternberg, Surgeon-General.”

Under the above authority purchases in Tampa were commenced, particularly magnesium sulphate, bismuth subnitrate, camphor and opium pills, compound cathartic pills, and other drugs needed to treat the increasing number of those sick from camp diarrhea, dysentery, constipation, and other digestive diseases incident to camp life.

The chloroform and beef extract, also the first-aid packets, arrived promptly, but the other supplies continued to delay. Surgical operating tables put in an appearance and other articles of utility, but it was still necessary to keep up the purchase of drugs, until the city was about stripped.

On June 1 I received the following from the Surgeon-General:

“Washington, D. C., June 1, 1898. Already authorized to purchase supplies for immediate use. Report promptly your needs and any shipment received.”

Under date of June 2 I wired the Surgeon-General:

“Tampa, Fla., June 2. Can get no trace of medical supplies here shipped from New York. The depot is nearly empty and the town about stripped. Send 2,000 points vaccine virus to acting medical supply officer by express, as I expect to leave any day on transport.”

Under the belief that the supplies thought to have been forwarded from New York were lost en route, I inquired of the depot quartermaster whether duplicate bills of lading had been received. He stated they had not, and wired the shipping quartermaster in New York to send a tracer to hunt up the lost supplies.

On June 2 I wired the Surgeon-General as follows:

"Medicines not yet found. The depot quartermaster at New York must telegraph number of car in which located."

Believing that the freight traffic was almost hopelessly blockaded, as there were at this time nearly 1,500 loaded and unloaded cars standing upon the tracks in Tampa, and as an equally hopeless blockade existed in the Post-Office Department, I wired the following to the Surgeon-General:

"Tampa, Fla., June 4. Order sent by express 200 ounces bismuth subnitrate, 50 ounces of powdered opium, 100 bottles of castor oil, 50 bottles of calomel and soda tablets, 50 bottles of morphine tablets."

So far as I know, the above was not received until after the embarkation of the expedition. But on the 5th of June the stringency was relieved by the arrival of some 200 packages of stores, the receipt of which I acknowledged by wire to the Surgeon-General. The issue of these was begun at once, the field hospitals receiving the first share and next the volunteer regiments who had been lacking sadly in every sort of medical supplies. Then the requisitions were filled with such articles as were on hand. Fortunately the supply of quinine was large enough to meet all possible demands. What was the actual amount and the character of the issues can best be given by Capt. C. M. Gandy, assistant surgeon, who was in charge of the supply depot.

On the 8th of June, at 10 p. m., the chief surgeon received the order for embarkation. The field hospitals had been warned and the medical supply officer directed to set aside one-half of the stores remaining as a reserve stock to be taken with the expedition.

At midnight I entered the medical storeroom and took out two wagon loads of supplies, two more loads being sent down by Captain Gandy to Port Tampa the next morning. The first lot was taken on board the headquarters transport *Seguranca*, and the second on the transport containing the second divisional hospital, under Major Appel, which, I think, was at first the *Comal* and later the *Olivette*.

The embarkation and condition of transports.—The embarkation of the Fifth Army Corps on transports took place on the 9th and 10th of June, at Port Tampa, Fla. The ships were drawn into a long canal, on one side of which trains of cars were run loaded with troops, who rapidly transferred their camp equipage and travel rations to the ships, which then slowly pulled into the larger waters of the bay.

In all there were some 27 transports into which the troops were packed, in lots varying from 700 to 1,300 each. The ships had stands of rough lumber bunks, usually three tiers high, sometimes four, built into the holds and lower and main decks. The packing of these bunks was so close that there was hardly room to pass between them, while in too many instances, with the closure of the hatches, light and air would have been wholly excluded and suffocation quickly result. The transports were originally built for freight and cabin passenger service, and no one of them was properly adapted to the carriage of troops.

Complaints of overcrowding were so numerous and so serious that the commanding general appointed a board of officers, consisting of Brigadier-General Lawton, the chief surgeon, and Captain Mendoza, to inspect the vessels and report which had the greatest number of troops, and how, by redistribution of the men, the trouble might be corrected. And he at once ordered back some 900 recruits that were to have joined their commands on the transports.

The inspection of the board showed that on the *Cherokee*, transport No. 4, there were 40 officers and 972 men, total 1,012, part Seventh Infantry and part Twelfth Infantry. On the lower deck there were 345 men; bunks in three tiers, closely packed; no ventilation or light when the ports were closed. No wind sails for the lower decks. On the main deck there were about 430 bunks and men, two 15-inch openings for ventilators when the main hatch was closed. No wind sail for this deck. On the upper deck 200 men, without protection, and who in case of storm would have to be crowded below. Only two water-closets accommodating 5 men each for the whole outfit. There was about 8,000 gallons of water on hand. No condenser. There was about 9 days' supply in the casks, and in tanks about 4,000 gallons. The board recommended that 200 men be taken from the ship, that water-closet accommodations be increased, and wind sails supplied.

Steamer *Concho*, transport No. 14. Commands, Fourth Infantry, Twenty-fifth Infantry, Third Battalion Second Massachusetts Volunteers, 71 officers and 1,256 men, total 1,327. In the lowest deck, where it was so dark that one could not see 10 feet from the main hatch, it was intended to pack nearly 800 men, the Twenty-fifth Infantry and Second Massachusetts Volunteers. The bunks were in four tiers and crowded so closely that men could hardly pass between them. Ventila-

tion by open hatches and open ports. If these were closed, ventilation would be impossible, as there were no other openings. On the second deck was the Fourth Infantry, 460 men. On the upper deck where the men stayed most of the time there were no bunks or shelter. Of 71 officers crowded into the cabins three were medical officers; Maj. William Stevenson, surgeon United States Volunteers (who was relieved before the ship sailed),* Maj. Paul R. Shillock, surgeon United States Volunteers, of the Twenty-fifth, and Hitchcock of the Second Massachusetts Volunteers. Only one water-closet on board for use of the troops. This was a trough accommodating 10 men only. Additional closets recommended and that the volunteer troops be taken off, which relieved the ship of 13 officers and 306 men. The water capacity was reported at 40,000 gallons, of which 30,000 was on hand. The water was brought from St. Petersburg, Fla., 3,000 gallons per day being used.

Steamer *Leona*, transport No. 21. Command, General Young's Cavalry headquarters, First and Tenth Cavalry, 57 officers, 1,026 enlisted men. The total bunkage said to be 1,046, which I very much doubted. On the lower deck were 230 men, main deck 496, and it was reported that nearly 300 men slept on the upper deck. The ventilation was by deadlights, open port, and open hatches. There were two wind sails, six water-closets. Health of the men excellent. Water storage capacity, 50,000 gallons, but it was not all on hand. No condenser on board. The board found the transport overcrowded by 230 men.

Steamer *Saratoga*, transport No. 20. Command, Thirteenth Infantry and one battalion Twenty-first Infantry, also division hospital No. 3, under Major La Garde, surgeon. Ship carrying 46 officers and 705 enlisted men. The bunks were three-tier, for 2 or 3 men each. On the lowest deck there were no bunks or men. On the main deck, bunks for 568 men. On the upper deck about one-fifth of the men were camped, as there was no room below. The water capacity was about 10,000 gallons; a condenser was on the ship for use if necessary. Ventilation was very bad. As the ship was a freight steamer only, there were no deadlights and but two wind sails where there should have been four. The ends of the main deck were dead spaces into which no air could be forced. The battalion of the Twenty-first Infantry was recommended to be taken off (235 men). There were 10 cases of fever on board and 2 of supposed measles. (These were removed to the *Olivette*.) Water-closets, 3; ample for command.

Steamer *Orizaba*, transport No. 24. Command, Twenty-second Infantry, Siege Artillery, 2 companies heavy artillery, 1 battalion Second Massachusetts Volunteers and 125 mules. Total, 43 officers and 927 men. Lower decks, 300 bunks and no men. Main deck, 300 bunks for 500 men. Upper decks, no bunks, 400 men. Water supply, 39,000 gallons. No condenser. Ventilation limited to one wind sail and open ports, all of which must be closed in bad weather. Board recommended battalion, Second Massachusetts Volunteers, to be removed—300 men.

Steamer *Miami*, transport No. 1. Command, Ninth Cavalry and Sixth Infantry. Officers, 63; enlisted men, 902. On the lower deck were no bunks. On the main deck 750, in which were accommodated 652 men. On the upper deck no bunks. There were 250 men camped out. The ventilation of the main deck was bad, the hold being a tight box without deadlights. There were two wind sails. Water-closets, 2—not sufficient. Increase recommended.

Several other transports were inspected by the board, in which the conditions appeared to be very satisfactory. The changes recommended were made so far as time would permit.

Water on transports.—The water on the transports, which was stated to have been largely drawn from New York, in many cases had a fetid odor of decomposition, apparently due to the foulness of the tanks. This pertained likewise to ships that had St. Petersburg water furnished them through the water steamer *Olivette*. St. Petersburg was a small town across the bay, whose water supply appeared to have been exceptionally good. It was conveyed by pipe line to the wharf and pumped into the *Olivette's* tanks for distribution. The tanks on this steamer being clean, the water was always good. That ship casks should get foul is no wonder, as they were usually in such position as to gather dirt whenever opened, the opening being a square hole 6 by 8 inches covered with a piece of canvas, which was as often off as on.

The hospital steamer Olivette.—As the embarkation took place and reports of sickness on the transports came in, it became quite evident that a hospital steamer must be secured with the least possible delay. Under direction of the commanding general I examined several boats with view to selection, but none of them presented more desirable qualities than the steamer *Olivette*, which was doing service

* First Lieut. James Stafford, Seventy-first New York Volunteer Infantry, assigned to Fourth Infantry just as transport sailed.

as a water carrier and distributor for all the transports of the fleet. She had large stateroom accommodation both on the upper and lower deck, a large-sized dining saloon, which was later used as a place for surgical work; she carried plenty of ice and water, and was without cargo except some horses, I believe, and forage for the same, which was cleaned out later.

The transfer of Major Appel's hospital from the *Comal* was quickly effected, and he at once proceeded to gather up the sick from the various transports, signals being hoisted every morning when his services were needed. These were from time to time transferred to a small hospital on shore in the artillery camp, with a view to their early transportation to the north. The removal of the sick from transports was often a slow and difficult process, particularly in rough water; for they first must be lowered into a small boat, which was at one time lifted on the crest of a rising wave and the next plunged into the gulf of a sinking one, and then pulled to the side of the hospital ship, where the same dangerous process was to be repeated in getting them on board. But the work was continued, and happily without accident, until the fleet was cleared of its most serious cases.

On the afternoon of June 13 and the morning of the 14th the fleet of twenty-eight transports and other craft sailed out from Tampa Bay with crowded decks and rigging, and bands playing. The weather was delightful and the sea as smooth as glass. Indeed, fair weather accompanied us the whole voyage, which occupied some eight days. Hatches and ports could be kept wide open, and the men lived virtually in the open air. Had it been otherwise, their suffering from sea sickness and the foul air of the unventilated holds would have been intolerable.

After the departure of the fleet the *Olivette* steamed to the dock to take on coal for the voyage. An opportunity was given to unload the ship of some cases of measles and light cases of fever. This was a fortunate circumstance, as it placed the steamer in condition to relieve the transports of their sick on arrival at Daiquiri, many of whom were later transferred to the steamer *Iroquois*, so that room was made for the wounded of the impending battle on the 24th of June at Guasimas and the 1st and 2d of July at San Juan Hill and before the intrenchments of Santiago de Cuba.

The landing of the Fifth Army Corps on the 22d of June at Daiquiri was accomplished in a brilliant manner. The escapes from death by drowning were many. That there were only two casualties of this nature is really remarkable, all of the circumstances being considered. As is well known, the troops went on shore with only such rations, shelter tents, and cooking apparatus as they were able to carry on their persons. The same is true of all medical officers and men of the Hospital Corps assigned to duty with the several organizations. This prevented the transportation of any medical supplies beyond what could be carried in the hands.

Of litters there was by no means a sufficient number, as many of the regiments had neglected to bring them from their several stations. This was a deficiency which we keenly felt later upon the field of battle, and which could not be rectified by the Medical Department. Where there should have been 10 litters to each regiment there were often but 2, and sometimes none.

First-aid packets.—Prior to embarkation there were received at the medical supply depot in Tampa about 12,000 first-aid packets, which, under direction of the chief surgeon, were issued to the several brigade surgeons with a view to their subsequent distribution to the troops while on transport, it being considered that if placed at once in the hands of the soldiers they would often be lost or thrown away, as they subsequently were on the march through the tropical jungle extending from Siboney to San Juan Hill.

These first-aid packets were liberally used in dressing the wounds received in battle, and the skill and care with which they were found to have been applied on receipt of the wounded at our field hospitals attest the courage and devotion of our medical staff.

Medical supplies.—Medical and surgical chests with which the regular regiments were in nearly every instance provided were in the hurry of departure unfortunately left on the transports, together with all extra medical supplies. A few medical officers took their chests with them only to abandon them within the first mile of march, leaving them to be afterwards picked up by passing wagons or ambulances. After the departure of the troops came the unloading of the pack animals, the subsistence stores, and the ammunition. It was a tedious and dangerous work that could only be done in the early morning hours, before the wind sprang up, by the small boats and later by the single steam lighter, the *Laura*, because of the rocky nature of the coast even in the harbors, the abrupt plunge of the beach into deep water, and the inadequate docking facilities at both Daiquiri and Siboney. Then, too, the masters of transports took them out to sea after debarkation of the

command, for many hours and even for days, because of their fears of wreck by collision with each other or by drifting upon the rocks. With all these difficulties in getting out the absolute necessities for life and military security for the troops, it can well be appreciated that little opportunity was given to unload tents and medical chests. Constant efforts were made by the chief surgeon to recover them, but with very meager results. He was more than grateful when he succeeded in getting the field hospitals on shore, as will be described later.

The absence of the medical chests was a great blow to regimental medical officers and a matter of keenest anxiety to the chief surgeon, particularly after the troops had dug the trenches and the sick lists were increasing rapidly by the appearance of malaria and thermic fevers and by diarrheas and dysenteries.

Reserve medicines, hospital delicacies, etc.—Three days prior to the order of embarkation, which was given on the night of June 8, I directed Capt. C. M. Gandy, assistant surgeon, the acting medical supply officer at Tampa, Fla., to set aside one-half of all the medicines and surgical supplies remaining in the storehouses to be taken as a reserve upon the headquarters ship the *Seguranca* under my own charge. At the time the order was given supplies were beginning to be unloaded from the trains by the quartermaster's department and issues were made to regimental surgeons, of both volunteer and regular organizations, of such articles as were needed. The reserve was not large, and was gotten out of the storehouse by myself and two hospital-corps men at midnight of the 8th and put upon the train which left for Port Tampa at 2.30 a. m. of the 9th. There were two wagon loads taken that night, and Captain Gandy sent two more on the following morning. Among this lot of medicines there was fortunately a large amount of quinine—2 barrels in all—and other material, and three sets of surgical chests and sterilizers. The medicines received on the morning of the 9th were ultimately placed on the steamer *Olivette*, where they were much needed.

My reason for taking only one-half the amount of supplies in the storehouses was that volunteer regiments were continually arriving at Tampa, and I felt certain that they would need everything that I could spare, as these troops were usually destitute of everything.

This lot of medicines was landed from the *Seguranca* at Siboney about June 27 and placed in charge of Maj. Ogden Rafferty, surgeon, United States Volunteers, with orders to act as medical-supply officer and issue the same. As the headquarters of the Fifth Army Corps was moved to the front on the 28th, the chief surgeon left instructions to Major Rafferty to use every effort to get the medical supplies known to be on transports and either ship them to the front as opportunity occurred or turn them into the hospital at Siboney, from which point our supplies were drawn up to July 23.

Although no report was made to me of the results of these efforts, I do know that medicines (in small quantities, to be sure) were brought up by returning ambulances and distributed to the chief surgeons of divisions. But there was never enough to satisfy the demands, even after the arrival of the hospital steamer *Relief*, which was reported to the chief surgeon to have on board 700 tons of medical supplies. What these supplies consisted of I do not know, as I was continually at the front, but I do know that the medicines required by us and the hospital delicacies brought by her were reported to me as practically exhausted by the 22d of July.

As the chief surgeon of the corps had been twice informed by the Surgeon-General that the *Relief* was not only loaded with everything that we should need, but would join the expedition at an early date, it can be imagined with what anxiety he awaited her arrival and what disappointment he suffered when he learned that her supplies were being exhausted at so early a date.

NOTE.—The arrival of the *Relief* was reported to the chief surgeon by telephone about July 8 by Major Torney, the officer in charge. Later, Colonel Greenleaf, who arrived on the *Yale*, telephoned they would have to be unloaded before the exact nature of her supplies could be ascertained, as no packer's list was on hand and the boxes were without content marks. Further, he requested the chief surgeon to send to Siboney a steward and some hospital-corps men to assist in the work of unpacking and sorting contents of boxes, which request was complied with as soon as possible, the men being detailed from volunteer regiments. Later, Acting Asst. Surg. W. E. Parker, United States Army, was placed in charge of the stores and attended to their issue. His report in this connection would be of interest.

Memorandum of events from June 22 to 28.—On the 22d of June the landing took place at Daiquiri, the naval steam launches and boats conveying the troops to the shore.

On the 23d the Navy furnished a few launches and some boats to convey the remainder of the troops on shore at Siboney, also some rations and ammunition.

but nearly all were withdrawn in the afternoon, as the heavy surf prevented any further landing.

On the morning of the 24th the chief surgeon requested of the commanding general that he be furnished a steam launch and boats to hunt up transports and get off the medical supplies. As it was impossible to get the steam launch from the navy so early in the morning, the use of a rowboat from the *Seguranca* was authorized and sent out with such supplies as belonged to the First Infantry, under charge of Captain Munson, assistant surgeon, who was the executive officer of the chief surgeon. Permission to continue the use of this only boat was then withdrawn, as it was needed for other purposes. By this time a strong breeze sprung up, which prevented any further attempt to reach the scattered transports or safely to board them. About noon of the 24th, news of the battle at Sevilla having been received, the chief surgeon and his executive officer after much difficulty were put on board the steamer *Olivette*. He ordered the ship to proceed at once to Siboney, where it arrived in time to take care of all the wounded that could be brought on board that night and the next day by naval boats and launches.

On the 26th of June the transport *Saratoga* came into Siboney Harbor. This steamer had on board a field hospital under command of Major La Garde, surgeon. After much difficulty the chief surgeon managed to board her and order the immediate landing of all her tentage and medical supplies, etc. The steam lighter was alongside taking off commissary stores under command of the chief commissary. The chief surgeon asked that the hospital might be taken on shore with the stores. He was informed that it was positively prohibited that the lighter be used for any other purpose than to unload subsistence stores. The chief surgeon after much difficulty boarded the headquarters boat again and got a direct order from the commanding general to take the hospital to shore on the lighter. This order was personally delivered by the chief surgeon and the landing was accomplished that afternoon.

On the 27th of June the commanding general directed Dr. Goodfellow to take the steamer *Cumberland* and proceed to Daiquiri, hunt up transports, take off from them certain quartermaster's employees known to be on board, and at the same time to remove and land all medical chests and supplies. Thirteen ships were visited. On several of the transports they were found and landed. On others they could not be found, the ship officers and crew claiming to know nothing of their whereabouts. In the afternoon the work was stopped, as the *Cumberland* was imperatively needed elsewhere.

On the same day, at Siboney, by direction of the commanding general, the chief surgeon, with great difficulty, managed to get a small boat to take him on board the steam tug belonging to Mr. Hearst, of the New York Journal. Finding that that gentleman had gone to the *Olivette*, the chief surgeon boarded that ship and begged that he would lend his steam launch to tow boats to transports for the purpose of removing medical stores. Mr. Hearst kindly promised to give its use, but the launch never appeared. The chief surgeon was then authorized by the commanding general to hire any tug that he could find and to use it to run down transports and get off the medical supplies. The only tug in sight was a newspaper boat, with which he was unable to communicate before it put off to sea.

On the morning of the 28th the chief surgeon succeeded in landing from the steamer *Seguranca* all his reserved stock of medical supplies and placed them in charge of Maj. Ogden Rafferty, surgeon, United States Volunteers, who had just reported for duty. He also directed Major Rafferty to act as medical storekeeper and make every endeavor to get from the transports as they were unloaded such regimental medical stores as might be on board. What success he had at that work I do not know, as I accompanied the commanding general to the front and was detained there by my duties until the end of the campaign.

It may here be stated that the steamer *Relief* had equal difficulty in unloading stores, nearly one week being consumed in getting them on shore, when the facilities were much better than during the early days of the expedition.

Field hospitals.—Of the field hospitals that had been organized at Tampa the first divisional, under command of Maj. M. W. Wood, surgeon, was the first to be landed. The report of Major Wood for June, which was forwarded to the Surgeon-General, shows under what difficulties this was effected, and how, by the heroic struggles of the Hospital Corps detachment, it was carried to the front practically by hand and by litters used as hand barrows.

The second field hospital landed was, I think, that of the cavalry division, under command of Major McCreery, surgeon, who succeeded in getting off only a portion of its tentage and surgical supplies when the transport stood out from land with the remainder of the outfit on board. I do not think that the whole of this hospital was ever assembled. Where it went I have not been able

to ascertain. It was moved to the front at an early date, and under the direction of Major Havard, chief surgeon of the cavalry division, became of service during the battles of the 1st and 2d of July.

The third or reserve hospital, under command of Major La Garde, surgeon, after many delays, during which the transport *Saratoga* was drifting miles at sea, was successfully landed by the lighter *Laura* at Siboney, and ultimately became the base hospital. To this was sent all medical supplies that could be gotten from transports and those from the hospital ship *Relief*.

The fourth hospital, under command of Maj. A. H. Appel, surgeon, was retained on the steamer *Olivette*, which became a hospital ship.

Two other hospitals were organized near corps headquarters, one under charge of Major Crampton, surgeon, for the reception of the sick—a detention camp, so to speak—until they could be separated; the second, a yellow-fever hospital, under charge of Dr. Hamilton R. Jones and Dr. F. J. Combe, acting assistant surgeons, United States Army. These hospitals, like all the others, were for a long time sadly deficient in tentage, bedding, and supplies, but later they were procured and good work was done, 125 cases of yellow fever being treated in them up to July 23, with a record of 35 deaths.

Major Crampton's hospital, which was at first only a collection of shelter tents, unfortunately located on bad ground, the mud at times being several inches deep, was later changed to a side hill, and some tents, furnished by Major La Garde from the hospital at Siboney, put up. These two hospitals were later placed under the control of Surgeon Ives, United States Army, and were continued until larger hospitals were established near the city of Santiago.

As has been stated, these hospitals were all of them lacking in a sufficient supply of tents, cots, bedding, and medicines, but were well equipped with surgical operating tables, surgical instruments, sterilizers, dressing chests, etc. After the headquarters of the commanding general was moved to the front an order was given by the chief surgeon to Major Appel to unload from the *Olivette* all his tentage and camp outfit and transfer it to Major La Garde at Siboney, and I am informed this was done, although no formal report was made to me of the matter.

The lack of tents was not particularly felt after the battle at Sevilla, as the wounded were brought at once to the steamer *Olivette*, where operations were performed and the officers and men made comfortable. But after the battles of July 1, 2, and 3 the inadequacy of shelter that could be furnished the wounded, and later to those who were sick, gave the greatest distress to all concerned. But the tents were not at hand, and only supplied in sufficient numbers after weeks of delay.

Ambulances.—Only three ambulances were carried on the transports. These were unloaded and set up in time to be of service during the battle of July 1 and subsequently. They were placed in charge of First Lieutenant Godfrey, assistant surgeon, and he carried them to the fighting line, frequently under fire of the enemy, in the work of removing wounded to the rear.

Later (about July 2) a train of ten ambulances arrived on the transport *Louisiana*, in charge of First Lieut. J. M. Kennedy, assistant surgeon. They were promptly disembarked at Daiquiri and brought to the front. The park was stationed near corps headquarters, where the train could be under control of the chief surgeon. This train, though small and frequently depleted of its drivers by disease, was of immense service, and under the efficient management of Lieutenant Kennedy was constantly engaged in transporting the sick and wounded from the camps to the advance hospitals, and from them to the base hospital at Siboney; and from that place medical supplies were transported to the front as fast as they were received, any reserve that might accumulate being protected by wagon paulins and a few tents. Through frequent discouragements, due to the breaking of tongues and other parts of ambulances, of harnesses and litters, the sickness of mules and of drivers, he kept them steadily at work over the awful roads, and efficiently did all so small a train could do.

Wagons bedded with hay, so long as any could be procured, and sometimes with grass, were also largely used in moving patients, but it was painful and sometimes frightful work, which the overwhelming pressure of numbers rendered unavoidable.

Among the precautions taken by Lieutenant Kennedy to prevent the spread of disease, he had the inside of his ambulances frequently washed with bichloride solutions 1:1000, the seats, curtains, and floors being attended to after every occupancy by a yellow-fever case; then separate ambulances were assigned to yellow-fever hospitals for removal of the sick from camps of detention to the same.

Yellow fever.—During the second week in July Dr. John Guiteras, acting assistant surgeon, United States Army, who had been left at Siboney with view to special work in connection with yellow fever, reported having discovered five cases of that disease. Three of the patients were newspaper correspondents; others from the Thirty-fourth Michigan Volunteer Infantry. Later, daily reports showed a steady and rapid increase of the disease, local unsanitary conditions favoring its spread. The fact that most of the patients had been sleeping in or resorting to habitations which were considered infected was reported. Upon this the commanding general directed the destruction by fire of all the buildings at that point.

On the arrival of the steamer *Yale*, Col. Charles R. Greenleaf, assistant surgeon-general, took charge at Siboney, and commenced a vigorous police of the town and the exclusion of all Cuban and Spanish refugees. Col. Nicholas Senn, chief surgeon, United States Volunteers, had before this assisted in the work of purification, and Major Gorgas, surgeon, United States Army, was detailed in charge of the yellow-fever hospital, and Major McCreery, surgeon, in administrative charge of the town.

A few days later, as cases were reported among the sick received from the front at the detention camp near corps headquarters, Acting Asst. Surg. Hamilton R. Jones was directed to make an inspection of all sick arriving and separate the yellow fever cases. A hospital for these was established three-quarters of a mile distant on an eligible site. Dr. Jones was placed in charge of this hospital with Acting Asst. Surg. J. F. Combe as his assistant. Cuban nurses were employed at first, but they proved to be worthless, and were either discharged or left in a short while. As was always the case, the lack of shelter was a serious evil, which was corrected very slowly and only as tents could be spared from Siboney and the surgical hospital under Major Wood. Up to July 23, 125 cases were received in this hospital and a mortality rate reported of about 12 per cent.

At Siboney cases continued to accumulate until over 400 were reported, the death rate being slightly higher than the above.

NOTE.—Very shortly after the debarkation of troops at Siboney the chief surgeon of the corps called upon the commander of the Cuban forces, who with his staff was quartered in the most desirable house in the place, and asked him in regard to the existence of yellow fever in or near the village. He stated in excellent English that there had been no case in the place recently. When questioned as to possible danger in occupying dwellings there or coming in contact with his people, he said he believed there would be no danger, as the Cubans rarely had yellow fever. When asked as to the advisability of burning the village to destroy infected houses, he replied that he did not think it necessary and that it might seem like wanton destruction of property.

Under the influence of this opinion neither the chief surgeon nor the commanding general thought it advisable to burn the town at that time, but orders were given that the troops should keep out of the houses and palmetto shacks. This order was not observed by civilians, nor by the commander of certain volunteer regiments and their staffs, the result being that they discovered the infective points very promptly and were attacked by the disease. After this had happened the town was destroyed, as stated.

Dr. Jones, who was ordered to inspect the fever cases under treatment in the lines, reported many mild cases and several serious ones, all of which were removed as quickly as possible to the hospital, the presence of albumen in the urine being apparently the main diagnostic point. Unfortunately regimental surgeons were without their urinary test sets, and nitric acid and test tubes were very scarce at all the hospitals. For this reason many cases that were thought to be simple ephemeral or thermic fever and various forms of malarial manifestation, which were widespread among the troops and complicated every disease, were really mild and undetected cases of yellow fever. The uncertainty of diagnosis was increased by the practical absence of yellow fever among the refugees or in the city, as reported by Dr. Hartmann, of Santiago, who had been a lifelong resident and practitioner, and who was one of the 22,000 refugees at Caney. Then numerous regiments which had suffered no contact with refugees, were isolated in fact, furnished cases of the disease. All of the regiments had one common condition, however, that of the construction of heavy lines of intrenchments and the necessity of living in or near this upturned soil for nearly two weeks. As I believe this was one of the principal causes of widespread malarial infection, so do I believe that it was the main cause of yellow fever infection. That this telluric variety of yellow fever was mild in type gave a reasonable hope that by the prompt recognition and separation of cases and the removal of camps the disease might be controlled before the virulence of the infective germ was increased by transmission through the human body.

Removal of camps, etc.—So soon as the military situation permitted, the commanding general directed the removal of all camps from the trenches, and the selection of elevated and well-drained sites on the hills to the north and east of the city. One camp, that of the First Infantry, was located near San Luis, for military reasons. The mountain range was avoided because of the lack of roads over which supplies could be drawn and the lack of water; also because of the marked increase of rainfall in that region, storms being much more frequent there than near the city. The camps varied in distance from Santiago. The nearest and the healthiest, that of corps headquarters, was 1 mile from the edge of town, on the ridge about 100 feet high. The farthest, that of the cavalry division, about 4 miles, under the foothills to the north. The mountain plateau country was unsuitable for camping purposes, because of the lack of shade and the deep black muck of soil, which was a perpetual quagmire during the rainy season. The men and officers of the First Infantry suffered intensely in that country from the moist heat of the day and the drenching by storms.

Tentage, etc.—It was not until the last week in July and the first week of August that regimental tents and camp equipage began to be unloaded from the transports and were carried to the camps, and up to the time of reembarkation many of the regiments were still protected only by their shelter halves. Where the material could be procured some of the troops made themselves bunks, elevated from the ground, but ordinarily this was not done, the material not being at hand, and the energy of the men exhausted by sickness and the tropical climate. Where the tents and the bunks were combined the greater comfort possibly revived the waning health of the men. But this was not apparent at once.

Among the camp equipage were to be classed the kettles for boiling water and the ovens for cooking and baking, all of which were necessary to establish the company messes and better methods of preparing the food supply. At the same time canned tomatoes and other vegetables began to appear and fears of scorbutic complications to wane; but with it all the intense infection of trench fever continued its work until over 4,000 men and officers were on sick report. It became thus evident that the solution of the problem lay only in the immediate removal of the whole command to the United States, which was commenced August 8, and continued under regulations established by the War Department as rapidly as transports were furnished until the 25th of August.

Use of transports for the sick and wounded.—Very early after the battle of Sevilla, and from that time on, the use of transports for the accommodation of slight cases of wounding and for the sick and convalescent became absolutely necessary, in the absence of regular hospital ships and the congestion of the hospitals with numbers of patients for whom necessary shelter could not be provided on shore, because of the lack of tents and the lack of cots. At the front and in the trenches hundreds of men were waiting for hospital treatment, which could not be given them until room was made, and room could only be made by shipping north those able to travel. For this reason the chief surgeon recommended the use of transports, and they were used with evident satisfaction up to the *Seneca* and *Concho* incidents, when there seems to have been complaint as to the alleged foul water on the ships and the lack of supplies for the sick. In regard to the first condition, these transports were wholly under control of the quartermaster's department in all matters pertaining to the ship itself, and foul-smelling water from long storage was a condition common to nearly all of them.

About the 20th of July Major La Garde, surgeon in charge of the hospital at Siboney, was asked by the chief surgeon, through telephone, how many more patients he could accommodate. He replied that his hospital was full, but that he had 175 convalescents, who, while unable to be returned to duty, were able to travel. In order to make room for many grave cases of sickness reported in camps, I requested that a transport be designated to take these convalescents to the States, and thus vacate beds and shelter for graver cases. The commanding general authorized the transfer and the chief quartermaster designated the vessels named. The conditions were urgent and because of the lack of tents the hospitals could not be enlarged, so as many convalescents as possible were sent north. The selection of those to go and the provision of medical stores was in the hands of the surgeon in charge of medical administration at Siboney. The foulness of the ships was a matter to be remedied by the captain and crew, and with the powerful pumps on hand I was assured no difficulty could be met in making a ship clean at any time during the voyage.

The lack of surgeons and nurses on these vessels was probably unavoidable, the lack because of sickness and other causes being one that pertained to all the hospitals of the corps at that time and to many regimental organizations also. Furthermore, the convalescents were supposed to be practically well men, and at least able to care for themselves, except during such illness as might break out during

the voyage, and for this contingency reasonable provision had been made by the presence of two medical officers and some most necessary medical stores. If any serious cases of illness or wounds were sent on these ships it was without direction from the chief surgeon.

Fight at Sevilla or Guasimas.—The engagement occurring on the 24th of June at a locality known as Sevilla or Guasimas, about 4 miles from Siboney, furnished 52 wounded men, who were slowly brought on litters to the shore, where they were temporarily rested in a very foul old shed until boats and launches could be procured from the Navy to transport them to the steamer *Olivette*. In handling the wounded much skill was shown by the sailor and hospital corps private, as well as a good deal of courage, in carrying the boat through the surf and alongside the steamer, where they were unloaded near an open port hole, and the patients carried thence onto the main deck to await their several turns at the operating table.

The chief surgeon spent the night on this steamer and can not too highly commend the effective administration of its affairs by Maj. A. H. Appel, surgeon in charge. The ship was well adapted to hospital work, and the surgical outfit made easily available. The large dining room, which was lighted by electricity, was rapidly converted into an operating room, the mess tables and chairs being moved away, and surgical tables, sterilizers, and dressing cases substituted.

The staterooms of the *Olivette* were largely above the main deck and well ventilated, although the use of staterooms rendered the task of nursing and surgical dressing more difficult than where open and clear decks could be fitted up. Bathrooms were extemporized, and the mess and nursing appliances of the field hospital were easily sterilized. A large stateroom was used as a dispensary, and the smoking room on the upper deck as an office.

This early battle gave the first illustration in actual warfare of the value of the first-aid dressings. All of the wounded showed most careful application of the dressing, which in many cases might have been left undisturbed could the exact nature of the surgical condition have been known without their removal. The nature of the surgery was conservative, no occasion for the graver operations appearing. One case of trephining for wound of the head was made by Lieut. L. P. Smith, assistant surgeon, United States Army, and a laminectomy for shot wound of the lumbar vertebræ by Major Appel.

Battles.—The action of July 1, 2, and 3 have been so fully written up in military reports that a further description would be unnecessary. The operations of the medical department have received no description that has come to my notice that does justice to the gallantry of the medical staff on the field or its skillful and tireless work in the hospitals. The bravery of our men under fire was conspicuous. They shared all the dangers and sufferings of the campaign equally with the officers of the line.

In Major Wood's hospital over 1,000 wounded men were received within three days, and in spite of lack of shelter and the subsequent exposure to intense heat and drenching rains, the mortality rate was less than 7 per cent.

All of the wounded showed the most careful primary dressing, which permitted deliberate work in the hospitals in the application of operation and secondary dressings. Fractures of the thigh were carefully splinted on the field, sometimes with rods or wire, at others with the broad bark of the palm tree, which when wet was pliable and when dry firmly adherent, and it could be cut into any desired shape with a knife or rolled into desired forms with great ease.

The transportation of the wounded from the field of battle, 3 miles distant, was mainly by litter and three ambulances. In a few cases an extemporized carriage was tried, but not often with success. The wounded from the fight at El Caney were cared for at that place by Major Ebert, surgeon with the Seventeenth Infantry. They were brought in later by means of ambulances and wagons. There were at this place over 150 wounded Spanish prisoners, who were cared for by Major Ebert and later by Drs. Goodfellow, Marshall, and Menocal, until they were transferred through the lines to the large Spanish hospital in the city.

Early after the battle the hospital was honored by the presence of Miss Clara Barton and her staff of four assistants, who immediately set up their tents and cooking apparatus, and labored incessantly day and night, in the broiling sun and drenching rain, preparing sick food for the wounded and serving it to them, and in a thousand other ways giving the help that the Red Cross Society brings.

At the earliest practicable date the wounded were moved to Siboney, commencing with the slighter injuries, and proceeding day by day until about the 17th of July, when the hospital was empty and ready to be moved further to the front. This was done by Major Wood, a site being selected on a hill near the road running north and not far from Cubitas, a collection of houses on Purgatorio Creek.

Health of the troops.—The health of the troops while at Tampa was excellent as a whole, the number of those excused from duty being considerably less than the rate of peace service at military posts. But this low rate did not include the large number who were suffering from an acclimating diarrhea, which broke out in the regiments newly arrived. This disorder, which was widespread and annoying, resulted in using up a large amount of medicines without materially impairing the effectiveness of the command. The reasons for its incurrence, I think, may be found not in any defect of water supply, which would have affected citizens as well as soldiers, nor yet in the food, which among the regular troops did not materially differ from that to which they were accustomed, but I believe it was due rather to change of habitation from warm, dry bedding in warm, dry barracks to the damp chills of sleeping on the ground, often with no other bed than a thin rubber sheet. Every night our clothing was drenched with dew, and every day it was drenched with sweat, and from this alternate heat and chill I believe the intestinal catarrhs and colics arose. When we became accustomed to the change, our troubles in that respect ceased. Another cause was the innumerable so-called soda water and "pop stands" that peddled their indigestible stuff on the outskirts of the camps, and with which the unwary and imprudent soldier was always gorging himself, not because his food was insufficient, but because of his childlike hunger for sweet stuff of any nature.

About the same time measles appeared among the troops, affecting regulars as well as volunteers, and old men as well as young. The disease, which had been unusually prevalent all over the North during the winter preceding, spread rapidly in the camps. Prompt isolation of the patients by removal from their commands to the field hospitals seemed to hold it in check, so that in the history of the expedition it did not become a very important factor. The type was not severe, and the mortality rate was small.

Typhoid fever appeared early and increased with rapidity as the season advanced. Just why it should have become so widespread I can not now conjecture. While we naturally look to an infected water supply as the universal cause, I think we must admit the possibility of infection of both food and water through showers of infected dust and swarming of infected flies who travel from the sinks to the mess tents with intolerable regularity. In too many cases the covering of sinks was perfunctory—usually done at reveille and in the afternoon—but its contents left bare during the middle of the day when most in use.

The infection of water barrels by dust being blown into them was easy, and the inhalation and swallowing of infected dust was by no means impossible.

The typhoid fever existing in Tampa prior to embarkation of the troops was of a grave type, but fortunately the mortality was not large. Later, in Cuba, after the strength and vitality of the men became lowered by the exposures and hardships of war, the mortality rate increased and the disease took its place among the foremost causes of disability. Malarial fevers and a variety of ephemeral fever, which simulated dengue, appeared in Cuba. The diseases were widespread and of a severe type. In all of them great prostration would follow apparent recovery, and convalescence was protracted. Large doses of quinine were required to control the malarial variety. The ephemeral fever, which exhibited a temperature often as high as 105° and 106° F., would disappear in about four days, with protracted convalescence and a tendency to recurrence. Quinine was used in large doses, but without checking the disease.

In Cuba many of these ephemeral forms were later diagnosed as yellow fever, particularly when they were subjected to urinary test; but without that the Tampa and Cuban varieties looked much alike.

During the latter part of July and August the tendency to diarrhea and dysentery became pronounced, although the diet of the troops had much improved and the water supply was certainly no worse than it had been from the first. The majority of medical officers regarded it as of malarial origin and treated it as such, and frequently with large rectal injections of quinine. Attempts were made to check its spread by recommending the use of boiled water for drinking purposes without favorable results, probably because the men preferred the disease to the remedy. At divisional hospital No. 1, where boiled and filtered water was freely supplied, and about all that was to be had, the incurrence of diarrhea and dysentery was almost unknown. Among the regiments the excuse for not furnishing boiled water was valid; the commands were, until very late, without the necessary kettles and cauldrons to heat the water. When the soldier had only his tin cup and ration can and a little fire of green twigs with which to cook his food, boiled water was omitted.

Sanitary advice.—Before leaving Tampa the chief surgeon secured the publication of General Orders, No. 8, headquarters Fifth Army Corps, June 2, 1898, in

relation to the sanitary care of troops. This circular was prepared by Dr. John Guiteras, acting assistant surgeon, United States Army, as was also a small card circular intended as a pocket companion. Copies of these are hereto appended.

Medical staff.—A pocket register of the medical officers, regular, volunteer, and contract, was kept by the chief surgeon, from which the following information can be given, and in the absence of verification by comparison with the larger desk records turned over to Lieutenant-Colonel Havard, chief surgeon, United States Volunteers, it is believed may be said to be fairly correct.

On the 22d of June there were on duty with the Fifth Army Corps 36 regular medical officers, 15 volunteer medical officers and 20 contract surgeons, total 71. to supply 20 regiments of infantry, 5 regiments of cavalry, 2 squadrons of mounted troops, 3 batteries of light artillery, 1 battalion siege artillery, 1 engineer battalion, 3 field hospitals, a large wagon train, 1 hospital ship, the pack train, the Gatling-gun detachment, signal-corps detachment, and 2 independent stations; in all, 37 military organizations and 2 quartermaster stations—Daiquiri and Siboney, and 4 hospitals.

It is my opinion that the number of medical officers was insufficient to meet the demands of service in Cuba. There should have been to every regiment at least 2 medical officers, or 50 to start with. To every squadron of cavalry, battery of artillery, and battalion of engineers, gun detachment, squad corps, pack train, 1 or 2 assistants. To every hospital, 4 as regular staff and 4 contracts as assistants, or 32; making a total of 90 officers.

Concerning the medical officers and men of the hospital corps who were with the expedition, I can not speak too highly. They shared all the hardships that came to the Fifth Army Corps, not alone during the assault and siege of Santiago de Cuba, but in the far more trying battle with disease, which day after day ravaged our camps and threatened annihilation as a fighting force to the gallant troops who had won one of the most splendid victories of history. These brave and devoted men, through the blistering heat and drenching rains and equally drenching dews of a tropical summer, marched side by side with their comrades of the line, slept in the mud, breathed the deadly vapors of the jungles, and more pestilential miasmas of the upturned earth in the trenches, endured the same privations as to lack of food and shelter, worked when others slept, resting neither day nor night so long as their services were anywhere called for, whether on the march, in the camps, or in the hospitals. Can we deny to them equal share in the honors that may be bestowed upon their fellow soldiers? I can at least append their names, in the hope that they may not be forgotten. There are also others, who joined the command later and did faithful and valuable service, whom I hope will be embraced in a supplementary list.

This report closes with July 23, 1898, when, on account of continued illness and at my own request, I was relieved by the commanding general from duty as chief surgeon of the corps and Maj. Valery Havard, surgeon, was appointed acting chief surgeon in my stead, the administrative duties of the office being assumed by him. His report will cover the operations of the department from that date.

DOCUMENTS ATTACHED TO LIEUTENANT-COLONEL POPE'S REPORT.

1. *List of regular and volunteer medical officers and acting assistant surgeons on duty with the Fifth Army Corps at the date of the landing of the expedition at Daiquiri and Siboney, Cuba.*

Lieut. Col. B. F. Pope, chief surgeon, United States Volunteers: chief surgeon, Fifth Army Corps, April 23 to July 23, 1898, when relieved on account of illness. Remained with the corps, however, until it returned to the United States.

Lieut. Col. Valery Havard, chief surgeon, United States Volunteers; chief surgeon, Fifth Army Corps, from July 23, 1898, to August 25, 1898, when he was announced as chief surgeon of the Department of Santiago; chief surgeon of the cavalry division to July 23, 1898.

Maj. Henry S. Kilbourne, surgeon, United States Army; chief surgeon, Second Division. Later, September 10, 1898, chief surgeon, Fifth Army Corps.

Maj. M. W. Wood, surgeon, United States Army; chief surgeon, First Division; also in charge divisional hospital No. 1 to July 21, 1898.

Maj. L. W. Crampton, surgeon, United States Army, Eighth United States Infantry; in charge detention hospital near corps headquarters; chief surgeon, First Brigade, Second Division.

Maj. S. Q. Robinson, surgeon, United States Army, Tenth United States Infantry; chief surgeon, Second Brigade, and acting chief surgeon of the Second Division. Later, in charge of divisional hospital No. 1. Left at Santiago de Cuba on departure of the Fifth Army Corps for the United States.

Maj. L. A. La Garde, surgeon, United States Army, Ninth United States Cav-

alry; in charge of divisional hospital No. 3, at Port Tampa, Fla., and Siboney, Cuba; also in charge of all administrative work at that place.

Maj. A. H. Appel, surgeon, United States Army; in charge of divisional hospital No. 2, at Tampa, Fla.; also of same hospital on steamer *Olivette*.

Maj. George McCreery, surgeon, United States Army, Sixth United States Cavalry; in charge of field hospital, cavalry division; executive officer at Siboney during the yellow-fever epidemic. Died at sea en route to the United States.

Maj. R. G. Ebert, surgeon, United States Army, Seventeenth United States Infantry, chief surgeon, Second Brigade, Second Division; also in charge of wounded Spanish prisoners at El Caney, Cuba.

Maj. R. W. Johnson, brigade surgeon, United States Volunteers. Executive officer and surgeon, divisional hospital, No. 1. Left at Santiago de Cuba after the departure of the Fifth Corps for the United States.

Maj. W. D. McCaw, brigade surgeon, United States Volunteers, Sixth United States Infantry; chief surgeon First Brigade, First Division.

Maj. F. J. Ives, brigade surgeon, United States Volunteers, Twentieth United States Infantry; chief surgeon General Bates's Independent Division.

Maj. H. S. T. Harris, brigade surgeon, United States Volunteers, Ninth United States Cavalry; later chief surgeon Cavalry Division.

Maj. W. B. Banister, brigade surgeon, United States Volunteers, Second United States Infantry. In charge field hospital near General Bates's Division. Left at Santiago after departure of the Fifty Army Corps.

Maj. Paul Shillock, brigade surgeon, United States Volunteers, Twenty-fifth United States Infantry; chief surgeon, Second Brigade, Second Division.

Maj. W. C. Gorgas, brigade surgeon, United States Volunteers.

Maj. Ogden Rafferty, brigade surgeon, United States Volunteers. On duty at Siboney, Cuba, as acting medical supply officer. Returned to the United States in charge of sick, transport *Cherokee*, July 6, 1898.

Maj. Philip G. Wales, brigade surgeon, United States Volunteers, Twelfth United States Infantry.

Capt. A. B. Heyl, assistant surgeon, United States Army, First United States Cavalry. Returned to the United States about July 9, 1898.

Capt. Joseph T. Clarke, assistant surgeon, United States Army, Twenty-second United States Infantry.

Capt. M. W. Ireland, assistant surgeon, United States Army; surgeon at divisional hospital, No. 3 at Port Tampa, Fla., and Siboney, Cuba.

Capt. H. C. Fisher, assistant surgeon, United States Army, Twenty-first United States Infantry.

Capt. F. A. Winter, assistant surgeon, United States Army, Third United States Cavalry. Returned to the United States on transport *City of Washington*, July 9, 1898.

Capt. M. M. Brewer, assistant surgeon, United States Army, Tenth United States Cavalry. Died of typhoid fever on his return to the United States.

Capt. H. M. Hallock, assistant surgeon, United States Army, Seventh United States Infantry.

Capt. G. J. Newgarden, assistant surgeon, United States Army, Third United States Cavalry.

Capt. E. L. Munson, assistant surgeon, United States Army, executive officer to chief surgeon, Fifth Army Corps, on steamer *Olivette*, June 24 to 26; in charge of outfitting transports for reception of wounded to July 10; left for the United States on the *Breakwater* July 10, in charge of sick and wounded.

First Lieut. Guy C. M. Godfrey, assistant surgeon, United States Army.

First Lieut. J. M. Kennedy, assistant surgeon, United States Army; commanding ambulance train, Fifth Army Corps; in charge of distribution of supplies and the transportation of wounded and sick from July 20 to August —, 1898; in charge of the Nautical Club Hospital at Santiago de Cuba to —.

First Lieut. W. W. Quinton, assistant surgeon, United States Army, Battery A, Second Artillery.

First Lieut. D. C. Howard, assistant surgeon, United States Army. On duty at divisional hospital, No. 2, and on steamer *Olivette* to —.

First Lieut. W. H. Wilson, assistant surgeon, United States Army, Battery K, First Artillery.

First Lieut. T. J. Kirkpatrick, assistant surgeon, United States Army, Twenty-fourth United States Infantry.

First Lieut. J. H. Stone, assistant surgeon, United States Army, Sixteenth United States Infantry.

First Lieut. P. C. Fauntleroy, assistant surgeon, United States Army, Fourth United States Infantry, and divisional hospital, No. 3, at Siboney.

First Lieut. L. A. Fuller, assistant surgeon, United States Army, Tenth United States Cavalry.

First Lieut. L. P. Smith, assistant surgeon, United States Army, divisional hospital, No. 2, and on hospital steamer *Olivette*.

The following are State volunteer officers:

Maj. W. D. Bell, surgeon, Seventy-first New York Infantry Volunteers.

Capt. H. E. Stafford, assistant surgeon, Seventy-first New York Infantry Volunteers.

First Lieut. James Stafford, assistant surgeon, Seventy-first New York Infantry Volunteers.

Maj. H. C. Bowen, surgeon, Second Massachusetts Infantry Volunteers.

E. A. Gates, assistant surgeon, Second Massachusetts Infantry Volunteers; also on duty at divisional hospital, No. 1.

J. S. Hitchcock, assistant surgeon, Second Massachusetts Infantry Volunteers.

Maj. Henry La Mott, surgeon, First United States Volunteer Cavalry.

Capt. J. A. Church, assistant surgeon, First United States Volunteer Cavalry.

Lieut. Frank Donaldson, assistant surgeon, First United States Volunteer Cavalry.

Maj. F. T. L. Magourn, surgeon volunteers, Ninth Massachusetts Infantry.

First Lieut. Peter Shea, assistant surgeon volunteers, Ninth Massachusetts Infantry.

Maj. V. C. Vaughan, surgeon, Thirty-third Michigan Infantry.

Guy B. Baily, assistant surgeon, Thirty-third Michigan Infantry.

Maj. James A. King, surgeon, Thirty-fourth Michigan Infantry.

John A. Bobb, assistant surgeon, Thirty-fourth Michigan Infantry.

Julius M. Wilhelm, assistant surgeon, Thirty-fourth Michigan Infantry.

Dr. George Goodfellow, of California; rendered volunteer service without pay to the wounded after the assaults on Santiago, and to wounded Spanish prisoners at El Caney. He was present with headquarters of the corps and rendered much assistance to the chief surgeon and general commanding.

Dr. Karl Rudberg, fleet surgeon, Royal Swedish navy. Distinguished services in the hospital at Siboney and on the *Iroquois* to Key West.

Maj. Charles P. Nancrede, surgeon of division, General Duffield's command at Siboney.

Contract surgeons who were with the Fifth Army Corps on its landing at Daiquiri and Siboney and during the assault and siege of Santiago de Cuba:

Acting Asst. Surg. W. W. Calhoun, Ninth United States Infantry.

Acting Asst. Surg. H. W. Danforth, Ninth United States Cavalry; fatally wounded July 2, 1898.

Acting Asst. Surg. W. E. Parker, divisional hospitals, Nos. 2 and 3. Yellow-fever service at Siboney and on hospital steamer *Olivette*.

Acting Asst. Surg. John Guiteras. Yellow-fever service at Siboney until July 20.

Acting Asst. Surg. B. C. Leonardi, Ninth United States Cavalry.

Acting Asst. Surg. W. P. Lawrence, Battery G, Fourth Artillery; also yellow-fever hospital at Siboney.

Acting Asst. Surg. R. N. Pitts, First United States Infantry, and in yellow-fever hospitals.

Acting Asst. Surg. Hamilton P. Jones, divisional hospital, No. 1. In charge yellow-fever hospital near headquarters and at Siboney.

Acting Asst. Surg. R. Echeverria, Light Battery D, Fifth Artillery, and in yellow-fever hospital at Siboney.

Acting Asst. Surg. Wilfrid Turnbull, battalion United States Engineers.

Acting Asst. Surg. F. E. Menocal, Second United States Cavalry, Sixth United States Cavalry, First United States Infantry, Headquarters Fifth Army Corps, and among Spanish refugees at El Caney.

Acting Asst. Surg. J. M. Delgado, First United States Cavalry.

Acting Asst. G. Surg. Moreno De La Torre, Tenth Infantry, to June 23. Steamer *Olivette* to —

Acting Asst. Surg. J. A. Tabor, Eighth United States Infantry.

Acting Asst. Surg. T. R. Marshall, Sixth United States Infantry, divisional hospital, No. 1, and among refugees at El Caney and Spanish prisoners.

Acting Asst. Surg. F. J. Combe, divisional hospital, No. 1, and yellow-fever hospital near corps headquarters.

Acting Asst. Surg. Arthur Jordan, Second United States Cavalry.

Acting Asst. Surg. A. E. Wynter, Thirteenth United States Infantry, and yellow-fever hospital.

Acting Asst. Surg. Thomas Y. Aby, Twentieth Infantry.

Acting Asst. Surg. E. R. Bragg, Third Infantry.

Medical officers who joined the command after the assault on Santiago and rendered service during the siege:

Maj. W. G. Willard, surgeon, First Illinois Infantry Volunteers.

Capt. Thomas C. Roberts, assistant surgeon, First Illinois Infantry Volunteers.

First Lieut. C. B. Walls, assistant surgeon, First Illinois Infantry Volunteers.
 Maj. Richard Pyles, surgeon, First District of Columbia Infantry Volunteers.
 First Lieut. S. C. Cox, assistant surgeon, First District of Columbia Infantry Volunteers.

Capt. C. F. Kieffer, assistant surgeon, United States Army, Artillery Battalion.

Maj. E. C. Farquhar, surgeon, Eighth Ohio Infantry Volunteers.

Capt. G. H. Wuchter, assistant surgeon, Eighth Ohio Infantry Volunteers.

Capt. A. V. Smith, assistant surgeon, Eighth Ohio Infantry Volunteers.

Acting assistant surgeons:

A. A. Snyder, divisional hospital, No. 3; Stanley Warren, Ennis Battery; J. Ramsburgh, detention hospital to ———; R. D. Boss, First United States Infantry to ———; J. T. Arwine, detention hospital to ———; J. McV. Mackall, Daiquiri to ———; C. C. Marbury, detention hospital to ———.

2.

[General Orders, No. 8.]

HEADQUARTERS FIFTH ARMY CORPS,

Tampa, Fla., June 2, 1898.

The following is published for the information of this command:

Suggestions to commanding and medical officers for the prevention of yellow fever, and the preservation of the health of the United States forces in the Tropics, by Dr. John Guiteras, United States Army.

The general hygienic rules for the government of military camps should be enforced. Your attention is called to the following special points:

The use of quinine.—The regular administration of quinine for the prevention of malaria is of doubtful advantage. Quinine, however, should be used when the individual is subjected to extraordinary depressing influences, such as traumatism, exhaustion. Several substitutes for quinine have been used by the Cuban army, but with little effectiveness. The best is probably a decoction of coffee and lemon.

Alcohol.—The excessive use of alcohol is specially deleterious in the tropics. Diluted wines, with the meals, are generally used, and with advantage. Stronger liquors internally, and in the form of frictions, may be recommended after prolonged exposure to wet. The aguardiente produced in the country is used with advantage in slight diarrheal troubles. In the treatment of the later stages of yellow fever effervescing alcoholic drinks are useful, but we can not prescribe the large doses employed in typhoid fever and pneumonia.

Fruits.—We would especially recommend the cocoanut water when the nut is green (may be found throughout the year), the sugar cane (from November to April), the sugar apple (August and September), the orange (during the winter months), and the mango (June and July). The latter fruit should be especially avoided when green or overripe. The sapodilla (May and June), the mammy apple (August), the banana (all the year round), and the pineapple (November and December) are less easily digested and should be eaten sparingly. The alligator pear (July and August) should be eaten with the meals, and not to excess. The tamarind and the ripe guava (the latter most abundant from June to November) are laxative.

The vegetables of the country—the yam, the yuca, the malanga, and the sweet potato—should be thoroughly cooked. Rice and plantains properly cooked are favorite dishes with the natives. They are nourishing and easily digested. I recommend that the method of preparation should be learned from the natives.

Water.—The spring waters in Cuba are usually good and abundant in many sections of the island. Yellow fever is not conveyed in the water, but typhoid fever and probably also malaria, dysentery, and some of the parasitic diseases are transmitted in the drinking water. Unless the water be obtained directly from the springs it should be boiled.

Bathing.—Bathing every day in the running streams is safe, and to be recommended. The best hour for bathing is about 11 a. m.

Clothing.—Light linen or cotton should be worn next the skin. Wool irritates the skin, promotes excessive perspiration, and prevents the cooling effect of evaporation. The danger of chilling by the rapid cooling of the surface under wet linen can be prevented readily by a change of clothing, or by an outer dry garment, or the woolen blouse, when the body is exposed to drafts of air.

The bed covering should be comfortable. Wet clothing and wet feet should be especially avoided during sleeping hours.

The tent flooring.—The hammock may be more comfortable than the floor, and it will certainly afford protection against troublesome insects, but there is no proof that the elevation of 2 or 3 feet from the ground will prevent the introduction into the body of the miasms of disease. If it be not practicable to swing large bodies of troops, there will be found in Cuba an abundance of tall grass that may be used in lieu of straw.

Work.—No exercise or exposure to the direct rays of the sun should be permitted between the hours of 11 a. m. and 3 p. m. The morning hours are the best for marching. The heavy showers and thunderstorms occur usually in the afternoon after 2 o'clock. The mornings are usually clear. Continuous rain storms are cyclonic, and they occur mostly in September and October.

The site of the encampment.—The ordinary rules should govern us in the selection of a camp site. The ground should be high. The prevailing winds are from the northeast, and the slopes of the hills fronting to this quarter should be selected. The privies should be located to the northwest of the camp.

With respect to yellow fever, two important facts should be borne in mind: (1) Yellow fever prevails habitually (so-called endemicity) only in a few and small sections of the island. (2) Yellow fever may be carried to, and when so carried may spread in, all sections of the country. The sections referred to under No. 1 are the populous centers, especially the seaport towns of commercial importance, such as Havana, Matanzas, Cardenas, Sagua, Santiago de Cuba, Manzanillo, Cienfuegos, Batabano. The large towns in the interior that have a free communication with the above are also frequently the seat of epidemics. In the country districts yellow fever is an imported disease.

The troops, then, should be kept, as far as it is practicable, out of the cities, and every precaution must be taken to prevent the introduction of yellow fever into the camps.

The means of conveyance of the disease into the camp will be through supplies, through prisoners of war, through detachments of our troops that may have been forced to occupy infected districts, through the smuggling of things into the camp. Against all these dangers we must institute the rules governing a strict quarantine. Our supplies should come from the north, and if depots for such supplies must be established on the island we should select noninfected places for this purpose. Prisoners of war should be corralled in a place of detention, guarded, if possible, by immune troops. The clothing of the prisoners should be disinfected at once. If no other measures of disinfection are available, we can place much reliance upon fresh air and sunlight, provided the exposure of every piece be complete. The period of detention and observation of these prisoners should extend over seven days.

The presence of a case of yellow fever in a camp is no evidence that the camp is, or that it will become, infected. Yellow fever is not directly transmissible. If the house, the room, the tent where a case of yellow fever is found be not infected, individuals may come in contact with such a case or cases without contracting the disease. Large yellow-fever hospitals have been managed without a single case occurring among the attendants, though these were not immune.

In the detention camps established by the Marine-Hospital Service near large epidemic centers the disease has never spread among the refugees. Of course, a certain proportion of these refugees are stricken down with the disease. They have contracted it in the epidemic center, and when they arrive in camp they are going through the process of incubation. The disease, therefore, breaks out within the first five days after arrival. The permanent residents of the camp—the attendants and the refugees who have been detained in camp longer than seven days—never contract the disease from these imported cases. This means that the camp has not become infected.

The measures taken to prevent the infection of these camps are twofold. (1) The baggage of these people is disinfected immediately upon arrival in camp. (2) A careful watch is kept upon these new arrivals and upon everybody in the encampment. On the first appearance of suspicious symptoms the individual affected is removed to a hospital especially provided for this purpose. The safety then depends upon the prompt recognition of the symptoms and the immediate isolation of the cases.

Our military camps should be divided from the start into two distinct and separate parts—one a main camp, the other a hospital camp. The latter should be situated from one-fourth to one-half a mile to leeward of the main camp.

A few tents should be placed about 100 yards from the hospital camp for the care of suspicious cases in which the diagnosis may be uncertain. This should be called the probation camp.

The hospital camp should be surrounded by a barbed-wire fence, and should be carefully guarded.

Even the hospital camp does not necessarily become infected. Disinfection of the clothing and the dejecta should be instituted to prevent this. The probation hospital should be carefully guarded against infection. When a case has been recognized as one of yellow fever and has been removed to the hospital camp, the walls of the tent should be washed down with a solution of bichloride of mercury, 1:2000, and the ground should be burned by a Barber asphalt furnace. Patients may be returned to the main camp ten days after the establishment of convalescence and after disinfection of the clothing.

If there be evidence that cases of yellow fever have originated in the main camp, it should be moved.

The diagnosis of yellow fever is based upon the following three cardinal symptoms: The characteristic appearance of the face, which may show itself with sufficient distinctness in the first twenty-four hours; and the albumin in the urine, and the peculiar discrepancy between the pulse and temperature. The two latter symptoms may not appear until the third or fourth day of the disease.

By command of Major-General Shafter:

E. J. MCCLERNAND,
Assistant Adjutant-General.

Official.

3. Memorandum of instructions to the soldiers of the Fifth Army Corps for the preservation of their health in the tropics.

The body adapts itself readily to changes of climate. You do not require any special preparation for the climate of Cuba. You should meet the heat in the same way that you do in the summer season of the North.

Avoid, therefore, the use of medicines that are recommended to protect the body against the action of climate.

The danger in the tropics does not come from the direct action of the climate. The danger is due to the presence, in some districts of the warm countries, of the microbes of certain diseases. The chief measures for the prevention of these diseases will be instituted by your commanding officers. There are no medicines that will protect us from these diseases.

Do not take quinine regularly when your health is good.

Do not take purgatives when the bowels are regular.

Drink boiled water when you can not get natural spring water. Stagnant surface water is specially dangerous.

If possible, drink water only at mealtime.

The fruits of the country are wholesome when eaten in season.

Avoid unripe and unsound fruits. Peel all fruits before eating. Use as little alcoholic beverages as possible.

The clothing should be light and loose. When wet from sweat or rain, remove it for drying and rub the body briskly with a wet towel until it is clean. Also, if exposed to drafts when perspiring freely, put on some extra covering.

When your feet are wet, rub them dry and put on dry socks, even if you can not change your shoes.

Protect yourself from mosquitoes by gloves and nets.

Bathe your whole body morning and evening if you can, but do not swim in the heat of the day, except under shade.

Sleep in dry clothing only. Otherwise keep awake and move about.

The health of the command will depend to a great extent upon the strict observance of orders not to communicate with suspected persons or places.

Report all sickness to a medical officer at once.

B. F. POPE,
Lieutenant-Colonel, Chief Surgeon, United States Volunteers.

REPORT AND COMMENTS ON SOME OF THE MEDICAL FEATURES OF THE SANTIAGO CAMPAIGN, BY LIEUT. COL. V. HAVARD, CHIEF SURGEON, UNITED STATES VOLUNTEERS.

Wars, like years, succeed, but do not resemble, each other. Not only do they each have special features, calling for special preparations, but the lapse of time works constant changes in the shape, size, and power of projectiles, so that each new campaign opens with problems unsolved and questions unanswered. The one subject about which military surgeons disagreed most—the behavior of the new small-caliber jacketed bullet—has apparently been solved, and solved in a

manner to comfort and cheer all who have labored to render war less destructive and more humane. This new bullet, from which the swift annihilation of brigades and regiments had been predicted, is shown, on a sufficient scale to be conclusive, to cause no more casualties than the large conical bullet of former wars, to cause proportionately fewer deaths (on the field and in hospital), and to give the wounded a much better chance of recovery. Never before have so many wounds healed by first intention, were there so few fractures, and so few operations performed.

At the battle of San Juan Hill, July 1, in which our troops assaulted and captured an almost impregnable position, the total number of casualties was 932 for the 7,000 troops present and under fire, a ratio of 13 per cent—namely, 11 per cent of wounded and 2 per cent of killed. At El Caney the total casualties were about 11 per cent. Among the Spaniards, who fought mostly under cover, the casualties were much under 10 per cent. Our proportion of killed in all the engagements at San Juan ($1,039:145 = 7.16$) was somewhat less than one-seventh of all struck; among the Spaniards it was less than one-fifth.

It would seem that for the purpose of invasion of an enemy's territory by sea, where no harbor can be entered and landing must necessarily be effected in open bay and through the surf, particular attention would be paid to the loading of transports, so that all needful supplies can be readily found, readily landed, and in such shape as to be easily carried into the interior. Concerning this matter, it is notorious that serious mistakes were made, arising from the apparent want of a systematic original plan and from the great hurry and confusion which marked the last days of preparation and loading. As a result, each regiment had more or less of its medical supplies lowered in the hold of its own or some other transport, and mostly inaccessible. Medical officers in dire need of many things stood on the beach day after day making futile efforts to get at their supplies in the holds of ships sometimes anchored only a few hundred yards away. The almost absolute want of means of landing and disembarkation is one of the amazing features of the expedition. There was but one lighter and not a single steam launch with the fleet of transports. Obviously the Navy was expected to furnish help in this respect, and it did at times and places, but was oftener conspicuous by its absence.

A bit from my personal experience will illustrate the situation. On June 29 I transferred the provisional hospital at Siboney to Surgeon La Garde and joined the cavalry division, of which I was chief surgeon. I at once realized the scantiness of our supplies and the impossibility of setting up a division hospital; therefore, on the very next morning, I returned to Siboney with Surg. George McCreery and an order for four wagons to get our medical supplies from the hold of the transport *Rio Grande*. Only one rowboat was available for the service of all the transports. We took passage in it and on the way stopped by the *Mohawk* to let off an officer. A member of the untrained crew, lifting his heavy oar, dropped it upon and through the bottom, so that the boat filled up rapidly and we had to scramble out upon the *Mohawk*. It happened that this transport was without a single boat on which to forward us to our destination, the *Rio Grande*, only 300 or 400 yards away, or send us back to the shore; and the captain, with the selfishness and indifference of many of his class in those troublous days, declined to make any effort in our behalf. It was only after several hours of shouting and signaling that we succeeded in drawing the attention of the lighter, and, after much difficult maneuvering, were rescued and carried back to the beach. The effort had been hopeless. I returned to the front that same evening empty-handed, leaving Surgeon McCreery behind. He succeeded in a couple of days, with the help of Assistant Surgeon Rafferty, in obtaining two wagonloads of supplies, which were a valuable addition to the overtaxed field hospital.

But few ambulances were brought from Tampa. Only three had been landed by July 1, and were available on the days of the fight at Caney and San Juan. They were ably handled by Assistant Surgeon Godfrey, but, in view of the number of wounded, played an unimportant part.

The wounded from San Juan were all brought to the field hospital on the day they were hit or before the following morning; many of them on improvised litters carried by hand. In the evening and during the night a few wagons returning from the front became available, and the sick and wounded were crowded into them in an apparently pitiless manner, but it was either this or else an indefinite waiting by the roadside. All or nearly all of the wounded from Caney were brought in by wagons the day after the fight. If we consider the abominable condition of the roads, the unruly state of drivers and mules, and the great difficulty of procuring the means of preventing jars and jolts, it is not saying too much that the 4 or 5 miles of wheeled transportation from the battlefields to the field hospital cost the lives of not a few patients.

The question of transportation of medical supplies and patients is a vital one, and deserves more thoughtful attention than it has yet received. Reasonably or unreasonably, hardly anything short of perfection is now required from the Medical Department. To meet this expectation, we must accumulate stores on the most liberal scale and be left perfectly unhampered in our disposition of them. In this campaign we should have had a special medical transport ship in command of a medical officer, loaded with all the equipments and requirements of ambulance and field hospitals, and large reserve supplies—everything stowed away in its proper place and readily accessible. Such ship should have two large, stout steam launches and be in all ways independent. It could not be expected to carry ambulances and teams, but it could and should carry a train of, say, 30 picked and trained mules with 12 sets of packs, 12 small two-wheeled carts, and 12 mule litters; the packs or carts, or both, as roads may permit, to carry supplies to the front, and the litters to carry patients. Besides the medical ship, each regiment should have with it the material necessary, including hand litters, for a quick advance to the front, this material not to be stowed away in the hold, but kept above in the most accessible place and under the hand of the medical officer responsible.

Stress should be laid on the fact that ambulances are cumbersome, complex organizations, and (especially in a war of invasion), not available in emergencies when most needed. Pack mules and light 1-mule 2-wheeled carts are indispensable, whether we operate by sea or land. The inestimable value of these carts is not only as a means of transport before wagons and ambulances are available, but also as classified store vehicles, all the contents in their proper compartments and within reach. A large bulk of medical supplies filling up an army wagon is of no use until everything is unloaded and all boxes open; and by that time many bottles will have been broken and much stuff wasted, to say nothing of the time consumed.

As to the transport of patients, the Santiago campaign revealed painful omissions and brought out instructive facts. Hospital Corps men were sadly deficient in number, being (at least in the Regulars) less than 1 per cent of troops in the field, although all previous experience has shown the necessity of at least 3 per cent. This latter ratio should have been reached and organized before the Fifth Corps left Tampa; transfers of combatants to the Hospital Corps after boarding transports and landing upon the enemy's soil were obviously impracticable. It followed that all hospital corps men were absorbed by the field hospitals and dressing stations; and that not a single one was available as litter bearer.

The new regulation hand litter was conspicuous by its absence, having been left behind at Tampa and in the transports. It was hoped that, on account of its lightness and ease of folding into a small portable compass, this litter, in which we all took a just pride, would be available in limitless abundance and in that way make up, to a large extent, for all inevitable shortcomings of ambulances. It was a sad disappointment. Makeshifts of all kinds were resorted to—generally a heavy frame of poles covered with blankets and grass; many patients were thus carried 4 and 5 miles, over miry, deeply gutted roads, mostly at night, and most of them arrived at the field hospital in fair condition, much better than if carried in ambulance or wagon. Each of these improvised litters was borne by from 4 to 6 men, with a few additional bearers for a second relay, and therefore took away from 6 to 10 combatants from the line. One good effect of so many bearers was necessarily to "break step" and reduce the jolting.

In my opinion, the best means of transport, under the circumstances, would have been mule litters—that is, litters carried one on each side of a mule, as first devised by the French and now adopted in all armies but our own. Mule litters must become part of our equipment and will prove invaluable in our colonies.

Of travois, it did not occur to anybody to construct one, and not a single patient was thus carried away. Its construction would have been easy and taken hardly more time than that of a litter. The main difficulty was felt to be the procuring of animals. It would have been greatly to the advantage of patients to unhitch the six mules of a wagon and make them drag travois, but who, in those days, would have had the temerity to propose the abandonment of a single wagon while the whole front was clamoring for food and ammunition.

The regulation litter, wherever used, stood the tests of the campaign in a very satisfactory manner, and shows itself to be well adapted to its purposes. Its weak points are the canvas, which, under any unusual strain, bursts and tears, and the braces, which are liable to warp and break.

The new two-decker ambulance, constructed just before the war, is, in my judgment, such a defective and objectionable vehicle that I need say nothing further concerning it.

It was expected that the long range of the small-jacketed bullet would change some of our ideas of field sanitary organization, and this expectation has been realized. Distance does not now count for so much, while shelter counts for a great deal more. We may even go further and say that distance may distinctly increase the danger. The advance of large bodies of troops, like brigades and divisions, in formation of attack, has become more difficult. There is an instinctive, irresistible inclination to take advantage of all possible shelters, and this results in the breaking of the originally continuous line into more or less separated groups of battalions and regiments. This breaking or fragmentation of long lines becomes a matter of life and death, when, as at El Caney, a prolonged siege is maintained against an enemy having every advantage of position. Under the withering fire of an intrenched foe general officers lose their hold on the advancing line, and at the critical moment regimental officers must often take the final and decisive action, each one according to the conditions confronting him.

The deduction, so far as the medical department is concerned, is that each regiment in battle must be provided with proper medical personnel and material, and be more or less independent. The advice of modern writers to concentrate all supplies behind the brigade as a unit is not borne out by the experience of this campaign. Of course this regimental organization is only suitable for the battlefield and does not apply to the camp, where division hospitals very properly absorb most of the functions of the regimental hospitals.

The best place for regimental dressing or collecting stations will be the nearest place to the line of fire at which sufficient shelter can be had; such place will often be only a few yards back of the firing line, the latter being almost always along the crest of a hill or a rise of ground. The farther back we go the more exposed is the station to drop shots and the less useful it becomes. If there be no shelter in the immediate rear and it is necessary to pass over any large area swept by the enemy's fire to carry the wounded to cover, the removal of the latter becomes very questionable; chances must be balanced and opportunities taken advantage of.

I used the name "regimental dressing or collecting station," thus conveying a specific idea, which may be, and often is, a wide departure from the facts. The *raison d'être* of a station is primarily its convenient location and safety, much more than the particular organization in its front. Thus, in the attack on San Juan Hill, only one station was established, although several regiments were under fire, because there was but one available place (at the "Bloody Bend," under the low bank of the San Juan River). It was a poor place, not even safe, but the only available one, and Assistant Surgeon Newgarden did wisely in locating it there, without regard to the position of the troops in front and rear of it.

After July 1, when our troops had carried the heights of San Juan, the "Bloody Bend" was no longer exposed to direct fire, but was still in danger from drop shots fired at least a mile away, and from sharpshooters. As patients continued to be brought there, and it was the farthest point ambulances could reach, it was thought best to retain it another day.

Meanwhile, other dressing stations were being established in the immediate rear of the firing line, not far below the crest of the hill and consequently in tolerably safe positions. It was recognized that one station may answer all the needs of a brigade; thus, a road led up to the rear of the Third, Sixth, and Ninth Cavalry and in a deep, hollow part of it Surgeon Harris established for the whole brigade a station which was comfortable, almost absolutely safe, and easily approached by ambulances. The First United States Volunteers (Rough Riders) and the Tenth Cavalry likewise joined forces and placed their station in a tolerably safe spot at the foot of a steep spur. The First Cavalry, being separated from the latter by a large exposed basin, required a separate station, which it shared later with two or three artillery batteries. Here natural shelters were very imperfect and a good deal of digging was required. In the same manner, stations were established all along the line, each corresponding to one, two, or three regiments, and sometimes to regiments of different but adjoining brigades.

According to books, each division of troops should have at least one ambulance hospital (ambulance station) 2 or 3 miles in rear and a complete, well-appointed field hospital 2 or 3 miles still farther back; but actual war is no respecter of theory and often upsets all our preconceived ideas. One field hospital was established near General Shafter's headquarters, 2 or 3 miles back of El Poso, and up to the time of the surrender remained the only one, and the only hospital organization of any kind in rear of the dressing stations, 4 miles away. Efforts were made to find another suitable place, but without success, owing to the facts that the country operated in was one vast jungle, with but few small clearings, and that there was but one road to the front. The only intermediate station was one improvised

under a grove of large trees near El Poso. Here much good work was done by the medical officer in command. Walking patients rested, received stimulants, and, if necessary, were placed in wagons impressed for the purpose; all litters were stopped and the patients carefully examined, but without meddlesome handling of the dressings; patients in wagons were given more comfortable positions; several tourniquets twisted tight, probably too tight, at the dressing station were loosened to the great comfort of the patient and the possible avoidance of serious injury. The application of tourniquets on the line of fire, immediately after the receipt of a bleeding wound, must be useful, but further back it is of very doubtful utility, and it will always be wise, if circumstances permit, to examine and loosen tourniquets in transit to the field hospital.

It is safe to conclude that, in future wars, the necessity for immediate operations being less and the patients able to stand longer transportation, less stress will be laid upon the importance of the ambulance station, which will generally be merged into the division or field hospital. It will be enough to have an "observation station" to see that all patients in transit are in the best condition possible to reach the hospital safely.

It is not my purpose to discuss matters pertaining to the field hospital; this I leave to others more directly interested and better informed, but the work in first aid done along the line should not be left unnoticed. Little dressing material had been taken to the front. Fortunately, first-aid packets were plentiful. Medical officers had succeeded in impressing upon many officers and men the necessity of carrying these packets, and along almost every part of the line they could be had in sufficient quantity and were invaluable. Probably never before have first-aid packets played such an important part in the treatment of gunshot wounds. Our surgeons and hospital corps men had hardly anything else, and, in truth, did not need much else. Let the surgeon of the next war provide himself with plenty of first-aid packets, wire splints, a small case of instruments, rubber tourniquet, and a bottle of stimulant, and he is suitably prepared for all the eventualities of the firing line and dressing station.

The packet being of such vital importance, its composition should be carefully studied. We know how much depends upon the proper application of the first dressing and the necessity for leaving it undisturbed until special indications call for a reexamination of the wound. This first dressing is made easier and more successful with large compresses, say twice the size of those now in use. Compressed cotton, containing an antiseptic powder, and which can be readily spread out, would, I think, prove a much better material than gauze.

Diagnosis tags were not generally used. Many of the surgeons who were provided with them failed to appreciate their value, thinking that when minutes are so precious tags do not matter. From my own experience of the tags seen in front, on the road, and at the field hospital, I am more than ever convinced of their great utility (under an improved form) and would urge that no dressing be considered complete until the tag is pinned on.

After the surrender of Santiago, when the troops had selected the best sites for their camps, and tentage was abundant, each division set up a hospital of its own, the overflow from which was received into a large field hospital established at a central, readily accessible point. In addition to these, each regiment had also a few hospital tents for its milder cases. This organization appeared to be the best possible under the circumstances, and gave excellent results.

In closing, one is naturally prompted to call attention to the excellent, nay, admirable work of our surgeons along the line of fire. I never heard that any medical officer had shirked his duty because of danger, or failed to help a patient that he could reach. I was specially well situated to see the first-aid dressing applied to the wounded under fire, on June 24 as well as on July 1 and 2, and could not help admiring how carefully and effectively the compresses and bandages of the packet had been applied in a majority of cases, as well as the improvised splints in fracture cases. Very few patients reached the field hospital with wounds unbound and unsupported.

REPORT OF MAJ. LOUIS A. LA GARDE, SURGEON, UNITED STATES ARMY, ON
THE OPERATIONS OF THE "BASE HOSPITAL," AT SIBONEY, CUBA.

[Dated October 31, 1898.]

Origin of the hospital.—The hospital was the outgrowth of a field hospital which I was ordered to establish in accordance with paragraph 2, Special Orders. No. —, dated Headquarters United States Forces, Tampa, Fla., May 3, 1898, for

the accommodation of the troops serving in Port Tampa and vicinity. The troops serving on the ground were composed of the Ninth Cavalry and the 10 light batteries of the artillery arm. These troops were not brigaded; each arm was commanded by its ranking officer, independently.

The hospital was established as is contemplated in our scheme of organization, by calling in all property and personnel, except such minimum allowance as might be required by the battery and regimental surgeons at sick call. In the manner mentioned we found ample supplies of all kinds for the immediate needs of the command. There were 9 medical officers, 1 hospital steward, 11 acting stewards, and 35 privates of the hospital corps for duty.

As time passed during the month of May, it became more and more certain that the troops serving about Tampa would be organized into an expeditionary force for the early invasion of Cuba. The exact time for the latter was always a matter of doubt, still the officers in all the departments worked faithfully to complete and perfect their organization with the view of placing themselves and those under them on a war footing. About the middle of May I was informed that the field hospital at Port Tampa would be designated as one of the divisional hospitals of the Fifth Corps. I never knew until June 8, the day of embarkation, that it would be known as the reserve divisional hospital. When the object of the hospital dawned upon us, we proceeded in earnest to supply it accordingly. By this time the matter of obtaining medical supplies had become very much simplified by the establishment of a medical supply depot at Tampa, from which we obtained all the necessary medicines, dressings, some stores, especially stimulants, bedding for 200 men in the event of battle or other necessity. The necessary amount of tentage, a thoroughly equipped ambulance train of 10 ambulances, and mounts for 56 members of the Hospital Corps were obtained by timely requisitions upon the different departments. First Lieut. and Asst. Surg. James M. Kennedy was appointed ambulance chief, and it was largely to his indefatigable efforts that the train was placed in condition for field service in such a short space of time.

Orders to embark on transports with the rest of the Fifth Corps were received on June 6. The hospital, consisting of the following personnel and supplies, was loaded on the steamship *Saratoga* on the 8th: Three medical officers, 1 steward, 2 acting stewards, 17 privates of the Hospital Corps; tentage, bedding, medical supplies, and stores, as already stated, for 200 men. The stores, with the exception of stimulants, were insufficient. We trusted to the commissary, which carried an abundance of milk, soups, and other delicacies for the sick. Our deficiency in medical officers and personnel generally was painfully apparent, but the hurry and confusion of throwing a large army in the field so suddenly made this unavoidable. Our large number of members of the Hospital Corps, which at one time aggregated 69 men, had been reduced from time to time by demands from the corps surgeon to supply deficiencies elsewhere. At the last moment we were informed that the ambulance train and mounts for the Hospital Corps could not be taken, presumably for lack of transportation. The train was left encamped at Port Tampa, under command of Assistant Surgeon Kennedy, to be shipped at some future time. Request was made of the chief surgeon Fourth Corps not to disintegrate the train unless it should become absolutely necessary. I am happy to state that the request was strictly complied with.

Aside from the reserve divisional hospital, the steamship *Saratoga* was loaded with the Thirteenth Infantry and one battalion of the Twenty-first Infantry, Lieutenant-Colonel Worth, commanding. The voyage to Siboney, our place of landing, was long, tedious, and marked by many weary delays. The command was on board ship nineteen days before disembarkation took place. The overcrowded condition of the ship for a long voyage, the inadequate ventilation and heat between decks, the hot, blue woolen uniform, and the sameness in the diet of the travel ration had begun to tell on the strength of the men, whose resistance had been correspondingly lowered for the exigencies of an arduous campaign in the tropics, out of season.

The comments I may have occasion to make in this report are not employed with a view to criticise the conduct of my superiors. I believe we should all be mindful of the fact that the conduct of a war in the tropics is to us a new business, and that we were apt to make mistakes, which are now generally admitted. It is by a candid admission of certain facts that we can the better prevent such errors in the future. I believe that the overcrowding on the transports on the way to Cuba had much to do with subsequently reducing the effectiveness of the command. I am of the opinion that we erred in allowing ourselves (1) to believe that we were attempting a short voyage, and (2) we erred in estimating the carrying capacity of our vessels by the rule observed with the British troopships of "a man to 1½ tons, an animal to 2½ tons." This rule is applicable to ships with clear between decks, especially constructed for the transportation of troops, like those

possessed by England; but it is not in any way applicable to the passenger and freight steamers fitted up with tiers of bunks, composing the fleet which carried us across. In the vessels built for the purpose with clear between decks the space is occupied during the sleeping hours by men in tiers of hammocks. During the day the hammocks are taken down, thereby increasing the superficial area.

I was ordered by the adjutant-general of the United States forces near Tampa, by letter dated May 8, to inspect certain transports then lying at Port Tampa. The letter was accompanied by a memorandum estimate of the carrying capacity of the transports. It was at once apparent that the carrying capacity had been largely overestimated. For instance, if we take the *D. H. Miller*, by the memorandum, which was based on "the ton and a half rule," we find that its reputed capacity was 1,116 men, while its actual carrying capacity, as determined by due regard to superficial area and cubic air space, was found to be but 341 men. The latter figure agreed exactly with the judgment of the captain as to the capacity of his vessel, and the same may be said of the other captains of vessels when the figures obtained by the two methods were shown them. They invariably admitted that the tonnage rule could not apply, except for an extremely short voyage.

After the command had been loaded upon the transports, June 11, prior to sailing, there were many complaints of overcrowding on the *Saratoga*. On the latter date I stated as follows: "As an instance of overcrowding, * * * the vessel that I am on gives but 77 cubic feet per capita in the after part (aft between decks), where tiers of bunks have been erected. At two inspections last night the heat and fetid condition of the air was intense. The men lay in their bunks naked, fanning themselves with their hats. Such a condition of overcrowding is not justified, except for a short voyage, not to exceed twenty-four hours. There are six cases of fever that have developed in the last thirty-six hours." We succeeded in having two of the companies of the Twenty-first Infantry removed to another transport. Still the overcrowding was in excess for anything except a very short voyage.

In a report to the assistant adjutant-general, Third Brigade, First Division, Fifth Army Corps, dated off Santiago, June 20, 1898, a report required by the manual (Troops on the March and in Campaign), I again touched upon the subject of overcrowding. "The practice of harboring men on these transports in tiers of bunks between decks is pernicious in the extreme. * * * As the floors are required to be washed once per week, the dampness that ensues for the want of aeration lasts two and three days. The bunks deprive the men of the superficial area upon which to move about in the day, to say nothing of their infringement upon the cubic contents. The bunks are superimposed in tiers of three double bunks with passages between so narrow that two men can scarcely pass each other. * * * Two cases of measles and 13 cases of fever from heat and exhaustion were noticed." As stated before, the men on the *Saratoga* were cooped up in this manner nineteen days, which lacks a great deal of being a short voyage.

The troops disembarked at Siboney on or about June 26. On the latter date I went on shore with the corps surgeon and the surgeon in chief of Admiral Sampson's fleet. We walked the ground over carefully in our endeavor to find a site for a hospital. Troops were quartered everywhere. Camp sites were limited, there were no sinks, and the stench from dried and recent human excreta overpowered the senses on all sides. The population and houses comprising the town of Siboney had but little to recommend them better than the ground outside. The vicinity just north of the landing was marked by a number of sloughs, which precluded its use for a hospital site. The region to the east was rocky and marked by high hills. To the west lay the site of Siboney, well drained, but rather contracted. The subject of burning the town down to prevent any possible infection from yellow-fever, and to allow more available space was discussed and repeatedly urged. The fleet surgeon stated that this had been done by the Navy at the point of landing at Guantanamo. The wisdom of such a step was brought to us very forcibly afterwards.

We commenced to unload the hospital the next day, the 27th. We had but 17 members of the Hospital Corps, and 3 small boats to move our stuff, which in bulk amounted to one and a half carloads. The *Saratoga* lay 300 yards in the stream, the surf was high. The plan was to have a detail to load on the ship, and when the boats were loaded, to row one and tow the rest to shore, where another detail proceeded with the tedious work of unloading. The surf being high—there were no docks—the small boats could not be gotten nearer than 15 feet from shore, so that it was necessary for the men to walk in the water waist deep for the property, which was placed on their backs and carried to the beach. It was not possible to land much property in one day under such circumstances; still we continued to work in this way, as the only means at our disposal, until orders were

finally issued to place the property on one of the lighters, while Colonel Weston, the chief commissary, very kindly unloaded it for us.

The hospital site on Siboney's water front was about a half mile from the landing, to which all the property must be carried by human muscle. Large details were obtained for the purpose from the commanding officer at Siboney.

About 80 patients with wounds, measles, heat stroke, fever, etc., were quartered in an old store under the care of Maj. V. Havard, United States Army. As Major Havard's division had gone to the front, the hospital was turned over to us. Capt. M. W. Ireland was placed in charge, while I busied myself transferring the property from the landing, superintending the pitching of tents, and the arrangement of a record room and dispensary. Assistant Surgeon Fauntleroy was placed in immediate charge of all arrangements pertaining to the operating room. His fertility in resource—in making something out of nothing—may be mentioned in part herewith; tubs for slops, and bichloride solutions were made out of barrels and kegs sawed in two; glass demijohns of 3 and 4 gallons capacity, found in a store near by, were utilized as jars for sterilized water and antiseptic solutions; operating tables were made by placing litters on the frames of bunks from an old Spanish barrack. These bunks were higher than common, and they answered the purpose very well when covered with a rubber cloth.

Tables were taken from the offices of the Juragua Company's offices and other buildings, to hold dressings, instruments, etc. The water main of the little town was tapped opposite the operating room so that water was provided in abundance. With few exceptions our assortment of instruments was liberal, having provided ourselves from Fort Robinson, upon taking the field; and later when Dr. Fauntleroy joined us at Port Tampa, on the eve of sailing, he brought a large assortment. In this way we had instruments sufficient to supply six tables very nearly. A few instruments were furnished by Major Nancrede, United States Volunteers, and Dr. Lesser, of the American Red Cross Society. The vexed question of sterilizing dressings in the field was overcome by the abundance of clean dressings so handsomely prepared by the makers, and abundantly furnished by our department.

On the morning of July 1 we were ready for the reception of 200 wounded. We soon learned that an advance of our line had been ordered and that the troops were engaged in battle. Our base was practically stripped of soldiers. The Thirty-third and Thirty-fourth Michigan regiments, under General Duffield, who commanded at Siboney, had been ordered, on the night of June 30, to make a demonstration on Aguadores, on the left of our line, along the Juragua railroad, 8 miles to the west. His command, which was entirely composed of infantry, fared badly in running upon some batteries which poured shell and shrapnel into it, causing a rather precipitate retreat. A train bearing 2 dead and 7 wounded steamed in front of the operating room, accompanied by Majors Nancrede and Vaughan, shortly after noon. The wounds were caused by fragments of a shell, necessitating two amputations, one of the forearm and the other of the thigh. Later in the day some of the less severely wounded commenced to arrive from the main line. Their reports of the extent of our casualties were necessarily inaccurate and conflicting. At about 10 p. m., a teamster road into camp on one of his mules, stating that a train of 8 wagons of wounded was blocked on the road to our advance, 4 miles away, and that men were needed to extricate the wagons from the mud.

I proceeded with the teamster to obtain an order from General Duffield for a detail of men. Before the detail had time to reach the sufferers they had received assistance from some other source. They reached the hospital at about daybreak. Many of the wounds had to be re-dressed. The injuries were not severe, as a rule. We busied ourselves in providing beef tea, coffee, etc. I regret to say that our outlay of delicacies was very limited. As stated already, we had depended for condensed milk, soups, oatmeal, lime juice, and other delicacies, upon our commissary department, which was well provided with such articles of light diet; but, for the lack of facilities to land, these articles were still on the transports. The landing of the troops was done in such a precipitate manner that ammunition and the bare ration of the soldier seemed by military necessity to be the first consideration. It was at this time that I remembered the offer of the honorable Clara Barton, president of the American Red Cross Association, through the corps surgeon, to assist us in any way she could with supplies and help from the *State of Texas*, which lay at anchor near our landing. I desire to testify herewith to the loyal manner in which this promise was kept.

While the wounded for four days kept crowding into our hospital faster than large details of men could provide them with canvas shelter, Miss Barton's assistants worked unremittingly with us to relieve the pangs of suffering humanity. They furnished us, with willing hearts and willing hands, delicacies like gruel,

malted milk, ice, soups, etc., when military necessity prevented us from getting our own. As the wounded crowded upon us in numbers far beyond anything we had reason to anticipate, they came forward with cots, blankets, and other articles for the comfort of the unfortunates. For such help at a moment of supreme need, coming from people in no way connected with the military service, the deep sense of gratitude, not only of the medical department, but of the whole of the Fifth Corps, can not be conveyed by words. I desire to emphasize our gratitude in this manner because efforts have been made to make it appear that the medical department was not mindful of the extent of the services rendered; and, again, there are those who have attempted to minimize the efforts and preparations of the medical department of the army, while in their opinion, the bulk of the credit in the care of the wounded at Siboney belonged to the Red Cross Association. As far as my personal knowledge extends, the officers of the Red Cross Association are not responsible for such impressions. They are willing to accord to the medical department due praise for the work it had to accomplish under great difficulties. They understood the military situation which governed in the premises, and saw, as we did, our helplessness, for the time being, at least.

The actions of the 1st, 2d, and 3d of July, as already stated, crowded our hospital to overflow. In addition to canvas shelter, a railroad shed was used for cases of measles. A small cottage containing about 20 beds was turned over to the Red Cross Sisters, under Dr. Lesser, for wounded officers and men, and the large cottage, known as the Garcia headquarters, was used as a fever hospital, under Maj. John Guiteras, surgeon, United States Volunteers. The latter, who was the yellow fever expert of the expedition, had inquired into the history of the last two of these buildings, and, from reports made to him by the Cuban population, he was reasonably sure that they were free from infection, which opinion, we regret to admit, was far from correct, as the sequel will show.

At the same time that the kitchens were preparing diets day and night and that men detailed from the regiments were helping the regular Hospital Corps men to care for the wounded, the operating room was the most active part of the hospital. On the 2d of July, Drs. Nancrede and Fauntleroy, of the operating staff, requested me to ask the Sisters of the Red Cross to assist at the operating tables. The second day of work had convinced us that we were very much in need of those having special training in operating-room technique. The few men we had possessing the qualifications necessary in this department were not able to satisfy the wants of the five and six tables that were running constantly, day and night. Accordingly I applied to Dr. Lesser for the Sisters, four in all, I believe. I also extended Dr. Lesser an invitation to assist in the operating room. We thereby received the benefit of their skill during the rest of the work which followed for the next few days.

After the services of the Red Cross were no longer required in the operating room, the worst cases among the wounded were placed in a ward over which Mrs. Lesser and her assistants ministered to the needs of those who required special nursing. In addition to the services of the Red Cross people, I desire to mention the names of Lieut. Col. Phillipe Varanes, assistant surgeon-general, Cuban army, also Surgeons Lewis, Elliot, Smith, and Spear, United States Navy, from the *New York*, and Dr. Karl Rudberg, royal staff, Swedish Navy. These surgeons, with Majors Nancrede, Vaughan, Captain Ireland, First Lieutenant Fauntleroy, and Acting Assistant Surgeons Parker and Lawrence, United States Army, formed the operating staff of the hospital. As the members of the operating staff became exhausted from overwork, their places were taken at different times by Major McCreery, Captain Winters, First Lieutenant Smith, United States Army, and others who were ordered by the corps surgeon as assistants. Later, upon the arrival of the hospital ship *Relief*, Lieut. Col. N. Senn, chief surgeon, United States Volunteers, and Acting Asst. Surg. Harry S. Greenleaf, gave us assistance. Our only regret was that this distinguished party had not been with us earlier. When the surgical work was completed, Colonel Senn busied himself in other fields. In the sanitary department he inaugurated reforms that proved of great value.

On the evening of July 4 the hospital contained over 500 wounded men and officers. Such a number so far in excess of our calculations, which, as was shown afterwards, was but a fraction of the number yet to come, was naturally appalling. The military surgeon is nearly always at a loss to estimate beforehand the probable casualties on the eve of action, since his knowledge of the battle tactics are too often limited by the military commanders, who keep their plans to themselves. Aside from these difficulties, common to all battles, the operations about Santiago presented unknown problems of a highly interesting character to all military men. For the first time in the history of the new armament two large opposing armies were to contest the ground between them with the hand weapons of reduced

caliber employing smokeless powder. Although much has been written upon the casualties of battle to be expected under such circumstances, the opinions of men amounted to little more than theories prior to the operations in question.

If one will take pains to run over Longmore's tables on the subject he will find that the casualties in war have not kept pace with the improvements in firearms, and this is especially true of the period which marks the evolution of the rifle from the smooth-bore gun. The reason is plain enough since troops in the days of the flintlock weapons, having a maximum effective range of 80 yards, advanced upon each other in close formation. The casualties under such tactics were apt to be larger than subsequently when additional range, flatter trajectory, and penetration were conferred upon the projectiles. The change of warfare in late years has really been a race between the scientific gun makers and the tacticians. As the former added range and penetration to their weapons, the latter sought to thin out their ranks—to fight in extended order—for the purpose of lessening the casualties incident to superior ballistics. The action near Santiago was about to furnish the first opportunity for an actual test of the new battle tactics with the small-bore rifle.

The opposing armies were about equal in number. They were armed with virtually the same gun. The arm of the Spaniard—the improved Mauser—has some advantages in penetration over those of the Krag gun, but they are so very slight that they need not be considered in battle. The wounds which the two guns inflict are practically the same. Writers upon the effects of the new armament in battle have estimated the results quite differently. Some have maintained that the new arm would be more deadly—that is, that the usual ratio 1 to 4 or $4\frac{1}{2}$ between the killed and wounded would be materially altered; that henceforth there would be one killed for every 2, or possibly 3, wounded. But few have maintained the opposite condition. There are those, again, who have argued that the percentage of the wounded to the number of troops engaged would be less than heretofore, owing to the extended order, except in those rare instances when troops should be more or less massed to assault fortified positions, at which times the casualties would far exceed those with the use of the less effective weapons. I have written at length on this subject to show the additional reasons which served to mystify the surgeon in basing his calculations on the estimate for supplies and personnel, and especially the distribution of the latter. Had it been known beforehand that the battle about Santiago must consist of dislodging infantry armed with Mauser rifles, intrenched in well-fortified positions, with no artillery preparation on our part, and that the approaches to these positions must be along narrow paths—death lanes—it would have been in order to put the bulk of the relief corps at the collecting stations and well to the front.

The transportation of the wounded in escort wagons was attended with much suffering and inconvenience until the unloading of the ambulance train, which we had left, as stated, at Port Tampa, under Assistant Surgeon Kennedy. The train arrived on the *Louisiana* and commenced to unload at Daiquiri on July 1, the day of the battle. Two ambulances reported to me on the same day and were hurried to the front that night. The rest of the train was unloaded by July 3. As the ambulances were unloaded they were hurried to me, and I, in turn, dispatched them to the front with such medicines and dressings as were needed. This train continued to do invaluable service, day and night, in transporting the wounded and afterwards the sick to the hospital at Siboney until about August 1.

The lack of skilled nurses in the care of the wounded and sick was one of the chief troubles at the base. The volunteer organizations left as guard did as well as they could to assist us. Some of their men had received training in first aid, but the proportion was too small to result in much benefit. Even this help, as unsatisfactory as stated, could not be depended upon. Military necessity often deprived us of it at the very time we needed it the most. From one to two companies of infantry were constantly required for the proper policing, guard, to assist in nursing, etc.

On July 7, after one company of infantry had been distributed for the night among the various wards, which contained nearly 500 wounded, a sergeant came to the hospital, and, without reporting to the surgeons on duty, passed the word down the rows of tents "that the company should assemble at its camp at once." The surgeons became aware of our plight at about 9 p. m. Upon inquiry I was informed by the commanding officer that the troops had all been ordered for outpost duty. The surgeons and the day nurses, already worn out with watching, had to care for the distressed the rest of the night. I made repeated endeavors to obtain larger and more permanent details, but to no purpose. Finally the arrival in camp of Col. Charles R. Greenleaf, United States Army, chief surgeon in the field, had the effect to clear matters. The whole of the Twenty-fourth Infantry was ordered from the front to assist us. The discipline of these seasoned troops

changed the aspect of affairs at once. For the first time in the history of Siboney order loomed out of chaos.

During those days of uncertainty as to help and lack of sufficient quantity of supplies from the 1st to the 8th of July, for causes already mentioned, I wish to record the many acts of kindness of the gentlemen of the press in our behalf. Mr. Lyman, president of the Associated Press, furnished us ice and delicacies often. Mr. Hearst, of the New York Journal, sent us ice by the ton, and gave us the use of his steam launch to tow the wounded to the transports and to bring supplies to shore when it was impossible to obtain other transportation. The spirit of humanity which prompted these gentlemen to come to our assistance, so regardless of their own interests, was beautiful.

The work of Capt. E. L. Munson, adjutant, of the medical department, Fifth Corps, in unloading supplies from the different transports, from the 1st of July to the 4th, supplied many deficiencies which must have persisted without his excellent efforts.

Although we might have done better with transportation of our own, and though the disappointment because of our inability to get at all of our supplies was bitter and exasperating in the extreme, we managed to care for the wounded, with no special amount of suffering, until the arrival of the hospital ship *Relief*, August 8. This vessel, so well equipped for the work at hand, was laden with 1,000 cots, and everything in the way of hospital supplies in quantities to correspond. Our hospital then assumed other functions besides the care of the sick and wounded from the front. Paulins and flies were pitched to receive this veritable purveying department. Captain Ireland was placed in charge of all supplies, and it was to his admirable method of systematizing his difficult task that the different hospitals and camps of the army were supplied by rail, ambulance, and wagon trains.

Knowing that we were at the place where the relief ships would first touch, the orders were at all times to send to the different points all supplies asked for. When we had run so low at one time that the wisdom of our liberality seemed questionable, the steamer *Resolute* hove in sight to supply all impending deficiencies once more.

The character of wounds.—The wounds inflicted by the improved Mauser did not differ from the wounds of the reduced caliber weapons generally. They correspond to the wounds inflicted with the new arm by experimenters on the cadaver, dead and living animals, as well as those heretofore noted on man by accident and in war. The explosive effects so often noted in wounds at close range were not seen, for the reason that none of the wounds were received within the zone of explosive effects, which, under some conditions, though rarely, may extend to 500 yards. Those organs containing tissues rich in fluids, incased in cavities with bony walls, are more apt to show these highly destructive effects. The absence of these ugly wounds was often commented upon by surgeons. It is safe to say that examination of the dead on the field could have shown evidences of explosive effects in the wounds of the head, the heart, liver, spleen, intestines, etc. In reckoning upon explosive effects one should always remember the factors upon which they depend. To be brief, destructive effects are commensurate with velocity and sectional area of the projectile on the one hand, and with resistance in the body on the other. High velocity, greater sectional area, and greater resistance exhibit explosive effects, and vice versa.

It should also be borne in mind that only two things offer resistance in the body, viz, (a) compact bony tissue and (b) water. The fractures of the long bones were attended with but little comminution, and in quite a number of instances with guttering and perforation unattended with fracture. More than a score of gunshot wounds of the kneejoint were treated by immobilization and simple dressings alone with the happiest of results. Injuries of the joint ends of bones were invariably marked by clean-cut perforations. The injuries of the soft parts were comparatively trivial. Wounds of the head involving injury to the brain matter had to be opened up on several occasions on account of sepsis. The skullcap invariably showed fissures radiating between the wounds of entrance and exit, and islands of bone, sometimes free from dura and periosteum, but more often attached. All wounds of the lungs were recovering rapidly without apparent complications when received in hospital. The wounds that astounded us all were those of the abdomen. Four were noted of such wounds which, from the anatomical regions traversed, must have involved the caliber of the intestines numbers of times, and yet recovery had taken place with no apparent sequelæ or ill effects of any kind. These cases were very wisely kept at the field hospitals, well to the front, until recovery was assured. Capital operations, such as amputations and opening of the larger joints, were done but seldom, and then only for

sepsis, which, in the nature of things, would seem to be unavoidable in war in a certain proportion of cases.

Another circumstance which rather puzzled us was the frequency with which lodged balls were seen. This was variously attributed to (1) defective ammunition, (2) ricochet shots, and (3) long range. By testing the penetration of the two ammunitions in blocks of yellow pine, Capt. Charles A. Worden, United States Army, was able to demonstrate for me the fallacy of the first of these theories. The Spanish ammunition penetrated as much as 9 inches farther in the wood than ours, a fact which is not surprising, since the muzzle velocity of the Mauser is greater than that of the Krag-Jorgensen, and since, also, the sectional area of its projectile is slightly less. The lodged balls were evidently due, therefore, to ricochet shots through the thick underbrush and to long range. Acting Asst. Surg. W. E. Parker visited Santiago late in July to confer with the Spanish surgeons upon their observations concerning the character of the wounds from our guns. He informs me that their conclusions tallied with ours in every respect. They remarked especially on the number of lodged balls, which they attributed to long range, and the number of recoveries from gunshot wounds of the abdomen with undoubted intestinal perforations.

When we contrast the ravages inflicted by leaden bullets of large caliber with the humane effects of the projectile of reduced caliber noted in this battle, it is not extravagant to say that the portable hand weapons of to-day have largely reduced the subject of military surgery to first-aid work.

Although the operating staff was occupied for a period of five days of incessant work in the operating room, the surgical work consisted principally in the redressing of wounds. The number of operations of all kinds was very small.

Yellow fever and the burning of Siboney.—On July 11 we had cleared the hospital of wounded by shipments north, and by the restoration of a few light cases to duty. The negotiations for the fall of Santiago were pending; still, our experience of a few days back convinced us that another battle of infantry, pitted against infantry with the new arm, must give in this instance a large casualty list to the attacking army. Our efforts were, therefore, directed to meet the exigencies of such a contest. More tents were pitched and wards were arranged in order for the reception of the wounded. Fortunately our apprehension in this direction was not realized. Yet there was a foe at work which was soon to put our resources to the severest test. About July 6 Maj. John Guiteras, our yellow-fever expert, reported that he had a suspicious case from our advance post near Aguadores Bridge. The admissions from yellow fever very soon multiplied day by day, and we at once established a detention station near the fever hospital in the old Garcia headquarters. In a very few days cases from the front commenced to arrive. The cases became so numerous that a yellow-fever camp had to be established on the railroad to Firmesa, 2 miles to the east.

To augment our difficulties, it was discovered, about July 9, that the buildings occupied as hospitals, dwellings, and offices in Siboney were recognized as sources of infection. Men of the Signal Corps, who had never gone away from the base and who lived in the offices of the Juragua Iron Company occupied by us as a telegraph station, were taken ill with the disease. Surgeons and nurses were taken down in the Garcia and Clara Barton hospitals. The wisdom of occupying these buildings for any purpose had always been a matter of doubt. We deferred all questions of this kind to Dr. Guiteras. The reports to him from the Cuban physicians were most positive that the houses were free from infection and that yellow fever had not prevailed in the buildings which we were induced to occupy. I believe that the reports were probably true with regard to the non-susceptible Cuban population. For the susceptible American, it is doubtful if any part of Cuba in the vicinity of our base was safe. Infection is not only prevalent in the habitations; it is to be met with in the shady nooks about rocky recesses, caves, arbors, etc.

At one time two regiments—the Twentieth Regulars and Thirty-third Volunteer Michigan—led in the number of admissions from yellow fever. The latter regiment was then encamped on ground such as I have described, recently vacated by one battalion of the Twentieth, while the rest of the regiment was encamped on more open ground. Reference to the hospital records showed that the battalion of the Twentieth Infantry, composed of Companies A, E, F, and H, furnished all the cases of yellow fever from that regiment except one, the latter coming from that part of the regiment camped in the open. This is certainly convincing evidence with regard to the common origin of the disease in the two regiments, especially as the Thirty-third Michigan had camped nowhere else.

The destruction of the town of Siboney by fire seemed to be a matter of absolute necessity. In thus destroying this dirty little town, we were, at least, sure of

limiting the number of new cases about us, and, as already stated, we needed the room to extend our canvas hospital, which was from the beginning on very contracted premises. Accordingly, on July 9 a formal request was made to headquarters at the front for the necessary authority. The authority was granted on the 11th and the buildings in West Siboney were burned on the 12th. The remainder of the buildings, with the exception of the railroad shed and a sawmill near the landing, were similarly destroyed as soon as vacated.

The accessions of malarial and yellow fever cases from the front continued until July 31, on which date 90 cases were admitted by transfer from Dr. Jones's hospital. By July 20 yellow fever had developed so rapidly among the patients in hospital and the overflow in the detention camp was so far in excess of our ability to accomplish transfers to the yellow-fever hospital that we were compelled by the universal presence of the infection to declare everything in the way of a canvas hospital about us a yellow-fever hospital. The lines which had heretofore defined the yellow-fever hospital from the detention camp and the hospital proper were no longer regarded. Certain wards were set aside for yellow fever; beyond that no effort was made to isolate those infected. The steamship *Resolute* arrived July 25, laden with 10 immune surgeons, 35 male and female nurses, and large quantities of supplies of all kinds. August 2 the *Olivette* appeared in Santiago Harbor with large quantities of supplies, 35 immune nurses, and more immune surgeons. The sick, under these circumstances, received the best of care. The female nurses proved a great comfort to the sick, and physicians who came with them worked most faithfully.

August 5 the register showed 816 sick in hospital from all causes. It was on this date that I was taken ill with fever. I struggled to do my work until the 7th, at which time I was too much overcome to continue longer on duty. I turned the command over to Maj. W. C. Gorgas and placed my name on the sick list.

In closing my report of the events which have connected me with the reserve divisional hospital of the Fifth Corps it is fitting that I should testify to the heroic deeds and faithful services of some of its officers.

Capt. M. W. Ireland, assistant surgeon, United States Army, the executive officer, deserves special mention. He has demonstrated unmistakable capacity for work. He was the only one of those connected with the hospital from its establishment at Siboney to escape entirely the effects of the tropical diseases. Aside from his ability in the executive department, he showed skill and rare judgment in the operating room in the early days of July.

First Lieut. J. M. Kennedy, assistant surgeon, United States Army, ambulance chief, deserves mention for the skill and celerity with which he outfitted his train for field service at Port Tampa and for his faithful performance of duty in the transportation of sick and wounded from the 1st of July to the 1st of August.

First Lieut. P. C. Fauntleroy, assistant surgeon, United States Army, exhibited superior knowledge and skill in the preparation of the operating room, and as an operator. He showed skill, endurance, and pluck in the treatment of yellow fever before the arrival of the immunes, and until he was stricken with the disease.

W. E. Parker, acting assistant surgeon, United States Army, of New Orleans, who was connected with the operating staff, proved to be one of the best operators on the staff. His skill as a surgeon was already sufficiently established before his entry into the service to have deserved advancement beyond the grade which he so humbly accepted. His knowledge as a yellow fever expert proved of inestimable value to us during the epidemic. Although a supposed immune, he was taken ill with the disease, from which he was temporarily disabled. At a time when errors during convalescence were causing fatalities daily, he insisted upon resuming his duties when he was still too weak to stand the work. His services to the Government were certainly far beyond his reward.

H. C. Gavitt, chaplain, United States Army, displayed great capacity for handling men in the executive department during the days of July 1-4. It was largely to his efforts—whilst Captain Ireland was employed in the operating room—that the wounded were properly sheltered and fed. He buried the dead, and was constant in his efforts to comfort the living. I left him in Siboney August 15 going his daily rounds, though much reduced in strength, in the same way he had done in the early days of July. We owe the systematic arrangement of the dead in the cemetery and the proper inscription for identification to his faithful performance of duty.

Maj. Victor C. Vaughan, surgeon, United States Volunteers, professor of hygiene at the University of Michigan, Ann Arbor, did good work in the operating room, and later his suggestions and advice pertaining to sanitary matters were of great value. He continued on duty until July 12, when he was stricken with yellow fever.

Maj. C. B. Nancrede, surgeon, United States Volunteers, professor of surgery in the University of Michigan, Ann Arbor, was naturally a prominent figure in the operating room. His advice was sought on every side in cases requiring the opinion of an expert surgeon. He and Major Vaughan brought us our first cases from the engagement at Aguadores Bridge where they were subjected to a sharp fire from the Spanish batteries. Men of prominence like these, who would abandon their interest in civil life through patriotic motives to engage in the hazards of war without stint, deserve richly the thanks of their countrymen, and I am pleased to be able to call the attention of the War Department to their conduct in this instance.

Maj. John Guiteras, the yellow-fever expert of the Fifth Corps, rendered valuable service in recognizing the presence of yellow fever at the inception of the epidemic. It was largely upon his advice that measures were employed at the outset to restrict the spread of the disease.

REPORT OF MAJ. M. W. WOOD, CHIEF SURGEON, FIRST DIVISION, FIFTH ARMY CORPS.

[Dated June 30, 1898.]

I was detained on duty with the Sixteenth Infantry at West Tampa, Fla., until about noon of the 1st instant, to complete the papers and turning over. I then applied myself to the task of organizing and equipping, at Tampa Heights, a hospital for the division, in the face of many difficulties, some of which proved insurmountable.

An attempt was made to procure every article of proper equipment for the hospital, but in this we were much handicapped by the exhaustion of supplies by the previous equipment of the two hospitals at Tampa Heights and Port Tampa. All articles necessary that could be procured were procured, including ambulances and tentage. When we received orders to embark on the 7th we were ordered to leave behind all canvas but flies, all ambulances and mules, and all horses but one for each officer. We went aboard the steamship *Santiago*, at Port Tampa, on the 8th. The transport lay in the harbor until the afternoon of the 13th, when it proceeded 38 miles to Egmont Key. We passed Key West after midnight of the 15th and 16th, and arrived off Santiago de Cuba on the 20th. On the steamship *Santiago* were headquarters and staff, First Division, Fifth Corps; headquarters and staff, Third Brigade, First Division, Fifth Corps; the Ninth Infantry; one battalion Tenth Infantry; and the First Division hospital and staff. The trip was an uneventful one on smooth water, and but few were seasick. We were moved back and forth in front of Santiago, and on the 25th were landed in the surf in small boats at a point variously called Siboney, Juraguasito, or Altares. On the 27th we moved out to the site of a deserted mansion with absolutely no transportation but the private horses of the medical officers. The Hospital Corps detachment had become augmented to 37 privates. These carried 14 litters, and on them 500 extra first-aid packages, 1 field operating case, 2 pocket cases, the case of instruments from the new surgical chest No. 1, cooking utensils, 20 bottles of chloroform, 2,000 c. c. of ether, and assorted dressings for about 200 wounded, in addition to rations, and the bedding rolls, and 3 hospital tent flies for wounded. On arrival at this camp I sent 4 men and 2 horses back to Siboney for more supplies.

On the morning of the 28th I sent 20 men and 4 horses back to Siboney for supplies, and in the afternoon moved, with wet bedding, to a new wet camp, the only available site for a field hospital, toward the front. The moving was accomplished by making two trips, just before nightfall. On the morning of the 29th, having reconnoitered the ground, believing an engagement imminent, we again moved with our own things wetted to a new wet camp, the present site of the hospital, then in advance of all troops except outposts, 1,200 yards in rear of where many of the casualties occurred. It seemed almost an ideal camp, except for the daily rains and the polluted water supply; but we could not control the rains and could only attempt to purify the water. The site was a long oblong, separated from the main highway by a strip of heavy timber and dense underbrush from 30 to 50 feet wide, and in a bend in the creek (dignified by the name of Rio San Juan). On each side of the creek were large trees and an almost impenetrable thicket. Thus, with access by three ways cut out to the highway and the creek (in a bed of rock and boulders) for a water supply, our site was tolerably well protected from small-arms fire by the trees about it. The site was within rifle range, but we escaped attention. For water supply for surgical purposes I had a shallow

well dug in the river bed as far as practicable from the flowing water, thus securing a filtration through several feet of sand of the water, which had been polluted by the ablution, laundry work, and excreta of the 15,000 and more of men and hundreds of animals encamped on the stream above our site. This was boiled for twenty to thirty minutes and then filtered through a Berkefeld filter and kept in closed containers fairly sterile.

Of the performance of their duties by the officers and men of the hospital little need be said. Such uncomplaining performance of such services by northern men under the blazing tropical sun, such genuine devotion to the cause in which they were engaged, such indefatigable following by the men of the example set by the officers of the staff, can be summed up by but a single word—heroism. Where each and every one did far more than his duty, where the efficiency of each was limited only by the utmost straining of his abilities, no particularization can be made for the officers more than to say that each proved “the right man in the right place,” and strove with unanimity each to emulate the others. Many of the men seemed to develop new faculties each day. Among the more valuable of these were Privates R. A. Wood, John E. Collins, B. F. Mayer, J. F. Fairman, and Harry C. Spears, all of whom richly deserve special commendation. Hospital Steward Denning, the only steward in the whole First Division, was invaluable.

It is much to be regretted that the actual organization and equipment of personnel is so vastly different from the theoretical paper personnel contemplated. It is also deplorable that a civilized army of a wealthy nation should be absolutely without transportation on the eve of what may prove a severe engagement, and I repeat that no transportation of any kind, save the single horses of medical officers, was furnished for this hospital from its landing until after the establishment of the hospital on this site on the 29th instant, the third day out. Supinely sitting in the mud awaiting transportation would not have resulted in the establishment of this which, as next month's report will show, was the only hospital at the front for the reception of wounded. The hearty assistance and encouragement of Lieutenant-Colonel Pope, chief surgeon, was a considerable stimulus to each to try to outdo the others.

REPORT OF MAJ. M. W. WOOD, CHIEF SURGEON FIRST DIVISION, FIFTH ARMY CORPS.

[Dated near Santiago, Cuba, July 31, 1898.]

My last report covered the establishment of the division hospital as near the enemy (1,200 yards) as it could be prudently located, in front of all our troops but outposts. In this location we received and cared for the wounded from the entire army who needed attention beyond the first-aid dressings applied on the line and at the dressing stations.

From the dressing stations the wounded came to us. The few walking cases not needing redressing, who were able and desirous to walk as far as Siboney, on the way homeward, were allowed to go on, and as rapidly as this could be done the sitting cases and the slighter lying cases were forwarded in army wagons and in the ambulances. Many of the more seriously wounded were retained as long as practicable, until the yellow fever all about us prompted me to take the risk of their removal.

The accompanying report by Major Johnson explains the want of record of many of the cases, and the meager details given of others. Not needed at the front because of the presence there of other chief surgeons who had no hospitals, and who had promised to attend to my duties there, I took upon myself the entire duties of the hospital outside the operating tables; attended to the unloading of the wounded who were delivered on litters, in army wagons, or in the only three ambulances there were with the army; attended to the orderly reception of these, that they might be relieved in proper sequence when it was not necessary to depart from this; to the assignments of patients to the tables when special assignments were considered necessary; to taking the records of the first 150 cases in such manner as to be most valuable for the Record and Pension Office, and until it became so dark that I could not see the pencil marks which I had made; to the disposition and arrangement of the wounded after they left the tables; and exercised a general supervision.

When the record taking was interrupted at about 7 p. m., on the 1st, there were probably 30 wounded ahead of us, and not until 5 a. m. did we catch up with the work, for many had been brought in in the moonlight. Then some of us snatched three hours sleep, until wounded began again to arrive by daylight. From that time we worked again until 3.30 a. m., until we had again caught up.

There was no one who knew how to do the work who could be spared to keep records, and we could only hope that in the hospitals which never joined the army this work might be done. As soon as Major Johnson could do so, he recommenced the record keeping, and was able to get some data in regard to some of the number who passed through our hands. The poor wounded were in a pitiable condition. Some, absolutely without clothing save the dressings on their severe wounds, had little but the wet ground for a bed and the sky for cover throughout that first terrible night; but we did the best we could in utilizing every scrap of canvas or bedding, and before very long could shelter, bed, and cover them. They were hungry, nearly famished, and with parched throats. What we could have done to relieve this but for the providential arrival of Miss Clara Barton and her little band of six, who proved ministering angels, I am glad never to know. She arrived in an army wagon, and in a few minutes had food in preparation and was distributing clothing. The first day they distributed 20 gallons of gruel and 10 gallons of malted milk. Next day, 10 gallons of gruel, 10 of malted milk, and 15 of rice. To this they added later 5 gallons of cocoa and 10 of apple sauce, with pineapples (native), stewed and raw. During the entire period until her departure on the 15th she continued to furnish quantities of supplies, not only to the wounded, but to the sick of the regiments at the front and to the offshoots of our hospital, and left a quantity to be subsequently distributed under my direction. Later, after the harbor of Santiago was opened, she distributed large quantities of timely supplies for our numerous sick.

A cask of captured Spanish wine, "Vino de Navarro," was turned over to me and proved of much service. Coffee was prepared in large quantities, and large quantities of a sort of soup were prepared from the canned roast beef, canned corn beef, canned beans, canned tomatoes, beef extract, and hard bread, which was quite palatable and eagerly taken. With the removal of the last of the wounded, because of yellow fever, their history with us was closed. Their uncomplaining acceptance of the aid which we were able to offer amid such surroundings was remarkable.

From our hospital there were formed as offshoots the general reception hospital for sick and the yellow-fever hospital of Acting Asst. Surg. H. P. Jones, both subsequently removed. The number of sick increased enormously until, on the 28th, it reached a maximum of 1,346, or 29 per cent of the total present in the division, and even then the Twenty-fourth Infantry, with its large sick list, was absent.

It is to me a source of unmixed pride and gratification that the entire personnel, so far as I know, of the medical department of the division, acquitted themselves so creditably. Their uncomplaining endurance of privations and exposure, while their abilities were taxed to the utmost limit, and the large-heartedness with which they cheerfully toiled on through sleepless nights, and the zeal with which they passed to the next sufferer, not only entitle them to a star position in the annals of the Department, but won them a secure place in the hearts of their combatant brethren of this division, which did the hardest fighting, suffered the heaviest losses in killed and wounded, and was "ever ready."

While heartily approving the well-deserved personal commendations in the inclosed reports, I desire, in conclusion, to commend especially to the attention of the Surgeon-General the following-named officers: Maj. W. B. Banister, by the manner in which he has performed his very arduous duties under peculiarly trying circumstances of physical debility and by the intelligent aid rendered the chief surgeon, has shown his fitness for the position of chief surgeon of a division. Capt. H. C. Fisher, for the high standard of efficiency he has maintained. Though he has remained with his regiment, his exceedingly valuable services have often come to the notice of the chief surgeon. Maj. W. D. Bell, surgeon Seventy-first New York Volunteers, richly merits for himself the words he has so fitly spoken of others for gallantry, and also for his extreme devotion to duty. Lieut. T. J. Kirkpatrick, who in every position in which he was placed has left the impression with all, "Would that there were more like him." Quietly, modestly, and gently he worked on the wounded with amazing rapidity, and seemed not to know fatigue. Lieut. G. C. M. Godfrey has richly won his "spurs," which I hope may be given him, with an additional volunteer promotion. A high compliment was paid him for his work under fire by a line officer, who said: "He's a darned fool; he doesn't seem to know what danger is." Acting Asst. Surg. Hamilton P. Jones would prove an excellent surgeon of volunteers, and is thoroughly fitted and trained for the position which he merits. Acting Asst. Surg. T. R. Marshall has shown that he is also fitted for and worthy of the position of surgeon of volunteers.

I know no words of blame or censure due to any of those who bore with us the heat and burden of the day.

REPORT OF MAJ. R. W. JOHNSON, BRIGADE SURGEON, UNITED STATES VOLUNTEERS, ON THE WORK OF THE FIRST DIVISION HOSPITAL, FIFTH ARMY CORPS, AT SANTIAGO, CUBA.

FIRST DIVISION HOSPITAL No 1,
Camp near Santiago, Cuba.

Maj. M. W. WOOD, U. S. A.,

Surgeon, First Division Hospital No. 1, Fifth Army Corps.

SIR: I have the honor to submit the following report of wounded in the battles of the 1st, 2d, 3d, and 10th of the present month:

I am well aware that the list is defective, and does not include the names of a great many who were admitted to this division hospital for treatment, but this was unavoidable, owing to the limited number of medical officers on duty, whose services were in constant requisition, caring for the wounded for three days and nights immediately following the battles.

Accurate information of the names, regiments, and locality of wounds was obtained from the time the first patient was admitted, July 1, until dark, when, owing to the large number of wounded coming from the front, and also to the fact that a number of these had been awaiting attention for at least three hours, it was decided to omit the histories; so none were accordingly taken for the remainder of the night. It was supposed that ample opportunity would be afforded the following day to enter in the records any whose names had been omitted owing to lack of time during the night, but the morning of the 2d found us with wounded coming in by the score, and the services of a medical officer could not be spared for that purpose. As a consequence many were simply dressed and forwarded to Siboney with no record of their names or wounds having been obtained.

A number of severely wounded from the first day's battle died during the evening or early the following morning after their admission, with absolutely no means of identification. It is with sincere regret that this statement must be made, but the immediate care of the wounded demanded the services of each and every member of the staff, including Hospital Steward Denning, Acting Hospital Steward McGuire, and all other privates of the Hospital Corps.

This matter of classification could have been properly attended to had there been a large number of medical officers on duty with the hospital, but being the only hospital in the field, the wounded of all three divisions were carried to us for treatment as soon as transportation facilities were available. Human endurance had its limit, and it was simply impossible to give to these matters the attention they deserved, although the staff worked nobly and uncomplainingly for nearly three days and nights with but little rest. I will say that during the night of July 1, Major Bell, surgeon of the Seventy-first New York Volunteers; Acting Asst. Surg. Thomas R. Marshall; and First Lieutenant and Assistant Surgeon Kirkpatrick, United States Army; and on the 2d and 3d Majors Havard and McCreery, surgeons, United States Army; Captain and Assistant Surgeon Stafford, Seventy-first New York Volunteers; and First Lieutenant and Assistant Surgeon Gates, of the Second Massachusetts, were detached from their commands and reported to the hospital for duty. All rendered timely and efficient service.

The fact that a number of soldiers died unknown, through no fault of ours, emphasizes the necessity of adopting some means of identification in men who are so badly wounded as to be unable to give any account of themselves. The diagnosis tags issued by the Surgeon-General were not used to any great extent, as a great many wounded were brought in without them. In some cases the writing was obliterated by the rain, or so indistinct as to render them of no assistance to us. As a result of my experience in this matter, I strongly urge the adoption of a metal tag to be worn around the neck, giving the name, rank, and regiment, and such other information as would be valuable in case of the death of a soldier.

There were only a few operations of any note; the most important being three laparotomies performed in apparently hopeless cases for perforating gunshot wounds of the abdomen, but all proved fatal. In this connection the question of the advisability of such major operations in the field is well worth careful consideration. A number of men recovered promptly who were wounded in the abdomen by bullets, which could not in their course possibly have escaped perforating the intestines. If to the natural shock attendant upon such injuries there be the additional one of opening the abdominal cavity, in the great majority of cases the result is sure to be unfavorable. That men can under certain conditions recover after the receipt of an abdominal wound in which the intestines are unquestionably injured, is well known; this has recently been well exemplified. I do not wish to be quoted as an advocate of nonoperative interference in such cases, as I consider surgical intervention a most necessary procedure when all the

surroundings are favorable; but in the field with our limited means of performing aseptic surgery, our inadequate facilities for after treatment, and the enfeebled and often infected condition these men are in after lying possibly some hours on the field of battle, and then removed several miles to the hospital over rough roads in army wagons and ambulances, make me confess to a liking for conservative surgery, which in such cases amounts to practical noninterference, so far as operative measures are concerned, as affording the only chance for the ultimate recovery of the patient.

Two amputations of the thigh were performed; one of the upper third for extensive crushing injury with great loss of tissue, and the other in the lower third for compound fracture, with injury to the main arterial supply. The former case was fatal in a few hours. The latter was performed several days after the receipt of the wound, on account of gangrene of the leg and foot.

An amputation at the upper third of the leg for a compound comminuted fracture of the tibia, with extensive loss of tissue, due to the explosion of a shell, was also performed successfully.

Ligation of the right lingual artery for secondary hemorrhage following gunshot injury resulted fatally, owing to the large amount of blood lost prior to the operation, and the consequent weakened condition of the patient.

A comparatively large number of compound fractures of the femur were sent to the hospital among the first, which soon exhausted our supply of splint material, but an excellent substitute was afforded by the woody part of the old growth of leaf of the palm tree, which when moistened could be accurately molded to the limb, in which position it remained after drying.

This made a very satisfactory splint, and while affording suitable strength was very light, and caused no pain or other inconvenience to the patient. A few Hodgen's splints were extemporized, but were discarded for those previously mentioned when the patients were transferred to Siboney. A more extensive experience with this splint will, I am sure, cause its adoption in many cases where neither Hodgen's nor Smith's anterior are available, and I accordingly recommend that a suitable supply be sent to the States for trial, as I believe it will be an excellent substitute for the heavy and cumbersome plaster-of-paris dressing now in such universal use.

The wounds inflicted upon our men by the small caliber Mauser bullets were much less severe than I had expected from the literature read on the subject. I certainly consider it a humane bullet in every sense of the term. There were a number of gunshot wounds of the skull where the bullet simply perforated the bones without any comminution or apparent splintering. In the case of Sergeant C—— a bullet entered the right parietal bone near its junction with the frontal and emerged at the posterior border of that bone, lacerating the brain substance. The first two days after admission to this hospital he was partially unconscious, but on the third day became rational and began to improve. When transferred to Siboney a few days later his condition was better, and beyond some blunting of the mental faculties, with peevishness and irritability of temper, gave fair prospects of ultimate recovery.

Private B—— received a perforating gunshot wound of the neck, the ball entering the right sterno-mastoid muscle at its middle, passing through the pharynx in its course, and emerging at the anterior border of the left sterno-mastoid at the same level. This patient was scarcely confined to bed, and up to the time of his transfer to Siboney, experienced very little difficulty from the injury. Perforating wounds of the chest, abdomen, and every other portion of the body healed kindly by first intention when not previously infected. Occasionally a ball seemed to pass directly through a bone without producing a fracture, but in the majority of cases—noticeably of the femur—a solution of continuity resulted. From what I have seen of the injuries inflicted by the Krag-Jorgensen rifle upon Spanish prisoners falling into our hands after the receipt of wounds, I have come to the conclusion that it is a much more effective weapon and produces wounds of far greater gravity than the Mauser.

Boiled and filtered water only was used in every case for cleansing and irrigation, and care taken at all times to secure as complete asepsis as possible. More efficient and satisfactory results with much greater comfort to our patients would have resulted had we been allowed to bring with us from Tampa the hospital equipment we had collected after so much time and labor. To be required to leave all our ambulances, cots, hospital tents, and depend on flies only in which to shelter our wounded men lying on the wet ground, was not a very encouraging outlook, but we determined to accomplish all we could under the circumstances. *Our facilities were totally inadequate even for the First Division hospital, and owing to the absence from the field of the Second and Third Division hospitals,*

which necessitated our caring for their wounded, work was thrown upon our hands for which we were entirely unprepared, and which taxed our resources to the utmost.

I desire to make especial mention of the strict attention to duty and valuable services rendered by the members of the hospital staff, Asst. Surg. G. C. M. Godfrey, United States Army; Acting Asst. Surg. H. P. Jones, United States Army, and Acting Asst. Surg. F. J. Combe, United States Army.

In conclusion I desire to express to you my appreciation of your valuable advice and counsel, freely rendered at all times, which was of great assistance to me in the management of the hospital in its various departments.

REPORT OF LIEUT. GUY C. M. GODFREY, ASSISTANT SURGEON, UNITED STATES ARMY, IN COMMAND OF THE AMBULANCE COMPANY, FIRST DIVISION, FIFTH ARMY CORPS.

[Dated July 28, 1898.]

As commanding officer of the Hospital Corps company of the First Division, Fifth Army Corps. I have the honor to submit the following report:

This company was organized at Tampa, Fla., on June 5, 1898, just two days previous to the departure of the troops of the First Division for the transports at Port Tampa, Fla. On the day of organization the strength of the company was 18 privates. No noncommissioned officer was assigned to it until June 7, 1898, when Acting Hospital Steward McGuire reported for duty.

When the order came to move the men of the company performed the work necessary thereto, and the enthusiasm and esprit de corps with which they labored added greatly to the celerity and facility with which the task was accomplished. The personnel and supplies of the division hospital, as well as the hospital company, was placed on board the transport *Santiago*, and arrived off the coast of Cuba, near Santiago, on June 20, 1898. The day before landing all of the material was brought up from the hold by the men of the company and stored on the main deck of the ship near the forward starboard port. This was done by direction of Maj. M. W. Wood, chief surgeon of this division, and proved a wise and efficient measure.

We landed on June 25 at Siboney, Cuba, and pitched camp on the beach. On this day 13 of the privates of the hospital corps of the Seventy-first New York Volunteers joined the company. During the night of June 25 Acting Hospital Steward McGuire and five of the men worked all night unloading the material for the hospital and storing it upon the beach under canvas. This was done by using small boats drawn by steam launches, and, owing to the high swell, it was at times quite dangerous. On several occasions the men narrowly missed injury from falling boxes.

On June 25 the men were given a short drill to perfect organization. Hurried preparations were made for a forward movement, and as absolutely no transportation could be obtained from the quartermaster's department, these preparations consisted principally in selecting such necessary dressings and drugs as the men could carry on their backs and litters. On the 27th the First Division moved forward, and the hospital company followed in rear of the Third Brigade, taking the ridge road toward Sevilla. Owing to the possibility of an immediate skirmish or battle none of the medical officers rode their horses, but made pack mules of them and carried as large a number of dressings, etc., as they could. The division camped in column of brigades, and the hospital company and division hospital pitched camp near the headquarters of the division commander. On the following morning 20 men and the steward and 2 medical officers returned to Siboney, and brought up 4 litters and as many medical supplies as possible, returning about 2 o'clock p. m. After a soaking rain the company broke camp and was ordered to move forward 2 miles. This they did, marching over a rocky yet muddy road, carrying the hospital supplies with them. They pitched their shelter tents on the soaking ground, while the officers, who had no shelter, slept in the open air, exposed to dampness and poisoning. On June 29 the company moved forward a quarter of a mile farther to a beautiful spot, with the Aguadores River on one side and the Siboney road on the other. Here on the 29th the division hospital was established, and here it remained all through the terrible carnage that followed. On this day six wagon loads of our supplies were brought up from the beach at Siboney, and tent flies were pitched and everything arranged for the coming battle. On the 30th of June the work of establishing the division hospital continued, and more of our supplies were brought from Siboney. * * *

At this time the wounded were coming back in a constant stream, and such as needed stimulation or dressing were at once attended to by the roadside. Many of them returned alone, others walked supported by the arm of some comrade, while the more seriously wounded were borne upon litters of various kinds. A few of those who returned had not received medical attention, but the majority of them were dressed with first-aid packages by the regimental surgeons and their hospital corps men.

At about 1 p. m. Maj. Valery Havard, chief surgeon of the Cavalry Division, established an ambulance station on the east bank of the Aguadores near El Poso. At this station many dressings were readjusted and a few patients were dressed for the first time. Stimulants, medicines, and dressings constituted the stock of this station, which was about 1 mile in advance of the First Division hospital. No point farther to the front was safe from the enemy's fire. The ambulances were worked constantly, and, considering their number, did remarkably well. Late in the afternoon ambulances were taken forward to near the farthest crossing of the Aguadores, but it was rather dangerous at all times, as the enemy kept the San Juan road enfiladed all day long. It was also very dangerous on account of Spanish guerrillas, who were located in trees overlooking the road. Several men carrying wounded were shot, and indeed in a few cases the patients themselves were hit.

At 11 a. m. a dressing station was established by Captain Newgarden at the farthest point where the San Juan road crossed the Aguadores. At this place there was a vertical bank about 4 feet high, beneath which there was a gravel beach. Here a certain amount of shelter was obtained, but bullets frequently cut through the bushes or splashed up the water in the creek. At one time it was enfiladed by Spanish sharpshooters in trees up the creek. Several horses were killed here, but no patients, surgeons, or attendants were injured that afternoon. It was at this place on the following morning that Dr. Danforth was killed. Late in the afternoon several escort wagons, having carried ammunition to the front, were turned over to the writer by Lieut. J. D. Miley, General Shafter's aid-de-camp. These were taken to this station and filled with the wounded, who were transported to the First Division hospital. Empty army wagons that could be found were used for this purpose, and the wounded kept coming into the hospital all night.

On the following morning an ambulance and two wagons were taken to the dressing station just described, and the wounded brought in, among them Acting Assistant Surgeon Danforth, who was shot through the head. Maj. S. Q. Robinson had assumed command of this station on the previous afternoon, but at this time he, with Capt. W. D. McCaw, rejoined their regiments, and left the station in charge of Capt. G. J. Newgarden. Maj. V. Havard arrived later, and established an ambulance station at this point, which was then comparatively safe. It was customary during the battle for the writer to send litters and dressings to the front in the empty ambulances. During and after the battle the men of the hospital corps company did much of the work in the First Division hospital. They assisted in operations, helped in applying dressings, made soup and coffee, carried patients to and from the operating tables, and acted as nurses to the wounded. With but few exceptions they worked all day, all night, all the following day, and most of the next night. They were assisted by members of the bands of the regiments and by some of the hospital-corps men of the regiments.

During the battle the first-aid work was very effective, and was done mostly by regimental surgeons and their hospital squads. Many dressings were applied by line officers and soldiers on the firing line, and in some instances by the wounded men themselves. Maj. S. Q. Robinson, who commanded the Aguadores dressing station on July 1, says that only about 10 patients came there who had not been dressed by first-aid packets. Words can hardly express the appreciation which the officers and men of the line have for the first-aid packets. They realize now as never before the value and importance of instruction in first-aid work. The very small number of suppurating wounds can readily be accounted for by the prompt application of these dressings.

REPORT OF CAPT. EDWARD L. MUNSON, ASSISTANT SURGEON, UNITED STATES ARMY, COMMANDING THE RESERVE AMBULANCE COMPANY, FIFTH ARMY CORPS, AT SANTIAGO, CUBA.

[Dated July 29, 1898.]

In view of the recent charges made affecting the efficiency of the army medical department at Santiago, and especially with reference to the conditions prevailing on the hospital transports sent north with wounded, I have the honor to *submit the following facts*, believing that my position as adjutant to the chief

surgeon Fifth Corps and as the officer in charge of the outfitting of the hospital transports *Iroquois*, *Cherokee*, and *Breakwater* may possibly give value to such report:

Drugs, medicines, dressings, instruments, hospital tentage, and supplies were loaded on the transports at Tampa in quantities sufficient to meet the needs of the Santiago expedition. These supplies were divided up on the various vessels, each organization having its own equipment. While the bulk of the supplies was with the organized hospitals, the regimental equipment was largely in excess of its needs, and was intended to be called in to supplement, if necessary, the equipment of these hospitals.

The landing on Cuban soil was made as rapidly as possible, each organization accompanied by the medical attendants assigned to it, and troops were pushed forward with no other equipment and supplies than could be carried by the soldiers. Having no means of transportation for even their field chests, the regimental medical officers had absolutely no resources at their command except such as were provided by the orderly and hospital corps pouches and the first-aid packets carried by the soldiers.

Having once left their ships, the latter were promptly ordered out of the small bays at Siboney and Daiquiri to permit the unloading of other vessels. These partially unloaded ships, in obedience to their orders, then proceeded to sea from 5 to 15 miles, where they remained, hove to, indefinitely. Such orders were given the transports carrying the reserve and the first divisional hospitals.

The vessel carrying the reserve hospital, in obedience to its orders, proceeded to join the naval blockading squadron off Morro Castle, where it remained five days and nights; the other transport disappearing, if I was correctly informed, for an entire week, during which time the fight at Guasimas had occurred, and large numbers of sick and wounded were requiring treatment. In the meantime the report of the conditions prevailing on shore was made to the chief surgeon, who promptly laid the case before the commanding general, requesting that a launch be placed under the control of the medical department for the collection of medical supplies from the various transports. It was also requested that a pack train be organized, in the proportion of one pack mule to each regiment, to transport supplies—especially the field chests—to the front for proper distribution, and the writer was named by the chief surgeon as available for the performance of these duties.

The exigencies of the situation did not apparently appeal to the commanding general, and for two days the medical department was unable to get transportation of any kind to the other ships or to the shore, although there were a large number of naval launches and boats employed on various other duties.

On the third day, by order of the adjutant-general, one rowboat was turned over to the medical department for the purposes above named, and at the same time an order was issued for land transportation to carry medical supplies to the front, "not to exceed one 6-mule team."

On getting into this boat with supplies from the headquarters transport I was directed by sundry staff officers to take them on various errands. On my refusal to recognize their authority the commanding general, who had appeared on the scene, personally revoked the previous order and directed, after the landing of the supplies already in the boat, that it should return without delay.

Presenting the order for land transportation to the quartermaster on shore, I was informed that only pack mules had as yet been landed; that neither wagons nor harness had been brought ashore, and, finally, that the road was impassable for wagons.

After this boat had been taken away the chief surgeon was without any means of communication with the medical officers on shore or still on transports, of finding out their wants, or of remedying the many already known to him.

This condition of things remained until after the fight at Las Guasimas, at which time there were absolutely no dressings, hospital tentage, or supplies of any kind on shore within the reach of the surgeons already landed.

The news of the Guasimas fight being reported to the chief surgeon, he was finally able to get on board the *Olivette* and send her to Siboney, where she received the wounded.

Within the following day or so the transports carrying the reserve and first divisional hospitals were found and unloaded of their hospital contents, the latter hospital finally obtaining limited transportation to the front for its supplies.

After a couple of days' duty on board the *Olivette* I was directed to put the *Iroquois* in condition to receive patients and to take the full capacity of the ship on board. While doing this I was able to set ashore considerable hospital tentage and supplies found aboard of her, and having control of her boats I was able to visit other transports in the harbor and land medical supplies from them.

While subsequently outfitting the *Cherokee* and *Breakwater* this work was continued as well as opportunity and limited facilities permitted, getting supplies from perhaps a third of the transports composing the fleet. Outside of this it is believed that no other regimental medical property was ever unloaded up to the time of my departure with wounded on July 10.

Appealing on several occasions for the use of a lighter or small steamer to collect and land medical supplies, I was informed by the quartermaster's department that they could render no assistance in that way, and the medical department was compelled to rely entirely upon its own energies and improvise its own transportation.

I feel justified in saying that at the time of my departure large quantities of medical supplies urgently needed on shore still remained on transports, a number of which were under orders to return to the United States. Had the Medical Department carried along double the amount of supplies it is difficult to see how, with the totally inadequate land and water transportation provided by the Quartermaster's Department, the lamentable conditions on shore could have been in any way improved.

The outfitting of transports for the reception of sick and wounded is a duty demanding thought and experience, and should never be intrusted to anyone but a regular medical officer. It includes the proper policing of the portions of the ship to be used by the wounded; the removal of bunks and partitions to give space and air; the utilization of the ship's blankets, door mats, rugs, and carpets to render the bunks more comfortable; the securing of extra supplies, such as canned soups and fruits, lime juice and oatmeal; the establishment of a mess and laundry, and the assignment of convalescents to specific light duties which materially relieve the overworked hospital corps.

Usually it is necessary to overcome passive resistance and opposition on the part of the crews and a tendency on the part of the captains to disregard or modify orders. In several instances in my own experience this action of the crew amounted almost to mutiny, and was only to be dealt with by threats, a show of force, and in one instance by the use of the irons.

While executive officer at the general hospital, Fort Monroe, I learned officially that the captain of the steamship *Seneca* positively refused to obey the orders emanating from your office, given to him by the contract surgeon in charge, to proceed to New York; he remaining nearly an additional day at Hampton Roads with sick and wounded, asserting that he would obey no orders given by the Medical Department.

A similar experience of my own at Daiquiri, which had to be settled by force, emphasizes the fact that no one should be placed in charge of such a ship who is not accustomed to command men and enforce obedience.

With regard to the Red Cross Society it would seem as if the lofty purposes of this organization were, on the Santiago expedition, subverted to individual interests. While at Tampa the Red Cross ship *State of Texas* was formally placed under the control of the chief surgeon, Fifth Corps, by Dr. Egan, the representative of the society, he acting under telegraphic instructions to that effect.

Colonel Pope accepted this offer and directed that the *State of Texas* accompany the expedition of General Shafter to its destination. Although this order was fully understood by Dr. Egan the *State of Texas* did not accompany the expedition, nor did it arrive at Siboney until the forces had been landed, a battle fought, and our hospital established and in working order.

The first offers of aid made by this society dealt largely in generalities and manifested reluctance to subordinate the organization to the Medical Department.

Too much praise can not be given to the individual efforts of Dr. Lesser and the Red Cross nurses. Their work was untiring and unselfish, and the assistance rendered by them was of great value.

In conclusion it is desired to emphasize the fact that the lamentable conditions prevailing in the army before Santiago were due, first, to the military necessity which threw troops on shore, and away from the possibility of supply, without medicines, instruments, dressings, or hospital stores of any kind; second, to the lack of foresight on the part of the Quartermaster's Department in sending out such an expedition without properly anticipating its needs as regards temporary wharfage, lighters, tugs, and despatch boats, and without an adequate number of stevedores to handle property. The quartermasters personally accompanying this expedition were entirely unable to properly carry the severe burdens imposed on them in spite of the personal energy displayed by them in making the most of the limited facilities and resources at their command.

REPORT OF CAPT. GEORGE J. NEWGARDEN, ASSISTANT SURGEON, UNITED STATES ARMY, OF HIS SERVICES AT SANTIAGO, CUBA, WITH THE THIRD UNITED STATES CAVALRY.

We arrived at Daiquiri, Cuba, on June 22 and went into camp on the side of a hill about 1 mile from the landing place. I was unable to take any supplies along, not having any transportation for the same. I succeeded in obtaining an emergency case from Major McCreery while in camp. A mackintosh and a woolen blanket constituted my protection from the elements. The brigade surgeon offered me for use with the regiment a medical and a surgical pannier, but no transportation having been provided for them I was obliged to refuse them with regret. On June 25 I made personal and thorough effort to secure transportation and supplies, but without success. I applied personally to the major-general commanding on board the *Seguranca* and requested a mule for a mount, but was refused. Later I succeeded in getting a Government horse from the brigade surgeon, which I managed to get equipped with a teamsters saddle and mule bridle after considerable effort. Before leaving this camp a box of first-aid packets was turned over to me and one was issued to every man and officer in the regiment. We proceeded as far as El Poso hill, where hostilities began at daylight on July 1. Captain Grimes's Battery, which was planted here, opened fire on the enemy. Reply was received in the form of a steady, well-aimed shrapnel fire, which did considerable injury to the troops of the cavalry division drawn up in column in the road below the hill. It was here that I had my first injury to dress; a bandman of the Third Cavalry, perforating shrapnel wound of the buttock.

We marched to the San Juan River, after crossing which the command was formed for action, and it was here the actual conflict began. I observed that this point was an excellent place for a first-aid dressing station, as the bank was about 3 feet high, and there was a short or gravelly shelf running from it to the creek, where the staff officers had left their horses. I had these removed, and in conjunction with Dr. Menocal, contract surgeon on duty with the Sixth Cavalry, decided to establish here the dressing station for the Third and Sixth regiments of cavalry. By the aid of a few men with shovels I had this shelf increased in area by filling in the creek along its sides. By the time this was done the battle commenced, just over the bank. This, which was the nearest dressing station to the firing line, became, by virtue of its location, a general collecting, first aid, and ambulance station for the whole line of fire, as the only road ran right by it and it was at the regular ford of the creek on this road. The wounded came in so fast that our energies and the capacity of the station were frequently strained to their utmost. Dr. Menocal and myself cared for all comers from whatever regiments, dressing their wounds and making them comfortable, having covered the earth with leaves, and spreading the ponchos of the wounded over these. I endeavored to keep records of the wounded and the nature of their injuries, but it was absolutely impossible for the time being. I did manage, however, to keep track of the injured of my regiment fairly well, which records I completed later, after reaching the regiment on the cessation of hostilities. Improvised litters were made of boughs and shelter halves. Men who were able to walk were allowed to proceed to the division hospital on foot, if their injuries were not grave. Those more severely injured and able to bear it were sent back on litters with bearers.

Pack wagons which passed toward the front with ammunition and commissaries were pressed into service on their return, and such wounded as could endure the rough ride were carried to the rear in this manner. Three ambulances only were available later, and in these the worst cases were transported. As it was, the capacity of the station was strained severely at all times during July 1, as the wounded were steadily pouring in from all regiments. Later in the day Maj. S. Q. Robinson arrived at the station and assumed charge until night, when the firing ceased. During the night he proceeded to the front and presumably joined his command. Captain McCaw also reached the station about the same time with Major Robinson, and the four of us had all we could attend to in looking after the wounded. At no time was this station safe, as the bullets were coming in from all directions continually, cutting the trees all around us, and occasionally so thick that it looked like rain in the creek. Shrapnel shells were also bursting disagreeably close at times, as the enemy had the road enfiladed. The wounded were made quite safe under the bank, but it was very dangerous in the open, where we had to go and come continually, looking after the welfare of the injured and preventing blockade in the station by incoming troops on the way to the front. Captain McCaw remained at the station until next day, when he proceeded to rejoin his regiment, the Sixth Infantry, returning toward evening, as there was little to do

forward, all the wounded having reached my station. During his absence on the second day the division surgeon, Maj. V. Havard, rode up to the station and ordered Dr. Menocal to join his regiment, commanding me to remain in charge of the station until relieved by orders from him. It appears that this locality, though dangerous in the extreme, so much so that it gained the name of "Bloody Angle" or "Bloody Bend," was of great value as a dressing and ambulance station while the conflict lasted. Many men were wounded at and about this station. Dr. Danforth, contract surgeon, with the Ninth Cavalry, received a mortal wound, perforating the brain. Six animals were killed on the creek bank, and one having dropped in the creek I made efforts to procure a detail to have the carcass dragged out and buried, but without success. Eventually I had to employ an ambulance team to do the work, and also Hospital Corps men to bury it and the others, as they were rapidly becoming offensive.

Chaplain Swift of the Thirteenth Infantry did excellent duty here, quieting the fears of the wounded, burying the dead, and superintending the foraging for food, in which he was very successful, securing a camp kettle and plenty of coffee, sugar, bacon, hard-tack, and canned roast beef. Coffee was kept continually boiling, and the wounded revived by the same, as well as food for those who wished to eat. Even smoking tobacco was plentiful, and it was a great boon to the injured who smoked. The sufferings of the severely wounded were quieted by hypodermics of morphine; and, on the whole, there was nothing further desired except transportation, and that we were sadly in need of. Several of the fatally injured were retained at this station over night, and made as comfortable as possible on litters with plenty of blankets, of which latter there was an abundance, as many of the volunteers had discarded them along the road. A few very severely injured who could not stand transportation in pack wagons were also retained by their own choice as well as ours, and sent safely to the rear in ambulances in the morning. On the 5th of July I received orders from Maj. V. Havard that I should abandon this station, as it was no longer needed, and was at all times dangerous, and rejoin my regiment. I immediately obeyed the order, and with Dr. Harris and Dr. Menocal started a brigade hospital behind the San Juan Hill for the three regiments, Dr. Harris being brigade surgeon in command. As the men were now succumbing to the prevailing fever, we had plenty of work on our hands. In the meantime Maj. V. Havard, division surgeon, established a supply station close to this hospital, where we replenished our medicines as needed, also receiving and dispensing such articles of sick diet as beef extract, malted milk, and canned soups and broths, etc. I continued at my duties with the regiment until I myself was stricken with a severe attack of fever on July 16, and on the 18th was sent to the division hospital for treatment.

REPORT OF CAPT. CHARLES F. KIEFFER, SURGEON IN CHARGE, ARTILLERY
BRIGADE, FIFTH ARMY CORPS.

[Dated September 22, 1898.]

I have the honor to submit the following report of the health and sanitary condition of the Light Artillery Brigade during the operations about Santiago and the voyage to Montauk on transport. This command was made up of six batteries. Of these, four batteries left on the first expedition and landed June 23, and two batteries on the second expedition, landing on July 9. The batteries were all in widely-separated positions in the trenches and were massed near Caney, immediately after the formal surrender. This camp was maintained until the departure from Santiago in different transports, between August 19 and August 23. The average strength of the command was 550 enlisted, 25 officers. There were three medical officers with the command: Capt. Charles F. Kieffer, Lieut. William W. Quinton, and Lieut. William H. Wilson, assistant surgeons United States Army. There were also four acting hospital stewards and an average of 8 Hospital Corps privates.

Immediately after the surrender the organization of a brigade field hospital was begun, and in a few days I had excellent provision for 50 sick, including cots, blankets, supplies, and foods. This hospital held all our seriously sick men, and the others were made as comfortable as possible in their battery camps.

The daily sick report averaged 120, and this proportion of the troops was more or less constantly maintained during the month following the fall of the city. These figures do not represent the total unfit for duty, because many of the men were so enfeebled that if more work than the minimum to maintain a clean camp had been required, they would have been unable to do it. The great majority of

the sickness was a thermic fever and various types of malarial infection. These fevers at different times attacked at least 95 per cent of the command—75 per cent had two attacks and about 40 per cent had three attacks to the time of leaving the island. Careful notes were made, and in a future report I hope to present some of the technical aspects of these cases. There were also 10 cases of either typhoid infection or severe remittents with typhoid symptoms. In the absence of microscopical evidence a differential diagnosis was impossible. I incline, however, to the belief that the cases were of malarial type. We had very few cases of dysentery, and the type was mild and easily controlled. Two cases of measles developed, necessitating a quarantine. Ten men were transferred to hospital ship by order of the chief surgeon of the corps, and when the command left camp 10 more were transferred to general hospital at Santiago.

During all this period there was but 1 death—a suicide. There was not one death from disease until after the dispersion of the brigade at Montauk. I understand, unofficially, that 2 men have died in hospital at Montauk and 1 officer at Washington. These men were in Southern camps a long time before going to Cuba, and made the whole campaign, being exposed to the weather and all attendant hardships as much as any troops on the island, and the sick showing is therefore a good one.

The camp was selected with great care by the brigade commander. The water was excellent, being a mountain stream fed by springs. Every effort was made and every precaution taken to keep it pure, and I think with success. Whenever possible contamination was feared, the men were counseled to drink boiled water. This is a difficult thing to get men to do. A thirsty man will drink anything, but nevertheless a great deal was accomplished along this line. The men were also forbidden to eat the various tropical fruits brought into camp, especially the mango. I think this precaution kept the average of intestinal troubles as low as it was. Tents were aired daily. The conical tents were dropped and the canvas lashed about the tripod and pole so that all the ground beneath was thoroughly aired and sunned. For a long time the command had no tents and the men slept under shelter of the gun paulins. The same precautions were adopted with them. The paulins were thrown back and the ground well aired. The men were also made to build bunks to raise themselves from the ground. This was generally accomplished with forked sticks, grain sacks, and split bamboo. The sinks were regularly inspected, filled in, and renewed. The men were forbidden to enter any of the old dwellings and buildings about. The use of old lumber stripped from these filthy huts, as flooring or for making bunks, was also forbidden. I think this was the most frequent and glaring sanitary misdemeanor committed in Cuba. Men were allowed to enter dwellings, strip boarding, shutters, and doors and use them in their tents.

The presence of the horses made an additional difficulty in camp sanitation, but the picket lines were frequently changed and kept very clean. In fact, a very rigid and effective police of the camp was maintained. So that, notwithstanding a great handicap, these men came out very well. They had horses to groom and the horses had to be herded. This necessitated a large proportion of the men being out in the fierce sun for quite a long time each day, and brought in that way many relapses.

The value of the precautions taken is proven, I think, by the exceedingly low proportion of cases and mortality from dysentery. But, above all else, there was at no time even a suspected case of yellow fever, and, as far as I can learn, very few organizations escaped this infection entirely. I wish also to state that every single sanitary recommendation received the hearty support of the brigade commander, and was immediately and effectively carried out.

This brigade had at all times as good a supply of medicines as could reasonably be expected under the circumstances. After the surrender of the city, we were very well supplied with not only comforts, but luxuries. Ice was furnished in quite generous amounts, and this 5 miles from the city. The prepared soups and milks were very grateful to the sick. No soldier of this command was at any time placed in jeopardy for lack of medicine.

The food supplied the men was of good quality and the ration was well handled. The beef was exceptionally good. There was a considerable lack of food during the siege, and only the most portable of the components of the ration could be brought up to the trenches. The suffering was not great from this cause, and I think, beyond lowering the resistance of the men somewhat, had no permanent ill effect. It was a hardship of the campaign borne cheerfully and alike by all, from the commanding general to the last recruit. From the fall of the city, as far as careful inspection could determine, these men messed about as well as they ever do in the field.

I wish to commend to the surgeon-general the work of Assistant Surgeons Quinton and Wilson and their zeal in the execution of their duties. These officers performed their duties and did hard professional work when they were sometimes as sick as the men they were caring for. This report has been delayed by my own illness.

Captain Kieffer's report was forwarded by the brigade commander, Gen. W. F. Randolph, with the following remarks:

"In forwarding the inclosed report, it is a source of gratification to call the attention of the Department to the extremely able manner in which Dr. Kieffer has performed his duties. As its senior medical officer present, he was brigade surgeon from July 9 to August 24, when he was compelled to succumb to repeated attacks of malarial fever. Immediately after the surrender at Santiago, the camp of the Light Artillery Brigade was established near El Caney. The command was largely without tents, which had been carried off on the transports to Porto Rico. During this time the troops were exposed to daily rains, and the sick report assumed such alarming proportions as to necessitate the establishment of a hospital for its own immediate use. In this work Dr. Kieffer showed untiring effort, and I believe that his subsequent illness was largely due to his frequent exposure to the sun in visiting Santiago, to obtain tents, cots, and supplies. Not a single death from disease occurred while the brigade was in Cuba, and when the yellow fever expert, Dr. Gonzales, made the final examination, previous to its departure, he gave it one of the few clean bills of health granted to departing troops."

REPORT OF MAJ. FRANK J. IVES, SURGEON VOLUNTEERS, CHIEF SURGEON
INDEPENDENT BRIGADE AND PROVISIONAL DIVISION, FIFTH ARMY CORPS,
DURING THE PERIOD JUNE 7 TO SEPTEMBER 12, 1898.

The Independent Brigade consisting of the Third and Twentieth United States Infantry and one squadron (Rafferty's) of the Second Cavalry under command of Brig. Gen. John C. Bates, United States Volunteers, was on board the transports at Port Tampa, Fla., when I reported for duty pursuant to orders from corps headquarters.

Upon reporting to the brigade commander I received verbal instructions to embark on the transport *Stillwater*. The medical department of the brigade consisted of myself and 3 acting assistant surgeons, 2 acting hospital stewards, 9 privates of the Hospital Corps, 4 being orderlies for medical officers, and 3 being ambulance drivers. Each regimental surgeon was equipped with a medical and surgical chest and field case, the members of the Hospital Corps with their appropriate pouches, and every officer and enlisted man in the brigade was furnished a first-aid package. There were 3 ambulances fully equipped with this brigade, and it ultimately developed that these were the only ones with the corps until sometime after the battle of July 1, 2, and 3.

No hospital equipment beyond that above enumerated was taken, for the reason that prior to embarking from Mobile, Ala., from whence this brigade sailed on June 4, Colonel Greenleaf, of the medical department, had distinctly stated that it was absolutely unnecessary for troops leaving Mobile to transport hospital supplies, as these would be provided at Tampa, arrangements to that effect having been perfected. Notwithstanding this there was no chance to equip the brigade completely at Port Tampa, owing to the confusion incidental to embarking and the uncertainty as to the exact hour of departure.

The disembarkation occurred at Daiquiri, Cuba, on June 22 and 23, each man being equipped with the blanket roll, haversack, canteen, arms and ammunition, besides three days' rations. On the afternoon of the 23d the brigade marched toward Siboney, camping about 2 miles east of the same. On the following morning, the 24th, it proceeded to Siboney and went into camp at the extreme western end of the town. Soon after reaching the latter place the squadron of the Second Cavalry was detached from the brigade, and I received verbal orders to report for duty at brigade headquarters. At about 9 a. m. word was received that Young's brigade of Wheeler's division had encountered the enemy, resulting in many casualties. General Bates instructed me, at that time the senior medical officer present, to make arrangements for the reception of the wounded. Upon reaching the lower end of the town I found a temporary hospital had been established by Maj. W. B. Banister, brigade surgeon, United States Volunteers, in an abandoned house, which had been cleaned out and rendered as fit as possible for their reception, and that 8 or 10 of the First United States Volunteer Cavalry had already

arrived and were being treated. The building occupied was an old, dilapidated structure, but it was impossible at that time to improve upon it. There was no tentage to be obtained, and as far as fear of infection was concerned, there was little choice between the buildings. The heat was intense, the hospital ship *Olivette* not in the harbor, and it was necessary to place the wounded under shelter of some kind at once. A large box of surgical dressings belonging to the First United States Volunteer Cavalry was soon after obtained and proved a most valuable acquisition. Maj. Valery Havard, chief surgeon of the cavalry division, arrived in the course of the day and assumed charge of this temporary hospital. There was some adverse criticism resulting from the use of this building for hospital purposes, which, in the opinion of the writer, was unjust. When it is considered that the Army was in a hostile country, that the village had just been occupied, that the base of supplies was practically at Daiquiri, 9 miles distant, and that there was absolutely no chance for shelter from the sun and rain until the arrival of the *Olivette*, there was nothing else left to do, as there was no natural shelter to be obtained. Subsequent events did not show that the slightest evil resulted from the occupation of this building by the sick or wounded. The independent brigade remained at Siboney until June 30. During this interval the brigade was encamped in close proximity to the houses of the town. The headquarters occupied a house previously used as a residence for the superintendent of the Juragua Iron Company. A hospital was established at Siboney, under charge of Major La Garde, and a limited amount of material was sent to the front for another located near General Shafter's headquarters. As the independent brigade consisted of only two regiments, no effort was made to undertake the establishment of a hospital, but the field equipment, consisting of the medical and surgical chests and some additional medicines and dressings, was obtained for each regiment.

One set of chests, besides a box containing a fine assortment of dressings and medicines, was also secured for brigade headquarters. The latter articles, under the personal supervision of the writer, were loaded on a wagon with commissaries and ammunition and were transported to the firing line, reaching there after midnight on the night of July 1, and proved of the most inestimable value during the two days' fighting that followed. The brigade left Siboney at 9 p. m., June 30, marching about 7 miles. On the following morning, July 1, at daybreak, it proceeded to General Shafter's headquarters, leaving there at 10 a. m. to support Lawton's division, then engaged with the enemy at El Caney. Soon after noon the brigade went into action between Chaffee's and Miles's brigades, and at about 3 o'clock assisted in taking and holding a strong stone fort from which the enemy had been dislodged. Owing to the limited number of medical officers then with the brigade no attempt was made to establish a dressing station, but it was deemed preferable for them to remain on the firing line and advance as far as practicable with the command. The wounded thereby received immediate attention, and were left in sheltered localities until ultimately transported to the nearest collecting station. By following this method the writer was enabled to render assistance in many instances, not only to the wounded of his own brigade but to many others who were too distant from their regularly established dressing station to hope for relief for a considerable time to come. Whereas these stations are necessary as gathering stations for the wounded prior to their transportation to the field hospital, it strikes the writer as essential that the wounds should be dressed as soon as possible after their reception, and that the medical officer and his assistants should be on the spot rather than have the patient wait indefinitely until means for transporting him to the dressing station are forthcoming. This was particularly evident during that portion of the battle following the capture of the stone fort above mentioned. After its capture the hill was occupied by the Third Infantry and portions of the Twelfth, Twentieth, and Twenty-fifth. The Spaniards concentrated a heavy fire upon these troops and there were many casualties, among them Captain Rodman, who was in command of the Second Battalion of the Twentieth, and Mr. James Creelman, a correspondent of the New York Journal.

The writer was the only medical officer present in this section during the battle, and at no other period were his services more urgently needed. The firing line at this point was stretched along the crest of the hill upon which the fort was situated, and a temporary dressing station established at a sheltered spot a few feet below the crest, so that the wounded had only to be carried by their comrades this short distance, thereby enabling the latter to return at once to their commands. In this way prompt assistance was rendered and the firing line not appreciably weakened, which would not have been the case were it necessary to depend upon the previously established dressing station. The regimental surgeon of the Twentieth, Acting Asst. Surg. T. S. Aby, United States Army, remained on the firing

line with the First Battalion of that regiment, which did not participate in the charge above mentioned, and the surgeon of the Third, Acting Asst. Surg. E. R. Bragg, United States Army, remained with his regiment until just prior to the charge, when his professional duties kept him in the rear, which accounted for neither of them being present at the stone fort. When all our own wounded at this point were cared for, the wounds of a number of Spanish prisoners were dressed. As the writer was thus occupied, the prisoners showed signs of great amazement and gratitude, evidently as if they had expected harsh treatment. These prisoners received the same care as our own wounded, and that same evening were carried to the nearest dressing station. The Spanish dead were decently buried at the scene of their gallant resistance, the line of intrenchments around the fort being utilized as a common grave. At about 5 p. m. the enemy had entirely disappeared. The brigade was withdrawn and bivouacked a couple of miles to the rear. The writer remained at the fort until nearly dark, and then, accompanied by his orderly, rejoined the command. During this ride he was fired at by some one concealed in the brush, which was the only instance of bushwhacking personally known to him. About 9 o'clock the line of march was resumed, and the brigade took position on the left of Kent's division, then occupying the San Juan Hill, before Santiago, this position being the extreme left of the line and covering that flank. It was reached between 1 and 2 o'clock in the morning.

On July 2 the Ninth Massachusetts Volunteers joined the brigade. During the 2d and 3d a portion of the brigade was in the intrenchments, the remainder being held in reserve about 300 yards behind the firing line. At this point the latter troops were exposed to a double enfilading fire and suffered considerably. A dressing station was established and efficient work done, the box of additional medicines and dressings proving a most valuable acquisition. Among the things in this box were sufficient extra "first-aid" packages, which were issued to the men to supply those used in the first day's fight. The casualties in this brigade during the three days' fighting were 4 killed and 29 wounded. This includes one member of the Hospital Corps wounded on July 2 while assisting in dressing a wound of a comrade. After the fighting of July 1 the wounded were transported on extemporized litters to adjacent dressing stations whose locations had been determined and were subsequently sent to the rear. On July 2 and 3 those treated at the brigade dressing station were carried to a collecting station on the Siboney road, near the San Juan River, where they were held until transportation could be procured to take them back. As the three ambulances above mentioned were the only available ones at that time, escort and many army wagons had to be impressed into service for this purpose.

I would respectfully submit the following remarks upon the personnel and equipment of the medical department on the battlefield, the conclusions being based upon personal observations, not only during the recent campaign, but for several years prior to the same: No regiment should go into active service with less than 1 surgeon, accompanied by his orderly; 1 steward and private of the Hospital Corps for each battalion; that each regimental surgeon should have a pack animal, with a mounted packer, under his exclusive control; that instead of the medical and surgical chests at present issued, ordinary stout boxes be employed, filled with a selected assortment of surgical dressings, together with a liberal allowance of a few very necessary medicines, such as quinine, cathartic pills, calomel, diarrhea tablets, antiseptic tablets, beef extract, aromatic spirits of ammonia, etc.; that each surgeon should carry on his person a small, compact pocket case—the present field case is of poor quality, clumsy, and useless.

There should be a light form of litter for active service. At an annual meeting of the Association of Military Surgeons of the United States, held in 1893, the writer submitted an article on a field litter. In the article it was claimed that an army in action required a light, serviceable stretcher that could readily and in comparatively large quantities be rushed to the front, and suggested one made of bamboo as possibly answering the purpose. However, the idea was rather discouraged by certain theorists who objected to the litter in question. In a discussion following the paper, some claimed the litter was useless on account of having no legs; others that it could not be used in an ambulance; others that it was not military enough, holding that it was desirable to have an article more suitable for the litter drill. The fights around Santiago demonstrated that the medical department should be equipped with just such a light stretcher which could be transported in quantities to within a short distance of the firing line and there distributed. The use of blankets, overcoats, and shelter tents for extemporaneous litters is not practical, owing to the difficulty and time in procuring poles. *The area of destruction of the modern small arm is so extensive that the distance between the firing line and the collecting station is liable to be very great. On*

that account the extemporaneous litters should not be depended upon, but the strongest efforts should be made to provide more suitable methods of transportation. As far as the writer could inform himself, the litter drill was entirely dispensed with in this campaign, and no effort was made toward its employment.

The first-aid package filled its part most nobly. Too much praise can not be bestowed upon it nor can one overestimate the benefits derived from the excellent instructions given for its use. The contents of the package might be improved by adding a small quantity of pulverized boracic acid or some other powder for a dry dressing. In many cases it was found difficult to hold the antiseptic gauze in position, which could be accomplished by a few strips of adhesive plaster. Four such strips, 4 inches long by one-half inch in width, laid flat in a small paper envelope, would be a valuable acquisition.

Prior to going into action an opportunity was offered the brigade to replenish the canteen. The men were cautioned to use the water sparingly in drinking, which enabled the surgeons to have sufficient water to cleanse all wounds before applying the dressing. In instructions in first aid this point should be emphatically dwelt upon. Also the men should be carefully impressed with the folly and danger of unnecessarily removing the dressings without the sanction of a medical officer. Several cases came to the knowledge of the writer where mischief resulted on account of the erroneous idea that a dressing should be frequently changed. By educating the soldier in this respect, much benefit will result. During the battle and subsequently the regimental bands rendered the most valuable assistance in the care of the sick and wounded. Some of their members procured rifles and participated in the fighting, while the remainder were attached to the medical department. Too much credit can not be given these men, who, under the most trying circumstances, performed their duties most excellently, displaying the greatest zeal, energy, and patience. For several years prior to the present war the writer has advocated the use of regimental bands for this purpose, and suggested that they receive special instructions in the duties pertaining thereto, but had received unanimous discouragement, especially from regimental officers. This instruction should be compulsory for all bands in the future. Better results in the instructions for the enlisted men can be obtained by requiring the medical officers to personally superintend them instead of their receiving it second-hand through their company officers.

During that portion of the campaign from July 4 to 17, designated as the siege, the brigade held its position on the left flank, and the main portion of it was located in the intrenchments, which were not abandoned until after the surrender of Santiago. The health of the command up to this period was excellent, but on the 4th the sick list was suddenly augmented by a large number of cases of acute ephemeral fever. This seemed to be confined principally to the Third and Twentieth Regiments of Regulars, the Ninth Massachusetts Volunteers apparently being free from it. The attack in most cases was sudden in its onslaught; in some preceded by a chill, but in the majority not; the temperature would suddenly run up to 104° or 105°, be attended by only a moderate increase in the pulse rate, severe frontal headache, pains in the back and limbs, a flushed and swollen appearance of the face, marked conjunctival congestion, and great prostration. The tongue in many cases was large and flabby, showing, after a day or two, the marks of the teeth. At night there was a tendency toward wakefulness or great restlessness, attended by vivid dreams; nausea and vomiting were usually present. The attack in most of these early cases lasted from three to five days, when the symptoms would subside and the patient gradually recover. This epidemic appeared during the latter portion of the battle, being fully developed about July 4. It was observed that a few days afterwards it seemed almost completely arrested, when there was a slight interval, lasting several days, when a second rush of cases occurred. This, in view of subsequent events, is of great importance, as the writer is convinced that many of the first series of cases were a mild form of yellow fever and the latter ones were malarial, thermal, or ephemeral in character. It is an established fact that Siboney was an infected locality, consequently the independent brigade, which had camped there almost a week, had been exposed to infection. The brigade headquarters had occupied a building previously used as a residence in the town, and among the first series of cases above mentioned, General Bates, all of his staff officers, orderlies, and servants were, without exception, included; and were taken sick almost identically at the same time. The writer was in the list, and although quite ill for several days, did not permit himself to be sent to the rear, but remained with the command. This illness prevented him making a clinical study of these early cases, but most of the symptoms enumerated above were present. In his case upon the abatement of the fever, the temperature became subnormal, and the pulse fell to about 45 per minute.

Dr. Guiteras saw him a few days after convalescence was established and pronounced it a mild attack of yellow fever. This was the last sickness of any kind experienced by the writer during his sojourn on the island, although he was continually exposed to all the rigors of the climate and weather.

In the first series there must have been in all about 100 cases, of which possibly 40 were transported to Siboney. Of the second series about 200 cases, of which 75 were sent to the rear. Many of these latter were pronounced yellow fever by the experts, and placed in the fever hospital, where a large percentage of them were extremely ill, and many died from undoubted yellow fever. On July 15 the writer went to Siboney, and from personal investigation became suspicious that many cases of alleged yellow fever were in reality nothing more than some form of acute, noncontagious fever, and that in sending our patients to Siboney we were placing them in a position of the greatest danger. The impression obtained from this visit to Siboney was that the majority of these experts were completely stampeded, and were calling everything yellow fever. This resulted in many cases, which the writer is now convinced were not such, being sent to the fever hospital, there contracting the disease, and ultimately losing their lives. On returning to the firing line, instructions were given not to send any more cases to the rear, which was strictly adhered to for the remainder of the campaign.

The above-mentioned suspicions became certainties in the opinion of the writer when subsequently it transpired that during the interval from July 20 to August 23, 4,900 cases of fever occurred in the provisional division (on July 13 the independent brigade was reorganized, becoming the provisional division), and there was not one death from yellow fever, nor was there a single case which could be clearly diagnosed as such. This proves conclusively, as far as the observations of the writer extend, that whereas an epidemic of yellow fever did exist at Siboney, that none existed among the army on the firing line, although sporadic cases may have developed from time to time. The medical officers of the Regular Army, and those on duty with the troops, were, as a rule, in no way included in this general stampede, which but for them might have proved disastrous to the Fifth Army Corps.

On July 18 orders were issued the division to vacate the position held on the left flank, and it took station in the neighborhood of the San Juan blockhouse. The division at this time consisted of the Third and Twentieth Infantry (regulars), the Ninth Massachusetts, the First District of Columbia, and the Thirty-fourth Michigan. The Thirty-third Michigan and the Eighth Ohio, although officially attached to the division, never actually joined. On July 19 a temporary division hospital was established on a strip of elevated ground behind the San Juan Hill. Capt. T. E. Roberts, assistant surgeon, First Illinois Volunteers, was detailed as officer in charge. Besides the surgeon in charge, there were 3 medical officers, 3 stewards, and 2 privates of the Hospital Corps, detailed from the volunteer regiments. One full company of infantry from the Ninth Massachusetts Volunteers was also detailed to act as a hospital guard; they also performed the duties of a permanent police detail and assisted in the care of the sick.

Shelters were first constructed of bamboo uprights, with brush shed, and a few days afterwards eight wall-tent flies were secured. On July 21 the first official records show 115 sick in hospital and 264 in quarters, a total of 379, of which all but 13 were from the original independent brigade.

On July 21 the writer received orders from the chief surgeon of the corps assigning him to duty in charge of two hospitals located in the neighborhood of General Shafter's headquarters on the Siboney road. These proved to be a detention hospital under the charge of Acting Assistant Surgeon Pitt, and a yellow-fever hospital under charge of Acting Asst. Surg. Hamilton F. Jones, United States Army. Each hospital contained about 115 cases. They were fairly well supplied with hospital tents, cots, bedding, and camp furniture, although the supplies were not equal to the demand. The latter portion of the month these hospitals, under the writer's personal supervision, were broken up and transferred to Siboney. Before effecting this transfer 100 complete suits of clothing were obtained from the quartermaster's department and were issued gratuitously to the convalescent yellow-fever cases. The ground occupied by both camps was thoroughly policed and burned over; all cast-off clothing, rags, worn and soiled bedding, cots, and tents were destroyed.

About the 25th a cargo of medical supplies, under charge of Major Summers, brigade surgeon, United States Volunteers, arrived at Santiago. Immediate steps were taken to improve the condition of the sick. A fully equipped division hospital, with a capacity of 150 cots, and at the same time regimental hospitals of 15 or 20 cots, were established. The sick list from this time on became enormous; fully 25 per cent of the command were on the sick report, and of the remainder fully two-thirds were unfit for other than the lightest duty. An overwhelming

majority of the cases were malarial, with a few typhoid. The latter disease developed as an epidemic about August 1. This epidemic of typhoid was, in a great measure, produced by contamination of the San Juan River, due to the exodus of noncombatants from Santiago to El Caney. The latter numbered about 20,000, including many sick, who were collected in the town and in the immediate vicinity of El Caney.

The stream from which our army obtained its water supply became a common sewer for this temporary community. Except in isolated instances, there were absolutely no facilities for boiling the water; consequently, as a matter of necessity, the command was compelled to utilize the same. After the occupation of Santiago and the establishment of the hospital, 9 acting assistant surgeons and 3 civilian nurses were assigned to the division for duty. The division commander detailed Captain Sullivan's company of the Ninth Massachusetts Volunteers for permanent duty with this hospital. It gives me great pleasure to state that Captain Sullivan and his command performed the arduous duties connected with the hospital well and faithfully. These men performed guard duty connected with the hospital, general police, buried the dead, dug sinks, and, in addition, a detail was constantly on duty in each ward, night and day, administering nourishment, supporting patients to stools, and performing all the duties of nurses. Too much credit can not be given this command for their subordination, obedience, and patience under the most trying circumstances, and the valuable work accomplished by them. In this connection I would add that the division commander and the officers at his headquarters cooperated most earnestly with the chief surgeon in advancing the welfare of the sick. Transportation for supplies was always furnished and special fatigue details made whenever requested. Lieutenant Reeve, aid-de-camp to General Bates, rendered valuable assistance by volunteering to superintend the obtaining of the hospital equipment and its transportation to the site of the same. Major Irons, engineer officer, personally superintended the laying out of the hospital camp and the pitching of the tents.

On August 3 the corps commander summoned all the general officers and chief surgeons of divisions to a conference at his headquarters. When assembled he stated that his motive in thus calling them together was to obtain their individual views regarding the present sanitary condition of the army of occupation and recommendations as to the best policy to pursue. The unanimous opinion was then expressed that the army was in a deplorable condition on account of illness, and the only course to prevent its ultimate destruction was its immediate removal from Cuba. The feasibility of moving the command to the high ground in the interior was discussed, but found absolutely impossible owing to the fact that there was no organization in the entire army which could undertake to break camp and march 5 miles without 80 per cent, at least, being compelled to go upon sick report. A 10 miles' march would have converted the army into an immense hospital. The railroad, having a carrying capacity of only 600 men, could not be used, as it would have taken a month to transport the army and its supplies. The Washington authorities seemed more apprehensive of yellow fever than anything else, which was probably brought about by the alarming reports from the experts and the almost general stampede, above referred to, in their ranks. But the regular and volunteer officers on the firing line were convinced that yellow fever was one of the lesser evils so long as it was confined to Siboney, but that typhoid, malaria, and dysentery were to be dreaded. These diseases proved so extremely debilitating and the malarial relapses recurred so frequently that it was only a question of time when the vast majority would succumb unless removed from the pernicious influences. This resulted in two statements being prepared and signed, one by general officers and the other by the chief surgeon, setting forth the above facts, and recommending the immediate removal of the entire corps to some point in the United States. This was favorably acted upon.

On the following day a board of officers consisting of Col. C. F. Humphrey, quartermaster department; Maj. F. J. Ives, brigade surgeon, United States Volunteers, and Lieut. J. J. Pershing, Tenth Cavalry, was ordered to inspect all transports leaving Santiago, with the view of determining their condition, capacity, and supplies. This duty devolved almost exclusively upon the writer, as Lieutenant Pershing became ill and left on one of the early transports, and Colonel Humphrey's duties occupied his time almost exclusively. Every transport which left Santiago from August 5 to the 26th, when the writer sailed on the *Berlin*, was personally inspected by him one or more times before sailing. These inspections were in every case thorough and covered the condition of each vessel as to cleanliness, sanitation, and supplies. No troops were allowed to board a vessel until it had been reported in fit condition for their reception. The water-closet facilities were examined and found to be amply able to accommodate the number of passengers, and each was provided with suitable means of flushing. The floor

space was carefully examined, and in no case was overcrowding permitted. If the utmost capacity of a vessel was 1,000, not over 500 or 600 would be allowed to embark, which ratio was approximately maintained. The board was particularly careful in this respect, owing to the known weakened condition of the men and the large number of sick. The question of hammocks for the men and proper stateroom capacity and messing arrangements for the officers was investigated, also whether the command was properly rationed and the senior surgeon had sufficient assistance and medical supplies. A schedule of medicines was made out by the chief surgeon of the corps, based upon the number on the transports. These together with the liberal allowance of foodstuffs for the sick were, under the personal supervision of the writer, put on board each transport. In many cases cots, mattresses, and bedding were taken for the use of the sick. Notwithstanding adverse criticism in the daily press, the writer does not believe an army ever before in the history of the world was more completely and more comfortably equipped than the Fifth Army Corps in the journey from Santiago to Montauk. When it is considered that the army was an immense moving hospital, the death rate was remarkably low. Two of these transports, the *Mobile* and the *Alleghany*, were the targets of unusually vindictive attacks. The *Mobile* is a large cattle ship, with an utmost capacity of transporting 3,000 troops. She carried on this occasion about 1,600. The ship was clean, well ventilated, and in good sanitary condition when the troops boarded her. The accommodations for commissioned officers were not particularly satisfactory, but no complaints were made on that score. Supplies of all kinds were ample, for there were ten days' travel rations for the men and a liberal amount of special foods for the sick. The former had hammocks and the latter cots.

Adverse comments have been fully indulged in on the employment of "cattle ships," gruesome mental pictures being drawn whereby visions of inhumane overcrowding were indulged in, leading one to imagine our men jammed like a pen full of cattle in the stock yards. As a matter of fact ships of the *Mobile* type are most admirably adapted for transport purposes. They are constructed with a view to steadiness, and are well ventilated. The writer personally examined and inspected every vessel in the transport fleet, and saw every type from the *St. Paul* to the *Stillwater*, and the so-called "cattle ships" were far above the average as far as individual comforts of the enlisted men were concerned. The *Alleghany* was one of the most commodious and desirable of the transports. The statements against her made in the press dispatches were absolutely without truth. Dr. Magruder, of the Marine-Hospital Service, who inspected her upon arrival, was quoted as stating that she was in a most deplorable condition. In my presence, and that of several reporters, he denied having made any such remarks, and said that on the contrary the vessel was above the average. Captain Sullivan, of the Ninth Massachusetts Volunteers, was the senior line officer on the *Alleghany*. He informed me that all derogatory statements as to the condition of the ship were false; that during the trip from Santiago the men were comfortable, well taken care of, and had abundant supplies. The large death rate (14) was due to the greatly debilitated condition of the men, and was in no way augmented by anything incidental to the journey. The same can be said of the death rate (10) on the *Mobile*. The following features impressed themselves upon the writer as essential for all transports: That the fixed berths be entirely done away with and hammocks substituted; that every sleeping section should not only have port holes, but there should be a system of electric fans and forced ventilation; that the bathing facilities be rendered as commodious as possible; the kitchen facilities should be much increased, so that one hot meal a day may be served. All vessels should be lit by electric lights, and the quartermaster's department should be responsible that sufficient life-preservers are on hand. There was not a ship in the entire fleet that had anything like the requisite amount of the latter, and the lifeboat capacity was entirely inadequate. This fact seemed to strike nobody as particularly essential, but unless it is rectified there may be a terrible calamity. Suitable regulations should be established for the guidance of the men while on the transports. If the weather permits they should be forced to take off their leggings, shoes, and stockings, at least during a portion of the day while the decks are being scrubbed down. A light form of shoe or slipper should be furnished, and an inexpensive yachting cap or light headgear of some kind. Many of the men, through carelessness or otherwise, lose their hats overboard, and as it is impossible to replace these except by borrowing from someone having an extra one on hand, very serious results are liable to follow.

The division began to embark for Montauk Point on August 18, being the last to leave. It was deemed preferable for each organization to carry its own sick, leaving behind only those whose condition rendered their removal perilous. The *Olivette* had previously taken on 40 cases, all but 1 being typhoid. The steamer *Bay*

State, a hospital ship sent by the State of Massachusetts, took 60 of the worst cases in the Ninth Massachusetts, the majority of these being typhoid. A board of medical officers, consisting of Major Kilbourne and Captain Fisher, of the medical department, United States Army, and Acting Assistant Surgeon Gonzales, was appointed to examine all the members of each regiment prior to its embarkation, with the view of determining whether any cases of yellow fever or even suspicious cases existed. All cases pronounced such by this board were ordered to remain in a detention hospital established for that purpose. About 30 cases in the division were designated by this board as suspicious, but it was afterwards demonstrated that none of them had yellow fever.

Major-General Bates, his headquarters and staff, including the writer, left Santiago on August 26, on the transport *Berlin*, which also carried the First Illinois Volunteers. After a pleasant and uneventful voyage Montauk Point was reached on August 30, a landing effected on the following day, and everyone placed in the detention camp at that place. The Provisional Division was never reorganized, but one regiment after another was ordered to their respective homes until, on September 12, it was completely dissolved.

Sanitary regulations.—During the period from the time of debarkation to the surrender it was impossible to follow any sanitary rules beyond a proper location and care of all sinks and the general policing of individual camp sites. Water could not be boiled; men were forced to sleep on the wet ground with no tentage other than shelter tents, and but few were provided with changes of underclothing. After the surrender the condition in many regiments was improved, their camp equipments being obtained from the transports. The Third United States Infantry and the Ninth Massachusetts Volunteers were not able to obtain their property and as a result were in a very deplorable condition, especially the latter, who were not so able to take care of themselves, not being seasoned soldiers like the others.

The commissary department fulfilled nearly every requirement during this campaign, and at no time was the brigade, and later the division, without rations. Occasionally one article or another might be missing, but under the circumstances the department was excellently administered. After the surrender fresh meat and fresh bread were issued. Canned fruit, vegetables, and quite an assortment of commissaries were also to be obtained. Ice in fairly good quantities was also issued for the sick. The writer recommended to the corps commander that an ice machine in Santiago be seized and turned over to the medical department, but the idea was not adopted, as a large supply of ice was expected, which was ultimately received and issued. Soon after the occupation of Santiago supply depots were established by the commissary and medical departments. Gratuitous issues of canned fruits, soups, lime juice, rice, and condensed milk were made by the commissary in sufficient quantities for all the sick, the same being readily obtained upon requisition countersigned by the chief surgeon of the corps. The issue of coffee in the bean to the command during active hostilities was very unsatisfactory and occasioned unnecessary hardships. There being no coffee mills on hand each soldier was forced to crush the bean in his cup, which was usually done with the bayonet handle. The coffee was thus imperfectly ground and the product not up to the ordinary standard. Tobacco in some form during such a campaign should be a component part of the ration. Much suffering was experienced by the command on account of its absence. An emergency ration of some kind should have been supplied.

The Red Cross Society was a valuable adjunct in supplying necessities to the sick. The writer had no occasion nor opportunity to call upon the same until after the surrender, when a requisition calling for oatmeal, corn meal, rice, malted and condensed milk in quantities sufficient to last the division several days was promptly filled. This occurred before the commissary department had established depots for the issue of supplies outside of the regular ration. Subsequently the society was called upon from time to time and never failed to respond.

The supply of medicines during the campaign was at times woefully short. However, by active exertion on the part of the writer, he was enabled to obtain a fair quota of everything available. From the time of landing until after the battle of July 4 the brigade was fully equipped, but when the epidemic of fever set in the supply of quinine, antipyretics, and calomel were quickly exhausted. Beef extract and condensed food of some kind was most urgently needed, as the only articles of diet were bacon and hardtack. Quinine and antipyrine were furnished in quantities which, although not abundant, were sufficient to meet the requirements, but the beef extract and calomel were not to be obtained. In fact, until the latter part of August the supply of calomel was practically nil. After the surrender a medical supply depot and ambulance station was established under the control of Lieutenant Kennedy, assistant surgeon, United States Army. Under this officer's able management, a good supply and

variety of medicine were constantly on hand. Limited amounts of beef extracts and whisky were obtainable. This depot was discontinued in the latter portion of July, and another, under Major Summers, brigade surgeon, United States Volunteers, was established in Santiago. During a period of several days, until Major Summers was relieved by Major Carr, brigade surgeon, United States Volunteers, there was considerable difficulty in obtaining supplies, and for one or two days the division was almost destitute of medicine of any kind. Colonel Havard, the chief surgeon of the corps, made a limited purchase of medicines from a local dealer, and a day or so later the writer, upon the approval of the chief surgeon, made extensive additional purchases from the same source. The *Olivette* arrived about August 8 with an assortment of medicines, but the supply was limited and contained only two small bottles of calomel. Soon after this medicines of all kinds came rapidly pouring in, and, under the capable management of Major Carr, were available for almost immediate issue. Besides the purchases above mentioned, quite an amount of calomel and other drugs were bought by individual regiments.

In the opinion of the writer, many statements regarding the absolute lack of medicines were exaggerated. At the meeting of general officers and chief surgeons above mentioned a chief surgeon of a division stated and repeated that his division had been without medicine of any kind for eleven days. No such state of affairs existed in the Provisional Division, for the writer adopted the plan of going personally every morning to the supply depot and there ascertaining exactly what medicines were actually on hand and what expected, and in that way succeeded in never being totally without medicines, except for the couple of days above mentioned. By adopting this plan in all subsequent efforts he was enabled to equip a hospital which was, in the estimation of many, second to none in the corps. The medicines most sorely needed, and of which there was a decided deficiency, were calomel, bismuth, morphine, strychnine, and a tonic tablet of some kind. The latter would have been of inestimable value during the period of convalescence. After the arrival of Major Summers hospital supplies of all kinds, exclusive of medicines, were abundant and readily obtained.

One of the greatest difficulties encountered by the writer in the management of his department was the almost complete lack of experienced hospital stewards. There were a number of volunteer hospital corps men in the division, but, with the exception of two acting stewards, one each with the Third and Twentieth Infantry, there were no regulars on hand. These volunteers did excellent service, but, being unfamiliar with military matters, were unable to render such assistance in the management of affairs as the serious nature of the occasion demanded. With the exception of the chief surgeon, there was no medical officer of the Regular Army with this division, consequently nearly all of the executive work pertaining to his department devolved upon him, not only in his own office, but throughout the command. The qualifications of many of the acting assistant surgeons were far from satisfactory, this being especially the case with many who reported for duty toward the end of the campaign.

Colonel Havard on several occasions offered the services of female nurses, but the writer declined them, being at that time opposed to their use in the field. Before the final close of the campaign, however, he became convinced that his previous conclusions were erroneous and that female nurses were in every respect superior to males in all division and general hospitals. Their presence near the firing line during active hostilities would not be desirable, but from their work in this campaign there can be no doubt of their great value in military hospitals.

Before concluding this report the writer would like to state that the conduct of all the surgeons and hospital attendants while attached to the brigade and division was on all occasions exemplary. All duties were performed faithfully, and each man seemed to strive with all his energy to accomplish what was assigned him. As chief surgeon of the division he takes great pleasure in expressing his high appreciation of the valuable services rendered by Acting Asst. Surg. T. F. Aby, regimental surgeon, Twentieth Infantry. This officer's unceasing devotion to duty under the most trying circumstances was a matter of general comment. Acting Asst. Surg. C. E. Pöey proved himself an excellent officer, performing all duties assigned him with an energy and thoroughness that merits recognition. Majors W. P. Willard, surgeon, First Illinois, and R. A. Pyles, surgeon, First District of Columbia Volunteers, proved themselves efficient and valuable medical officers. The sanitary condition of these two regiments was fully as good as any in the division, and would compare favorably with that of the very best in the corps.

Capt. T. E. Roberts, assistant surgeon, First Illinois Volunteers, being the officer in charge of the division hospital, was in close official relations with the writer and cordially operated with him on all occasions. This officer, under the

direction of the chief surgeon, had exclusive control of the hospital, and by his energy, zeal, and constant attention to duty and high professional attainments contributed more than any individual toward its success. The regimental surgeons were unable to keep records during the campaign, owing to the immense sick report and total lack of clerical facilities. However, a list of all cases admitted to the division hospital from July 18 until its final abandonment on August 25 was maintained and will enable the writer to furnish your office in the near future with a report of sick. A consolidated numerical sick report of the division was made daily, beginning July 21, from which the following tables are compiled:

Consolidated sick report of the Provisional Division, Fifth Army Corps, from July 21 to August 25, 1898.

Civilians attached to command.....	1
Total.....	32

Maj. Patrick J. Brady, Ninth Massachusetts Volunteers, died suddenly of functional disease of the heart, July 29, 1898.

Maj. Michael J. O'Connor, Ninth Massachusetts Volunteers, died August 6, 1898; pernicious malarial fever.

Frank Talley, civilian, with First Illinois Volunteers, died August 4, 1898; remittent fever.

When the medical service was systematized after the surrender, each regimental surgeon was required to report daily all suspicious cases of yellow fever. There were 26 of such cases reported. They were in every instance isolated, but none developed into yellow fever. Only two of these were taken to the detention hospital, and, as far as learned, neither proved to be as suspected. Frequent examinations were made by Acting Assistant Surgeon Aby, whose residence had been in Louisiana for years, and who is perfectly familiar with the disease. He maintained throughout that he saw no case of yellow fever while on the island. From the clinical history of the fevers under treatment, the absence of death, and the fact that not a single case of yellow fever developed in the division during the journey north and subsequently, it seems to the writer very clearly demonstrated that his conclusions regarding the character of the fever were verified.

Pursuant to verbal instructions from the chief surgeon of the corps, the division hospital was abandoned on August 25, the tentage left standing, and all property remaining therein undisturbed.

REPORT OF COL. WILLIAM H. FORWOOD, CHIEF SURGEON, CAMP WIKOFF, MONTAUK POINT, LONG ISLAND.

[Dated October 18, 1898.]

The following brief account of my work at Montauk Point, Long Island, is respectfully submitted for your information:

I left this station July 31, 1898, in obedience to the following order:

[Special Orders, No. 177—Extract.]

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, July 29, 1898.

26. Col. William H. Forwood, assistant surgeon-general, United States Army, will proceed to Montauk Point, Long Island, New York, and there establish a temporary tent hospital of 500 beds, assist in the selection of suitable camping grounds and in locating wells for camps, and in general act as a sanitary expert in providing for the health and comfort of the troops to be sent to that point, and on completion of this duty will return to his proper station. The travel enjoined is necessary for the public service.

By order of the Secretary of War:

H. C. CORBIN, *Adjutant-General*.

In accordance with your verbal instructions I proceeded first to New York City and reported to Brig. Gen. G. L. Gillespie, United States Volunteers, commanding the Department of the East. The general had no instructions about making a camp at Montauk, and as there was no one up there to render any assistance I waited, reporting each morning until Wednesday, August 3. On that day Capt. J. N. Patten, quartermaster of volunteers, and Mr. Smith, of the Quartermaster's Department, reported, and we went together to Montauk in a special train with the president of the Long Island Railroad Company, arriving there at 3.30 p. m. We drove round and took a general view of the grounds.

Thursday, August 4, I studied the location more in detail, selected sites, and made plans for a large field hospital, a detention hospital, and for the detention

camps. The ground was then examined with a view to the location of wells and the best method of obtaining a suitable supply of water for the various widely separated camps and hospitals. It was apparent at once that drive wells were impracticable on account of the bowlders and compact layers of clay, and that in order to get a sufficient quantity of water one or more large deep wells would have to be dug. At Montauk Point the ground is covered with a mass of glacial drift, composed of large and small bowlders, boulder clay, and gravel, thrown up into hummocks, with intervening excavations everywhere over the surface. Under this the same layers are met with that prevail on other parts of Long Island and along the middle Atlantic coast, known in geology as the "Potomac beds," consisting of a series of clay, gravel, and sand of varying thickness, repeated one after another down to the primitive rock.

There is little soluble mineral matter except a trace of iron in the clays, and the water found in these beds is exceptionally pure. The water from wells at Montauk is therefore of the same character as that found at other points on Long Island, where its purity and fine quality are well known. It happens also at Montauk that the upper layer of the series is the clay several feet in thickness and very compact. This constitutes a safe protection against surface drainage. Water that accumulates from rain in the numerous basin-like excavations everywhere over the boulder drift does not percolate away rapidly into the ground, but remains for weeks in pools with clay bottoms, almost as impervious as cement, until it slowly disappears by evaporation or overflows when the rain falls again.

Long Island is celebrated not only for the purity of its well water, but for the abundant quantity to be obtained in the heavy layers of water-bearing sand and gravel at a depth of from 40 to 60 feet. Mr. C. A. Lockwood, an experienced well-digger from Jamaica, Long Island, appeared upon the ground, and Captain Patten immediately set him to work in a suitable location to dig a large well, which he thought would furnish 500,000 gallons, and which did eventually furnish more than that amount of excellent water per day. This method of obtaining water involved the erection of steam-pumping apparatus, large tanks, and extensive pipe lines, and the troops were soon to arrive. To meet the emergency until a well could be dug it was proposed to establish a pumping station temporarily on the shore of Fort Pond, near by, and to order up a number of water wagons at once. The water in Fort Pond is mainly from surface drainage, but at that time the surrounding region was clean and free from sources of contamination. The pond is nearly a mile long and half as wide and the water contains about 50 grains of salt to the gallon.

The grounds selected for a military camp at Montauk Point comprised an area several square miles in extent, uninhabited, and bare of trees, except a few stunted shrubs in sheltered places, which bore evidence of the high winds that prevail there at certain seasons. There are two large ponds or lakes and very many smaller ones scattered over an uneven surface, which is generally high and well drained, ranging up to 100 feet above sea level. The soil is a rich loam well covered with grass, and the landscape bordered on one side by the ocean and on the other by Fort Pond Bay presented a very picturesque appearance, but there were no hard roads and it was evident that much time and labor would be required to make and keep them in repair on this loam and clay with the heavy teams and the vast amount of hauling needed for a large military camp.

At the station we found only a single railroad track ending at a small shanty on a barren sand bar. There were no switches, side ways, platforms, storehouses, or other facilities for landing the thousands of carloads of freight, passengers, and material soon to arrive. On Fort Pond Bay there was a narrow pier and a small fishing wharf, but the pier was not wide enough for the landing of a transport vessel and the fishing wharf was so insecure that a danger signal was placed across the entrance to warn people from walking out upon it. Both of these structures had to be repaired immediately by the driving of heavy piles and the use of bolts and lashings. On this day, August 4, the movement of troops from Santiago, with thousands of sick, was ordered to begin at once, and three days later the first installment from Tampa came. There were no teams, lumber, tents, men, or means at hand to prepare for their reception. The enormous task and the grave responsibility before us was fully appreciated as we looked out over this bare and lonely region so soon to be crowded by an army of soldiers, more than one-half of whom would require hospital treatment.

I telegraphed the Surgeon-General for men of the Hospital Corps to come up at once with tents and rations. That night we returned to New York, the quartermaster to make contracts and order up men, teams, lumber, tents, boilers, engines, pumps, pipe, tanks, pile drivers, tugs, lighters, and a thousand things that were necessary for the work, and I to procure medical supplies, bedding,

furniture, cooking ranges, etc., which I did for a hospital of 500 patients. On Friday, August 5, Major-General Young reported in New York and went up to command at Montauk, and having completed my arrangements with the medical purveyor, I followed on the evening train.

August 6 was a day of waiting and expectancy. The railroad company was beginning to lay switches and side tracks at the station. Acting Assistant Surgeon Holmes reported for duty. I received instructions from the Surgeon-General, and laid them before the major-general commanding, to select detention camps for 4,000 men with detention hospitals convenient. These were already laid out awaiting the arrival of transportation, labor, and material for their construction.

Sunday, August 7, still waiting. I sent the following telegram to the Surgeon-General: "Tents, lumber, rations, and water expected soon. Sick men better not be sent here before Tuesday at the earliest." I also telegraphed to have a disinfecting barge from the Marine-Hospital Service sent to take charge of quarantine in the harbor and to disinfect, when necessary, the men's clothing and effects before landing. This was referred to General Wyman and acted upon promptly, and the barge *Protector* arrived August 11 with Passed Asst. Surg. G. M. Magruder, Marine Hospital Service, and three assistants. An attempt was made to haul some boards borrowed from the railroad company on their carts to the proposed pumping station on Fort Pond, but it was a partial failure; the lumber slipped from the carts and was soon scattered all along the road. These unusual objects in the way frightened the mules and one cart was turned bottom up on the Italian driver, who sustained serious if not fatal injuries to his back and internal organs.

Monday, August 8.—Late last night the Sixth United States Cavalry, under Colonel Anderson, came into the station from Tampa, Fla., with 36 sick, including typhoid cases, in charge of Dr. Ira C. Brown. This command had with it regimental wagons and ambulances, which was the first transportation available at Montauk. They brought also tents and fifteen days' rations. The sick remained on the cars until arrangements could be made to bring them up. One steward and 10 men of the Hospital Corps having reported from Governors Island, hospital tents were pitched on a clean, grassy slope at the site of the general field hospital. Cooking ranges, mess chests, and medical supplies in large quantity were already at the station. Tent flies were spread in the tents and hair mattresses and blankets laid on them, and the sick were soon made as comfortable as possible. Milk was obtained from a man at Amagansett, who came and entered into an agreement to furnish a regular supply each day as needed morning and evening, by train, but it had to be hauled from the station. Ice was purchased from Mr. Parsons, who had a small ice house near the railroad terminus. These supplies continued to be furnished in regular and increasing quantities as needed, and were kept up, notwithstanding many very liberal contributions from individuals and aid societies, because the latter supply was irregular and uncertain. Water was brought to the hospital in barrels on army wagons. On this day a small quantity of lumber and 12 carpenters were secured and the construction of hospitals at Montauk Camp began. The first structure built was the general hospital kitchen. While the building was being erected a cooking range was brought and set up inside ready for operation. There was no time or lumber then to lay a floor, although all the other kitchens were floored as they were built.

Dr. Ira C. Brown was placed in charge of the sick, with Dr. Holmes, Steward Neil, and 10 Hospital Corps men as assistants, all of whom worked hard and took excellent care of their patients. There was great trouble for a while, at first, to get carpenters who would work on the hospitals, because they were afraid of being subjected to quarantine. Then again, seeing an opportunity to profit by the sudden and urgent need of men, they all went on a strike for higher wages. When these difficulties were overcome rain set in, and for two or three days the work of construction progressed very slowly. Hauling, however, continued, and an effort was made to accumulate lumber and medical supplies. Bales of blankets, pillows, and mattresses, and boxes of drugs were piled up under paulins, and tent flies on scantling, and the very limited number of wagons and ambulances labored in mud hub deep until the animals were exhausted. Teamsters unfamiliar with the grounds lost their way and wandered off to other camps, and sometimes left their heavy loads stuck fast or upset in the ruts.

On the following day 14 carpenters reported, but August 10 there were only 2, until General Young came to the rescue and secured a force of 30. It rained hard all the afternoon, however, and little could be done. Captain McMillen was

detailed as quartermaster and commissary of hospitals, and Captain Sewell assisted in the erection and flooring of tents at the detention hospital, working all day in the rain. Tents were set up and floors laid under shelter of the canvas.

Passed Asst. Surg. J. J. Kinyoun, Marine Hospital Service, having reported on the 10th, I obtained through General Young possession of the fishing wharf on Fort Pond Bay and turned it over to him for a quarantine station and landing. Learning from Dr. Kinyoun that the Marine Hospital Service had at Philadelphia a steam sterilizer of 4-foot cylinder, with boiler complete, and not in use, I immediately took steps to procure it, and its prompt arrival was facilitated by the president of the Long Island Railroad Company, who had it forwarded by special freight. It was brought to detention hospital, where a frame building had been erected for it, and a sterilizing plant was established there to disinfect the clothing and bedding of patients from infected ships. I also telegraphed the same day to the Surgeon-General specifications for a suitable laundry plant to do the hospital washing. These were approved and referred to the Quartermaster's Department for construction, but the laundry was not completed and in working order until September 10, a month later.

On August 10 there were 1 steward, 2 acting stewards, 21 nurses, and 50 sick in the temporary hospital tents, which had been floored as lumber could be spared. The dispensary and office were up and occupied, and frames and platforms for tent wards were being built. Sick were being brought in from the camps. More medical officers were called for and quickly came. Letters and telegrams were received from people in all sections of the country offering money and supplies for the sick, and others, representing various aid societies, were on the ground ready to furnish anything needed or useful.

August 11 the Red Cross yacht *Admiral* came into the harbor loaded with 20 tons of assorted supplies, which were brought to the general field hospital, where a storage pavilion was erected for them 15 feet wide by 113 feet long. The Red Cross Society filled this storehouse to the roof, issued the articles freely, and kept it refilled from this time on to about the 18th of September. The Women's National War Relief Association, through Miss Helen Gould, selected a corps of expert cooks and assistants—distinguished chefs from New York and Boston—and placed them at my disposal for service in the general and special diet kitchens of the hospitals, where they remained and exercised their skill in preparing food for the sick. From this time on the army ration was supplemented by almost every article of food to be found in the larders of the best hotels in any city. All offers of aid from outside were promptly accepted, and bales and boxes and parcels arrived by every train. The finest wines and liquors, mineral waters, fruits, eggs, chickens, turkeys, game birds, meats, preserves, and all sorts of delicacies came from day to day in enormous quantities. Four vessel loads of supplies, mostly food and clothing, were landed at different times on the quarantine wharf and distributed to the troops sick and well in camp. A full carload of lemons was sent from California. Others contributed underwear, wrappers, sheets, pillows, cushions, etc., and one donation consisted of 500 reclining chairs, rockers, and sofas.

August 12 four wards at the general hospital were completed and 90 patients were in bed under care of nurses, with all kinds of medical and hospital property in abundance. At detention hospital 125 beds were ready for patients. On this day the Surgeon-General placed in my hands a check for \$1,000, and at a later date \$700 more, for the purchase of ice, milk, chickens, lemons, or whatever else might be needed for the benefit of the sick, and I was urged to spare no pains to provide early and promptly everything that might be required for their comfort. I was bound by no regulation forms, but had authority to order everything direct by telegraph, which I did.

August 13 the first transport from Cuba came into the harbor and 50 sick were landed and sent to general hospital on the following morning. The troops went to detention camp, where hundreds of tents had been already pitched and floored for their reception, under the direction of Brigadier-General Randall, who had command there. I selected Maj. J. P. Dodge, brigade surgeon, volunteers, a most excellent officer, and had him detailed to report to General Randall as medical inspector of detention camps, with instructions to visit daily the different regiments and detachments to find out what they needed and aid them in getting supplies. His report was forwarded to you some days ago. These camps were situated in a beautiful part of the grounds and kept in a most perfect state of police, and the exhausted and fever-stricken soldiers recuperated rapidly while there.

August 14 Maj. C. L. Heizmann, surgeon, United States Army, reported and was assigned to duty as surgeon in charge of the general field hospital—a difficult

and laborious position, as it afterwards proved to be, which he held until the close of its existence. He selected Maj. Ira C. Brown, surgeon, volunteers, as his executive officer. I had one medical officer assigned to duty at the landing to attend to unloading sick from the transports, and one was kept at the railroad station to get out freight and send it up to the hospitals; and later on another was required to be at every departing passenger train to look after the men going on furlough. From this time on there was no lack of carpenters, the weather was favorable, and hospital construction progressed rapidly.

The tent pavilion wards extended outward on either side from a central walk or covered way, with the kitchens and dining halls at one end and the dispensary, storerooms, offices, and officers' quarters at the other. The kitchens were ample frame structures, covered with oiled paulins and equipped with a number of the most approved modern cooking ranges and appliances for general and special diet. Adjoining each of these was a frame building of equal size, covered with boards and tar paper, and provided with a cold-storage room at one end for meat and at the other for milk, while the main portion was fitted with shelving for commissary articles. The wards were floored in one continuous platform 15 feet wide by 113 feet long, on which substantial frames were erected of 2 by 4 scantling for six hospital tents and two flies. One fly intervened between each two tents, to break the continuity and provide ventilation. The whole was then covered by tent flies in the usual way. Each pavilion thus formed a comfortable and convenient ward of 36 beds, arranged 4 on one side and 2 on the other, at right angles, in each tent, with a continuous passageway between. Space under the two flies was utilized for linen cases, storage, water coolers, oil stoves, bath tubs, buckets, etc. A linen case with shelves and locker was built for each fly in every ward.

The dispensary, general office, and storage rooms were of the same dimensions as the wards. The female nurses were quartered in a series of pavilions 15 by 42.4, being three continuous hospital tents with floor and frames. There were 27 of these pavilions for the trained nurses and Sisters of Mercy and others for post and express offices, chapels, mess halls, storerooms, isolation wards, dead houses, and for relatives visiting the sick. The female nurses were in three camps, each provided with their own kitchen, storeroom, and mess hall. The medical officers occupied wall tents with floors and frames, and the hospital corps and male civilian cooks, nurses, and laborers, common tents. At detention hospital the arrangement was varied to suit the ground and for better isolation of cases.

The number of carpenters kept on this work ranged from 75 to 100 per day, as many as could be conveniently supplied with lumber without diverting it from other purposes. Vast quantities of boards and scantling were required for flooring tents at the camps, and for storehouses, sinks, and other buildings; and teams that had to haul this and other freight were limited, as well as space for loading at the platforms. Soldiers' tents were floored in every camp as fast as possible, but the troops soon began to come in such numbers that this could not be completed in all cases until after their arrival.

August 15, the detention hospital received its first consignment of 60 patients from the *St. Louis*, an infected ship. There were then 210 sick in general hospital, with many vacant beds and plenty of supplies. Surface pipe had been laid to the hospitals, and water from Fort Pond was pumped direct. Work on the 30,000-gallon tank was in progress. The pump was connected with the well three days later, August 18, after which the water came from there. It was distributed through iron pipe laid on the ground. The total length of pipe laid amounted to about 12 miles. When the tank was finally completed and filled it appeared that by some mistake in calculation there was not sufficient pressure to carry water through the pipes, and direct pumping had to be continued as before. The tank was then used to fill water wagons for sprinkling the roads.

August 16, we had 750 beds. In general hospital 240 patients, and in detention hospital 62, with 150 ready to land. The yellow-fever tents contained 2 patients. There were tons of supplies at the station, which we were trying to get up. Roads bad and animals exhausted. Ambulances, 11. The one difficulty was then and had been from the start lack of enough transportation. The Surgeon-General ordered the erection of another hospital of 100 tents, and authorized the making of contracts with doctors, nurses, and cooks. Built quarters, kitchen, dining room, bath house, etc., for female nurses.

The question of sending patients, especially typhoid cases, to New York, New Haven, and other points, had been considered and authority from the Surgeon-General obtained; and on August 17 the Red Cross yacht at New York was offered and accepted by telegraph for that service. Miss Quintard and 13 female nurses reported, also several male nurses and cooks selected by the Women's National War Relief Association.

August 18, the general hospital was completed and work on the annex begun. The Red Cross yacht reported. It was a private yacht fitted up with elegance and comfort and had a capacity of 15 beds. One medical officer, 1 male and 2 female nurses with all necessary medical supplies were placed on board and regular daily trips commenced, carrying sick mostly to New Haven, New London, and Bridgeport hospitals. This convenient and comfortable little vessel continued in service without interruption until the breaking up of the camps. We needed a larger transport suitable for carrying the sick, which was supplied by the elegant passenger steamer *Shinnecock*, August 30. There was great pressure from men at the camps to get into hospital where delicacies were served and where furloughs with transportation to and from their homes were given. At this time the general hospital had 430 patients, 8 doctors, 50 hospital-corps men, 30 female and 8 male nurses, and 6 cooks; in detention hospital 300 patients, 7 doctors, 20 hospital-corps men, 5 cooks, and a proportionate number of nurses not stated. Regular medical supplies and delicacies reported abundant, with outside contributions coming in from all directions. Doctors, nurses, cooks, and hospital-corps men were employed and came in large numbers as the sick in hospital increased. Many medical officers were detailed to duty with the regiments in camp. The whole number of female nurses, contract and volunteer, was 312, of whom 103 were Sisters of Charity.

August 19, the transports *Comanche*, *Mobile*, and *Seneca*, with a large number of sick, were in the harbor. I had 250 vacant beds at the general hospital. After 150 of the worst cases had been brought up it was late and the animals were exhausted. Operations were suspended until the following day, when more wards were ready and all sick were taken in and provided for. Every patient as he landed from the ambulance was offered hot soup and milk punch from the hands of the female nurses and was placed in bed on a hair mattress.

August 20, 5 new wards at the annex were completed and as many more under way. There were a large number of vacant beds ready at detention hospital, and I felt confident of being ready to take the sick as fast as they would come, but I was anxious to find means of sending some to other hospitals. August 21, I therefore selected the *Rio Grande*, one of the transports, and placed Maj. J. L. Powell, surgeon, United States Army, in charge to prepare her for a load of convalescent sick to be sent away. The Surgeon-General telegraphed that the *Olivette* on arrival should proceed with her sick to Boston, which she did. Large numbers of convalescents able to travel were leaving the hospitals every day on furlough. Those from detention hospital were given a medicated bath and provided with a complete suit of new clothing just before going away, and all bedding and effects left behind by them passed through the steam sterilizer. At the general hospital and annex the sterilization of soiled linen from typhoid and diphtheria cases was accomplished by means of formaldehyde gas in a tight, double-lined frame building, erected and provided with a Kny-Scheerer generator.

On the 23d the *Rio Grande*, with Surgeon Powell and a corps of doctors and nurses and supplies, sailed, taking 300 convalescent sick to the military hospitals in New York Harbor.

August 24, heavy rain and wind prevailed during the night, but the tents on frames stood firm and the patients were comfortable. Just sixteen days had passed since the first nail was driven in the construction of hospitals at Montauk, and there were 1,700 beds ready for patients and 1,465 sick under treatment, besides all those who had been treated and sent away. The death rate was remarkably low, notwithstanding the extremely unfavorable condition of many cases as they came from the transports. The sick were receiving better attendance and more supplies than are usually furnished in city hospitals. Physicians, surgeons, and nurses of the highest skill and training were in waiting, and devoted themselves with zeal and energy to their duties. The Secretary of War visited the hospitals on the 24th and 25th, and again on the 30th the President, Vice-President, and party arrived and went through all the wards. The Surgeon-General came later, and under his instructions the sick were transferred as rapidly as possible to other hospitals in the neighboring cities and military posts. Accommodations were offered on all sides, and transports were sent to take as many as were able to be moved.

From the 25th of August to early in September patients came in great numbers from the transports and from camp, many intending to go on sick furlough, which they did at the rate of 200 a day. The capacity of the field hospitals was rapidly increased accordingly up to 2,500 beds, and three division hospitals were organized to accommodate 600 more. The total number of beds sent up from the medical purveyor in New York was 3,300, and other articles in proportion.

August 30, the steamer *Shinnecock* reported to me, and Maj. W. C. Borden, surgeon, arrived with the *San Marcos*. The latter vessel was not well suited to carrying the sick, while the former was splendidly equipped with every convenience and comfort, I therefore transferred Dr. Borden, with his medical officers, nurses, and abundant supplies to the *Shinnecock*, and placed 200 sick on board to go to the military hospitals in New York. This steamer made regular trips thereafter to New York and return every two days, taking from 200 to 300 sick each time.

St. John's Hospital, Brooklyn, sent up two cars, which made several trips with convalescents to that institution. The steamers *Fall River* and *Bridgeport* and other smaller craft came across the Sound and took patients to the hospitals in Providence, New London, and Bridgeport. The transfer of patients and the granting of furloughs continued, and the last of the transports from Cuba having arrived, there were, September 10, over 1,000 vacant beds in the three field hospitals that in the short period of one month, had been constructed and equipped and had served for the treatment of 9,000 patients.

In anticipation of the chilly nights and high winds of September, the Surgeon-General ordered that some of the tent wards should be boarded up and provided with stoves for better protection to those patients who for some time could not be moved. A simple plan for changing the tent pavilion into a frame ward had already been devised, and on September 10 window sash, stoves, hardware, etc., were ordered for 5 such wards, and the construction begun at once. Two of these were practically completed and others under way when my duties at Camp Wikoff having been completed, on September 12, I was relieved to join my proper station by the following order:

[Special Orders, No. 215.—Extract.]

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
Washington, September 12, 1898.

17. By direction of the Secretary of War, Col. William H. Forwood, assistant surgeon-general, United States Army, is relieved from further duty at Camp Wikoff, Montauk Point, New York, and will return to his proper station at the United States Soldiers' Home, Washington, D. C. The travel enjoined is necessary for the public service.

By command of Major-General Miles:

H. C. CORBIN, *Adjutant-General*.

REPORT OF COL. CHARLES R. GREENLEAF, CHIEF SURGEON, ARMIES IN THE
FIELD, ON THE SANITARY CONDITIONS AT CAMP WIKOFF, MONTAUK POINT,
LONG ISLAND.

[Dated November 1, 1898.]

In compliance with your telegraphic direction I have the honor to submit herewith a report upon "the sanitary condition of the troops at Camp Wikoff since its occupation with statement as to provisions for care of sick," etc.

In view of the fact that my service at this place commenced at so late a period, and I was ignorant of any of the antecedent historical data necessary for making such a report, I called upon the heads of the various departments at the camp, and, also on Colonel Forwood, who organized the hospitals, for statements of their work; these have been compiled in the following report:

In transmitting to me, under date of September 20, 1898, the data which is embodied in this report, Maj. Ira C. Brown, surgeon, United States Volunteers, states:

"I desire first to say that the medical officer in charge of the detention hospital has aided me greatly in obtaining the facts pertaining to that institution. I also desire to thank Lieutenant Durfee, of the Engineer Corps, for information that would be difficult to obtain without his cooperation. I am also indebted to the Signal Corps for kind assistance, and to the various aid societies who have been engaged in relief of the sick.

"It is only fair to say in this connection that the detention hospital has been made a model of its kind under the direction of Major Ebert, and that those in charge prior to his administration did heroic work at a time when there was no opportunity to perfect an organization.

"Major Almy, who had charge of the annex hospital, rapidly perfected his organization, and soon had a model institution, which remained a monument to his executive ability until all the hospitals were combined under the head of the general hospital.

“The success of the general hospital, through which the other hospitals received their supplies and to a certain extent their inspiration, is largely due to the efforts of Major Heizmann, who has been a tireless worker under many trying circumstances.

“Major Thomason, superintendent of wards of the general hospital, has been a very efficient officer, having had charge of the shipment as well as the receiving of most of the patients since he has been on duty here. His work has been so well performed that no accident or even discomfort to the patients has been noticed.

“The officers and contract doctors who have been on duty here in a professional capacity have all made good records for themselves, having worked faithfully and conscientiously for the patients intrusted to their care.

“It is a matter for congratulation that a hospital of this size, springing into existence in so short a time, should have such an able corps of physicians and nurses, and proves to my mind the unselfishness of the individuals connected with the medical department. The same can be said of the nurses, and when I speak of nurses I wish to be understood as including the Sisters of Charity and the trained nurses.

“Personally, I wish to thank you for the many courtesies received at your hands, and trust that the information furnished herewith may be of service to you in determining the success or failure of the medical department at Camp Wikoff.”

Water supply.—The following report in regard to the water supply, the pumps, the wells, the piping and hauling of water, the filter plant, etc., is furnished by Col. Willard Young, commanding Second United States Volunteer Engineers:

“The work of supplying water to camp was inaugurated by Colonel Hecker and Colonel Miller, of the quartermaster’s department, who had placed Mr. Clinton Smith in immediate charge, practically as superintendent of waterworks.

“Immediately upon the arrival of this regiment in camp, on August 15, a request was made for a detail to assist in laying pipe. A detail of 24 pipe fitters was at once sent out and proceeded to work under the direction of Mr. Smith, reporting to him each day until August 17, when charge of the water supply was turned over to me by verbal orders of Maj. Gen. S. B. M. Young, and Capt. Fremont Hill placed in immediate charge. At the time of my arrival, August 15, the condition of the water supply was as follows:

“A pump had been set up on Fort Pond and a pipe line laid from it to the general hospital, and a branch line to detention hospital, with one outlet at each hospital. Work was just being begun on erecting a tank on the top of the hill a few hundred yards from the pump. In all, about 6,000 feet of pipe had been laid. The pump was in operation, supplying water for all purposes from Fort Pond, and it continued in operation until August 18, when well water was first supplied. At the same time, by an agreement with Colonel Hecker, Mr. C. A. Lockwood, a contractor from Jamaica, Long Island, was engaged in sinking a well at a point a few hundred yards from Fort Pond, near the present camp of this regiment. This was the first well put down, and will therefore be referred to as the first well in this report. It is the one with the greatest capacity, and the one at which the filter plant is located. The agreement with Mr. Lockwood included sinking this and another well, on a site to be selected.

“The first well was connected to the pipes on August 18. It delivered an amount of water satisfactory to Colonel Hecker, and was approved by him. Mr. Lockwood then began to sink the second on a site which had been selected by Colonel Hecker and Colonel Miller. This well was located at the edge of Peters Run, in a place likely to receive the surface drainage of the detention camp and hospital. Seeing the danger likely to result from the use of this well I consulted with Major Meacham, surgeon of my regiment, who strongly condemned its use. I then reported the matter to Colonel Forwood, who also condemned it, and General Young ordered its abandonment. A new site on higher ground was selected, and another well put down by Mr. Lockwood. In driving this well, at a depth of about 35 feet a large boulder was struck. At this depth the well had a capacity of about 80,000 gallons, instead of 500,000 as agreed upon, and the supply has materially diminished since. It was not recommended for acceptance as fulfilling the contract, but was nevertheless accepted by Major-General Young on account of the urgent and immediate demand for water. This completed Mr. Lockwood’s agreement with Colonel Hecker.

“Owing to the small amount of water supplied by the second, or Peters Run well, and the great length of pipe line between the first well and some of the camps to which it was supplying water, as well as to the fact that it was not known how long the camp here would be maintained, and that in case of breakdown of the

pump or failure of the first well the camp would be left without water, I recommended that another well be put down.

"A contract was entered into with Mr. C. A. Lockwood to sink another well, to have a capacity of 500,000 gallons per diem, on a location near Lake Wyandanne, beyond all camps, and hence out of reach of contamination from surface drainage. This well was to be sunk for \$1,000. Mr. Lockwood finished work and withdrew his tools from this well on September 9, but the pump was not yet in the well at that time. The well was driven into fresh water at a depth of about 30 feet, and being driven deeper reached brackish water after passing through a clay stratum. The point was therefore withdrawn to where fresh water was found. This well yields only about 75,000 gallons per diem.

"The source of water here is undoubtedly the rainfall water sinking very rapidly through the sandy soil until it reaches a level somewhere near sea level, where it remains. There are in some places strata of earth or clay which cut off the flow in particular places, but there does not appear to be any continuous stratum of such material. The water in its natural condition is wholesome; the sole danger to be feared is that it will become contaminated with the impurities which will by degrees percolate down from the surface. Very little water runs off of the surface during a rain storm; most of it sinks into the soil. Most of the drainage is caught in basins and held to evaporate or slowly percolate downward.

"Not knowing how long the camp would be occupied, and seeing danger from contamination due to the presence of so many men and animals on the ground, I recommended that a filter be installed as an extra precaution against disease. This met with the approval of Major-General Young and yourself, and of the Secretary of War, who on August 30 authorized an expenditure of not more than \$7,000 for this purpose. A contract for the immediate installation of two filters with a capacity of not less than 300 gallons per minute was entered into with the New York Filter Manufacturing Company.

"The elevation of the ground occupied by some of the camps at Montauk Point varies from a few feet to about 100 feet above sea level. The tank erected on the hill a few hundred yards from the first pump was not at an elevation sufficient to make it of any value in supplying water to the camps, and it is necessary to pump directly into the pipes, at a pressure as great as 120 pounds, to force the water to all points on the pipe lines. The tank is filled at night and the water drawn off during the day for sprinkling purposes. Another tank has since been erected and is used for the same purpose.

"On August 19 I divided the work of looking after the various matters intrusted to me among the officers of the Second United States Volunteer Engineers, assigning to Lieut. Col. E. W. Burr and Capt. Fremont Hill the immediate charge of all the work on water supply.

"About 12 miles of pipe lines were laid up to September 15. On these lines there are 178 faucets, with about 477 feet of three-fourths-inch pipe and 37 feet of 1-inch pipe used as connections.

"The water has been partially shut off on a few occasions; once on account of breakdown of the pump installed at the well first put down, and at other times on account of the pipe being stopped up with large pebbles in an inexplicable manner.

"There have been in continual use 11 water wagons hauling water from the wells to the hospitals and to points not supplied with water by pipe lines, and in sprinkling roads in front of the general hospital and elsewhere. Since September 4 these wagons have been under my supervision, and Lieutenant McAndrews, Second Regiment, United States Volunteer Engineers, has had immediate charge of them.

"Owing to the limited supply of water, only the road in front of the general hospital was sprinkled at first, but since the completion of the tanks, which are filled during the night, there has been plenty of water for both purposes."

The following additional statement in regard to the water supply at Camp Wikoff is from the report of Lieut. Col. Charles Smart, made to the Surgeon-General September 10 in compliance with instructions:

"The water supply of the camp and hospitals is taken from a well about 200 yards from the eastern margin of Fort Pond. A free supply was found at a depth of 40 feet below the surface. Two strata of clay—one near the surface, the other at a depth of 25 feet—separate the well water from surface contamination. It is distributed by about 8 miles of pipe, and is on tap in each of the regiments. Two of the regiments, the Ninth and the Thirteenth Infantry, are provided with Pasteur filters in their company kitchens.

"The following tabulation shows the results of a chemical examination of the water by myself on Thursday, September 8, immediately after the samples were drawn:

	Fort Pond water.	Well water.	Tap water.
Chlorin	62.00	3.00	3.00
Nitrites	None.	None.	None.
Oxygen required.....	.375	.075	.075
Free ammonia.....	.0025	.002	.002
Albuminoid ammonia.....	.048	.003	.003

"The figures represent parts per 100,000 of the water.

"The Fort Pond water is unfit for use as a potable water. The other samples are organically pure.

"I have instructed a medical officer to examine this water from time to time to note any change in its character.

"With this satisfactory water supply and the good sanitary condition prevailing in the regimental camps, I have no hesitation in saying that the troops could stay on their present ground in winter quarters without any such outbreak of typhoid fever as has occurred at Camp Alger and at Chickamauga Park."

On September 16 Acting Asst. Surg. Llewellyn P. Williamson made an examination of the water and reported as follows:

"I have this day examined the water supply of this hospital and found it the same as when examined by Colonel Smart last week. It is pure water, albuminoid ammonia being almost entirely absent."

Transportation facilities.—In regard to the facilities furnished for transportation, Dr. Brown states:

"When the first troops arrived at Montauk (the Sixth Cavalry) there were scarcely any means of transporting supplies except that brought by the cavalry outfit. With the Sixth Cavalry came its sick, in the baggage car which arrived at Montauk about 4 a. m. August 8, 1898. There were ten ambulances parked near the station, and with these the sick were taken to what is now the general hospital. At that time there were no tents and no provision whatever for the reception of these men, and the medical officer in charge erected tents and had the sick (some 30 in number) under cover by 11 a. m. the same day. There were no cots, no mattresses, and only one blanket for each man. It was raining at the time and the ground was wet. There was no lumber on hand to put floors in the hospital tents, and consequently the patients were laid on the ground. These men were suffering from different diseases contracted in Tampa, Fla., and which developed on the way to Montauk. The greater portion had typhoid fever, quite a number malaria, a few cases of dysentery, and one of measles.

"There was no food for these men, nor could any be purchased at this end of the line. The medical officer, however, made arrangements on the way here to have milk sent by the first train arriving that morning, and to continue the supply until further orders. There was enough with the sick to last until the supply came.

"The medical officer found the location for the general hospital very early in the morning and before any of the officers here were at the site selected. Early in the morning General Young and Colonel Forwood came to the proposed site and did all that men could do to make the sick comfortable. Here was the first lack of transportation. There was some lumber at the station, but only one team to haul it. There were two carpenters waiting for lumber to go to work. When the officers in charge were able to get the lumber here it was used at once for putting floors in the tents erected, and the sick were transported to more comfortable quarters.

"Slowly the facilities for bringing up the lumber were increased, and also the number of carpenters. From day to day transportation facilities were increased until finally the lumber came in great quantities, and there were nearly 100 carpenters at work, but as the working force increased so did the number of patients. Transports commenced to arrive, and the sick came pouring in all day, and frequently into the night, and only by the constant application to duty by Colonel Forwood were the patients able to be housed, let alone making them comfortable.

"It was thought necessary to get the lumber up if other departments had to suffer, for without a house other material would be of no consequence. As soon as it was possible cots and mattresses were brought up and the patients were placed upon these mattresses and made quite comfortable. It was almost impossible to find transportation for medical supplies and hospital furniture. At first

there were no medical supplies here except those brought by the medical officer of the Sixth Cavalry, which consisted of one medical and one surgical field chest, which had done duty all the way from Tampa here, and were more or less depleted.

"Colonel Forwood had great trouble with the carpenters, who came from some distance and would not remain here over night, but insisted on returning by a morning train, and they seldom got to work before 9 or 9.30 in the morning.

"The quartermaster's department did not show the interest in the matter that the situation seemed to demand. It is not my purpose nor desire to reflect upon the quartermaster's department, but it is only simple justice to say that supplies came to this hospital only by the personal efforts of officers who should have been on duty elsewhere and not compelled to go the quartermaster's office and beg for supplies that everyone knew were badly needed.

"Another great obstruction to getting supplies promptly was owing to the fact that cars came in billed as medical supplies, and when located and opened the boxes were not marked with their contents. Consequently hundreds of packages came to the hospital which were not needed at the time and that have been used very little since. Many of the boxes were so large that there was not force enough at times to handle them. It would seem upon reflection that anyone intrusted with packing of supplies of this nature would see the necessity of having boxes not larger than two men could handle and of having their contents plainly marked on the outside.

"The story of transportation could be made a volume in size, but it can be covered in a single statement, and that is, that so far as this hospital is concerned the service rendered by the Quartermaster's Department up to the beginning of September was very poor."

Hospital construction.—The hospital construction was under the charge of Colonel Forwood, who worked hard all day and frequently far into the night, using every effort at his command to hurry along the building of the hospital. He was greatly handicapped in this work, owing to the lack of transportation and material for building purposes. The selection of ground for tentage was looked after by him personally. His desire to make his hospital a model one was appreciated by all who were on duty here, and his aim to make it a monument to the success of the Medical Department of the Army has been realized.

The success of this great hospital is due entirely to the efforts of Col. W. H. Forwood.

Surgical wards and work.—Colonel Forwood, in his plan for the construction of a hospital, laid out one row of tents for a surgical ward, one tent for disinfecting, one tent for giving anæsthetics and preparing surgical dressings, one for operating, and three for the reception of patients immediately after operation, and another pavilion of twelve tents for convalescent surgical patients.

The surgical wards were models of modern field equipment, the operating tent being provided with everything essential to asepsis and to facilitating operative procedures. An especial diet kitchen was completely equipped. The nursing was done by Sisters of Charity who had been specially trained in their surgical work, and the selection of supplies and apparatus was carefully made. The whole section was organized by and under the charge of Lieut. Col. Nicholas Senn, chief surgeon, United States Volunteers, who had for assistants Major Adams, chief surgeon, United States Volunteers, and Acting Asst. Surg. H. S. Greenleaf, United States Army. About 115 cases were operated on, with no deaths. As I understand that Colonel Senn is to publish the result of his work in these wards, I prefer to leave a description of the surgical work to him, merely adding that so far as my observation went the results show that it was the perfection of modern field surgery.

Annex hospital.—The general hospital, comprising 130 ward tents, and having a capacity for 780 patients, was soon found inadequate to meet the demands made upon it, and an annex, comprising 106 tents, and affording additional capacity for 636 patients, was commenced and completed in ten days. This was found to meet emergencies for a time, but it soon became evident that still more hospital room would have to be provided. Consequently a second annex was built, which accommodated about 400 patients, making the total capacity of the general hospital and its annexes nearly 1,700.

The work of the female nurses at this hospital has proven their worth for this particular service. They entered upon their duties with great enthusiasm, and while some of the male nurses complained of the amount of labor they were compelled to perform, there was never a complaint from the female nurses on account of their work or on account of the accommodations afforded them for rest. To them must be credited in a great measure the low death rate in this hospital, for on no occasion were the patients left a moment or neglected, and in this way medical help was summoned and many a patient received aid just at the time to save his life.

Total number of sick passing through hospital.—The records of the hospital show the total number of sick passing through the general hospital up to September 17, 1898, to have been 6,564; through the detention hospital up to the same date, 1,640; and those passing through the division hospitals brings the number of sick handled in the hospitals in this camp up to about 10,000. Estimated number that will pass through the general hospital, 7,264. Of course this does not include the furloughed men who pass through the hospital, which number several thousand. The above figures include only those who received treatment and were regularly admitted to the wards.

There were present 720 patients in the general hospital at the time the above statement was written.

Hospital staff.—The total number of medical officers, comprising commissioned regular and volunteer surgeons, and contract surgeons, on duty while the hospital was at its greatest capacity, consisted of about 40. In the early part of the establishment of the hospital the hospital corps comprised 1 hospital steward, 1 acting hospital steward, and about 60 hospital-corps men, which was later augmented by the addition of 2 hospital stewards, 9 acting stewards, and about 60 additional privates. The total number of female nurses since the establishment of the hospital averaged about 100; Sisters doing duty as contract nurses also about 100; contract male nurses on duty at the hospital averaged about 50. In addition to these there were about 15 contract cooks who were on duty at the general hospital. This estimate includes all those on duty at the annex hospital.

Detention hospital.—The following statement is from Acting Asst. Surg. H. C. More:

“This hospital was opened August 14, 1898, and I continued alone and in charge till August 18, 1898, when I was relieved by Captain Winter, having at that time about 85 patients, with no deaths. I then took charge of the quarantine tents until August 25, having exclusive charge of the five yellow-fever suspects, all of whom recovered. On that date the quarantine was raised, and I returned to duty in the camp. I took charge of half of the second row for one day and then of row 1, having 120 beds, all full, and also of the officers' pavilion August 28, and of half of row 8 August 29, other surgeons relieving me. On about August 31 my patients were moved to Pavilion G, where I still am.

“During this time I have treated patients as follows: Until August 18 about 85 patients, all here when I went to quarantine; August 18 to 25, 5 patients, all since recovered; August 25, about 55 patients in row 2, turned over to Dr. Carson; August 26 to 28, row 1 and Pavilion A, turned over to other surgeons, about 125 in all; since August 28, about 110 cases, of which 24 were sent to New York, 8 to general hospital, and the balance sent on furlough, with 2 dead; total 295 cases. Sent to other wards, 184; sent to other hospitals, 32; dead, 3; furloughed, 76.”

Captain and Assistant Surgeon Winter, United States Army, was placed in charge of the detention hospital August 17, 1898. He submitted the following statement:

“At that time there was 1 physician in charge, and 6 Hospital Corps men. Dr. H. G. More and Dr. W. R. Booth, with myself, constituted the medical staff for the next two days. There was no organization at the time I joined the hospital, although Dr. More had worked earnestly and faithfully to provide for the needs of some 60 patients. The kitchen was of ample size and range capacity, but for three days after taking charge there were no cooks save a few pronounced amateurs and neophytes in the culinary art. Fortunately the supply of prepared foods (cereals, etc.) was large and the sick were fairly well nourished. Of drugs there were almost none, most of the very essential articles being lacking. All of this was remedied the following day, when a good supply of all essentials, including two cooks, came from the general hospital, where all the officers cooperated most heartily with me in the effort to provide suitable supplies for the sick. During the next few days the accommodations of the hospital were materially increased by the very efficient work of the engineers under the command of Captain Cook. They pitched a number of hospital tents, set up bunks, and by putting in an abundant water supply solved a problem which had hitherto been a grave one. The increment of sick at this hospital was of the most uncertain character. One afternoon, with 6 Hospital Corps men, including cooks, to aid me, I fed 170 men of the Seventy-first New York Volunteers, who had just come off a transport and who clamored for food with the combined importunity of an India famine and a nursery. Fortunately there were some prepared soups on hand (the gift of Mr. Howard Townsend, representing the Red Cross), and with these and some bread I succeeded in staying the clamors of a lot of men who were eager as only a dearth of food can make men eager.

“The details of such a situation can scarcely be elaborated on paper. I could amplify the arrival of sick officers and men and point to the incoming of ambulance after ambulance, each with its full complement of sick, arriving from 10 p. m.

to morning, with no notification of their incoming and no provision for their reception. The provision of one blanket became a study, and to exercise discrimination in their distribution was tantamount, in the soldier's opinion, to a personal assault upon his rights. Transports bearing sick were constantly arriving at Montauk from infected ports, and the element of detention was insisted upon in no unequivocal terms by the authorities. To one familiar with the multifarious details of a field hospital, and cognizant of the time necessary to the establishment of such an institution, it will not seem unreasonable or even unfitting that accommodations should be crude and simple for the first few days. The supplying of kitchens, cooking utensils, cooks, tents, beds, mattresses, pillows, sheets, pillowcases, buckets, basins, commodes, bedpans, urinals, lights, dishes, tableware, towels, and the thousand and one other things necessary for the comfort of sick takes time, and when the recipients are dependent on a one-track railroad the difficulties are enhanced. I have distinct recollection of the great efforts put forth by the chief surgeon (Colonel Forwood) to provide for the needs of this hospital, and it was due to his untiring work that the hospital was in good running shape when I left it on the 23d of August."

Dr. J. F. Cronin, acting assistant surgeon, United States Army, was left in charge of the detention hospital after Captain Winter left, and remained in this capacity until August 27. Maj. R. G. Ebert, surgeon, United States Army, took charge of the detention hospital August 27, 1898. He states:

"At that time the hospital consisted of 60 single hospital tents and 4 pavilions of 6 tents and 1 fly each, as wards for patients, with 4 single tents detached some distance as an isolation ward; an administration pavilion of 2 tents and 1 fly; another pavilion of 3 tents and fly as bathroom, storeroom, and officers' dining room; a frame kitchen with 2 ranges; an incomplected disinfecting plant; a single wall tent for morgue; besides tents for officers and attendants.

"There were on duty 6 acting assistant surgeons, 41 privates of the Hospital Corps and privates who belonged to volunteer organizations whose status was undetermined, there being no orders or descriptive lists at this hospital, 3 civilian cooks, and 6 civilian and volunteer nurses. Supplies, implements, and medicines were limited, many necessary articles being entirely missing. The food appeared to be the regular army ration supplemented by a supply of milk. Clothing for issue to patients consisted of a small quantity of articles of uniform and some few Red Cross supplies.

"Physicians and nurses were overworked, and the wants of patients, in spite of best efforts of all, were not always promptly met. Records did not exist, except a directory of patients, in which some information relative to arrival and disease was noted. Stationery, books, and blanks there were none. No reports were rendered by the attending surgeons, and but a very limited number of 'registers of patients' were in use.

"Requests were made for a detail of 50 men from the line to assist in the work of attending to patients. This was filled imperfectly, and many of the men reporting absented themselves, while others, being themselves convalescents, became sick, 14 of the 40 present on second day after reporting being sick, as were also 10 of the Hospital Corps.

"Additional surgeons, entirely unfamiliar with army work and methods, reported the following week. Hospital Steward George W. Muller, United States Army, reported for duty on the 28th, and of his services I can not speak too highly. Being informed that no hospital stewards or acting hospital stewards were available, I requested and was given the detail of 3 privates of the corps in that capacity, and their services were of value.

"Female nurses under Miss L. A. Hughes, M. D., reported for duty on August 28; that day 9. The succeeding days these were increased by arrivals from New York, Michigan, and Massachusetts. The following table shows the status of hospital in various respects on the date I assumed charge; on the date of the greatest number of patients; on the date when orders were received to admit no more patients, and at present date:

	Aug. 28.	Sept. 5.	Sept. 11.	Sept. 17.
Surgeons.....	6	16	16	6
Hospital Corps	41	42	45	a 45
Male nurses	6	7	7	5
Female nurses		48	57	26
Cooks, civil	3	4	4	2
Laborers.....		46	44	8

a Includes 1 steward, 3 acting stewards; the others privates.

"Total number of patients received in hospital, 1,850; died, 62; transferred to other hospitals, 415; furloughed and sent to regiment, 1,107; remaining (September 17) 60.

"A diet kitchen was commenced on August 29, with 2 oil stoves and tomato cans as utensils. As rapidly as possible this was increased and now occupies a pavilion of 3 tents and a fly; there are in use 2 ranges and 6 persons are employed. I can not say too much of its value, and Miss Fennessy, in whose charge it was placed, is worthy of the highest praise.

"The policing of grounds was at first under charge of Lieutenant Rowell, Fifth Cavalry; afterwards Lieutenant Jackson, United States Volunteer Engineers. While the work of construction was continued (September 13), it was difficult to keep grounds in the best of shape; but after the arrival of sufficient noncommissioned officers to properly oversee employees, the work was done satisfactorily.

"Medical supplies were obtained from general hospital, and after the 4th or 5th of September were ample. Previous to that time there was a shortage in some drugs and at times the preparations were not such as were desired by the prescribing physician.

"Stores for the sick were obtained by purchase, and also from the Red Cross and many organizations for the relief of soldiers, and gifts of private individuals. It is difficult to tell how much was thus donated. The lack of clerical force and competent men to take control rendered an accounting of property impossible. It became the first and only aim to take care of the sick at no matter what expense of material or labor. The unpreparedness of this hospital to care for its sick at first and the constant building operations necessitated a vast amount of discomfort to patients and loss of time and labor to attendants; especially was this due to the system of single hospital tents.

"At present there is no complaint to be made excepting lack of noncommissioned officers and proper clerical assistance. It is only by working from 5 or 6 o'clock in the morning till late at night that progress can be made in straightening out records, which must be so valuable in the future to Government and patient; and here again must I give credit to Steward Muller, who, familiar with the papers of the medical department, is the only one competent to do this work besides myself of our present force.

"In conclusion, permit me to call attention to the magnitude of the task considering the limited amount of properly instructed material to do the work. A command equaling a regiment, a time of emergency, with more or less discordant elements, to be fed, clothed, cured, and furloughed is a difficult task to accomplish within the space of a month, and the many imperfections must be given the benefit of this excuse. To Dr. C. M. Lee, whom I appointed executive officer September 1, and to the many willing volunteer aids in the work, I desire to give this token of my appreciation of their services."

Construction and equipment of steam laundry.—The provisions made in connection with the laundry work of Camp Wikoff are very fully set forth in the following statement of Capt. G. L. Goodale, assistant quartermaster, United States Volunteers:

"I arrived at Montauk at noon August 12, 1898, to take charge of the work of constructing and equipping a steam laundry for hospital work.

"On the morning of August 13 location for building was selected at a point southwest of the infantry camp, between Atlantic Ocean and Fort Pond; this place being chosen that fresh water for laundry work might be drawn from Fort Pond and refuse water conveyed to the ocean, thus avoiding all danger of infection from any work done. On this date I made contract with American Laundry Machinery Company, through their New York branch, for all necessary machinery to fully equip a laundry capable of doing the work for all hospitals—general, detention, and division. Price to be \$3,000, they to place the machinery in building in good running order in nine working days after building was ready and machinery had arrived there. In the event of failure on their part to do the work in the specified time it was stipulated and agreed that they should forfeit \$50 for each and every day's delay. Arrangements were made by Colonel Hecker with Mr. Hyde, of Grace, Hyde & Co., for erection of building.

"August 15 the greater part of lumber for building arrived at wharf, but as all wagons possible were being employed in transporting troops and baggage, arriving from Cuba, to camps, it was not until the 17th that any was teamed, and then only a small quantity. Not until the 21st was all the lumber and materials for building upon the ground.

"August 18 carpenters began work in a small way, and on 18th sills for building were laid.

"August 22 I notified the American Laundry Machinery Company that building would be ready for machinery Wednesday morning, August 24.

"August 24 machinery arrived at railroad station. Mr. White, chief engineer of company, and 3 assistants came to place same in position. - Owing to lack of transportation, delay occurred in getting machinery to building, the last piece arriving on the afternoon of 26th.

"September 1 received authority from Quartermaster-General to employ civilian laundrymen.

"September 3 started work, all machinery having been put in place in running order completed on the 2d. Owing to the difficulty in getting employees to come here from New York, had only 5 men of the necessary force of 12.

"September 4, after working one day, it was demonstrated that the pump put in by the contractors would not give sufficient water supply from the location of pump house near the shore of Fort Pond. I at once wired the company that a larger pump would have to be supplied. On the 8th a new one arrived with men to put it in position. Change of pumps and laying of larger steam pipes to pump house completed on September 10.

"September 7, employees arrived from New York, completing requisite force—10 civilians, 2 detailed men.

"Water is obtained through 425 feet of 1½-inch iron pipe from Fort Pond, and refuse water conveyed to ocean through 650 feet of 3-inch pipe. Pipe furnished and laid by Second Regiment Volunteer Engineers, Colonel Young commanding.

"Handicapped though the work has been by delays caused by want of employees for four days, and short supply of water necessitating many stoppages from September 3 until September 10, fair progress has been made; from September 3 to September 19, inclusive, 23,670 pieces of work were sent from laundry to different hospitals.

Medical supplies.—So soon as it was determined by the Government that a camp should be made at Montauk Point, the Surgeon-General gave orders to the medical supply officer at New York to ship to that point articles of every kind that might be necessary to equip the hospitals in the most thorough manner, and to spare neither labor nor expense in the work.

He instructed Colonel Forwood to call by telegraph for additional articles, and directed the medical supply officer to honor all such requisitions without delay or formality.

A vast amount of property was thus accumulated, and although the large and numerous hospitals were fully equipped there was at the time of my visit a sufficient quantity of surplus stores to have equipped another hospital of equal size.

An idea of the amount of this kind of property that was furnished by the Medical Department may be gained from the fact that of beds and bedding alone there had been shipped 3,452 cots, 3,000 mattresses, 18,254 sheets, 7,675 blankets, and general medical supplies such as drugs, hospital comforts, surgical instruments and appliances, furniture, table and mess ware, and other miscellaneous property for 12,000 men, comprising no less than 54 carloads of supplies. In addition to this, there were sent for the division field hospitals 400 cots with bedding complete, all without formal requisition, but solely on the order of the Surgeon-General, from Washington. Five thousand dollars of public money was also sent to a medical officer, appointed as disbursing officer, for the purchase of such property as was not on the supply table and for the payment of employees.

Food supplies.—In regard to the supply of food in the early days of the camp, Dr. Brown states: "That at the beginning the food was scanty and very poor when it reached the hospital. Meat, for instance, had to be sent up here in ambulances that were used for transporting the sick, and was then thrown on a crude table covered with dirt and often exposed to the sun, so that it soon became necessary to bury it. When we were able to cook it it was so full of grit that it took a strong heart to be able to masticate it.

"Milk came spasmodically and usually soured late in the afternoon, leaving us to depend upon canned milk for our night supply.

"For three days there was very little food of any kind except milk, which fortunately supplied the patients, and the help could get along under the circumstances. One day we would be out of meat, the next day out of bread, and so on; when we had a supply of one thing we were all out of the other. Here, too, was the lack of transportation plainly visible. From about the 18th of August the supplies came in in large quantities and very good in quality, so that latterly we actually had more provisions than could be used. And the canned goods and other articles not perishable accumulated so that we have quite a reserve stock on hand."

Sanitary work done on grounds about general hospital.—The following is a report of the sanitary work done on the grounds about the general hospital by the Second United States Volunteer Engineers, under the general supervision of Maj. Franklin A. Meacham, surgeon Second United States Volunteer Engineers, by order of Col. Willard Young, commanding Second United States Volunteer Engineers:

“On the first visit of the Secretary of War to this camp, August 24, he found the grounds about the general hospital in a deplorably unsanitary condition. Desiring to remedy this, he, together with Maj. Gen. Joseph Wheeler, called Col. Willard Young in consultation as to the best means of accomplishing this much-needed reform. As a result of this conference the Second United States Volunteer Engineers were charged with this, doing the work.

“August 24 orders were received by me from Col. Willard Young to proceed to the general hospital and take entire charge of the sanitary work about the grounds. This was in no way to interfere with the internal management of the hospital. All work engaged in by the several details of the regiment, except those laying the water pipes and the laying out of the infantry camps, was to be suspended, and all efforts to be turned toward the rapid accomplishment of this much-needed sanitation.

“Accordingly, August 25, at 7.30 a. m., I proceeded to the general hospital with 6 officers and 150 engineers and inaugurated the work. Later in the day the Secretary of War and Maj. Gen. Joseph Wheeler visited the grounds, and reiterated the instructions given me by Col. Willard Young: Use every possible effort to remedy at once the existing insanitary condition; to continue in charge and see that the grounds were kept in order, and that all necessary help would be furnished; to use freely their names in ordering any necessary supplies or procuring needed assistance. In accordance with these instructions, Lieut. Oscar S. Durfee, Second United States Volunteer Engineers, by order of Colonel Young, reported to me with 67 quartermaster laborers and 2 foremen, with 10 wagons and 7 dump carts on the following morning. These laborers took the place of the engineers as soon as their labors had been completed, and have since carried on the general work under the immediate supervision of Lieutenant Durfee, assisted by 4 non-commissioned officers of engineers. This work was greatly facilitated by large details of men and wagons sent from the cavalry regiments.

“In looking over the ground I found that there was the greatest need for commodious and comfortable latrines, placed at a safe and respectable distance, and the immediate stoppage of the soiling of the surface of the ground, in many instances through the carelessness or ignorance of the attendants employed in the wards. The latrines already in use were small and placed only a few feet from the wards. Those at the northeast corner of the main hospital were placed on swampy ground and could not be dug over 2 or 3 feet deep. Similar latrines were placed at the northeast and northwest corners of the main hospital on high and dry ground. These latter were on the main approach to the hospital. Others were located on the east and west sides of that part known as the annex. These latrines were foul smelling and the men using them plainly exposed to public view. They were so small that they could not accommodate the great number of men, and in consequence the surface of the ground around about them was often befouled. Two men only had been employed in digging, filling, and disinfecting these latrines in a desultory way. From the constant necessity of moving the latrines the ground around about was rapidly becoming honeycombed and a great source of infection. Screens were at once built around these latrines, which were used while other and more comfortable ones could be constructed. The place chosen for these new latrines was to the north of the main hospital, where the necessary depth of 8 to 10 feet could be had. To reach these it was necessary to build a plank walk, with railings, 270 feet long across the swamp. Here latrines were built as follows:

“A latrine consisting of two sinks, each 100 feet long, 8 feet deep, and 4 feet wide, dug parallel to and 6 feet from each other and covered by light frame buildings 7 feet in front, 5 feet high in rear, facing each other. A board fence 3 feet high between the two sinks gave the necessary privacy and economized lumber, the front of the buildings not being boarded up. The seats were the ordinary holes, 10 inches in diameter and 2½ feet center to center. At each end a lateral trough 6 inches wide and 4½ feet long, leading into the sink, served as a urinal.

“The latrine was economical and served its purpose admirably. A hinged door on the bottom rear gave easy entrance for disinfectants. The building was strong enough to permit being moved to new sinks as often as necessary. Suitable openings were left for emptying bedpans, etc.

“Other and similar latrines were built for the annex, the officers, and nurses. Six laborers were assigned to the care of these latrines, keeping the seats and

floors clean, and attending to the disinfection and the filling in of the sinks. All sinks were disinfected every hour during the day in the following manner: A liberal amount of lime was thrown over the fecal matter and over this fresh dry earth. On top of the dry earth was thrown a layer of copperas. In this way the fecal accumulation of the next hour fell in disinfectants and was in turn covered with lime and earth. There was scarcely any odor when properly attended to. This method took the place of the individual disinfection and covering of stools with dry earth as recommended by most sanitarians as the best, but in this special case impracticable owing to the sick and weakened condition of the men.

"The ward attendants, in many instances private soldiers with no knowledge of the modes of conveying infection, were in the habit of emptying bedpans and vessels on the surface of the ground about the latrines, in the roads, gutters, and swampy pools which surrounded the hospital. The garbage cans and barrels placed between the wards as receptacles for table refuse were even used as dumping places for the contents of bedpans and commodes. It was the custom also of these same attendants to wash these vessels in the swampy pools. These methods of conveying infection not only prevailed openly in daytime, but under cover of night were even more pronounced. To put a stop to these nuisances, on August 29 I applied in person to Maj. Gen. S. B. M. Young for a guard. One officer and 30 men reported to the hospital for guard duty and ten posts were stationed about the wards. In this way these insanitary offenses were stopped and the ward attendants made to empty the stools properly into the sinks.

"In order that there should be some place for cleansing the soiled bedpans, etc., a water plug was placed on line with the latrines and a hole 6 feet square and 10 feet deep was dug. This was covered after the manner of a "hopper," in which the vessels, etc., could be cleansed and the hole kept thoroughly disinfected.

"Garbage from the kitchen and wards, which was heretofore hauled to the beach in front of the First Division infantry camp, was now hauled to large refuse pits, properly disinfected, and buried. So great was the accumulation of refuse that it was some days before any impression could be made on its removal. This refuse as far as possible was separated into the destructible and burned, such as clothing brought from Cuba, such ordnance stores as haversacks, belts, etc., boxes, etc. The indestructible was buried. All materials left after burning were raked together and buried.

"Soiled and infected bed linen, blankets, mattresses, and pillows were thrown out and had been piled up under each ward. They were wet and moldy, foul smelling, most obnoxious to the sight, and a source of infection to the occupants of the wards above. It was now determined to haul the bed linen to the laundry and burn the infected bedding. At that time this was the only feasible method of disposing of this linen. The completion of the laundry being delayed, this infected material accumulated there in large quantities, which would have been a great source of infection had it not been properly ordered burned by Maj. Gen. S. B. M. Young, September 10. After this date no linen was destroyed, excepting cast-off clothing, as the laundry was now able to take care of it. All linen and blankets that had been laundered were delivered to the hospital under our detail.

"On account of the great amount of dust, on August 29 I obtained from Maj. Gen. S. B. M. Young an order for sprinkling carts. From this time on the entire grounds and wards about the hospital were free from dust.

"Hitching posts were constructed at a distance from the hospital, and orders issued that all horses and conveyances should be kept out of the avenues about the hospital headquarters and away from the kitchens, where they were wont to congregate.

"In addition to the building of all latrines, Capt. Barton F. Dickson, with 2 officers and a detail of 12 noncommissioned officers and 48 men, constructed all carpenter work. The kitchen of general hospital was properly floored after 12 inches of ground, indescribably foul by soakage, was removed. Platforms and troughs were built around all water plugs and filled around with sand. Three hundred feet of troughs were made for carrying away waste water. Large boxes were placed between wards as receptacles for refuse and soiled linen. Captain Dickson and detail were at work from August 25 to September 4.

"Capt. A. W. Cooke, with detail of 3 noncommissioned officers and 35 men, improved the roads leading to the hospital as well as those around about the hospital. Many swampy places were filled in with sand and box drains put in where necessary. The hospital tent wards were trenched. The soaked earth around kitchens was removed, filled in with sand, and drained. Captain Cooke and his detail were at this work from August 25 to September 5.

"Sufficient force for the policing and the sanitary work of the detention hospital and camp had not been provided. Refuse pits were placed too near the

hospital, and the soiled and infected linen was thrown upon the ground between the wards, nor was there any surface or hydrant drainage. From September 8 to September 25 Lieut. C. F. Jackson, Second United States Volunteer Engineers, was placed in charge of this work under my supervision. New latrines were built and pits for garbage from kitchen and wards were dug at a safe distance from hospital. More garbage cans, and receptacles for soiled linen and paper were procured. Grounds about hospital were thoroughly policed, and lime sprinkled freely where refuse had been thrown. The latrines were now disinfected on the same plan as at the general hospital. All garbage was hauled to refuse pits and buried. The destructible refuse was burned and the indestructible buried. Drains were constructed for surface and hydrant water.

"The general policing of the various vacated camps was done by Lieut. Arthur T. Ballantine and quartermaster laborers from September 19 to 23.

"In a few instances only were any of the camps left in a clean and sanitary condition. This was notably so in the case of the artillery in the detention camp and the First and Twenty-fourth Infantry. The camps vacated by the regular troops were in an average sanitary condition only, while the camps left by the volunteer regiments were in a deplorable state. Here were to be found numerous infractions of the elementary principles of sanitary science, the natural causes of infectious diseases. There was evidently no attempt at policing. In many cases it was found the unoccupied tents were often used as latrines. Paper, boxes, ordnance stores, etc., were scattered in all directions. Some tents were trenched, others not. Wagonload upon wagonload of commissary stores and quartermaster stores were left upon the ground.

"In some camps the sinks were not dug over 2 feet deep; in other camps they were using buildings which rested on the surface of the ground and no holes dug at all. No effort was made to take care of their sinks in any manner whatsoever. Refuse and garbage were scattered over the surface of the ground or left uncovered in the garbage pits. The camps of the Seventy-first New York and Eighth Ohio, Thirty-third and Thirty-fourth Michigan, First District of Columbia, Eighth Massachusetts, and the Rough Riders were left in the above deplorable insanitary condition."

Protection against fire.—Large barrels and galvanized iron tanks, filled with water, were placed at the front, rear, and sides of each ward, into which a quantity of salt was thrown, for the double purpose of keeping irresponsible persons from using the water for other purposes and increasing its efficiency in extinguishing fire. Inside each ward were placed three brass fire extinguishers, which were easily handled and could be carried by a child and operated by simply inverting the cylinder. Each will throw a stream of water one-fourth of an inch in diameter 30 feet and will continue in operation for ten minutes. These, together with the surveillance of outside sentinels and the constant watchfulness of those on duty in the wards, both day and night, it is believed afford positive assurance that there is no danger of spread of fire. The wooden buildings for the sick are provided with a door at each end and two on each side for exit in case of fire. Axes are kept under guard in a central location so that they may be had at any time in case they are needed. The reason they are not distributed among the wards is that it is feared that patients in their delirium might obtain possession of them if they knew of their whereabouts, as we have found that many of the delirious patients are anxious to get hold of weapons.

This protection is not only for the wards, but for the storehouses as well, where the Government property is kept. In a word, every precaution has been taken to insure our safety against fire.

Policing of the camps.—With regard to the protection afforded by the provost-marshal in policing the camps, etc., Dr. Brown submitted the following statement:

"Capt. George F. Chase, Troop D, Third Cavalry, was appointed provost-marshal, and his guard was so effective that it was impossible to get in or out of detention hospital without a pass from the proper authorities. When visitors and others came to the general hospital in great numbers, Captain Chase gave us great relief by holding up people who had no other business about the hospital than sight-seeing. It was not only in the protection afforded the hospital that Captain Chase assisted us, but I might say in every way. His duties were constantly enlarged, until, if anything was wanted from about the station, and wanted badly and quickly, all that was necessary to do was to notify Captain Chase, and it was forthcoming at once. This is mentioned because it was so unusual at times to get prompt attention, and to receive supplies badly needed, from any of the other officers on duty about the railroad yards.

"Part of the work of the provost-marshal was looking after the sanitary conditions of the whole camp, which was done in a very satisfactory manner. In this connection Captain Chase says:

"It being part of my duty to look after the sanitary conditions and to see that the policing was properly done, I am warranted in saying that, with the exception of the Eighth Ohio, the Seventy-first New York, and the camp of the Rough Riders, it was perfectly done. The Seventy-first New York, the Eighth Ohio, and the First Volunteer Cavalry left Camp Wikoff and their camp sites in a filthy condition. It was necessary to employ a large gang of men for several days to get these camps cleaned up and in sanitary condition."

Sanitary condition of troops at Camp Wikoff.—In regard to the sanitary condition of the troops at Camp Wikoff, Maj. H. S. Kilbourne, under date of September 17, reported as follows:

"The Fifth Army Corps arrived at the camp by transports from Santiago de Cuba during the latter days of the month of August and the first two weeks of September, 1898, having about 1,500 men on sick report, in addition to those transferred from the general hospitals at Siboney—in all about 2,000 sick, with increasing numbers.

"For the reception of the sick a detention hospital and a general field hospital were established at this station, with a capacity sufficient to accommodate the more serious cases of illness and abundant supplies.

"In order to provide for the less serious cases of illness among the troops, three additional field hospitals were installed by the division surgeon of the Fifth Army Corps, with a capacity of 180 beds each, new tents being obtained from the depot quartermaster at Montauk for this purpose, and furniture and medical supplies from the purveying depot in New York City.

"From the supplies of this hospital necessary medicines were issued to regimental surgeons as they were required.

"I assumed the duties of chief surgeon of the Fifth Army Corps on September 6, 1898, since which date there has been no lack of supplies and accommodations for the sick of the command.

"Owing to the large number of sick to be provided for, and to relieve the congestion of the hospitals, the transfer of sick soldiers by rail and transports to other points and the furloughing of convalescents has been regular and continuous since the above-mentioned date.

"The movement of the troops to other stations has been in progress for the past ten days. At the present time a majority of the troops are arrived or en route to other stations, and there are remaining in the hospitals a comparatively small number of the sick.

"The site of the camp is, in my opinion, well chosen. The locality is accessible by both land and water transportation. Proximity to the sea, an open, rolling, and elevated country, and an abundant supply of pure water are afforded here.

"The conditions to be dealt with here are unprecedented. The victorious army returning to the United States from Cuba was greatly debilitated by the exposure and fatigues of the campaign. A majority of both officers and men are enfeebled by the incessant labors of an active campaign in a tropical climate. And while now, after the fact, it is not difficult to perceive how the contingencies of war might have been better appreciated and met, I am able to say with confidence that all resources available in this place for the mitigation of the suffering of the troops have been continuously employed.

"Timely aid has been afforded here by various organizations and individuals, the Red Cross Society, the Massachusetts Aid Society, the Christian Brothers, and especially the service of the special diet kitchens, organized and conducted by prominent women. All these have been found valuable adjuncts to the Army of a nation whose custom it is to declare war and afterwards prepare for war."

Maj. H. S. T. Harris, on the same date, also reported on the sanitary condition of the camp as follows:

"I arrived at Montauk Point August 17, with the First United States Cavalry and a battery of the Fourth Artillery, in the steamship *Matteawan*. There were some 70 men on sick report in the ship, and the whole command was anæmic and wasted from malarial infection in Cuba to a greater or less degree.

"We found well-equipped hospitals already established for the reception of our more serious cases of illness (some 20 in number). The command found tentage already pitched and floored for its reception in the detention camp, so that there was no work devolving upon them save the preparation of their own meals.

"Upon my release from detention camp, I found that the camp for the division was pitched before the arrival of the troops on a most excellent site as regards

soil, drainage, situation, etc., the men being again spared the labor of making their own camp. The utmost care was used in preserving the cleanliness of the company kitchens, company streets, and the camp site in general, a police officer having been appointed in each brigade with full powers to report upon and correct any laxity in individual troops or regiments. Both quicklime and dry earth were used in the men's and officers' latrines. The water supply has been excellent, in my opinion, coming from deep wells lying below one or two impermeable strata of clay.

"Bed sacks were provided by the quartermaster's department and filled with straw. Many of the men constructed bunks for themselves out of lumber furnished by the engineers. New clothing was drawn in the usual manner to replace the worn articles brought from Cuba and Tampa, and free issues have been made to sick men leaving on furlough or going to hospitals.

"The regular ration has been added to by extra issues of ice, milk, eggs, oatmeal, canned soups, canned goods, and many other articles. These things, aided by many donations from various societies and individuals, have made such a profusion of diet, that in many instances the troops have refused to draw all their fresh meat and bread.

"Montauk Point is an ideal site for what has been really a malarial convalescent camp, swept as it is by refreshing ocean breezes, and presenting no exuberant vegetation to act as a means of fresh infection.

"The greater proportion of the sick at this date have either gone home on furlough, been sent to hospitals, or returned to duty. The remainder of the command has not fully recovered its former health and vigor, but is making as rapid progress as can be expected in view of the virulence of the malarial infection to which it has been exposed.

"Some cases of typhoid fever have been brought here from Southern camps, some few from Cuba. All suspicious cases which have come under my notice have been sent to general hospital, so that I am unable to state definitely how many, if any, cases have originated in this camp. Certainly, every practicable precaution in the matter has been taken.

"The medical care of the sick in this camp has been most careful. Both medical and line officers have taken the greatest interest in the matter, and delicacies have been furnished not to be surpassed in any hospitals in the country. Neither labor nor expense has been spared. So much has been furnished in the way of diet and help in its preparation (diet kitchens), that of the large sums available for this purpose only a small proportion has so far been used."

The following "Brief memorandum of the impressions produced as a result of my observations since I reported at Camp Wikoff, August 20," is furnished me by Maj. J. C. Powell:

"1. *As to the condition of troops on their arrival.*—From observing the officers and men on landing from transports and very soon afterwards in camp, their general appearance was that of men who had just gone through an extraordinary tax on their physical powers. Men who were not actually on sick report were wan, sallow, and greatly reduced, and all the conditions seemed present for the quick development of acute paroxysms of disease under but mild exciting causes.

"2. *Effect of arrival at Montauk Point.*—There was no instant improvement in their condition as result of the change from the hot and exhausting equatorial zone to the mild and health-giving atmosphere of Montauk Point that prevails during the summer season. What change has taken place has been gradual, for to the conditions of disease brought along with them was added, as has just been suggested, that of thorough exhaustion. With the seasonal changes taking place now, many cases have been seen where disease had been lurking in ambush, so to speak, but with the advance of autumnal chill and damp it has been unmasked and developed into acute paroxysms.

"3. *Capability for the performance of duty.*—It would be impossible to express an accurate opinion as to the amount of disability, but it was unquestionably very large, and even among those who were not on the official sick report I do not believe over half were equal to the proper performance of all their duties. Aside from the effects of a campaign, which it is agreed was exceptional in its demands upon the physical powers of officers and men engaged, the disabling character of the diseases from which they suffered—malarial and typhoid—is to be borne in mind on account of their prolonged effect, as it requires in a majority of such cases many months before the subject is able to shake off entirely the profound toxæmia that results.

"4. *Care of sick and well.*—Nothing more could have been done under the circumstances. No more eligible site, in my judgment, could have been selected as

a camp for the command than Montauk Point, limiting this remark, however, to the summer season. The rapidity with which hospital accommodations were prepared for the sick and properly equipped camping outfits set in place for the apparently well, in my judgment, reflects great credit upon those engaged in that work, when it is remembered that such a mass of troops was rushed in with scarcely a moment's warning.

"5. The camp itself.—For a summer sojourn of a couple or more months, this is in my opinion an ideal camp. In fall or winter I believe it to be the reverse. Climatic and weather conditions then exist favorable to the development of pneumonia, bronchitis, and allied diseases, and especially would this be the case with those who were in an enfeebled state in consequence of physical exhaustion or an impoverished state of the blood. The water I believe to be good, notwithstanding the insane crusade against it by the ignorant. For myself, I have taken it without boiling from all parts of the Point without the least inconvenience. Reference to some new features in military-hospital management may not be out of place. I wish to allude to the value of trained female nurses, which has been a revelation to me. The diet kitchens, too, where provisions for the sick, and especially for the very ill on such a large scale becomes necessary, are invaluable accessories."

Facilities afforded relatives and friends seeking information.—The executive officer of the general hospital, whenever it was possible to ascertain the information, telegraphed to the friends or relatives the condition of those they were interested in. These, in case of a fatal termination, were at once notified of the death and information was solicited as to the disposition of the body. Those visiting the hospital to see their relatives and friends and who desired to remain overnight were comfortably tented, and provided with cots, mattresses, and blankets and permitted to eat Government rations. They were aided in every way possible to locate their friends, and if located, every facility was offered within our reach to afford them the means of visiting those sought for.

Hysterical women and those seeking notoriety were not encouraged to remain here. Notwithstanding this, they continually hung on our flanks until quite recently, when, as the excitement began to wane, the place became uninteresting to this class of people, and they went to pastures new.

Records and clerical work.—When the first troops arrived there was only one book in which to keep records; that being a blank book brought to the camp by the medical officer serving with the Sixth Cavalry. This served as a record of the troops coming with that organization, but could not be used for records of the patients soon arriving in great numbers. Consequently, there were no books or papers by which a record could be kept of anything except of admissions and deaths; and not until August 21 did we receive stationery that would permit us to undertake to keep a proper record of the patients here.

A report of the sick and wounded could not be furnished on account of the rapid change of the patients; for instance, patients arriving one day would be furloughed or transferred to another hospital the next day.

For a time after the stationery arrived it was impossible to work the clerks at night owing to the fact that there was no light. We were able only to obtain now and then a candle, which was absolutely necessary to have in the wards for the patients; the records, like the rest of the hospital, becoming better as time went by. Finally, when we had plenty of light and stationery, the clerks worked every night, sometimes all night, and now the records are as near perfect as one could wish.

The diet kitchen.—The following is a statement by Mrs. M. H. Willard:

"Through the cooperation of Colonel Forwood it became possible to establish a diet kitchen for the sick and convalescent soldiers under the care of the general hospital at Camp Wikoff. Previous to August 27, 1898, all of the patients had been fed from the mess kitchen, a small wooden building presided over by an army cook, who had neither the time nor knowledge to prepare food necessary for the diet of malarial and typhoid patients. The army rations or hospital stores of rice, oatmeal, and milk formed the diet for every meal, until many of the patients were unable to digest their food. The physicians and nurses could not secure the simply prepared chicken, beef, and mutton broths, so necessary for the proper nourishment of the sick. As soon as the men were convalescent they were sent to the mess kitchen, where they could obtain only the army rations of pork, beans, bacon, and (at times) fresh beef. It is conceded by all physicians that the diet of the fever convalescent is the most important factor in the patient's recovery.

"It was the great need for carefully prepared food which prompted the Red Cross Society and the Massachusetts Volunteer Aid Association, represented by William H. Prescott, M. D., to establish between the general hospital and the

annex a diet kitchen, to be conducted on scientific principles, and to provide all liquid, light, and special diets. Tents were secured August 23, 1898, and every arrangement made as speedily as possible to feed the 1,500 patients in the hospital. Every assistance was given by the authorities, and valuable aid was rendered by the volunteer engineer corps in putting up the framework, in perfecting the sanitary arrangements, and in bringing running water into the tents. All expenses of a large supply of kitchen utensils, cereals, and foods were paid by the Massachusetts Volunteer Aid Association, who also secured the cooks. The Red Cross Society placed Miss E. F. Cox in charge, a dietician and graduate of a Boston school of dietetics, who thoroughly understood cookery for the sick. On August 27, 1898, four days after the first plank was laid, supper was served to the patients. Since that date about 4,000 patients have been fed. Beef tea, mutton and chicken broths, custards, rennet, steaks, chops, scraped-beef sandwiches, broiled chickens, birds, and other delicacies have been served.

"The officials in charge of the hospital speedily recognized the value of the work, and a few days following the opening of the kitchen it was turned over to the Government, accompanying orders from Maj. C. L. Heizmann that all supplies needed outside of the general-hospital stores could be purchased independent of the commissary department. The kitchen was then enabled to meet almost every demand upon it for any delicacy required by the patients. The surgeons in charge of the division hospital requested that the diet kitchens should be established before the opening of their wards. This was done at once; ranges and other necessary articles being brought from New London by the tug *Alert*, the property of the Massachusetts Volunteer Aid Association. The diet kitchen of the First Division hospital opened September 5, 1898, with Miss E. D. Ballinger in charge, and was ready to receive the first patients brought in. It continued until the hospital was disbanded, September 19, 1898, during which time 340 patients were fed for seven hundred and sixty-six days, making the total number of meals served 2,198. The diet kitchen of the Second Division hospital opened September 8, 1898, with Mrs. A. E. Aldred, a graduate of the New York Cooking School, in charge, and the same careful system was observed as at the general hospital. Four hundred and forty patients were received; total number of days, six hundred and sixty-nine, and 2,007 meals were served. Owing to the late completion of the regular mess at this division the patients also received solid diet. The Third or Cavalry Division hospital was ready to open September 7, 1898, and the diet kitchen was completed in time to care for every sick man brought in. This is still open and the statistics not yet made up. At the detention hospital there was opened on August 29, 1898, a diet kitchen in charge of Miss Mary Fennessey, who, with only an oil stove and a few kitchen utensils, did excellent work. Through the system adopted by the Red Cross and the Volunteer Aid Association, and later by the Government, we were able to render valuable aid in securing ranges, kitchen utensils, and a prompt delivery of supplies. The kitchen closed September 19, 1898, having distributed meals to about 1,000 patients. The kitchen at the general hospital will remain in active operation as long as there is a patient requiring its services."

Upon my arrival, September 10, I found the various hospitals in excellent condition. In fact, I have never seen field hospitals better arranged or in more perfect order. The wards were clean, the attendance was efficient both by doctors and nurses, the food was well cooked and served, the discipline was good, supplies of all kinds ample, and the patients as well cared for as they could have been in the best-managed city hospital.

As my specific duty was to expedite the transportation of the sick to city hospitals, my attention was first turned to the means at hand for accomplishing the work. I found a train of 22 ambulances under the command of Lieutenant Sile, assisted by Dr. Moore; this train was camped partly near the dock, and partly at the division hospitals of the Fifth Army Corps, so as to be readily available for service at any part of the field. At the dock was stationed Dr. F. G. Jones, to take charge of the sick and conduct their transfer to hospital ships, and at the hospital a medical officer was assigned to supervise the transfer from wards to ambulances.

Prior to leaving Washington, I telegraphed an order for the assembling of a board of three medical officers to examine carefully all patients about to be transferred, and to determine who were in proper condition to make the journey; no man should go who would be likely to be injured in the transfer, or who was well enough to return to his regiment. The function of the board was subsequently extended to applicants for furlough, and their action in both cases was final. The board at the general hospital was composed of Lieutenant-Colonel Senn, Major Nancrede, and Dr. Delafield, of New York, all men distinguished in their

profession. Similar boards were arranged in all the other hospitals at the camp. This action was a necessity, since the importunity of relatives and friends, and the desire of the patients to be sent home was so great as to embarrass the ward physicians, warp their judgment and thus lead to the transfer of men who subsequently fell by the way, or possibly would die from the exertion and excitement of removal.

The hospital ship *Shinnecock* and the yacht *Red Cross* were available for water transportation, and some railway cars, equipped at the private expense of Mr. McMillan and Mrs. Whitelaw Reid, furnished land transportation. On the day of transfer early word was sent to the several hospitals to prepare the patients for removal at a fixed hour, usually 1 o'clock p. m. Clothing was issued, food given, and transfer slips prepared, the number to go having been previously reported. Guards were placed at the leading stations to keep away sightseers. As fast as ambulances were loaded they were driven to the dock, where Dr. Jones, assisted by a large detail of attendants, took charge of the patients and placed them on the ship.

Telegraphic notice of departure was sent to the officer designated to receive them at the point of debarkation. The points of shipment were New York, Philadelphia, Boston, Providence, New London, and other cities along the sound. The hospital ship was fitted with every convenience, well supplied with doctors, nurses, medicines, food, etc. Shipments were made every other day, and during my tour of duty over 1,200 sick and convalescents were handled. The first and second division hospitals were soon emptied, and I ordered them closed; so, also, the annex and branch sections of the general hospital; this for the purpose of convenience of administration, and to afford better service for the remaining sick. The medical board referred to decided also on the condition of removal of the patients from one ward to another.

As there was much apprehension regarding suffering of the sick from storms and cold weather, I ordered the construction of wooden pavilion wards, each to hold 40 patients, placing them alternately between tent wards, one tent ward being removed to give place to a pavilion. Their plan of construction was superintended by Dr. Delafield, of New York. They were furnished with stoves, water was piped into them, ventilation secured, and the comfort and convenience of the sick when in them were thus assured.

The vast amount of public property made surplus by the departure of the sick and the concentrating of administration, was collected, packed in containers for shipment, regular inventory taken, and the whole placed in store tents in the general hospital, where it could be properly guarded, until finally disposed of by order of the surgeon-general.

The surplus personnel was gradually utilized at other places, doctors and nurses being sent to Cuba, Porto Rico, and Southern hospitals, by order of the surgeon-general, and on their application for retention in service, while those who desired it were granted a discharge.

Thus quickly, but in an orderly manner and without disturbance, this host of sick soldiers left the great camp almost deserted. At the time of my departure there remained about 300 very ill patients; too ill to be moved. They were receiving every comfort and had ample provision made for their care until the end should come, or they were sufficiently recovered to be returned to their homes.

REPORT OF LIEUT. COL. HENRY LIPPINCOTT, DEPUTY SURGEON-GENERAL, UNITED STATES ARMY, ON THE CONDITION OF MEDICAL AFFAIRS IN THE PHILIPPINE EXPEDITIONARY COMMANDS.

[Dated Manilla, Philippine Islands, August 31, 1898.]

In my communication of the 27th ultimo, I had the honor to inform you that the health of this command was fairly good. This may still be said to obtain, but the sick list is larger than it would be were our men better situated in a sanitary way. There is a great tendency to stomachic and intestinal disorders, dysentery being common, but malarial fever is also of frequent occurrence, and many of the diseases common to the United States are also observed. These will appear on the monthly reports and are merely referred to here. The total number of deaths from disease and accidents since first fleet left San Francisco is 29, distributed as follows: Typhoid fever, 14; septicæmia, 1; paralysis, 1; broncho-pneumonia, 1; pneumonia 2; dysentery, 2; meningitis, 2; cerebro-spinal meningitis, 1; heart rheumatism, 1; heat exhaustion, 1; endocarditis, 1; appendicitis, 1; morphine poison (suicide), 1.

Regarding reports, I have to state that the surgeons have had much to contend with in rendering them. Some of them, I regret to say, have been unavoidably long in reaching your office. I can assure the Surgeon-General, however, that we have not only had incessant storms to contend with, but transportation between the transports and Cavite and the transports and Camp Dewey has been most difficult and dangerous. The bay of Manila is practically an open sea and we have had to land supplies and patients through the surf, contending with high winds and almost constant rains. Life has frequently been endangered and property has been lost or ruined. With all this the medical department has performed its duties cheerfully and efficiently. The headquarters are now here where I opened my office on the 17th instant, and trust soon to be able to have the medical officers instructed in the preparation of the various reports, etc. At San Francisco there was no time for systematic instruction, although much was done in that direction. On my arrival there I began at once to complete the organization of the medical department for these forces, steps having already been instituted in that direction by Lieutenant-Colonel Middleton and Surgeon R. H. White, United States Army.

I found that a number of men had been enlisted for the Hospital Corps, but, perceiving that many more would be required, I recommended continued enlistments, and, in addition, the transfer of the volunteer regimental hospital corps to the regular establishment, which was ordered. Many excellent men were thus secured, and I was thereby enabled to furnish a sufficient number of privates for duty in the division hospital in Camp Merritt and for attendance upon the sick in the transports. Each full regiment of volunteers has 3 hospital stewards, so that the allowance of hospital stewards of the United States Army for the corps is limited to 10. The allowance of medical officers has been about sufficient thus far, but the employment of a few more contracts will probably be necessary.

While in San Francisco I made every effort to secure ample medical and hospital supplies, and was successful to a great degree. The medical purveyor, Colonel Middleton, did everything in his power for us, and issued many articles not usually supplied for field service. Many necessary articles for the sick on the transports were furnished. Brigade supplies were put on board certain ships, and everything was done that could reasonably be done to make the voyage successful. Of course a few things ran short, but, taking all together, I can say the troops were supplied with all essentials on the way here.

On the ocean I prepared a circular for the guidance of medical officers, and several typewritten copies bearing the approval of the commanding general were issued before the attack on Manila. This circular is chiefly a compilation from existing orders, regulations, etc., and will be printed as soon as possible and a copy forwarded to your office. A knowledge of its contents aided the surgeons during the attack, and here I desire to say that the Medical Department was all that the Surgeon-General could wish, and the conditions were most trying. The ambulance company was commanded by Captain Keefer, of the Army. He had a number of excellent medical officers with him and they, one and all, together with the enlisted men of the company, did fine work during the advance on Manila.

The hospitals (two brigade, under Surgeons Crosby and Penrose) were in excellent working order, but were not moved forward, the distance from Camp Dewey to Manila being only about 4½ miles. Major Crosby, brigade surgeon, was and is chief operator for the second brigade, and Major Fitzgerald, Thirteenth Minnesota, was and is chief operator for the first brigade. These officers were assisted by Major Kemble, of the First Colorado; Asst. Surg. Paul F. Straub, United States Army; Asst. Surg. N. M. Black, First North Dakota Volunteers; Asst. Surg. J. M. Cabell, United States Army (retired), and Acting Asst. Surg. G. W. Daywalt, United States Army.

The number of killed during the attack on Manila was 4; wounded, 4 officers and 41 enlisted men. These were all brought back to camp quickly, although the means of transportation were very imperfect, viz, the two-wheeled *carameta* of the country carrying our litters, and by the Hospital Corps men with regulation litters. Ambulances could not have been used even if on hand, because of the nature of the ground and obstructions. I desire here to say that our department received great credit for its preparation, and for the manner in which it met the many difficulties of the day. It should be stated that every wounded man was dressed and comfortably in bed by 7 o'clock p. m. on the day of the attack. I have also to add that the wounded are all doing very well and that no amputation of any kind has been made, notwithstanding the fact that we have had severe wounds complicated with fracture of the limbs.

While the volunteer surgeons lack knowledge of reports, etc., the Surgeon-General may well be proud of their field and hospital work.

In the matter of supplies, I must say that the field supply table is not entirely satisfactory, considering the distance from our base. However, I have great reason to be thankful that it was not adhered to. Our supplies now arriving and on the way will serve for some time, especially as we doubtless will soon have some money available should emergencies require purchase. Before the battle of August 13, fearing the possible necessity for more dressings than we had on hand, I purchased some material, for which vouchers will be handed the purveyor on his arrival.

We are still using several buildings in Cavite for hospital purposes. These are all absolutely unsuitable in every way, making no pretensions to sanitary fitness, but are the best we could obtain. It will be necessary to continue their use for some time, because troops will remain in the town for a while longer. The brigade hospitals were removed from Camp Dewey to the Spanish military hospital, this city, August 17, and there combined to form a division hospital, August 20, for administration purposes. This establishment was erected by the Spaniards and used by them as a general hospital. It is quite large and in fair repair. It has room for at least 400 beds, and at this date 288 beds are occupied. Prior to placing the patients in the wards the surgeons took great pains to have the woodwork cleansed and disinfected. It is probable that some of the patients will be transferred from Cavite to this hospital.

The ice machine is being put up in Cavite under the direction of Surgeon Woodruff. It will be of the greatest value when working, which is likely to be soon. The drinking water is insufficient and limited to the rainfall.

The Spaniards have given little attention to sanitary matters, so that coming from our country to this, one is reminded of the advantages our people have in the United States.

I am getting the supplies from the ships and from other sources, but it is proper to add that unavoidable events, etc., as referred to above, have thus far made storing and segregation of property absolutely impossible. Now, however, affairs are taking shape and we will soon be in good working order. I understand we are to have a hospital ship (the *Scandia*). This will be most acceptable, for the time will surely come when such a vessel will be necessary.

I wish to mention the fact that we have used the Hunt ovens in the field hospitals and found them useful. I had a large number supplied by the Quartermaster's Department before leaving San Francisco. I desire also to refer to our supply of hospital tents received in the same city. The Quartermaster's Department did well for us, and I have every reason to be grateful to them. The inexperience of the Hospital Corps has been somewhat of an inconvenience; still, on the whole, the corps has done good work, and I have already expressed myself in regard to the ambulance company. The surgeons have taken great pains to procure suitable nourishment, ice, and other necessities for the wounded and sick as well; these have greatly contributed to the present good condition of the former, and have been equally beneficial to the latter.

About 15,000 points of vaccine virus were issued to the surgeons in Camp Merritt prior to the 29th of June. These points were nearly used before the troops embarked.

On our arrival at Honolulu I, under orders from General Merritt, examined into the propriety of establishing a hospital there for our sick. This was deemed necessary for the reason that almost all of the transports were obliged to leave one or more sick in that city. A building was selected, and recommendations for medical officers, attendants, supplies, etc., made.

The troops are all quartered in buildings now; some are well housed, others are not. It is difficult to restrain men from eating and drinking unwholesome articles, and these with the great heat have increased the sick list recently. Efforts are being made to correct errors, and I expect good results. The number of patients in hospital in Cavite to-day is 71; this I neglected to enter under the proper heading. We now have a launch and a well-equipped ambulance company, and are able to remove the sick from place to place about the harbor. I have now to refer to the beds and bedding for the sick of this command. We have been able to gather a good many formerly used by the Spaniards. These, though imperfect, in many instances have been a great help.

I have just called attention to the danger of unwholesome articles of food and drink, and expect to see the sick list decline by the enforcement of sanitary recommendations.

It is proper that I should refer to the Spanish sick. They have very many, and from what I can learn I do not think they fare much better here now than they did on arrival; but they do not consider sanitary requirements as our people do, and hence have a much larger list. Their sick are well supplied with essentials,

and I understand they are doing fairly well, although the number is very large, about 1,400 in hospitals in all.

I now inclose lists of wounded, an analysis of which shows that there were—

Killed:	
Officers	None
Enlisted men	11
Wounded:	
Officers	12
Enlisted men	104
Total	
	127
Died from wounds received in action:	
Officers (Captain Richter)	1
Enlisted men	7

Respectfully submitted.

GEO. M. STERNBERG,
Surgeon-General.

Hon. RUSSELL A. ALGER,
Secretary of War.

REPORT OF THE PAYMASTER-GENERAL.

ANNUAL REPORT

OF

THE PAYMASTER-GENERAL.

WAR DEPARTMENT,
PAYMASTER-GENERAL'S OFFICE,
Washington, October 25, 1898.

SIR: I have the honor to submit the following as the report of this office for the fiscal year ending June 30, 1898:.

On July 1, 1897, officers of the Pay Department were charged with public funds aggregating	\$598, 883. 29
During fiscal year 1898 these officers received:	
From the United States Treasury.....	22, 117, 948. 49
From soldiers' deposits.....	613, 513. 51
From army paymasters' collections	169, 624. 18
	<hr/>
Total balances and receipts	23, 499, 969. 47
	<hr/> <hr/>

Accounted for as follows:

Expended on account of pay of the Army	14, 632, 569. 64
Expended on account of pay of the Army (United States Volunteers) ..	1, 519, 150. 64
Expended on account of pay of the Army (national defense).....	5, 000. 00
Expended on account of mileage to officers.....	103, 201. 80
Expended on account of mileage to officers (national defense)	37, 021. 94
Expended on account of pay of Military Academy.....	300, 321. 99
Expended on account of volunteers (Treasury certificates).....	437, 341. 28
Surplus funds deposited to credit of United States Treasurer	1, 205, 366. 42
Army paymasters' collections deposited to credit of United States Treasurer.....	169, 624. 18
Balances charged officers June 30, 1898.....	5, 090, 371. 58
	<hr/>
Total	23, 499, 969. 47

A comparison of the expenditures of the last fiscal year with those of the preceding year shows a net increase of \$2,326,804.11. This increase is accounted for by the fact that by act of March 8, 1898, two additional regiments were added to the strength of the Army. Again, under act of April 22, 1898, the Regular Army was, by order of the President, recruited to its maximum strength, making about 61,000 men.

Under act of April 22, 1898, the President, on April 23, 1898, called for the enlistment of 125,000 volunteers, following the same on May 25, 1898, with an additional call for 75,000 volunteers, 3 regiments of specials, 10 regiments of immunes, 3 regiments of engineers, and a signal corps, thus providing for an army of over 280,000 regulars and volunteers.

To meet the payment of this extraordinary force estimates were prepared and submitted to Congress and liberal appropriations were made for payment.

Collections in favor of other bureaus of the War Department.

Collections for credit of appropriation for "Pay, etc., of the Army"	\$109, 115. 13
Collected and turned into the Treasury to credit of:	
Quartermaster's Department	56, 076. 58
Subsistence Department *	185. 01
Ordnance Department	2, 276. 66
Medical Department	3. 53
Mileage to officers	1, 243. 64
Miscellaneous receipts	723. 63
Total collections	169, 634. 18

SOLDIERS' DEPOSITS.*Recapitulation of soldiers' deposits.*

Fiscal year.	Number of deposits.	Amount deposited.	Fiscal year.	Number of deposits.	Amount deposited.
1873		\$309, 850. 38	1886	7, 361	\$439, 051. 56
1874		348, 609. 56	1887	6, 389	436, 574. 96
1875		325, 255. 60	1888	7, 409	336, 944. 10
1876		435, 912. 68	1889	7, 802	333, 798. 34
1877	5, 524	328, 585. 05	1890	7, 684	326, 128. 83
1878	5, 524	346, 243. 94	1891	8, 790	402, 478. 15
1879	6, 307	470, 770. 38	1892	5, 570	334, 464. 70
1880	8, 635	477, 174. 44	1893	5, 878	283, 343. 04
1881	8, 942	524, 112. 72	1894	5, 614	361, 830. 76
1882	6, 390	448, 561. 83	1895	6, 384	318, 270. 73
1883	7, 902	407, 544. 68	1896	8, 778	420, 338. 87
1884	7, 114	389, 267. 55	1897	17, 878	538, 392. 64
1885	7, 033	427, 617. 96	1898	21, 896	613, 512. 51

From the above table it is shown that in the past fiscal year there has been a gradual increase in both the number and amount of the deposits. This fact evidences a growing interest in the provision made by the Government to assist the enlisted men in saving their earnings, and reflects much credit upon the class of men now in the Army.

The privilege of depositing applies to the volunteer force.

MILEAGE.*Mileage disbursements for fiscal year ending June 30, 1899.*

	Mileage.		
	1898.	January 1, 1899.	Total.
Change of station	\$32, 180. 82	\$12, 783. 31	\$44, 964. 23
Inspection of the Army:			
By the general commanding the Army accompanied by his aides, and the generals commanding the several military departments accompanied by officers of their staffs, as provided by paragraph 193, Army Regulations	2, 694. 00	298. 23	2, 992. 23
By officers of the Adjutant-General's Department	85. 76		85. 76
By officers of the Inspector-General's Department	2, 418. 24	111. 04	2, 529. 28
By officers of the Quartermaster-General's Department	1, 585. 48	182. 72	1, 768. 20
By officers of the Commissary-General's Department	201. 36	2. 72	204. 08
By officers of the Medical Department	342. 44	67. 36	409. 80
By officers of the Ordnance Department	2, 469. 92	456. 16	2, 926. 08
By officers of the Signal Corps	396. 36	18. 24	414. 60
By officers of the line on ordnance duty	128. 28	85. 28	213. 56
Inspection and instruction of the National Guard	2, 568. 68		2, 568. 68
Travel in Europe and other foreign countries	4, 679. 30	8. 64	4, 687. 94
Boards of examination to examine officers for promotion	5, 544. 84	1, 965. 80	7, 510. 64

* Collections on account of Subsistence Department were further made for credit sales to enlisted men and at once turned over to the commissary at the respective stations. The amount thus collected is not included in the above statement.

Mileage disbursements for fiscal year ending June 30, 1898—Continued.

	Mileage.		
	1898.	January 1, 1899.	Total.
Retiring boards and officers retired and ordered home.....	\$1,931.92	\$327.88	\$2,259.80

	79,087.42	17,313.55	96,400.97
Disbursements, mileage, national defense.....	37,021.94
Disbursements, mileage, 1897 appropriation.....	6,795.23
Total.....	140,218.14

The question of mileage has been quite satisfactorily and equitably settled by the allowance of 7 cents per mile for transportation, and much labor and expense saved by this fixed allowance. There are, however, two recommendations that I would suggest:

(1) Under the present law it is almost impossible for paymasters to ascertain the cost of fare paid by the general public over bond-aided and land-grant railroads, and it is suggested that a uniform rate of 3 cents per mile be adopted as the amount to be deducted by the paymaster for travel over any of the aided roads involved or when transportation has been furnished in kind by the Quartermaster's Department.

(2) Under the law the Pay Department is directed to make the payments for mileage for travel performed. The Army Regulations, paragraph 1470, provides that the Paymaster-General shall prepare (under direction of the Secretary of War) lists of distances, and in accordance therewith mileage will be computed, no matter by what route the travel may have been performed, etc.

In settling the mileage accounts of paymasters by the accounting officer of the Treasury, differences often occur in the matter of distances, occasioned by the Auditor computing the distance over different routes than those used in making up the tables by the Pay Department. I would recommend that as the tables of distances prepared by the Pay Department are the tables by which payments are made, they should also be adopted as the authority for the settling of the accounts, and be so recognized by law.

SYSTEM OF PAYMENT.

During the past year all payments to the Army have been made monthly. Previous to the declaration of war these payments were made by check or in currency by express. After the organization of the volunteer force it was not found practicable to pay by the above-mentioned method, consequently all of the forces in the field have been paid by the paymasters in person.

Very many complicated questions have arisen owing to the authority given to muster the several State organizations into the service in accordance with the State laws. In many instances the State organizations differed from the organization of the United States Army both in number and rank of the officers and enlisted men.

This gave rise to many questions as to the law governing in the several States, in the formation of the organizations, and the rates of pay to be allowed. In a rapidly formed army it is natural that many important facts would be overlooked, which are necessary for the information of the paymasters.

The question of authority, however, to the paymaster is of great importance as to what payments are proper and legal and will pass the scrutiny of the accounting office of the Treasury Department. Therefore careful thought and consideration had to be given to new questions confronting the disbursing officer, and when not covered by law or regulations appeal was taken to the Pay Department or to the Secretary of War, and instructions and orders thus obtained have been closely followed, and it is hoped that they will not be in conflict with any of the regulations governing the settlement of accounts in the Treasury Department.

Since the close of the fiscal year covered by this report and up to the date of its rendition, October 25, this Department has endeavored to pay promptly the troops in the field scattered over two hemispheres, and has fairly well accomplished the task.

In addition to the regular payments, the payment of mustered-out troops has imposed much additional labor, but so far all have been paid without delay.

The large number of regiments and independent commands yet to be mustered out will severely tax the energies of the entire Pay Corps, but the zeal they have shown gives assurance that however arduous the labor it will be promptly and satisfactorily performed.

ADDITIONAL PAYMASTERS.

The increase in the Army necessitated an increase in the force of the Pay Corps to enable the Department to make prompt payments; therefore, on the request of the Paymaster-General, the President had, on June 30, 1898, increased the Corps by 72 additional paymasters.

These officers and their clerks entered the service with very little or no knowledge or experience in regard to army accounts, and it appeared necessary to place them under instruction to fit them for their duties.

Accordingly a school of instruction was organized, in which each was made familiar with the necessary forms to be used in payments and the principles of making and rendering accounts. Attention was also directed to orders, regulations, etc., governing the payment of accounts. As a result, each officer entered upon his duties with a fair knowledge of the business before him.

This preparation has borne its results, as the payments to troops have been made promptly and intelligently, resulting in fewer errors than would have otherwise occurred.

EXAMINATION OF ACCOUNTS.

By section 12, act of July 31, 1894, it is required that the accounts in this office shall be transmitted to the Auditor for the War Department within twenty days after their receipt. It has often been quite difficult, in the limited time, to comply with this provision and give the accounts the attention they require.

The difficulty in forwarding these accounts within the twenty days is now greatly increased, particularly when large numbers of accounts are received at the same time, as, for instance, from the Philippine Islands or from Cuba or Porto Rico, all having the same date; and I would earnestly recommend that section 12 of the act approved July 31, 1894, be so amended, that the Secretary of the Treasury be vested with the same authority in regard to relaxing the rules and regulations in regard to the rendition of accounts by the administrative departments beyond the limit of twenty or sixty days the same as in the case of the rendition of accounts by the accounting officers.

INCREASE IN THE REGULAR FORCE OF THE PAY CORPS.

While the strength of the Regular Army has been more than doubled numerically, the number of regular paymasters has remained the same. The exigencies of the service were such that the duties devolving upon the regular Pay Corps of the Army have been very laborious and responsible. It required considerable time for the additional paymasters to qualify themselves, and after receiving their preliminary instructions they were still lacking in experience in the field, so that it was not until after July that much relief was afforded the regular force.

In making payments senior or regular paymasters were placed in charge, who, in addition to making their own payments, were required to advise and direct the payments made by the additional paymasters. Thus double duty was demanded of them. In making payments, the regular officers, as seniors, were intrusted with large sums of money, which were left under their personal care until distribution was made to the paymasters under them, which was frequently done in the camp or on the field, and at times under very unfavorable circumstances. This duty has been accomplished without loss or delay on their part.

As the corps is now organized, there are only 2 assistant paymasters-general, 3 deputy paymasters-general, and 20 majors and paymasters. The assistant and deputy paymasters-general are assigned as chief paymasters of the several military divisions. Under the new condition of affairs, additional departments are being formed at such remote points as Manila, Porto Rico, and Cuba. To these positions the senior majors have usually been assigned, and as they are stationed so far from Washington they are obliged to rely upon themselves in deciding the numerous and difficult questions that are constantly arising in making disbursements and rendering their accounts for the same. Very capable officers have been found for these responsible positions, and while other staff officers with the rank of colonel and lieutenant-colonel are filling similar positions in their several depart-

ments, the paymasters, with quite as great responsibilities, are only ranked as majors.

In view of the foregoing facts, the increased Army, and added responsibilities, I earnestly recommend that to the Regular Pay Corps of the Army there be added 3 assistant paymasters-general, 5 deputy paymasters-general, and twenty majors and paymasters; the promotions to colonel and lieutenant-colonel to be made from the officers now in the Pay Department according to seniority, and upon the mustering out of the volunteer forces and the reduction of the Regular Army to the basis prior to the act of April 26, 1898, no appointments shall be made in the Pay Department until the number of officers in each grade shall be reduced to the number authorized prior to the date of the act above mentioned.

PERSONNEL.

Maj. William Arthur retired from active service under section 1243, Revised Statutes, upon his own application, after thirty years' service, April 30, 1898. Maj. Harry L. Rogers was appointed paymaster May 2, 1898, to fill the vacancy caused by Major Arthur's retirement.

On June 10, 1898, Col. G. W. Candee, assistant paymaster-general, died at Chicago, Ill., after nearly thirty-four years' faithful service. At the time of his death he was chief paymaster, Department of the Lakes. Owing to the vacancy occasioned by the death of Colonel Candee, Lieut. Col. A. B. Carey was promoted to colonel and assistant paymaster-general, and Maj. C. I. Wilson was promoted to lieutenant-colonel and deputy paymaster-general.

Maj. J. A. Watrous was appointed to fill the vacancy in the corps occasioned by the promotion of Lieutenant-Colonel Wilson June 15, 1898.

PAYMASTERS' CLERKS.

There is no class of employees in the service of the Government who are so poorly paid in proportion to their services as the paymasters' clerks. Their business requires a thorough knowledge of bookkeeping and of stating and rendering accounts. They must be conversant with the Army Regulations and all orders and decisions governing the payment of accounts. They are subject to change of location, with the attendant expenses. At present the salary is \$1,400 per year, with no prospect of advancement.

I would therefore again recommend to Congress that legislation be had increasing the pay of paymasters' clerks 10 per cent for every five years of service, the salary not to exceed \$1,800.

CLERICAL FORCE.

The regular clerical force in the Paymaster-General's Office has shown the result of thorough training and experience in official duties. The force had been reduced to the minimum strength; the new condition of affairs greatly increased the work of the office; the temporary appointees required instruction, taking up the working time of the regular clerk; the new paymasters were seeking information continually; at the same time the increased current work had to be kept up, the accounts of the new paymasters required close inspection, and many letters of instruction were prepared, requiring much patience and judg-

ment in their preparation. All this has been attended to with promptness and regularity.

On account of the overcrowded condition of the work in some branches of the office, it required that a portion of the force, and sometimes the entire force, should remain and work over-hours. This additional service was rendered willingly and without complaint, and I would recommend that Congress provide remuneration for such service.

Attention is invited to the exhibits which are appended, showing in detail the accounts with the several appropriations and the receipts and expenditures of the individual officers of the Pay Department.

Very respectfully,

T. H. STANTON,
Paymaster-General United States Army.

The SECRETARY OF WAR.

Statement showing the number of pay trips made, number of days consumed in travel, posts paid, and amount of field and office disbursements made by each disbursing officer of the Pay Department, United States Army, during the fiscal year ending June 30, 1898.

REPORT OF THE CHIEF SIGNAL OFFICER.

REPORT

OF THE

CHIEF SIGNAL OFFICER.

WAR DEPARTMENT, SIGNAL OFFICE,
Washington, October 10, 1898.

SIR: I have the honor to make the following report of the operations of the Signal Corps of the Army for the fiscal year ending June 30, 1898:

In view of the importance of events since June 30, there have been incorporated in this report the story of the war as far as the Signal Corps is concerned to September 30, 1898.

To a greater extent than any other corps of the Army, the Signal Corps has had its field of operation and sphere of usefulness expanded by the Spanish-American war. While the Army has been increased ten-fold this corps has been enlarged more than twenty-fold, from 60 officers and men to 1,300. Despite this astounding increase, rendered absolutely necessary by the insistent demands of the age for instant communication by telegraph or telephone, there has been no hour of leisure for any company of the Signal Corps. On the other hand, so active and acceptable have been the operations of the volunteer officers and men that no army outside the country from the Philippines to Porto Rico or Cuba has waited a day for its telegraph or telephone, and the commands and supply depots of no great military camps within the United States have been without their independent system of electrical intercommunication.

In the attached reports (Appendixes 1 to 13) of subordinate officers will be found detailed accounts of the organization and operations of the Volunteer Signal Corps, with which the fortunes of the regular corps have been inextricably entwined. This report narrates briefly the more important features of the active participation of the Signal Corps in the war.

PRELIMINARY CONDITIONS.

The approach of war found the 8 available officers and 50 men of the Signal Corps widely scattered—from Oregon to Texas to the south and New York to the east. There were not more than 2 men at any station, and only \$800 was available for war expenses. Theoretically, under the restricted policy as to the Signal Corps, there should have been a reserved force of 454 officers and 1,816 enlisted men in the line of the Army from which to draw signalists and telegraphers for campaign work. This system broke down absolutely, as always in the past, a fact that the Chief Signal Officer has pointed out for years in his reports on Indian campaigns and other army operations. Only 7 officers and about 50 partly trained men were obtainable from the line of the Regular Army, and these were largely drawn from commands having no hope of active duty. Where a chance to face the enemy obtains, the line soldier will not leave his comrades for staff duty, however important, except by imperative orders, and the American people glory in this esprit de corps.

When war was declared the Chief Signal Officer immediately asked orders that assembled with the moving troops every signal man but five, while every officer on active duty sought and obtained orders for field service, the Chief Signal Officer working alone for nearly two months without a skilled assistant in his office, so that field operations might not later suffer for want of competent signal officers with the newly organized army corps. To add to the difficulties of the situation the act for the organization of the Volunteer Army, through oversight, failed to provide for the electrical work of the volunteers, and the Chief Signal Officer was obliged to resort to Congress for special legislation.

MILITARY TELEGRAPH CABLES.

With the increasing prospects of war, public attention was called to the harbor defenses. For six years the Chief Signal Officer had unavailingly urged on Congress the absolute necessity of perfecting its costly system of coast defenses by establishing electrical intercommunication between adjacent fortifications, especially in the harbors of New York, Boston, and San Francisco, so that the entire system of defense could be controlled by one mind. Despite the war emergency, Congress, in March, 1898, refused an appropriation for this purpose. Recourse was then had to the Secretary of War for an allotment from the national defense fund for this purpose, and on April 5 \$23,700 was allotted for New York, the other harbors being provided for later. As a result cables have been laid between adjacent fortifications in the harbors of Boston and New York, while the cable for San Francisco is on the ground awaiting final decision as to the best method of providing for the needs of this important harbor. In addition, cables connecting either adjacent forts or single forts with the commercial telegraph system have been made at Newport, R. I., in Long Island Sound, near Philadelphia, near Southport, N. C., in Charleston, S. C., harbor, and near New Orleans, La. The exterior defenses of the city of Washington, Forts Washington, Myer, and Sheridan's Point have been connected telephonically with each other and with the War Department. Block Island has also been connected by a telephonic cable with the mainland at Narragansett Pier.

ELECTRICAL INSTALLATIONS AT ARMY POSTS.

Coincident with the demands for proper harbor defenses arose the question of electrical installation for the fire-control system, an absolutely necessary adjunct of disappearing guns. Under this system the range officer, located a long distance from the batteries, determines every minute or less the position of the enemy's ships and communicates this information to the officer who controls the fire. The control officer plots the positions and at a suitable instant causes through the firing officers the mortars to be discharged or one or all the guns to rise, deliver their fire, and then disappear in their pits. Although instant and continuous telephonic or electrical communication is indispensable between the range, the control, and the firing officers, yet there existed no appropriation for such an electrical installation, nor did any installation exist save at two or three experimental stations which had been provided with tentative installation. Charged by orders with the providing of such installation, the Chief Signal Officer has procured the necessary telephonic and electrical instruments, so that every gun can be put in direct communication with the control officer. Other necessary instruments have been contracted for and

manufactured, conforming in all respects to the approved types furnished by the Board on Regulation of Seacoast Artillery Fire. Seventy complete sets thus manufactured are awaiting the instructions of the Artillery Fire Board as to the batteries to which they are to be assigned, except about ten sets which have been issued to the more important forts for experiment and test. The electrical installations thus made demand skilled electricians, such as the Signal Corps is to furnish, for their proper care and maintenance. Sergeants will be assigned to the artillery posts for such duty as soon as the exigencies of war service will permit.

The commanding officer at Fort Monroe having reported that he was unable to properly care for the search lights and other electrical instruments, with the consent of proper authorities, the Signal Corps has repaired and put them in good order. As occurred at Camp Montauk, future emergencies may arise where the establishment of an electric-light plant may be demanded in the public interest, in which case the Signal Corps can at any time duplicate its work of installing and operating such a plant without the employment of high-priced civilians.

PROPOSED HAVANA CAMPAIGN.

In connection with the contemplated operations against Havana the Chief Signal Officer caused to be assembled at Tampa, Fla., every signal sergeant that could be possibly spared, and also added thereto every enlisted man of the line who was familiar with the rudiments of signaling and who would accept service. The outlook for the Signal Corps would have been most discouraging if there had not been in existence three small detachments of detailed men of the line, who had been brought together a few weeks earlier for signal instruction through the efforts of Captain Glassford, Lieutenants Greene and Reber, and by authority of Major-General Miles, Brigadier-Generals Otis, Shafter, and Graham. This made available about 45 trained men (signal sergeants) and about 50 detailed partly instructed men, not more than one-third of the number needed for the operations of the Regular Army alone. Every military post in the country was stripped wholly or in part of its signal stores and equipment, and new supplies were ordered to be manufactured without formality of bids. The officers made herculean efforts to perfect by drill and practice these men who had never been able to act in concert since detailed for duty with this Corps. The advantages of recruiting the Signal Corps by selections or competitive examinations from the noncommissioned officers of the Regular Army was strongly emphasized by the readiness with which these men communicated to their comrades skill and efficiency in signal, telegraph, and balloon practice, under conditions that would have seemed impossible to any but experienced and hardened soldiers. Every moment was utilized in preparing for the expected field service.

MANILA CAMPAIGN.

The preparations of the Signal Corps for operations against Havana were interrupted by the capture of Cavite, the occupation of the harbor of Manila, and the demands for a force to operate in the Philippines. Major-General Merritt, realizing the necessity of electrical intercommunication for an army operating far from home in an untried country, asked that he should be supplied with a selected Signal Corps embracing as many Spanish-speaking officers and men as possible. The Signal Corps is fortunate in the linguistic acquirements of its officers, *as half the Corps has a knowledge of Spanish, and the Chief Signal*

Officer was able to send to Manila four officers familiar with Spanish. Lieut. Col. Richard E. Thompson, captain in the regular Corps, whose report forms Appendix No. 1, was made the chief signal officer of the command. Originally the Chief Signal Officer could only spare 6 signal men for this large expedition, but after the organization of the Volunteer Signal Corps was authorized there were added 13 officers and 110 men. Their proper equipment was very difficult from the fact that the entire Pacific coast had been practically stripped of signal supplies for the use of the Army Corps in Florida, but the Philippine expedition was by dint of especial exertion sent forth so fully equipped that no signal supplies of any kind have ever been called for from Manila and no deficiencies reported.

Official reports indicate that Lieutenant-Colonel Thompson and his officers and men have justified the confidence reposed in them, and in addition to the efficient discharge of their technical duties have contributed their share to the luster gained by American arms in the far east. A war cable was laid between Cavite and the city of Manila. Telephonic and telegraphic communications were established and maintained not only between headquarters of the commanding general and his detached commands and depots, but as our army moved forward the Signal Corps carried into the advanced trenches its telegraph lines and repaired them under fire, whereby communication was maintained throughout the campaign. When the final assault came one company of the Signal Corps ran the field-telegraph line up to the open beach and established an advanced station under fire of the enemy's second line. Another party, led by Captain McKenna, marched up the beach with the firing line, their signal flags displayed, so that the fire of the navy should fall in advance of the army, and, displaying these flags as the first emblems of the United States in the enemy's fort, established an advanced telegraph station under the fire of the enemy's second line, and maintained communication with both wings of the army till the enemy's positions were carried. Lieut. Col. R. E. Thompson and five other officers of the Signal Corps were brevetted for gallant and distinguished service, and eleven enlisted men were recommended for rewards for gallantry and distinguished conduct.

After the occupancy of Manila Lieutenant-Colonel Thompson repaired the Manila-Hongkong cable and reopened it for use four days in advance of the expected time, which was supposed to depend on the arrival of the English cable ship then en route from Singapore.

VOLUNTEER SIGNAL CORPS.

Affairs had, however, reached such a point in early May that the necessity of organizing a Volunteer Signal Corps was obvious to Congress, for the regular corps could not even furnish one officer to each authorized army corps.

The Volunteer Signal Corps was organized under the provisions of the acts of Congress approved May 18, 1898, and July 7, 1898. These acts looked to a corps whose maximum number should be 138 officers and 1,115 men. There were never in service, however, at any one time more than 115 officers and about 1,000 men.

Recruiting commenced June 2, and in thirty days the corps was not only practically organized and partly equipped, but one of the companies was already in the field with the army before Santiago de Cuba. The recruiting and equipment of the Volunteer Signal Corps, on lines laid down by the Chief Signal Officer, was intrusted to Col. H. H. C. Dunwoody, Signal Corps, whose report, Appendix 2, gives interesting details. Colonel Dunwoody applied himself to his difficult task with

such a degree of intelligence, skill, and energy as insured from the very out set the successful organization of the Volunteer Signal Corps. The difficulties of clothing, equipping, and outfitting the volunteer corps were almost insurmountable considering the limited time, but tact and persistency worked wonders. Colonel Dunwoody wisely insisted on the corps being equipped for field service before any company should leave its original camp. A most wise decision, that contributed greatly to its efficiency.

The lines on which the corps was organized are of interest and may be of value in future wars, inasmuch as the principles involved are believed to have been most essential factors in the subsequent efficiency of the corps. The original field officers were appointed from the captains and lieutenants of the regular Signal Corps, as far as their limited number permitted, that is, from officers who had attained their commissions by competitive examinations, and their promotions after rigid examination, thus insuring professional fitness and ability, mentally, morally, and physically.

Fourteen of the highly educated and trained enlisted men, first-class sergeants, were promoted to be second lieutenants. Six captains were promoted from lieutenantcies of the regular line and two others from graduates of West Point in civil life. Other officers, as far as possible, were such as had served in the Signal Corps of the National Guard.

It should be added that both the President and Secretary of War gave their moral support to the Chief Signal Officer in the organization of this corps in an efficient manner. The greatest safeguard of the corps, however, was the action of Congress in enacting the provision recommended by the Chief Signal Officer, that two-thirds of the officers and enlisted men should be skilled electricians or telegraphers.

Under these conditions the original selections for field officers were, without exception, highly trained officers in the prime of life, thoroughly skilled in the specialties of the corps, not only admirably fitted for administrative duties, but also capable of arduous campaigning. It may be added that not one of these officers was either invalided or obliged to quit his duties during the war, though they served at Santiago, in Porto Rico, and at Manila.

The subordinate officers were almost entirely trained in electrical pursuits or in duties of an allied character in civil life, where special intelligence and ability are necessary to insure success. These methods reduced to a minimum appointments based solely on influence.

The result of thus selecting officers and men of business experience and executive ability has been so strikingly successful as to emphasize the advisability of similar legislative restrictions should another volunteer army be raised, or the Signal Corps of the Army be increased.

It is to be stated that almost without exception the officers of the Signal Corps proved efficient, and that the body of enlisted men challenged any other corps or branch of the Army to produce its equal for ability, intelligence, and amenability to discipline. Their service was uniformly marked by cheerfulness, zeal, and good conduct, and was characterized by that resourcefulness which is an especial characteristic of the typical American soldier.

The successful interest of the officers in caring for their men and the self-reliance of the men themselves are strikingly illustrated by the fact that with a force of 1,300 men, both the volunteer and regular corps, up to the date of the orders for muster out of the first company, lost only five men, a death rate unequaled, it is believed, by any corps of the Army which operated in every great camp in the country, and in every campaign abroad from the Philippines to Cuba and Porto Rico.

SANTIAGO DE CUBA CAMPAIGN.

Especial interest for the Signal Corps attaches to this siege, since, as is stated elsewhere, the Chief Signal Officer of the Army, by his representations, was responsible for the inception of this campaign, which proved to be the turning point of the war. The work of the Signal Corps therewith naturally divides itself under three independent lines:

(1) The rearrangement and installation of an electrical communication whereby the War Department was brought as near to the army, and able to exercise as potent an influence therewith, as though the operations were conducted at distances of 100 miles instead of 1,500.

(2) The signal work proper, involving communication, electrically and otherwise, between the commanding general of the Fifth Army Corps, his division and brigade commanders, the transports, the supply depots, and the cooperating fleet of the Navy.

(3) War ballooning.

REARRANGEMENT OF CABLES AT SANTIAGO.

The rearrangement and installation of electrical communication in Cuban waters were greatly facilitated from the fact that Major-General Miles, commanding the Army, had earlier requested the Chief Signal Officer to make similar provisions for the proposed campaign against Havana. For the Havana campaign an allotment of \$80,000 had been obtained, but the Chief Signal Officer at the very outset found himself hampered by the fact that there was no submarine cable in the American market. All that was available at the beginning of the war had been previously purchased by the Navy Department, and for theoretical defensive purposes laid between Key West and Tortugas.

The details of this work of rearrangement were intrusted to Col. (then Capt.) James Allen of the Volunteer Signal Corps, for which he was courteously spared by Major-General Miles, commanding the Army, to whose staff he was attached. Colonel Allen's report, Appendix 3, sets forth the details.

The hearty cooperation of Gen. Thomas T. Eckert, Mr. Thomas F. Clark, of the Western Union Telegraph Company, and of Mr. James Scrymser, of the Mexican Telegraph Company, was of the greatest assistance; indeed, without their aid success was doubtful. The preparatory work was conducted with such method and discretion that a ship was chartered, cable gear installed, and cable manufactured in New York without attracting general attention, and Colonel Allen sailed from Key West, Fla., for Santiago de Cuba on May 29, after several weeks of preparation, without the matter being heralded in the public press. Sixty miles of cable were deemed essential to success, and at first there was no prospect of obtaining any except by the slow process of manufacture at the rate of a mile per day. Two small lots were picked up here and there, but when the time for sailing came there were only 45 miles on board. The Chief Signal Officer decided to act, and ordered Colonel Allen to sail under the unjustified belief that the remaining 15 miles could be forwarded in time for use in the campaign. The steamer chartered for the use of the Signal Corps was procured through a third party, and was fitted up with cable gear of the Mexican Telegraph Company, the only available set of cable gear in the United States, as the superior set belonging to the Western Union Telegraph Company had been placed on the U. S. S. *Mangrove*, where it remained unused throughout the war. The 15 miles of cable deemed absolutely essential had not reached Colonel Allen when orders were given him to immediately leave Key West.

When the orders were given for departure the captain and crew refused to sail, but finally preferred the dangers of the Cuban coast to facing in the United States court a suit for breach of contract.

Appreciating the technical difficulties which attended the work, Colonel Allen engaged for the expedition 16 men skilled in cable repairs, but at the last moment no less than 13 absolutely refused all offers of increased salary and other inducements and declined to sail. In this emergency Colonel Allen was authorized to take the only available sergeants (three in number) of the regular Signal Corps, while the Adjutant-General of the Army came to the rescue by authorizing 10 volunteers from the First Regiment of Artillery at Key West. With Capt. M. L. Hellings, of the United States Volunteer Signal Corps, a cable expert, as an assistant, and the motley force of men innocent of any experience of sea life or knowledge of cable work, Colonel Allen hastily put to sea. The expedition arrived off Santiago de Cuba June 1, 1898, and Colonel Allen immediately began his work, the first phase of which was the destruction of the submarine telegraphic communication of the army.

Long before the expedition sailed the Chief Signal Officer had carefully considered the question of cable cutting, and had announced his official opinion that the destruction of a cable, even though the property of a neutral, was fully justified, provided that operations were confined within the territorial jurisdiction of the enemy. The blockading of a port makes the operation by neutrals of a steamship line an action punishable by the destruction or confiscation of the ships thus operated. The introduction of articles contraband of war similarly results in the seizure or destruction of the articles thus introduced, and it can not be doubted that letters or messages are thus contraband of war. The operation of a submarine cable and the transmission of telegrams are far more injurious than the delivery of letters, in view of the secrecy and rapidity with which cable messages are thus introduced. The cases of the West Indies and Panama Telegraph Company and of the Cuba Submarine Company were even more pronouncedly contraband and liable to destruction, as these companies had certain exclusive privileges or received subsidies from the Spanish Government.

In addition, the International Convention in adopting regulations for the protection of cables made them applicable only during peace. With these views, Colonel Allen was ordered by the Chief Signal Officer to destroy these cables and to confine his operations within the jurisdiction of Spain in Cuban waters.

The physical obstacles to success were extraordinary, it being a coral coast washed by a sea that deepens with a rapidity almost unknown elsewhere, the water attaining a depth of 7,000 feet within a marine league of the shore. Besides, the irregularity of the coral bottom is so extraordinary as to make dredging with ordinary cable gear extremely difficult and ineffective. Energy, application, and untiring effort worked out success. One cable was raised about 5,000 feet, when it broke. A second cable was raised 6,240 feet and a section successfully removed from it. It eventually transpired that these breaks were of one and the same cable, it having been severed at two points. Most persistent efforts to find the third cable failed, and with good cause, as it was later learned that it did not enter the main channel, as had been supposed, but miles to the eastward.

During this prolonged grappling the dangers of the situation gradually dawned on the working force of the *Adria*, who had not realized that they had been working within the range of the Spanish guns.

Finally the bombardment of our Navy and the fire of the enemy's batteries left no doubt, for one Spanish shell passed directly over the *Adria*. While the American contingent were willing to remain and pursue their dredging, the alien force which navigated the ship objected to further operations at that point.

During the week that Colonel Allen pursued his work within range of the Spanish batteries he was under obligations to ships of the Navy for protection against a Spanish torpedo boat that threatened his destruction and for aid in handling the cables. Captains Clark, U. S. S. *Oregon*; Philip, U. S. S. *Texas*, and Lyon, U. S. S. *Dolphin*, were especially active and obliging.

Colonel Allen, being unable to navigate the ship with his American volunteers, and finding it impossible to constrain or persuade the captain and engineer to further operations off Santiago, proceeded to Guantnamo, where cable communication between Santiago de Cuba and Haiti was then interrupted.

The sailing of the Fifth Army Corps for the reduction of Santiago on June 14 changed the condition of affairs and caused the Chief Signal Officer to bend the energies of the Signal Corps to the establishment of speedy communication between the War Department in Washington and the environs of Santiago de Cuba. This involved not only the cooperation of several commercial telegraphic systems, but also the installation and operation of military cable and land lines by the Signal Corps to the point, as yet not definitely known, where our army would land on the southern coast of Cuba. The wide range of probabilities connected with the landing place of the Fifth Army Corps correspondingly increased the difficulties of the Signal Corps. Special arrangements were made with the Postal Telegraph Company, the United States and Haiti Cable Company, and the French Telegraphic Cables Company whereby speedy and effective service within the limit of neutrality were guaranteed as soon as the French cable south of Cuba could be repaired.

Cipher orders were telegraphed to Colonel Allen via Mole St. Nicholas, Haiti, to immediately bend his energies to the restoration of the telegraphic cables between Cuba and Haiti, and the establishment of telegraphic communication with the Fifth Army Corps, wherever it should land. On June 13, renewing his work, he commenced the repair of the French cable near Caimanera. The conditions were adverse, but obstacle after obstacle yielded, and on the night of June 20 he opened station on shipboard and telegraphically reported to the Chief Signal Officer that the Fifth Army Corps had arrived off Santiago that morning and that General Shafter was in consultation with Admiral Sampson. On the following day Colonel Allen landed the cable and restored communication by opening an office at the marine camp at Caimanera, near Guantnamo. The message that communication was permanently restored between the south coast of Cuba and New York was received at the Executive Mansion in Washington five minutes after it was filed at Caimanera. The landing place of the army was then undetermined, but when General Shafter commenced the disembarkation of his corps the next day he was within two hours by boat and wire of Washington, and after June 29 was within twenty minutes of the War Department, with a direct telegraph service that continued uninterruptedly to the date of his occupation of Santiago.

The agreement with the French Telegraphic Cables Company strictly guaranteed its neutrality. The company agreed to accept the same military censorship from the Americans at Playa del Este as it accepted from the Spanish authorities at Santiago. It was agreed by the Chief

Signal Officer that the United States should not interfere with the management of the cable, which, beyond strict military censorship, should remain in complete control of the French company and its agents. In short, this company had the same rights and obligations as devolved on the Western Union Telegraph Company in the operations of its cables between Key West and Havana. As the former cables were cut at Key West to insure rigorous censorship on that line, so the French cable was cut at Playa del Este to insure similar rigid censorship over messages to and from Santiago de Cuba.

Although cable communication was restored from Haiti to Caimanera June 21, the French cable to the west toward Santiago was yet broken. As the company had no repair ship, Colonel Allen acceded to their request that he should assist in repairing this section. While working on this line the French company opened at Siboney a commercial cable office that worked with Playa del Este partly over the Signal Corps war cable and partly over the French line. As soon as he could extend his repairs toward Santiago Colonel Allen restored the French cable to the French company and laid an independent Signal Corps cable between Siboney and Playa del Este, thus insuring uninterrupted communication by having two lines between these points.

In connection with these various cable operations, Capt. Martin L. Hellings and three other officers of the Volunteer Signal Corps so distinguished themselves as to warrant Colonel Allen in recommending them for suitable acknowledgment. In addition, the Chief Signal Officer recommended Colonel Allen for brevet to be brigadier-general of volunteers for his conspicuous gallantry and persistent efforts within range of the enemy's batteries in an unarmed ship, which resulted in the destruction of one of the enemy's cables.

It is to be added that the establishment and operation of the telephone and telegraph line in connection with General Shafter's army depended entirely on the instruments and insulated wire furnished for this purpose by Colonel Allen to Lieut. Col. Frank Greene, chief signal officer, Fifth Army Corps, who was not allowed to take with him the Signal Corps telegraph train that had been sent to Tampa for this expedition.

Santiago having capitulated, Colonel Allen returned to his duties on the staff of Major-General Miles, and on July 21 sailed with that general to assume charge of the signal operations of the army about to invade Porto Rico.

TELEGRAPH AND SIGNAL WORK AT SANTIAGO DE CUBA.

These operations were conducted under the orders of Lieut. Col. Frank Greene, chief signal officer of the Fifth Army Corps, whose report, Appendix 4, sets forth the details. Considering the limits of time and material, Lieutenant-Colonel Greene's work was remarkably successful. His energy and zeal merit especial commendation.

The work was directly done by Maj. G. W. S. Stevens, United States Volunteer Signal Corps, and 35 enlisted men of the Signal Corps, who were charged with the duty of establishing and maintaining communication between the commanding general, his division and brigade commanders, the supply depots, and such other points as he might designate. Each of the 30 transports had been provided at Tampa with a competent signal man, whereby communication was maintained by flag, and all orders were transmitted with precision and celerity throughout the fleet and its convoy during the voyage to Santiago and the disembarkation in Cuba. After disembarkment, detachments, as well equipped as their permitted supplies made possible, were attached

to headquarters of the first division, second division, cavalry division, independent brigade, light artillery battalion, and the cavalry squadron, so as to provide communication between separate parts of the force. The commanding general allowed only means of visual signaling to be taken with the expedition, but the nature of the country, however, soon demonstrated that visual signaling could rarely be depended upon, and that reliable and general communication could only be maintained through the instrumentality of the telegraph or telephone; hence, the men were speedily withdrawn for more successful operations on other lines. The Fifth Army Corps, unfortunately, was not supplied with a field telegraphic train, the major-general of the corps having declined, even after recommendation was made to him through his signal officer, Major Greene, by the Chief Signal Officer of the Army, setting forth the necessity of such apparatus.

The signal detachments organized for this expedition had been depleted by the promotion of 14 sergeants to be second lieutenants in the Volunteer Signal Corps. This left with the purely signal detachments only 11 men who were skilled in signaling. There were, however, in the balloon detachment, 5 skilled signalmen, who were not allowed until June 28. Every effort was made by officers to properly train the men transferred from the line, but, of course, there were no opportunities for concerted action and instruction after leaving Tampa. In consequence the force assembled at Santiago was a makeshift organization that was licked into shape as rapidly as possible. If there were no deficiencies in the operations of this command during the early days of the siege it is astonishing, and the good results flowed, not from the wise provision in time of peace of a skilled force, but from the intelligence of the American soldier, supplemented by the skill of the officers in command.

The lack of thoroughly trained men was not the only serious factor that threatened the efficiency of the signal work. Seeing that visual signaling, which the commanding general of the Fifth Army Corps fully relied upon contrary to professional advice, was practically impossible for land operations and only proved useful between the coast stations and the fleet, it is impossible to surmise what would have been the result had it not been for the supply of insulated wire, telegraphic and telephonic instruments, etc., which Colonel Allen furnished to Lieutenant-Colonel Greene.

The insulated wire had been especially made for this campaign. It was seven stranded (six steel wires around one of copper), and unusual care was used in its insulation, which was nearly pure rubber. Its tensile strength, lightness, flexibility, and conductivity and insulation were such that it met all requirements under conditions of extraordinary severity. Of it Lieutenant-Colonel Greene says:

Happily provided by the forethought of General Greely, the value of this wire can not be overestimated; having no poles, and the chaparrel being too light to sustain the weight of the wire, the perfect insulation of the wire furnished enabled it to be laid up on the brush as far back from the trail or road as possible, or on the ground itself where no other course was open and a clearing back from the trail could be found, and so long as it was not cut or broken communication by its means was perfect.

It should be added that the Chief Signal Officer of the Army, foreseeing the absolute necessity of telegraph facilities for the successful handling of the Fifth Army Corps, determined on his own responsibility to provide against contingent failure and so sent by the Signal Corps steamer, the *Adria*, all available and spare stores that the capacity of the vessel would allow after taking on board its cargo of mili-

tary cable. Although such orders were really unnecessary to such an officer, Colonel Allen was directed to furnish Lieutenant-Colonel Greene and any other officer requiring them such supplies as could possibly be spared, so that needful electric communication might be established and maintained. Without the material furnished it would have been practically impossible for communication to have been maintained and orders given throughout the 13 miles of army front, along the whole of which this insulated wire was finally stretched, from El Caney to Aguadores, for at times the single, narrow roadbed became a knee-deep water course.

Under Lieutenant Colonel Greene's well-directed efforts the construction of telegraph lines was most speedily carried out by Capt (now Maj.) G. W. S. Stevens, United States Volunteer Signal Corps, whose interesting report, Appendix 4, shows the details of his work, which was pursued with a zeal, application, and intelligence that merits special notice, particularly in the utilization of broken instruments and the adaptation of local supplies to the end in view. Not allowed to land until June 27, Major Stevens, with a detachment of 8 men, reconnoitered roads and constructed that day a telephone line to Siboney and over the ridge to the northwest of that place. Major Stevens says:

Owing to the absence of the telegraph section, left at Tampa, the party had but their hands and one pair of pliers—no climbers, tackle, brackets, or tools.

In extending the line along the prolongation of the army's march, there was no telegraph wire available from Spanish forces and the party depended entirely on the insulated 7-stranded wire supplied by Colonel Allen, which was transported partly by pack mules, but which in the construction of the line was necessarily carried by the Signal Corps men. These conditions made rapid progress impossible, but by dint of extraordinary exertions $2\frac{1}{2}$ miles of line were completed on the 28th through dense chaparral to the vicinity of La Guasima. On the day following the line was carried through that place to Sevilla and the headquarters of the cavalry division, and thence to the headquarters of the Fifth Army Corps, within a mile of El Poso or the sugar mill.

Of the physical conditions Major Stevens says:

Each day we had not only the natural obstacles to overcome, but suffered the daily deluge of rain, and, as we worked from early morning till dark, we were wet continually, and often stayed wet at night. The absence of blankets and protection proved trying, but none of us worried over the physical discomforts, our interest being so keen and all of us being too busy to think much of such things. The party had acquired an old kettle, and henceforth we lived and camped wherever we happened to stop.

From early morning of June 30 Major Stevens was able to inform the headquarters of the Fifth Army Corps in the field that through the cables it was connected by wire with America. There were no breaks in this complex system of telegraphic communication save those caused by our own soldiers and other persons occasionally cutting out sections of the insulated wire, partly through ignorance and possibly in some cases intentionally. As the Signal Corps was not allowed to take mounts, the patrol was necessarily slow and fatiguing. In accordance with orders from the commanding general of the corps the line was prolonged July 1, with the proposed forward movement of corps headquarters that day to the sugar mill, and stretched, says Major Stevens,

to El Poso building; but the Spanish shell fire was so accurately covering this space that the building could not be used, and the sugar mill, near by and about 200 yards to the right of and below Grimes's battery, became the field headquarters. The line was tied up to a tree behind the battery and then tapped at the bank of the creek

at the sugar mill for a station, from which communication was had with corps headquarters in the rear and with Siboney.

On the morning of the 2d of July, by directions received from Lieutenant Miley, aid to the general commanding, the line was carried to the San Juan River, the station at "C" being still maintained, and on the afternoon of the 3d, under the direction of the chief signal officer, Major Greene, the line was carried forward and a station was established at the headquarters of General Wheeler at the American trenches on San Juan Hill. From this point the line was afterward carried right and left to the headquarters of Generals Lawton and Bates, respectively, thus connecting by wire the center and both flanks of the American trenches with America.

Of the conduct of the detachment, Major Stevens says he can not speak too highly of the men and general situation:

They were not only intelligent and without thought of comfort or self, but anticipated everything. It was a great pleasure to me to serve with these men. Many of the men were under fire at some time, and I experienced the pleasure of hearing officers voluntarily speak very highly of them. In all the work done by my detachment everything went smoothly, and the establishing of the line was accomplished without a setback.

The insulated wire enabled the line to be built. With iron wire and no equipment the line would have been not only endlessly delayed, but have given much trouble, if successful at all.

The operators were busy day and night, and assisted during the day in laying lines; even a guard was used on two nights at the sugar mill station, so that the men were pretty thoroughly worked. I can not make mention of individuals in the detachment, as the men were all so gratifying in their behavior that I was proud of them and of the corps.

The number of men was far too small for the attendance on the corps had the campaign proved more extended. The men could not stand a lengthy continuance of such effort in the climate. Indeed, the fortunate supplying of the "insulated pliable wire" and the jungle enabled us to accomplish the work with celerity.

Major Stevens, being invalided by yellow-fever, was unable to render his report to Lieutenant-Colonel Greene, to which it is now attached, and it was rendered later direct to the Chief Signal Officer.

In connection with the attack of July 1, division and other separate commanders were provided with two suitably equipped signal men. Lieutenant-Colonel Greene reports concerning this work as follows:

On July 1, at 4.30 a. m., Captain Stevens and Lieutenant Burnell, Signal Corps, with a detachment of signal men, began extending the telegraph line from the headquarters camp to the front, a work of great difficulty, as the single, narrow road was crowded with troops marching to the front; but by perseverance the line was pushed forward in the brush well to one side of the road, so that it might not be disabled. Understanding that the advance headquarters were to be located at El Poso, I proceeded to that point early in the morning for the purpose of locating the station. It was intended to place the instrument in the abandoned hacienda of El Poso, and by 8 a. m. the wire was at that point; but, located as it was, upon lower ground and some 150 yards in the rear of Loma del Poso, upon the crest of which Grimes's battery was in position, and in the line of fire from the enemy's battery replying to Grimes's, it was soon evident that the telephone could not be maintained there, so the line was recovered and the instrument located in the shelter of the bank of the Agüadores (San Juan) River, alongside the Sevilla-Santiago road, some 250 yards to the north of El Poso. The latter part of the work was performed under a smart shower of shrapnel, which continued more or less in the vicinity of the station all day. From the station orders were sent and received all day, and the line was carefully and constantly patrolled to guard against interruption.

On July 3 the line was extended to the foot of what is known as San Juan Hill, where were the headquarters of Generals Wheeler and Kent; thence to the headquarters of General Lawton, upon the right of the line of investment, and subsequently a branch line built from General Wheeler's to General Bates's headquarters, on the left of the line of investment.

It thus appears that throughout the critical period of the campaign the Signal Corps kept General Shafter in direct communication by telephone with his subordinate commanders, and that these lines were uninterruptedly maintained under fire and during the progress of battle.

The value of the Signal Corps in directing the fire of the Navy is shown by the following extract:

On July 7 I went to the mouth of the Aguadores River, found the telegraph line along the coast between that point and Siboney in good condition, and located and established a station about 1 mile east of the railroad bridge, in a position screened from the fire of the batteries and rifle pits upon the Spanish side, right bank of the river. Afterwards, during every bombardment of Santiago by the fleet, the plotting of the fall of the shots in the city were telephoned from the station near Loma San Juan to the commanding general, whose directions as to range and direction were in turn telephoned direct to Aguadores and flagged to the admiral.

As to later operations, Lieutenant-Colonel Greene says:

Capt. G. W. Butler, with the Eighth United States Volunteer Signal Corps, reported at Siboney on July 9, and his men were placed on duty at Aguadores, Daiquiri, Siboney, and the ammunition camp. From this time to July 17 the line was constantly maintained in working order over its entire length, comprising the line of investment with a line extending from the middle thereof through the corps headquarters and different supply camps to Siboney, the land line from Aguadores to Daiquiri, and in addition the French cable from Siboney to Playa del Este, which has been seized temporarily by the United States, all the operators being soldiers of the Signal Corps. Those at the front worked and lived in mud and took their share of all hardships and exposure to fire with the remainder of the Army.

Upon July 17, immediately after the occupation of Santiago de Cuba, the Spanish military telegraph line from Santiago was tapped at the junction of the Caney and Sevilla road and extended into corps headquarters and communication opened, and afterwards, as required, the different camps were connected by telephone.

Concerning this telegraphic and telephonic service, which did not fall within the plans of the major-general commanding the Fifth Army Corps and for which he made no provision, the Chief Signal Officer of the Army feels it incumbent upon him to point its absolute military necessity and value, and to indicate the extraordinary risk which any general commanding a detached army, especially one serving on a foreign soil, assumes when he leaves himself unprovided with telegraphic or telephonic facilities.

Through the volunteer work of the Signal Corps no failure occurred in telegraphic communication. On the one hand, the major-general commanding the Fifth Army Corps reached by telephone points on the right, center, and left of his line within 400 yards of the enemy, and communication with his subordinate commanders was not only possible at all times, but was continuously maintained, as these lines worked twenty-four hours in the day. On the other hand, the major-general commanding the Fifth Corps was able to communicate directly with the admiral commanding the fleet through the telephonic station near Aguadores. In addition, the War Department, with all its bureaus and the supply depots of a great nation, were within twenty minutes of the general commanding, so that any deficiencies of equipment could be asked for or reinforcements requested; and further, he was able to keep in touch with the President, the Secretary of War, and the Commanding General of the Army, so as to receive at critical moments such advice, encouragement, or assistance as might advance the interests of the campaign.

It may be insisted that, apart from the value and effect of potent words of inspiring confidence which passed from Washington over these wires in the gloomy hours of the siege, these lines were worth more to the nation in the single month of July than has been the cost of the Signal Corps of the Army from its inception in 1859 to the present day. No one can say how long our success would have been delayed at Santiago, with the Spanish fully equipped with telegraphic and telephonic communication, had the commanders of the American Army been unable to communicate with each other, with their supply depots, or with the coopera-

tive fleet, save by the medium of their few mounted men, when hours, instead of minutes, must have elapsed before important orders could be given or answered. In addition, it is not pleasant to surmise what might have been the fate of the fever-stricken army near Santiago de Cuba had its fortunes and movements been debated by mail instead of by electrical communication.

MILITARY BALLOONS.

The necessity of balloons for reconnoitering purposes, especially in a level or wooded country, is universally recognized by military experts. All efforts to obtain special appropriations for the use of the balloon section of the Signal Corps having failed in past years, the beginning of the war found the Signal Corps provided with only one balloon, manufactured by members of the corps by hand, for which the cheapest possible accessories had with difficulty been obtained from the limited appropriation of the Signal Corps.

After the war began, while inability to promptly obtain funds, conjoined to the fact that everything connected with a balloon has to be manufactured to order, made it necessary to confine active balloon operations to the material already on hand, yet balloons, generators, compressors, and steel tubes were ordered as soon as an allotment was made. These, however, did not reach Tampa until the expedition was aboard transports, and so were too late for the Santiago campaign.

The balloon work was intrusted to Lieut. Col. Joseph E. Maxfield, United States Volunteer Signal Corps, a captain in the Regular Corps, whose report forms Appendix 5, and it is to his energy, professional skill, and ability that the successful operation of the war Balloon at Santiago de Cuba is due.

Overcoming almost insuperable difficulties at Tampa, Fla., the balloon with its accessories, such as generator and reserve hydrogen gas compressed in steel tubes, were assembled and loaded on the transport *Rio Grande* in three days. When the Fifth Corps disembarked, June 22, the orders of the commanding general prohibited the balloon detachment from landing, and it remained on the transport until June 28, when it was ordered ashore. On June 27 urgent verbal orders were given by the commanding general of the Fifth Army Corps to Lieutenant-Colonel Greene that the balloon detachment should instantly land and proceed to the front for the purpose of making a balloon reconnaissance. Lieutenant-Colonel Maxfield immediately requested authority to land the gas generator with the necessary material for inflating the balloon, thus holding the compressed gas stored in the steel tubes for reserve. The commanding general refused, and operations began by drawing immediately on the reserve gas, whereby only one inflation of the balloon was possible instead of a dozen, which could have been had by following usual methods. The balloon detachment reached the headquarters of the commanding general at Siboney on the night of June 28, and it moved with these headquarters on the 29th. The lack of proper facilities for storage during the voyage and the extreme heat had impaired the balloon, which was an old one, and when fully spread it was in such condition that its use for ascensions in times of peace would have been considered unsafe. Temporary repairs were speedily completed and three ascensions made on the afternoon of June 30—the first by Lieutenant-Colonel Maxfield and Sergeant Ivy Baldwin of the Signal Corps, the second by Lieut. W. S. Volkmar, Signal Corps, and General Castilla, of the Cuban army, the third by Lieutenant-Colonel Maxfield and Chief Engineer Officer Derby of the Fifth Army Corps.

These ascensions resulted in an increased knowledge as to the direction and course of such roads and streams directly in front of the Army as had remained undiscovered during the previous week. Lieutenant-Colonel Maxfield says:

The fact that the Spanish fleet of Admiral Cervera was in the harbor of Santiago was at last definitely settled. It could not be determined, however, how strongly the fortifications in our front were held, nor could they be located except with the greatest difficulty. A most flattering verbal report as to the value of the balloon in war was made by the chief engineer officer to the commanding general, with the recommendation that it be employed during the battle for the next day.

That evening verbal orders were brought to Lieutenant-Colonel Maxfield by the chief engineer officer of the Fifth Army Corps from the commanding general to report with the balloon at as early an hour as practicable at El Poso, which was to be the headquarters of the commanding general during the battle, and that there he would find the chief engineer officer, who would accompany him in the ascents.

Reporting on the morning of July 2 at El Poso, Lieutenant-Colonel Maxfield says: •

Upon reaching the summit of the hill none of the officers attached to headquarters were visible, and it was found that the hill was covered by a slow but remarkably accurate shrapnel fire from the enemy's guns. [Here his horse was shot under him. He continues:] The balloon was carried to a place in the river bottom about a quarter of a mile to the rear and an ascent made, Colonel Derby and myself occupying the basket. From this point a message was sent to the adjutant-general of the corps, setting forth the movement of the troops at El Caney and upon the road to our front which led to the hill of San Juan. Under orders from the chief engineer officer the balloon was then pulled down to within a few hundred feet of the ground, the occupants of the basket still remaining in it, and towed toward the front until a more suitable position for viewing the intrenchments at San Juan could be found. It was supposed that the balloon would be halted at El Poso and that point taken as a station for the balloon detachment, as had been originally intended. As this was not done, a statement was made by me as to the result of artillery firing at balloons in experimental work abroad and the conclusions to be drawn from such, and the fact stated that in my opinion it was unwise to carry the balloon farther to the front. No formal protest, however, was made, as it was felt that the chief engineer officer was the representative of the commanding general and that his desires were to be carried out. As a consequence, the balloon was carried rapidly to the front until it was immediately in the rear of the troops, who were then deploying for an attack upon the blockhouse and trenches on the San Juan Hill. As no further progress to the front could be made, the balloon was then carried across the bed of the San Juan River and into a large meadow just to the right of the road and the river. In passing through the trees and brush along the river banks the ropes holding the balloon captive became badly tangled in this brush, and no movement for a time was possible, nor, for the same reason, could the balloon be given the necessary elevation to enable it to do its best work. Nevertheless, from this point the fact was determined that the intrenchments on the San Juan Hill immediately in our front were strongly held, and a message to this effect sent to the commanding general, with the suggestion that the artillery upon the hill at El Poso should reopen its fire upon them. This was done. The attention of the occupants of the basket was given almost solely to an examination of the ground held by the enemy and that immediately in their front, and it was impossible for that reason to state what was the disposition of our own troops in the immediate vicinity, most of whom were hidden by the brush. It was noticed, however, that dismounted cavalry were deploying in the open meadow in which was the balloon, about 50 yards in front. It was at that time that the enemy opened fire. This fire appeared to be musketry only. In a very few moments it became apparent that the balloon had been struck, as there was a decided loss of gas, and the rope having not yet been cleared from the brush, I gave orders that the balloon should be pulled down, hoping to be able to disentangle it, carry it over to the rear, repair the holes in it, and replace the lost gas from the tubes which still remained full. This order was obeyed, and for twenty or thirty minutes the detachment was busy endeavoring to disentangle the captive cord and extend it along the bed of the river. During this work the detachment was exposed to a heavy musketry fire, from which they were fortunately well sheltered by the banks of the river, and, although the leaves often fell in showers from the bushes and trees overhanging the bank, but one man, Private Haywood, Signal Corps, United States Army, was struck. He received a wound in the foot. An examination of the balloon having shown several holes

in the upper portion and the loss of so much gas as to render the future use of it impossible, orders were given to secure it and to retreat along the river bottom. This was done.

A new balloon, meanwhile, had been shipped to Lieutenant-Colonel Maxfield, when he was informed by the commanding general of the Fifth Corps that no further work of the balloon detachment would be necessary during the campaign, and this officer returned with balloon gas tubes to Tampa to prepare for the Porto Rico campaign.

The operation of the Signal Corps balloon has been the subject of official comments that necessitate attention.

As to the utility of the balloon, Lieutenant-Colonel Maxfield states:

On July 1 at least two items of information of value were obtained by the use of the balloon. These were as follows: First, the fact that the intrenchments at or near the hill of San Juan were strongly held by the enemy. The obtaining of this information resulted in the opening of fire by the battery at the hill of El Poso earlier than would have otherwise been the case. Second, as shown in the official report of Brigadier-General Kent, commanding First Division, Fifth Army Corps, as quoted hereafter.

Brig. Gen. J. F. Kent, commanding First Division, in his report on July 7, 1898, says:

We were already suffering losses caused by the balloon near by attracting fire and disclosing our position. The enemy's infantry fire, steadily increasing in intensity, now came from all directions, not only from the front and the dense tropical thicket on our flanks, but from sharpshooters thickly posted in trees in our rear and from shrapnel apparently aimed at the balloon. Lieutenant-Colonel Derby of General Shafter's staff met me about this time and informed me that a trail or narrow way had been discovered from the balloon a short distance back leading to the left to a ford lower down the stream. I hastened to the forks made by this road, and soon after the Seventy-first New York Regiment of Hawkins's brigade came up. I turned them into the bypath indicated by Lieutenant-Colonel Derby leading to the lower ford, sending word to General Hawkins of this movement. This would have speedily delivered them in their proper place on the left of their brigade.

Judging from his report on July 25, 1898, Major-General Breckenridge was not fully informed as to the object and management of the Signal Corps war balloon, and evidently was unaware of the valuable information obtained therefrom. He says:

A balloon was sent down with this army, but its practical value was not demonstrated. This is a difficult country in which to see moving troops or anything of that sort, even from a balloon, on account of the thickly wooded nature of the country. On the 1st of July the balloon accompanied a marching column and drew much of the fire from the Spanish position, and some casualties resulted from this fire among the troops coming along the same line as the balloon.

Under these circumstances it is necessary that the Chief Signal Officer shall state exactly the above facts, which demonstrate, first, that the balloon proved its utility; second, that the forcing of the Signal Corps balloon to the skirmish line, where its position is reported to have caused serious loss to the troops by disclosing their movements and attracting the enemy's fire, was the action of Major-General Shafter, through his chief engineer, Col. George McC. Derby, in the face of professional advice given him by Lieutenant-Colonel Maxfield of the United States Volunteer Signal Corps, who was charged with the practical operation of the balloon, and who, besides sharing absolutely every danger to which Colonel Derby was subjected, in addition had his horse shot under him in a previous reconnaissance of the grounds.

Whether the valuable information obtained in this ascent could have been obtained with the balloon at a safe range in the rear is not within the knowledge of the Chief Signal Officer, nor is it within his province to decide whether or not the information obtained was sufficiently valuable to compensate for the loss of life involved therein. It is sufficient

to call attention to the fact that the official reports above quoted fully demonstrate the utility of the balloon, and that, despite the unsuitable character of the balloon and its imperfect accessories, its operations were successfully conducted. That it was kept on shipboard unused for a week was not the fault of this Corps.

Although the excellent conduct of the Signal Corps on this occasion was not officially noticed in the official report of the commanding general of the Fifth Army Corps, the Chief Signal Officer calls attention to the fact that while the signal corps is not a part of the fighting force of an army, and the operations of the balloon detachment are supposed to be conducted without the range of the musketry fire, yet no man failed to do his duty under fire. In his report Lieutenant-Colonel Maxfield says on this point:

It is with pleasure and pride that I refer to the conduct of the small detachment under my command in the field. Second Lieut. James R. Steele, United States Volunteer Signal Corps (since dead), performed his duty in the same quiet, thorough, and faithful manner which has marked his entire previous career in the Signal Corps. Second Lieut. Walter S. Volkmar, United States Volunteer Signal Corps, proved himself to be an energetic and courageous young officer. The entire command bore itself well, not only under fire, but also during the days of hard work and privation which followed. To Sergt. John Kennedy, Signal Corps, United States Army, praise is due for display of courage and uniform cheerfulness which did not fail to have its effect upon the entire command.

The character of the outfitting work of the Corps is shown by the following extract from the report of Lieutenant-Colonel Maxfield:

In spite of the difficulties met with, however, it can be said that within five weeks after the declaration of war the Signal Corps was able to put a fully armed balloon train in the field, and that by the time the companies of the Volunteer Signal Corps had been organized and were ready for service another train was practically completed. At the time of the cessation of hostilities one set of equipment was at Santiago de Cuba, with all the necessary apparatus and material for making balloon ascension, although work could not have been done with it as rapidly as would have been the case had a fresh supply of tubes containing compressed gas been available. Another balloon section was at Tampa likewise fully equipped.

The Signal Corps failed to receive from Major-General Shafter in his original report even a notice that it participated in the Santiago campaign, and this Corps did not share in encomiums such as were bestowed by him on the other staff corps for their efficient service at Santiago. It is hoped that this resulted from the natural wish of the commanding general of the Fifth Corps to defend other departments from unwarranted criticisms leveled at them and not with the distinct purpose of discriminating against a Corps that has so far escaped adverse comment. It was certainly invidious to assign charge of this balloon, which pertains to the Signal Corps, to an engineer officer who, responsible for its destruction, is recommended for brevet for having ascended in the basket with the signal officer who was in charge of it, while the latter officer, naturally responsible for its safety and proper management, is excluded from praise or management. However, in his later indorsement on the official report of Lieutenant-Colonel Maxfield the commanding general of the Fifth Corps says:

The service rendered by the balloon detachment, as well as the whole of the Signal Corps, was satisfactory.

TELEGRAPH CENSORSHIP.

There has been a misapprehension on the part of many that the Signal Corps exercised a press censorship during the war, an opinion that is entirely unfounded, as the Chief Signal Officer ignored all suggestions looking to interference with the free and untrammelled publication of press matter, even by the most sensational and unpatriotic

of journals. It may be added that the Associated Press, the Sun Press Association, and many of the leading journals, in a most patriotic spirit, expressed freely and frequently not only their willingness, but also their desire to refrain from the publication of any information that would embarrass the Administration or be detrimental to the success of military operations. These offers were not Pickwickian, for in more than one instance information of the highest interest to the public has never been published to this day, being held secret by press associations, newspaper correspondents, and editors, as calculated, if given publicity, to injure the national cause.

What the Chief Signal Officer of the Army really exercised was a censorship of all matter which passed over such telegraph cables and land lines as were militarily occupied by the Signal Corps in accordance with instructions from higher authority. The lines also occupied were the land lines of Florida, every cable (six separate systems) extending from the United States to any foreign country, the French cable on the south coast of Cuba, and the English cables in Porto Rico and Santiago, and the Cuba submarine cables at Santiago de Cuba. Most of these telegraph lines were only constructively seized, the Chief Signal Officer taking the responsibility, which he believes to have been the most effective method, of intrusting the direct censorship of messages, under the general supervision of an officer of the Signal Corps, to the respective superintendents, men of high character, whose good faith was guaranteed by the companies whose interests they likewise guarded. The interests of the United States were thus subserved while the privacy of the affairs of the companies was conserved.

The response of the several telegraph and cable companies to the demands of the United States, through the Chief Signal Officer, was gratifying in the extreme. The Western Union Telegraph Company suffered the most financially, owing to the almost total destruction of its West Indies traffic over the Key West-Havana cables, yet through its president, Gen. Thomas T. Eckert, whose effective patriotism during the civil war is part of the history of the country, it placed on all occasions the counsel, skill, and aid of the company's agents everywhere at the free disposal of the Government when needed. Mr. James A. Scrymser, president of the Mexican Telegraph Company, contributed his own great professional knowledge and the active cooperation of his company in many ways to the benefit of the nation. The Commercial or Postal Telegraph Company, by its president, John W. Mackey, pledged itself to full and patriotic action in harmony with the wishes of the United States. The United States and Haiti Cable Company accepted with the best of feeling the strict supervision that was necessarily exercised over its cable between New York and Haiti, and its officers placed at the service of the Government its most reliable and experienced operators. The French Telegraphic Cables Company, through M. Louis A. Lurienne, gave the strongest possible evidence of loyal and faithful compliance with the requirements of the United States, acceptable evidences that the hospitality shown by the Government to this company was appreciated. During the critical period in Cuba this company strove to fulfill its obligations as a neutral corporation, although most trying and difficult conditions obtained with a Spanish military censor at its office in Santiago and an American military censor at Playa del Este. The Direct Cable Company, Mr. James Brown superintendent, and the Anglo-American Cable Company, Mr. Charles Trippe superintendent, both accepted the situation with a spirit of good will to the United States and of straightforward conduct and earnest effort to carry out the censor's orders that were none the less gratifying that they came

in obedience to instructions from "our kin across the sea." The West India and Panama Telegraph Company (an English corporation) and the Cuba Submarine Company were necessarily committed to Spanish interests, owing to their franchises and subsidies from Spain, but they accepted with good faith and in proper spirit military control coincident with the American occupation of Cuba and Porto Rico.

The authority under which the Chief Signal Officer exercised censorship rests on that proviso of law which vests in the Chief Signal Officer of the Army the control and operation of military telegraph lines, and as soon as these cables and lines were militarily occupied by the United States, it fell within his province to fix the order of business and to decline such messages as were prejudicial to the military interests of the United States.

As correspondence with Spain and her colonies was discontinued by mail, so also was correspondence by telegrams, except such as fell within diplomatic privileges. Cipher dispatches by wire were also forbidden to and from any part of the West Indies, as otherwise information injurious to the United States would have been possible. Personal and commercial messages in plain text were permitted unless they contained injurious information, such as military or naval operations contemplated or then progressing. The policy followed looked to the least possible interference with domestic or commercial affairs. It thus occurred that messages passed freely over occupied lines, even in and out of Havana or, at times, of Santiago.

The Chief Signal Officer was not oblivious of the fact that secret information could be sent in plain text by concerted code, but it is to be said that while such messages were frequently accepted, it was often the case that they went quietly into the waste basket and not over the wires to the proposed destination. On the other hand the Chief Signal Officer appreciated fully the advantages to be derived from careful examination of the thousands of messages of unfriendly or neutral character that passed through the hands of his subordinates. From newspaper correspondents, blockade runners, Spanish agents, commercial messages, personal dispatches, etc., there was reaped a rich harvest of information. It would be boastfulness to say that these sources of information were fully exploited by the Signal Corps, but it is unquestioned that much was learned that proved of inestimable value to the United States. Col. James Allen, Lieut. Col. Joseph E. Maxfield, and Lieut. Grant Squires, in their capacity and service as telegraph censors, gained in order named the most valuable information. The intelligence and ability of these officers were applied with such persistent zeal in the performance of their duties that they rendered service of the greatest possible value to the Government.

The operations of American fleets in Cuban waters, the success and plans of blockade runners, the presence and activity of Spanish agents, the movements of Spanish ships were among various matters concerning which information reached the proper authorities through the Chief Signal Officer of the Army, not only hours, but even days, in advance of information through the ever active and almost ever-present correspondent, and in some instances the information gained was solely by the exertion of the Signal Corps.

The most striking illustration of the value of information thus gathered is the fact that out of the Signal Corps cipher messages that reported the arrival of Admiral Cervera's fleet in Santiago Harbor flowed the conception of the Santiago campaign, the turning point of the war. There have been so many incorrect reports regarding the locating of *Admiral Cervera in Santiago Harbor*, and of his being blockaded or

"bottled up" therein, that in the interest of history, let alone justice to the Signal Corps of the Army, the truth should be told. The location of Cervera's squadron at Santiago was first made by Col. James Allen, and later verified independently by Lieut. Col. Joseph E. Maxfield, both officers of the Signal Corps. The blockading of Cervera's squadron was due to the concerted action of the President and Secretary of the Navy, based on reports and representations made personally to them by the Chief Signal Officer of the Army. Secretary Long, alive to the situation, in an official dispatch, says: "All military and naval movements depended upon that point (the presence of Cervera in Santiago Harbor)."

On May 19, Admiral Cervera entered the harbor of Santiago with his squadron. That very day Colonel Allen telegraphed in cipher to the Chief Signal Officer: "Five Spanish vessels arrived at Santiago de Cuba. Have notified admiral commanding (Sampson). The Spanish flagship arrived Santiago de Cuba. The admiral (Cervera) hastily wired Madrid." On the following morning he added the following information: "Palayo and four cruisers in Santiago. No destroyers or torpedo boats arrived there." This information was communicated immediately to the President and by his orders to the Secretary of the Navy, who, being impressed by the assurance of the Chief Signal Officer of the Army as to the entire reliability of this report, proved himself equal to the emergency and on that very day gave such prompt and effective orders as resulted in the blockade of Santiago and the ultimate destruction of Cervera's fleet.

Colonel Allen furnished almost daily cipher reports from Santiago sources. On the 23d he reported that the Spanish squadron was short of coal and could not renew its supply at Santiago. His later information, that unarmored American cruisers passing up and down the coast were mistaken by the Spanish for the main American fleet, proves the wisdom and efficacy of Admiral Sampson's orders by cable that the fast unarmored cruisers of the Navy should perform scouting duty off Santiago. Cipher messages of the 23d stated correctly that Admiral Schley was that day at Cienfuegos and Cervera was at Santiago. Meanwhile the Navy had been unable to verify the fact of Cervera's presence at Santiago, and as a result the correctness of the information furnished by the Signal Corps was sharply questioned. The Chief Signal Officer, being informed that the whole campaign was being conducted upon his representations, was asked to verify this information from other sources, if possible. Prompt action was taken by the Chief Signal Officer, who adopted such lines of operations that thereafter there was scarcely a day that he was not in possession of information of some kind or other coming over one or more of the six cables leading out of Santiago. Lieutenant Colonel Maxfield, then in charge of the telegraphic censorship in New York, carried out special injunctions of the Chief Signal Officer so successfully that he was able in twenty-four hours to confirm from separate and absolutely certain source the fact that Cervera was still in Santiago. This confirmation, received from Lieutenant Colonel Maxfield, greatly lightened the burden of responsibility borne by the Chief Signal Officer, which, however, did not fully disappear until the tenth day after the entrance of Cervera's squadron in Santiago, when his presence was first confirmed from naval sources.

It is an interesting anticlimax that when Cervera's squadron was destroyed on July 3, Colonel Allen, the same officer who originally reported the arrival of the fleet on the very day it reached Santiago, likewise reported by telegraph to the Chief Signal Officer the fact that

the entire fleet had been destroyed, which information was conveyed to the President and country fourteen hours in advance of any other official advice.

Various conflicting reports were made during the war as to telegraphic isolation of Cuba. The Chief Signal Officer was kept daily advised of the situation, and, in fact, Captain-General Blanco was never unable to communicate over friendly lines with the Spanish Government at Madrid except during two days, when the cable operators left Santiago. The reentry of these operators, by permission of General Shafter, restored Generals Toral and Blanco to the telegraphic facilities they previously enjoyed over one cable, which could not be located, and which, save for two days, was operated throughout the war between Santiago de Cuba and Kingston, Jamaica.

In connection with the duties of telegraph censor, the Chief Signal Officer was struck with the patient patriotism displayed almost universally by business men of the country, whose operations abroad were necessarily conducted under conditions of increased cost and impaired secrecy. Whatever sacrifices the Government asked, almost to a man they were ready to make, and their general action sets in strong relief the conduct of the very few for whom the war seemed only an opportunity to decry their own or to turn all to gain.

The report, Appendix 6, of Lieut. Grant Squires furnishes details as to the telegraphic censorship at New York, the real center of telegraphic information.

THE PORTO RICAN CAMPAIGN.

The general charge of the Signal Corps work of this campaign devolved on Col. James Allen, United States Volunteer Signal Corps, who was serving on the staff of Maj. Gen. Nelson A. Miles, Commander of the Army of the United States. The Signal Corps men operating therein consisted of six organizations, Fourth, Fifth, Seventh, and Ninth Volunteer Signal Corps companies and companies A and D of the regular force. Of these, three served under Lieut. Col. W. A. Glassford, chief signal officer, First Army Corps, and three under Lieut. Col. Samuel Reber, attached to the Headquarters of the Army.

Colonel Allen's general report and the detailed report of Lieutenant-Colonel Reber furnish information in full as to the operations of the Signal Corps in the Porto Rican campaign.

Lieutenant-Colonel Reber's command on the *Stillwater* entered the harbor of Guanica, where the U. S. S. *Gloucester* had just cleared the shore. Establishing communication with the beach, he pushed forward his advance outposts, and hereafter that portion of the army was in constant communication with the Headquarters of the Army, to which all movements of troops were communicated and from which all orders and instructions were given over the lines of the Signal Corps. An advance line was run from the beach to the suburbs of Guanica the first day, and as the outposts moved toward Yauco July 28 the line was extended to that point. Under orders of Major-General Miles of that date to build telegraph lines from Yauco and open communication with Ponce, Lieutenant-Colonel Reber commenced operations with the flying telegraph train, and pushing on to Yauco with twenty men of the Sixth Massachusetts Volunteers reconnoitered the route and occupied the town on July 28. At Yauco it was discovered that the telegraph instruments and appliances had been destroyed by the enemy, but utilizing such portions of the Porto Rican lines as were standing and filling the gaps from the Signal Corps material communication was opened to Ponce on July 29.

The Fifth Signal Corps company landed on July 28 at the Playa de Ponce, occupied the telegraph office at Ponce that afternoon, and ran a line to the railroad station, while the Ninth company was disembarked the same day and took possession of the Spanish office at Playa and put the line in good order to the telegraph office in Ponce.

Upon the occupation of Ponce, Colonel Allen proceeded to St. Thomas, where satisfactory arrangements were made with Mr. Ross, superintendent of the West India and Panama Cable Company, for operators and instruments, whereby cable communication could be had with the United States via St. Thomas and Jamaica, or via St. Thomas and Martinique. As a result of Colonel Allen's efforts, and through the courtesy of Mr. Henry B. Chamberlain of the Chicago Record, cable employees were landed at Ponce on July 31 and communication established with Santa Cruz. Although the operations of the Signal Corps looked to field work, and so contemplated only the construction of flying telegraph and telephone lines, yet the ingenuity of its officers and men enabled it to put in prompt repair the permanent telegraph lines which had been abandoned by the enemy after destroying the instruments, batteries, and repair material.

The extension of lines along General Brooke's march from Guayama was under the personal direction of Lieut. Col. W. A. Glassford with the Fourth and Seventh Volunteer companies and Company A of the Regulars. Communication to the westward to Ponce was made over the repaired Spanish telegraph line from Guayama. As General Brooke's corps advanced, Colonel Glassford's skill and energy insured uninterrupted telegraph communication from Ponce via Guayama and Arroya to the outposts of the First Army Corps.

The extensive system of lines centering at Ponce was under charge of Lieut. Col. Samuel Reber, who was assigned the task of keeping up communication with General Wilson's command to the Fifth company, Capt. W. H. Lamar. The Ninth company had divided duties, Lieutenant Davenport being in charge of the central office, while Lieutenant Woodard skillfully maintained communication with General Henry's command as it advanced via Adjuntas to Utuado.

Later Capt. C. C. Clark, with Company D of Regulars, displayed great energy in opening up, after the peace protocol was signed, telegraphic communication from Ponce via Mayaguez with General Schwan's command, with which it was at first deemed unnecessary to establish telegraphic communication. A pleasing example of the versatility of the American soldier was the action of Lieutenant-Colonel Reber in replacing destroyed instruments. Visiting a workshop, he personally made out of a brass sugar kettle a switch board that, save under close inspection, seems to be of standard manufacture, and through it were sent thousands of messages from army headquarters. The ability, zeal, and resourcefulness of Lieutenant Colonel Reber insured a rapidity of action and efficiency of service that were highly creditable to that officer and the Signal Corps.

The extent and character of the work done by the Signal Corps under the direction of Col. James Allen, United States Volunteer Signal Corps, who had general charge of all Signal Corps operations, may be considered as a typical instance of the methods by which the Signal Corps operations of a great army should be conducted. The results obtained in Porto Rico, whether considered from an administrative standpoint or from a strategical point of view emphasize the indispensability of electrical communications in any serious campaign. Colonel Allen in this work added to the laurels he had already gained by his extraordinarily efficient service on the south coast of Cuba. The extent of this

work may be estimated from the fact that over the wires at Ponce office alone there were sent and received no less than 4,613 messages, within twenty-one days after the occupation of the city.

At Ponce was established the headquarters of the military telegraph system, which reached the cable of the West India and Panama Cable Company by a loop to the cable box at Playa de Ponce and Guanica to the west by a branch line. To the westward General Schwan's headquarters were reached through offices at Yauco, Subana Grande, San German, Cabo Rojo, and Mayaguez; to the northwestward General Henry's command by offices at Adjuntas and Utuado; to the northeast General Wilson's command by offices at Juana Diaz, Coamo, and at the outposts in front of Aibonito; to the eastward General Brooke's command by offices at Guayama, Arroya, and at his outposts. The whole system aggregated about 170 miles and covered nearly one-half the territory of Porto Rico.

The efficiency of the system is shown by the speedy manner in which the general message regarding the peace protocol was handled by Lieutenant Davenport, whose work as manager in charge of the line at Ponce was admirably done. The cablegram was received August 13 at 10.34 a. m. in the main office and reached army headquarters at Ponce at 10.37 a. m. The orders of Major-General Miles, commanding the Army, to Generals Brooke, Henry, and Wilson, directing suspension of hostilities were written, filed, and delivered to them by 11.10 a. m., just in time to prevent a renewal of active hostilities. The message to General Schwan was necessarily sent by a courier from Yauco, reaching him at daylight on the morning of the 14th at a point 20 miles northwest of Mayaguez.

The officers and men of the Signal Corps in this campaign were alert to secure valuable information, which was promptly transmitted to the commanding generals, and they acted as scouts. Lieutenant-Colonel Reber in this way occupied Yauco, and Captain Lamar, with General Stone pushed on to Utuado, about 15 miles from the north coast. In establishing advance telephone stations at outposts the Signal Corps kept pace with skirmishers and performed this important duty under fire of the enemy.

PERMANENT MILITARY TELEGRAPH LINES.

Situated almost entirely along the Mexican frontier or running to the heart of the great Indian reservations, the permanent military telegraph lines of the United States aggregate about 900 miles in length (Appendix 7). They have been regularly operated almost without interruption, despite the fact that they were stripped of Signal Corps sergeants at the commencement of the war. They were then, however, in the best possible order, through the activity of the Signal Corps, so that their temporary transfer to a force largely civilian has not resulted in material impairment of service, although they have suffered deterioration. The expense of their maintenance has been largely increased, owing to the necessary replacement of signal sergeants by civilian operators. A general overhauling of the lines has been impossible except at great expense, but will be undertaken on the return of military garrisons and signal men to various posts. The charge of these lines has devolved upon the following departmental signal officers, whose duties have necessarily kept them from active campaigning, but nevertheless the manner in which they have performed their work is deserving of special commendation from the Chief Signal Officer of the Army, who mentions *in this connection* the names of Capt. Eugene T. Wilson, United

States Volunteer Signal Corps, Department of California; Second Lieut. Edward L. King, Eighth United States Cavalry, Department of the Colorado; Capt. Frank L. Dodds, acting judge-advocate, Department of the Gulf; Second Lieut. Walter L. Clarke, United States Volunteer Signal Corps, Department of the East.

FLYING TELEGRAPH LINES.

The temporary occupation as camps of certain points by the volunteer forces of the United States necessitated the construction, maintenance, and operation of telegraph and telephone lines for purposes of administration. These were almost invariably flying telegraph lines, constructed according to plans in vogue for drill purposes in times of peace, though in most instances telephones have replaced telegraph instruments. These lines are usually of No. 14 galvanized-steel wire, suspended by 16-foot lances, to which the wires are hung by detachable india-rubber insulators.

At each separate camp, whether brigade, division, or corps, there has been erected an independent system of either or both telegraph or telephone lines (as shown by Appendix 8). The main office was located near the headquarters of the camp and afforded direct communication with headquarters of the subordinate commanders, the hospital, the commissary depot, the quartermaster stores, etc., and such other points as in the opinion of the commanding general were thought necessary for the prompt and successful administration of his command. In addition, direct communication was made with the adjacent commercial systems, whether telegraph office or telephone exchange.

It is admitted that it would have been impossible for the great camps of the country to have been properly administered without such electrical means of communication. This was especially true of camps such as Alger, George H. Thomas (Chickamauga Park), and Wikoff (Montauk Point, N. Y.), where the area covered by the troops amounted to 20 square miles or more. Similar telegraphic and telephonic facilities have been arranged for the great military hospitals whenever desired by the Surgeon-General.

Among the officers of the United States Volunteer Signal Corps who have particularly distinguished themselves in the installation of electrical systems in the great camps there are to be specially mentioned for their ability, energy, and zeal: Lieut. Col. Richard P. Strong, at Camp Alger, Va.; Lieut. Col. W. A. Glassford, Camp George H. Thomas; Lieut. Col. George O. Squier, Camp George H. Thomas; Capt. A. Higgins, Camp Wikoff; Capt. Frederick T. Leigh, Camp George H. Thomas; Capt. Howard A. Giddings, Camp Cuba Libre; Capt. Carl F. Hartmann, Camps Alger and George G. Meade; Capt. Frank E. Lyman, jr., Camp Hamilton; Capt. Samuel S. Sample, Camp Shipp; Lieut. Alvar G. Thompson, Camp Poland; Lieut. Henry G. Opdycke, at Fort Monroe.

The extent of these lines and the importance of the business done may be gathered from the mere statement of facts that flying lines built for this purpose within the limits of the United States exceeded 250 miles in length, and that the messages received and transmitted over them aggregated hundreds of thousands in numbers.

The rapidity with which these lines were constructed, the efficiency with which they have been maintained and operated, and the successful manner in which they have been recovered for future use have elicited commendation and praise from the various commanders whose administrative purposes they have subserved. No complaint, either official or unofficial, has reached the Signal Office that has reflected in the least degree upon the operations of these lines, which, it is evident,

are absolutely indispensable for administrative purposes in great camps and for strategical purposes during active campaigning.

The flying telegraph system, as devised and perfected by the Signal Corps, has stood the test of extended experience under diverse conditions both in these great camps and also under conditions of foreign campaigning, and it may be safely said that this system has developed no defects in time of war. It may, therefore, be accepted as a standard equipment, capable of rendering any communication service that the exigencies of war may demand.

It should be added that the successful installation and operation of these lines has been almost entirely due to the high degree of professional skill, patriotic zeal, and faithful attention to duty that has marked the service of officers and men of the United States Volunteer Signal Corps who have been charged therewith. The routine labor of garrison and camp are monotonous and fatiguing, but they have been fulfilled with the same fidelity to duty under these trying conditions as had characterized the work of their companions in arms who have been called to more active and inspiring service in the face of the enemy.

TELEGRAPH LINES OF CUBA AND PORTO RICO.

Immediately after the surrender of Santiago the Chief Signal Officer of the Army found that the labors of his corps were largely increased instead of diminished, and that it was necessary to increase the number of Signal Corps men in the new department of Santiago. This condition of affairs resulted from the fact that the telegraph lines of the western section of Cuba, as indeed for almost practically the entire island, were the property of Spain. These lines, partly owing to the disturbed conditions of Cuba during the past ten years and partly from late military operations, were in such condition as to be practically useless. Whatever may be the ultimate policy of the United States concerning these telegraph systems, there was an urgent necessity for putting them in good condition, at least as far as they were required for military purposes. The Signal Corps of the Army is therefore repairing and operating such lines as Major-General Lawton, commanding the Department of Santiago, deems necessary for the purpose of military administration. Steps are being taken to secure a definite report as to the present condition, urgent necessity, and prospective utility of these lines, and a similar course will be followed regarding the lines in the eastern end of Cuba whenever it shall be occupied by the military forces of the United States. In any event it is certain that between 200 and 300 men of the Signal Corps will be necessary for the care and operation of Cuban lines needed for military administration. Since the creation of the Department of Santiago the care of these lines has devolved upon Capt. Jasper E. Brady, jr., United States Volunteer Signal Corps, whose professional skill and energy are rapidly placing the lines in this department in proper working order.

In Porto Rico practically the same conditions obtain. The telegraph and telephone lines were the property of Spain, but have now become the property of the United States. The telegraphic system of this island is shown by the map forming a part of the report of Lieut. Col. Samuel Reber, of the Signal Corps.

Major-General Brooke, commanding the military forces in Porto Rico, appreciates the importance of the efficient and successful administration of these lines. Realizing that the possibility of governing this island with a small military force is greatly facilitated by, if not *dependent on*, prompt and reliable telegraphic communication, General

Brooke has officially reported that 100 men of the Signal Corps are necessary for the permanent garrisoning of the island, that is, that one out of fifty men of his command should be an electrician or a telegraph operator. Since the creation of Porto Rico into a department the charge of the telegraph lines has devolved upon Lieut. Col. William A. Glassford, United States Volunteer Signal Corps, whose long experience, professional skill, and great energy are confidently relied upon to administer these lines in the most efficient manner. Needful repairs are being made, and the lines are gradually resuming commercial business, and will be fully restored when the evacuation of the island of Porto Rico is completed.

CABLE TO PORTO RICO.

The transfer of Porto Rico to the sovereignty of the United States makes the subject of telegraphic connection between that island and this country one of unusual interest and importance.

At present the island is only reached over the cables of the West Indies and Panama Cable Company, an English corporation, which has certain concessionary rights. It certainly seems to be a matter of national import to secure direct communication between Porto Rico and the United States by a cable operated by an American corporation, or by the Government of the United States. At present the whole system of telegraph lines in Porto Rico is operated by the Signal Corps, the lines having become the property of the United States from the fact that they were owned and operated by Spain at the time of the military occupation of the island. Similar conditions obtain in Cuba, where the Spanish Government telegraphic system is gradually passing into the hands of the Signal Corps of the Army, in trust, for future disposition.

Inasmuch as the relations of Cuba and Porto Rico must become more and more intimate and important, it is recommended that the United States system of land lines in these two islands be connected by a deep-sea cable from Mayaguez, in Porto Rico, to Santiago, Cuba. This would connect the Cuban and Porto Rican systems. From Santiago, Havana will be ultimately reached by lines operated by the Signal Corps, and from Havana two American cables extend to the coast of Florida. By this means all communications between Porto Rico and the United States would pass over strictly American lines.

It is estimated that the cost of the cable between the points named, and the repair of connecting land lines, would not exceed \$600,000, and it is recommended that action be taken to perfect a telegraphic system as above outlined.

EXPERIMENTAL WORK.

The policy pursued in the past by the Chief Signal Officer in experimental work along lines of prospective value to the Signal Corps of the Army has naturally been interrupted by the war. Nevertheless, it has progressed as far as existing conditions have permitted.

Col. James Allen has devoted much attention to the system of wireless telegraphy with a view to the adoption by the Signal Corps of a suitable system whenever the progress of the invention and the conditions of the military service shall warrant such action.

Lieut. Col. George O. Squier, with the efficient cooperation of Prof. A. C. Crehore, has pursued, under the direction of the Chief Signal Officer of the Army, his investigation regarding the most effective

manner of transmitting and receiving telegraphic messages. The discoveries made by these brilliant young physicists have reached a point where their utility and importance appear practically assured, and it is believed that their discoveries and inventions will be of great value to the commercial world, and incidentally to the Army. A summary of their experiments and observations form a part of this report.

The Department is under obligations to the Commercial Cable Company for the unusual facilities that it afforded Professor Crehore and Lieutenant-Colonel Squier for experimental work with the sine wave system of cable transmission. This company not only placed its cable between New York and Canso at the disposition of these physicists, but the officials of the company offered every courtesy, attention, and assistance that was possible, especially Mr. George Clapperton, Mr. Charles Cuttriss, and Mr. S. S. Dickenson.

REDUCTION OF VOLUNTEER FORCE.

As the Volunteer Army has been gradually reduced since the signing of the peace protocol, similar changes have taken place in the Volunteer Signal Corps. The extended and important duties imposed upon the corps by the peculiar conditions in Cuba and Porto Rico and the institution of a considerable number of camps within the limits of the United States, have, however, prevented a corresponding reduction in the Volunteer Signal Corps as compared to that of the Army as a whole. Six companies have been furloughed with the view to the muster out of the men and the honorable discharge of the officers. These are the Fifth, Seventh, Eighth, Ninth, and Fourteenth companies. As far as practicable, the reduction of the Signal Corps has been made from companies wherein a majority of the men desired to leave the service and return to their civil duties. The able, faithful, and zealous manner in which the officers and men of the Signal Corps have performed their duties, whether in the great camps within the limits of the United States, at the siege of Santiago, the capture of Manila, or in the occupation of Porto Rico, have been such as to merit the highest commendation and praise. As a recognition of this service, the Chief Signal Officer issued on September 13, 1898, the date of the earliest order of the muster out of a company, a general order which recited briefly the extent and character of their services during the war. This order forms an appendix (No. 9) to this report.

Attention is especially called to the health record of this corps, which up to the date of the above order for muster out, lost by disease in camp and field only 5, officers and men included, out of a total aggregate of 1,300 men.

OFFICE OF THE CHIEF SIGNAL OFFICER.

The unfortunate illness of Maj. (now Lieut. Col.) Robert Craig, Signal Corps, arising largely from overexertion in the line of his duties, left the Chief Signal Officer of the Army at the beginning of the war without any assistant, and these arduous duties, except the signing of checks, devolved on the Chief Signal Officer until the beginning of June, when Maj. Eugene O. Fechét, United States Volunteer Signal Corps, was appointed disbursing officer of the corps and Capt. Otto A. Nesmith, United States Volunteer Signal Corps, was assigned as Assistant to the Chief Signal Officer. The reports of Major Fechét (Appendix 10) and of Captain Nesmith (Appendix 11) give briefly an account of the work of this office which has been of an overwhelming character. The working force was suddenly reduced to one experienced clerk, sup-

plemented by temporary appointments necessarily unskilled. The officers worked sometimes eighteen hours daily, Sundays included, and in addition to their ordinary desk duties were obliged to train inexperienced employees. Simultaneous with war conditions thousands of letters flooded the office.

The Chief Signal Officer has pointed out repeatedly in past years the fact that this office was undermanned, but his efforts to obtain proper clerical force have been unavailing. There was but one civilian clerk for the important duties of the disbursing and property officer prior to the beginning of hostilities, and it was necessary for the labors of this clerk to be supplemented by details of sergeants of the Signal Corps, a most objectionable line of action, but which was absolutely necessary.

The resignation, for the purpose of military service, of two clerks of the office left the disbursing officer without any skilled clerk, and the labors of his office, at all times arduous, became almost impossible. In order to handle the largely increased amount of work connected with the purchasing and forwarding of signal supplies to commands in the field, it was necessary from time to time to increase the clerical force by three temporary clerks, a number inadequate to do the work, which has consequently fallen in arrears for the first time in the history of the office. While most of the clerks appointed were willing, yet they were unfamiliar with the duties required of them, and frequent changes have proved injurious to the public interest. The necessity of a proper permanent force for the discharge of public business is obvious, and Congress should also provide a suitable clerical force for the general depot of signal supplies, for which the proper number of clerks and laborers will be asked for in the estimate for the coming year. It should be pointed out that the work of the disbursing officer, as indeed of the Chief Signal Officer and his other assistants, has been done under conditions which, to use plain English, have been discreditable to the Government. Despite repeated applications there has been no increase in the number of rooms. Not only has the Chief Signal Officer been unable during the whole war to transact any strictly confidential business in his office, owing to the necessary presence of another officer and clerks therein, but also, in addition, the other officers and clerks of the office have been crowded into three rooms, lighted by one widow each, where it has been impossible to transact public business for a portion of each day save by artificial light. For many consecutive days the temperature was 100 degrees in these crowded rooms, the unsanitary conditions of which were such as to affect injuriously the physical health of the clerks and to impair their mental efforts. Despite these unsanitary conditions and the attendant great physical discomforts the clerks as a rule have most faithfully performed their exacting duties. The hours of labor in the Signal Office during the war ran from nine to ten hours daily, Sundays included, and at times reached twelve hours per day. It should be said to the credit of these clerks that no expression of dissatisfaction has ever reached the ears of the Chief Signal Officer, and they have shown almost invariably a patriotic devotion to duty that is worthy of the highest praise.

The parsimonious policy that reduced the appropriation of the Signal Corps from \$22,000 to \$18,000 a few years ago necessarily left the Signal Corps badly provided for war operations. It was necessary to provide a large army with all the appliances for the most advanced methods of electrical and visual signaling, as well as provide for the electrical installation of the fire-control system of all the artillery forts of the country. As far as possible articles were bought on short-time bids of from three to five days, but whenever a necessity arose the

Chief Signal Officer went into open market and purchased without the formality of bids. This course, it should be said, has only been followed when time was a more important factor than money.

While it is not usual to note in an annual report the relations of the different bureaus of the War Department, yet, under the circumstances, considering the importance of the relations of the Chief Signal Officer to the Adjutant-General and the Quartermaster-General, it is but justice to record the harmony that has existed with and the valuable cooperation that has been received from these departments. To the Adjutant-General of the Army, Brig. Gen. Henry O. Corbin, is especially due an acknowledgment of valuable services rendered by him, which have contributed to the successful operations of the Signal Corps. Whether day or night, General Corbin never failed to fully and promptly meet the most exacting demands of the Chief Signal Officer of the Army when made in the public interests.

Brig. Gen. Marshall I. Ludington, the Quartermaster-General of the Army, has never failed to promptly and favorably act whenever special facilities have been needed by the Signal Corps. It should be further added that Brig. Gen. John M. Wilson, Chief of Engineers, has also extended valuable aid, both personally and through the officers of the Corps of Engineers, especially in connection with Signal Corps cables in the great harbors.

Thanks are due to Maj. Hugh G. Brown, United States Infantry, temporarily on duty with the corps, for the valuable assistance rendered, especially in connection with matters pertaining to field work.

The services of Capt. Otto A. Nesmith, United States Volunteer Signal Corps, Principal Assistant, have been simply indispensable to the successful conduct of the office. His knowledge of War Department methods, his tact, courtesy, and industry were most valuable adjuncts at such critical times.

Maj. Eugene O. Fechét, United States Volunteer Signal Corps, brought to his duties as disbursing officer of the Signal Corps a knowledge of practical business methods which were doubly important through his appreciation of the importance of time and accomplishment of the desired end in the most direct and efficient manner.

Capt. Daniel J. Carr, United States Volunteer Signal Corps, was most valuable from his technical knowledge of electrical matters at a time of large purchases and new installations.

The chief clerk, Mr. George A. Warren, has performed his duties with the zeal, industry, and intelligence that have marked his services for many years, and it is hoped that the reorganization of the office will permit him to receive a salary commensurate with his ability and application.

APPROPRIATIONS.

The Signal Corps commenced its war operations with a fund of \$800, which was supplemented by allotments from the national war defense fund and by deficiency appropriations of Congress, so that the total amount available for the eighteen months ending December 31, 1898, aggregated \$609,000. The report of the disbursing officer shows the chief items of war expenditures, of which the most important in connection therewith are the cable, telegraph, and telephone lines and instruments, aggregating, in round numbers, a quarter of a million dollars.

ESTIMATES.

The estimates for the fiscal year ending June 30, 1900, aggregate \$47,500, and are based upon the assumption that the Regular Army

will hereafter consist of 75,000 men. Should the number be greater or less the estimates can be proportionately increased or decreased.

REGULAR SIGNAL CORPS.

The reorganization and enlargement of the Signal Corps of the Army is a matter of great importance, and the within recommendations are based on the supposition that the Regular Army will hereafter consist of a force of 75,000 men and that the outlying portions of the United States—Porto Rico, Hawaii, and at least the city of Manila—will be garrisoned.

The regular corps now consists of 10 officers, 10 first-class sergeants, and 40 sergeants. It is recommended that there be added to the Signal Corps 1 colonel, 1 lieutenant-colonel, 2 majors (one to be a disbursing officer out of the line of promotion), 5 captains, 9 first lieutenants, 40 first-class sergeants, 60 sergeants, 50 corporals, 250 first-class privates, and 50 second-class privates.

This makes an increase of 18 officers and 450 enlisted men; but, on the other hand, it relieves from military signaling duty, and thus enables them to devote the time to other duties, 1 officer and 4 enlisted men from each company throughout the Army, or an aggregate of about 400 officers and 1,600 men—a most cumbersome and inefficient system, which absolutely broke down during this war, as it has during all Indian campaigns and troubles in past years.

It is further recommended that the vacancies shall be filled from officers who have served in the United States Volunteer Signal Corps during the present war; and that no officer shall be appointed until he shall have been previously approved as to his moral, mental, and physical fitness by a board of Signal Corps officers convened for that purpose and its proceedings are approved by the Secretary of War.

The efficiency of the Signal Corps in the war has been due to the high professional standing of the officers of the regular corps, who have all, without exception, attained their commissions by competitive examination after having served in the Regular Army. The high standing of the corps in future can only be preserved by a similar policy, which should insure in any future war, as it has in this, the successful operation of the corps. In the present war the captains and lieutenants were promoted to the higher grades in the United States Volunteer Signal Corps, while 14 of the trained first-class sergeants, proficient in their duties and experts through long service, were made second lieutenants. This afforded a most satisfactory frame work with a personnel skilled theoretically and practically both at the top and at the bottom of the commissioned force. It may be added that a very large number of noncommissioned officers is necessary in this corps, owing to the fact that the electrical installations at artillery posts will demand some 50 skilled electricians for the care of the electrical devices which are absolutely indispensable to the system of fire control, on which rests the efficiency of the entire coast defenses of the country.

THE LIBRARY OF THE ARMY AND THE WAR DEPARTMENT.

This collection of books has usually been called the War Department library, yet in truth it belongs almost entirely to the Army of the United States, the books having been purchased from its contingent fund. Under these conditions it has been administered in the interest of the Army at large, while at the same time serving the office of the Secretary of War and all the bureaus of the War Department as a

library of reference and issue. The library has been under the general supervision of the Chief Signal Officer of the Army in addition to his other duties, and in connection therewith he has paid particular attention to the selection of suitable professional publications and their proper cataloguing for the use of the Army. Under this policy the library is gradually attaining a rank as one of the best collections of military literature in the world, despite the fact that less than \$1,000 annually is spent on it.

Exclusive of the public documents and Government publications, there were added to the library during the year 1,190 books and pamphlets and about 800 periodicals. Of the books, 457 were acquired by purchase and 313 by exchange and 420 by gift. Those purchased, either for professional research or reference, include publications on war and allied sciences. Special attention is given to the collection of historical works on American wars, and the books contributed as gifts are largely those relating thereto. Special consideration is also given to works bearing on the resources and political conditions of countries which are engaged in warfare, or where such contests are anticipated, so that officers of our Army may intelligently follow current military operations.

The library has been very successful in exchanges, as authorized by the law of January 12, 1895. In exchange for military publications of the War Department this library has received during the past year no less than 34 separate military periodicals from foreign countries.

Particular efforts have been made to obtain books and pamphlets relating to American wars, especially the war for the Union. Many pamphlets and books have been donated to the library in answer to widely distributed circular letters. Gradually the deficiencies in important military serial publications are being filled by purchase or exchange.

The regulations extending the use of the library to officers of the Army on duty at distant posts have had gratifying results. No book has been lost and none materially damaged. The professional value of this privilege to officers is indicated by the fact that, despite war conditions, no less than 483 books were loaned by registered mail during the fiscal year. The professional activity of the officers is evidenced by the character of the publications borrowed, which largely pertain to the higher branches of scientific and military literature.

No account was kept of the number of books consulted in the library until December, 1897, but as the number consulted during the last six months of the year was 4,859, it is probable that not far from 10,000 volumes were consulted during the year.

The number of volumes loaned to officers and men of the Army and clerks of the War Department in the city of Washington was about 3,600. This makes the total library use some 14,000.

In accordance with law, the use of the library has been extended by the Secretary of War, under proper restrictions, to the faculty and students of the Columbian University. Historical students in steadily increasing numbers visit this library for study and research, and to them are accorded the amplest facilities permitted by the limited space.

The library force should be placed on a permanent and satisfactory footing. While the library has increased 40 per cent by the devolving on the library the distribution of public documents, the library force has only one regular clerk. No less than 20 employees have been assigned to the office during the year. While these clerks have, almost without exception, been faithful, yet their lack of library knowledge was such

that in most cases they have been actually a drawback in the work in hand. The library force should consist of the librarian, who should be a fourth-class clerk, and two assistants, who should be attached to the Secretary's office and be an actual part of the library force.

The death of the former librarian, Mr. David Fitzgerald, a clerk at \$1,400, was followed by the appointment of Mr. J. W. Cheney, who, despite the increased labor that fell upon the office in reorganizing it, receives a salary of only \$1,200. The library has never been arranged or catalogued under modern scientific methods, and its utility has been greatly impaired by the lack of proper and systematic arrangement. Since the beginning of the new administration in December last, nearly two-thirds of the library has been rearranged under the general features of the Cutter system of classification, modified as the peculiar character of this library necessitated.

Especial attention has been given to the cataloguing, filing, and arranging of the very valuable photographs and photographic negatives relating to the war for the Union. There are now over 8,000 such photographs on file in the War Department Library. These valuable collections have been placed beyond the chance of future injury, and are so arranged that any single photograph can be at once reproduced. The process of identification has of necessity been slow, and there are yet several hundred portraits of distinguished soldiers and civilians in the unrecognized list. A finding list of the photographs and photographic negatives has been printed, thus widely extending the value and knowledge of these collections. In exceptional cases, where such action would be in the public interests, or as a proper concession to surviving relatives, permission is granted, in accordance with the instructions of the Secretary of War, for reproductions of selected photographs under rigid restrictions insuring the safety of the negatives.

WAR DEPARTMENT DOCUMENTS.

The distribution of such documents as are published by the War Department, printed only in small editions for the use of the Army, has been regularly and systematically conducted.

The creation of a large army made it necessary to modify the restrictive law regarding the military publications of the War Department. The Chief Signal Officer therefore recommended to the Secretary of War that legislative authority should be obtained for the future printing of as many extra copies of the military publications of the War Department as might be necessary for the instruction of the National Guard of the various States. In addition, Congress provided, on the recommendation of the Chief Signal Officer, for the printing and distribution of 35,300 volumes of various manuals, regulations, and drill publications, which were issued under conditions imposed by public resolution No. 24 (Appendix No. 13). There have been received more than 120,000 and been distributed more than 60,000 War Department documents during the year. This work, carried on in obedience to the special provisions of law, is of such importance in character as to demand the assignment to it of a permanent clerk. Legislation by Congress is necessary, and should be obtained, whereby the National Guard can obtain at their own expense the military publications of the War Department, which can now neither be issued nor sold except by special Congressional authority.

A. W. GREELY,

Brigadier-General, Chief Signal Officer of the Army.

The Honorable

The SECRETARY OF WAR.

APPENDIX No. 1.

REPORT OF LIEUT. COL. RICHARD E. THOMPSON, UNITED STATES VOLUNTEER SIGNAL-CORPS, ON THE OPERATIONS OF THE CORPS AGAINST MANILA, PHILIPPINE ISLANDS.

HEADQUARTERS DEPARTMENT OF THE PACIFIC AND EIGHTH ARMY CORPS,
OFFICE CHIEF SIGNAL OFFICER,
Manila, Philippine Islands, August 29, 1898.

CHIEF SIGNAL OFFICER,
United States Army, Washington, D. C.

SIR: I have the honor to report as follows relative to the work of signal parties during recent operations:

The day immediately following the arrival of the signal command in Manila Bay, July 31, it was disembarked and assigned to quarters at Cavite, and preparations were at once made for the connection of this point, then the base of supplies, with the advanced camp of troops before Manila. Although by direct route from Cavite to the camp did not exceed 8 miles, the distance around by land was at least twice as great, and through a country difficult at all times, but rendered nearly impassable during the heavy rains then prevalent and the great heat.

There was utter lack of the ordinary army transportation, so that the only recourse in this respect was to the small ponies and native carts of the country; but, notwithstanding the difficulties of road and the lack of facilities, the base was placed in communication with Bakor, the insurgent headquarters; Paranaque, the secondary base; the camp, and the trenches in less than four days—no great feat, apparently, to those not familiar with the difficulties to be overcome, but one, under the circumstances, calculated to tax the endurance and perseverance of the men to the utmost, and bring into marked prominence their indifference to hardship and privation and their devotion to duty, and indicating in the most unmistakable manner the capacity of their officers to command.

During the period of line construction communication between the several transports was maintained by flag detachments, and after completion of the telegraph reports were transmitted through the elevated flag station at Cavite from the most advanced position of the line to both the transport fleet and the navy; and from the time of its completion to the day of the assault the telegraph and flag system was of the utmost importance in informing the different commanders of the condition of their troops and supplies, the progress of affairs at the front, and the character of the almost nightly engagements at the trenches, during one of which the hazardous work performed by Corporal Dozier and Private Greene, in repairing the field telegraph line under a hot fire, was of such a character as to call forth the special commendation of the brigade commander.

On the night of August 12, orders having been issued for the disposition of troops and the assault the next day, five signal details, each under the command of an officer, were made—one each to the division commander, the two brigade commanders, and the reserve; and an important station was established on the beach, with instructions not only to maintain communications of the army, but to facilitate the cooperation of the navy, by the display of prearranged signals for the control of their fire, not only during the bombardment of the fort and the enemy's line of trenches, but for directing its fire in front of the army during its advance; and the effective work of the *Callao* in running close in and maintaining a rapid fire against the Spanish position during the progress of the assault, not only marks the intrepidity of her commander, but indicates the satisfactory working of the system of signals.

The efficiency of the signal parties can perhaps be best illustrated by stating that during the engagement the different parts of the army were at all times in actual cooperation until the carriage of the works and the entrance of the troops into the city, touch being temporarily lost only while carrying forward the line and establishing stations under fire. The party designated to signal the navy maintained its position, either with or in advance of the firing line, and its signal flags were the first emblems of the United States to be displayed within the enemy's works.

It is most gratifying to be able to record that during all the operations, both preceding and during the assault, each individual of the signal detachment, officer and man, performed his duty in every respect with most scrupulous and zealous devotion.

Very respectfully, your obedient servant,

R. E. THOMPSON,
Chief Signal Officer and Lieutenant-Colonel Volunteers.

INCLOSURE 1.

REPORT OF CAPT. E. A. McKENNA, COMMANDING FIRST COMPANY, VOLUNTEER SIGNAL CORPS.

MANILA, PHILIPPINE ISLANDS, *August 17, 1898.*

Maj. R. E. THOMPSON,
*Volunteer Signal Corps, Chief Signal Officer,
Department of Pacific and Eighth Army Corps, Manila, Philippine Islands.*

SIR: I have the honor to submit the following report of the battle at Manila August 13, 1898:

On that morning my company consisted of 55 men, and was distributed as follows:

At Cavite: Sergeants Knapp and Mowbray, Corporals Vose and Schoeneman, and Privates Banning, Biebel, Ryan, Scheuer, Reeves.

At Baker: Sergeant Sloan and Corporals Stock and Lindholm.

At Paranaque: Sergeant Neal and Privates Holloway and Williams.

At Camp Dewey: Sergeant McKinstry, Corporals Smith and Bietau, and Privates Reed and Neal.

On board S. S. *Newport*: Corporal Jones and Privates Daley and Stewart.

In Second Brigade Hospital: Corporal Emerson.

At the front, with Lieutenant Rudd: Sergeant Watkins and Privates Ten Eyck, Logan, and Ray. With Lieutenant Kilbourne: Privates Fowle, Curtis, Dunn, and Walters. With Lieutenant Perkins: Sergeant Cunningham and Privates Burgess, Gorsuch, Greene, Mize, Rudrew, and Russell. With Lieutenant Chance: Sergeant Dozier, Corporal Gordon, and Privates Forman, Gellerman, Inman, Hopkins, and Cutler.

My detail consisted of Sergeants Gibbs, Kelly, Sellar, and Jurs, Corporal Howser, and Privates Cooke, Wadak, Shalda, and Frazier.

The officers, with the various details as above, left Camp Dewey at 6 a. m. Lieutenant Chance and detail were sent to establish an office at General MacArthur's headquarters, he being assigned as chief signal officer First Brigade, Second Division of the Eighth Army Corps.

Lieutenant Perkins and detail were assigned to take charge of office established at Church, he being chief signal officer Second Brigade, Second Division, Eighth Army Corps.

Lieutenant Kilbourne and detail went to Passay with myself and opened an office, Lieutenant Kilbourne being assigned as chief signal officer of reserve.

After opening an office at General Anderson's headquarters at main reserve, Lieut. Rudd and detail were left in charge of said office.

Myself and detail went to the beach on the extreme left of our intrenchments and established a signal office in rear of hulk.

All of the above offices were working "O. K." at 7.30 a. m.

At 9.30 the fleet began the bombardment of the Spanish fortifications, the Signal Corps with their flags indicating the exact spot where each shot took effect; also directing the flagship whether their shots were too high or too low.

At 10.10 a. m. my detachment signaled the fleet to cease firing, and immediately thereafter the advance of the Second Brigade, commanded by General Greene, was begun.

Sergeants Gibbs and Jurs carried Signal Corps flags on the left flank of the Second Brigade, which was directly exposed to the fire of the enemy, and Privates Frazier and Wadak supported them.

The Spanish intrenchments were gained by our troops of the Second Brigade at 10.35 a. m. At 10.50 a. m. telegraph communication was made inside the Spanish intrenchments with our troops, the wire having been strung from previous station by Sergeants Kelly and Sellar and Corporal Howser, and Privates Burgess and Gorsuch from Lieutenant Perkins's detail. At the same time First-Class Sergeant Chadwick, of the Signal Corps, United States Army, assisted in the work. Wire was then strung some half a mile farther, and an office opened in an English house in the outskirts of Malate.

Wire was interrupted for a short time on account of troops passing over it and breaking connection. Everything, however, was in first-class working order at 3 p. m.

Lieutenant Rudd and his detachment were ordered to report to me at Malate, there being no further occasion for office at the main reserve.

Lieutenant Kilbourne, with his detachment, was ordered to close office at Passay and report to me at Malate.

Lieutenant Rudd reported to me at 4.30 p. m. and Lieutenant Kilbourne at 4.45 p. m. Lieutenant Chance and detachment were ordered to return to Camp Dewey. The telegraph office, with Lieutenant Kilbourne in charge, remained at Malate, and my detachment, also Lieutenant Rudd's, came toward the city of Manila and established an office at General Anderson's headquarters.

When General Greene's troops entered the intrenchments I notified General MacArthur, on the right wing, that the Second Brigade had gained the enemy's intrenchments, and that the Spaniard's had apparently abandoned the same upon the commencement of the bombardment by the fleet.

I wish to commend the bravery of all the men in my detachment, and especially the good services rendered by Sergeants Gibbs, Kelly, Jurs, and Sellar, and Corporal Howser. I also wish to call attention to reports of Lieutenants Chance, Perkins, Kilbourne, and Rudd, which are hereto attached and made a part of this report.

When connection was first made inside the Spanish intrenchments at 10.50 a. m. the men of my detachment and also First-Class Sergeant Chadwick were subjected to the fire of the Spanish soldiers, but, fortunately, none were hit with the enemy's bullets.

While the office was being established in the English house heretofore mentioned, and while two of my men were busily engaged running the wire through the window, a fusillade of shots was fired through the window, my men narrowly escaping serious injury. A private of the Colorado regiment was seriously wounded in the neck within a very few feet of where my men were at work.

Every man of the First Company of the Signal Corps was anxious to be the first man to cross the Spanish intrenchments, and all, without exception, did their duty in the positions assigned to them.

A red and a white flag of the Signal Corps were the first American emblems shown within the Spanish intrenchments, being there some minutes before the Spanish flag was pulled down and the American flag run up in its place. Established a telegraph office at General Anderson's headquarters, near walled city, at 4.45 p. m., putting him in telegraphic communication with all the troops of Second Division, Eighth Army Corps.

Hereto I append report of trip from San Francisco to Manila.

In pursuance of orders issued by Major-General Otis, dated Camp Merritt, June 25, the First Company of Volunteer Signal Corps, consisting of 5 officers and 55 men, left Camp Merritt June 26, 1898, at 11 a. m., and marched to Pier No. 7, San Francisco Dock, arriving there at 12.15 p. m., going on board the steamship *Indiana* en route to Manila.

Two men of the Signal Corps, viz, Dozier and Howser, were detailed for duty on the *Morgan City*, Privates Dunn and Frazier were detailed for duty on the *Ohio*, Privates Jones and Daley on the *City of Para*, and Privates Gordon and Cutler on the steamer *Valencia*, which steamers, with the *Indiana*, formed the third expedition to the Philippines, commanded by Brigadier-General MacArthur.

The expedition steamed out of harbor at San Francisco June 27. On the way out of harbor, signals were exchanged between Signal Corps men on steamship *Indiana* and flag stations along the entrance to the harbor.

June 28: Sea very rough. Early in the morning messages were sent from the *Indiana* by Privates Jurs, Stock, and Knapp to other vessels of the fleet, the sending flagmen having to be lashed to the bridge on account of rough sea.

On trip from San Francisco to Honolulu there were no incidents of any importance.

Monday, July 4: All drills were suspended and exercises in commemoration of our national birthday were held on the cabin deck, consisting of music by the band, oration by Major Lord, music and chorus. General MacArthur acted as president of the day.

Sighted Hawaiian Islands at 3.30 a. m. July 6. Made Honolulu Harbor at 6 a. m. *Ohio* and *City of Para* already in port; *Morgan City* arrived at noon.

All men of the Signal Corps were allowed to go on shore July 6 and 7. *Valencia* arrived at midnight July 6.

On July 7 the First Company of Signal Corps was landed in a body from the *Indiana* and marched to the palace grounds, where they were served an elegant luncheon by the citizens of Honolulu, the officers being entertained by the officers of the Hawaiian National Guard at their bungalow.

The *Indiana*, *Valencia*, *Morgan City*, *City of Para*, and *Ohio* left Honolulu Harbor Friday morning, but on account of machinery of *Indiana* being out of order the fleet returned to the entrance of the port.

During stay in port at Honolulu the Signal Corps was engaged in sending messages

between the various ships by flag. The fleet finally sailed from Honolulu at 2.30 p. m. July 9.

The weather from San Francisco to Honolulu was not excessively warm, but after leaving Honolulu it began to get unbearable.

Up to July 20 no incident of importance occurred, except the death of a private of the Twenty-third Infantry on July 14.

Private Ralph R. Bowers, of the Signal Corps, died at 7.35 p. m. on July 20. He was first taken sick on July 17, complaining of indigestion. From best information obtainable it appears that he overloaded his stomach with canned goods, and a short time after he went down into the engine room, where the thermometer was about 120°, and immediately after coming out of the engine room took a shower bath. He was sent to the hospital on the 17th. On the morning of the 20th he seemed to be much better, having passed a quiet night. At 7 o'clock p. m. on July 20 Captain McKenna, Sergeants Gibbs, and Corporal Smith went to see him, there being no appreciable change in his condition; but a few minutes later it was noticed that death was imminent. He passed away quietly, with scarcely a struggle. The doctors pronounced the cause of death to be heat exhaustion and heart failure. A list of the effects of Private Bowers was made by the captain, and witnessed by Lieutenants Chance and Perkins. Thursday, July 21, the remains were consigned to the sea at 10 o'clock a. m., from port side of the ship, in longitude 155° 46' east, latitude 20° 48' north. The service of the Episcopal Church was read, and six pallbearers and the whole company were present at the ceremony, including the company officers; also General MacArthur and Colonel Ovenshine, of the Twenty-third Infantry. The band of the Twenty-third Infantry played a funeral march and "Nearer, my God, to Thee." Taps were sounded.

Up to this date a morning drill of one hour and an afternoon drill of one hour in wand practice were had on board ship, also inspection of arms at 3 o'clock p. m., but subsequent to this date the weather was so warm that these drills and inspections were dispensed with.

Lieutenant Kerr, of the Engineer Corps, died at 9.30 p. m. on the 21st, and was buried Friday, July 22, at 9.30 a. m., from the port side of the ship.

Corporal Vose was quite ill July 22 with neuralgia.

We passed the Ladrone Islands Friday evening, July 22.

July 25 and 26 I served with general court-martial on board *Indiana*.

The fleet arrived at Cavite at 4 p. m., July 31, and cast anchor. The harbor was sighted at 9 a. m., but several hours' delay was occasioned waiting for the *Morgan City* and *Valencia*.

On the voyage the quarters of the men were as good as could be expected owing to the crowded condition on board. The health of the men was fairly good as an average. More fresh vegetables would have been conducive to good health, but it was impossible to bring such articles of food such a long distance. With one exception no serious illness prevailed.

Distance traveled from San Francisco to Manila, 6,995 nautical miles.

Hereto attached are reports of Lieutenants Chance, Perkins, Kilbourne, and Rudd, covering their detached duties during campaign ending in the capture of Manila.

E. A. MCKENNA,
Captain, Volunteer Signal Corps.

A true copy.

E. A. MCKENNA,
Captain, Volunteer Signal Corps.

REPORT OF LIEUT. WILLIAM W. CHANCE, FIRST LIEUTENANT, VOLUNTEER SIGNAL CORPS.

AUGUST 13, 1898.

I was assigned for duty as chief signal officer of First Brigade, Second Division, Eighth Army Corps, at the headquarters of General MacArthur, on the extreme right of the attacking line, with the following men: Sergeant Dozier, Corporal Gordon, Privates Hopkins, Gellerman, Forman, Cutler, and Inman. Corporal Gordon had been detailed to set up instrument at this station on the evening of the 12th.

Left Camp Dewey at 6 a. m., following the main telegraph line for about 1 mile, to the headquarters of General Anderson; then proceeded to our station in the trenches on the right, between the Astor and Utah batteries, arriving at 7.30, and reporting to General MacArthur, who had reached there shortly before. Wire working well. Wire open at 7.50. Sent out Dozier and Hopkins, who found wire grounded; cleared it, and reported back at 8 05.

At 11.30 sent Sergeant Dozier to the front with message for General MacArthur. At 12 sent Hopkins to the front with message for General MacArthur, distance about 1½ miles. Cutler accompanied him about half way to relay reply if any. At 2.20

p. m. I delivered message to General MacArthur, who, I found, had raised flag in Paco and was entering Malate.

At 6.10 moved telegraph instrument to second floor for protection from rain.

At 6.55 received orders from you to return to Camp Dewey with instrument and extra supplies, which orders were carried out.

During the engagement the men under my command worked diligently and faithfully, rendering very efficient service.

The file of telegrams received and sent during the day shows: Messages sent, 31; received, 21; the greater portion of the work having been done between the hours of 8.30 a. m. and 2.30 p. m.

REPORT OF LIEUT. WILLIAM W. CHANCE, VOLUNTEER SIGNAL CORPS.

DETACHED DUTY, *August 3 to 21, 1898.*

Was in command of detachment at Cavite, Philippine Islands, August 3. Purchased two horses, giving order on quartermaster for \$150, Mexican. At 1 p. m. detailed Privates Schoeneman and Fowle to cut our wire in at the insurgents' telegraph office, Cavite, to complete circuit over insurgents' wire from Cavite Arsenal to Bakor, or to point of Lieutenant Kilbourne's detachment. After cutting our wire in, Schoeneman went out the line 3 or 4 miles and returned with report that it was in good condition.

August 4, 5, 6, and 7: At 9 a. m., 4th, Sergeant Knapp and Private Reeves started on horseback to carry coppers to you (Captain McKenna). I purchased a horse, giving order on depot quartermaster for \$70, Mexican. Lieutenant Rudd, with Schoeneman and Fowle, started on horseback at 9.45 a. m. to clear line from Cavite until you and party were met. At 6.45 p. m., as the wire had not as yet begun working, I concluded that something was wrong between Cavite and Lieutenant Rudd's detachment; so, with Sergeants Jurs, Neal, and Mowbray, I started out to repair line. When at a point about 1½ miles from Cavite Arsenal, discovered a bad cross, the upper and lower wires being twisted together in such shape that it was necessary to cut out about 300 yards of the upper wire. After cutting the wire, tying up the ends, and putting in several pole supports, went on quarter of a mile and tested back to Cavite, finding wire clear. This work occupied four hours' time, owing to a heavy rain storm and nearly total darkness. From this point to Baleta, which is about 8 miles, found wire off many insulators, and quite a number of places where it was necessary to clear away overhanging limbs which interfered. In Baleta is a telegraph office operated by the insurgents, which it was believed interrupted the working of our instrument. We therefore proceeded a little beyond and made a test, but were unable to raise Cavite. It was evident that the trouble was in the insurgents' office. We returned, cut the office out, and made another test, which proved conclusively that this office was the cause of the break, as the line now worked clear through to our Cavite office. The above office was cut out at 4.20 a. m., the 5th. About one-half mile before reaching Bakor found that new wire had been strung from other direction, and I recognized our insulators. At this point I was unable to raise either Cavite or Bakor, but, owing to the fact that a new wire had been strung, I concluded that the programme had been changed; hence I pushed on to Bakor, arriving there at 8.45 a. m., to meet you, and received orders to take your squad and string wire back to Cavite as soon as possible. Strung insulated wire down to and across Bakor River and about 2 miles beyond; then took up iron wire as far as Cavite Viejo. Here you caught up to us and gave further orders regarding the line; then went back to Bakor. Leaving Cavite Viejo in two squads, work was divided up. Squad under Sergeant Knapp wired up to within a short distance of Baleta, connecting the wire put up by my squad, my men having gone on through and beyond the village about three-quarters of a mile. It then being 8.30 p. m. and too dark to continue work, I took the men back to Baleta, where we stayed all night, rising next morning, the 6th, at 4, and started ahead; divided as before, Sergeant Knapp, Corporal Sellar, and Private Burgess going to broken bridge and wiring from there along the beach; the other squad, Privates Hopkins, Schoeneman, Logan, Inman, and Reeves, continuing and connecting at broken bridge; then pushed forward, overtaking first squad at next native village. From here we pushed on into San Roque, where we ran short of wire. I went into Cavite (about a mile distant) for wire and found supply exhausted. Lieutenant Perkins secured boat, went to the *Morgan City*, and brought in enough to complete line. In the meantime Private Hopkins had come in with carromato, and reported that they had also run short of insulators. Loaded wire and insulators on carromato and returned to the line, taking Biebel and Wadak out to relieve Inman and Logan, who were exhausted. We picked up the wire and continued work until 8.30 p. m., when Private Schoeneman became suddenly ill. I then abandoned the job until next morning and took Schoeneman into the hospital.

At 5 a. m. of the 7th I took Sergeant Neal, Privates Fowlo, Reeves, Schener, and Garsuch out, and in an hour's time completed the line so that communication was opened up from Cavite to Camp Dewey, over a line fully 28 miles long, including the line to the trenches.

The duties as assigned to and assumed voluntarily by the men were performed with the utmost alacrity and thoroughness, and it gives me pleasure to make special mention of the fact, as the personnel of the men is above the average, and I consider it the least I can do by highly commending their actions.

On the 7th, at 8 a. m., as per your instructions, Corporal Sellar, Privates Burgess, Hopkins, Inman, and Logan, with the train of five carromatos, started back to Camp Dewey. During the remainder of the day, and also the 8th, I attended to office duties.

August 9, in accordance with your telegram, I left Cavite on launch at 4 p. m. and reported to you at Camp Dewey at 6.30 p. m.

WM. W. CHANCE,
First Lieutenant, United States Volunteer Signal Corps.

E. A. MCKENNA,
Captain, Volunteer Signal Corps.

REPORT OF FIRST LIEUT. PHILIP J. PERKINS, VOLUNTEER SIGNAL CORPS.

AUGUST 13, 1898.

Detachment arrived on station, designation H, and located in rear of small building at trenches, this being the headquarters of General Greene, at 7.15 o'clock a. m. This office had been previously operated, and was in charge of Sergeant Cunningham, who was detailed to remain with my detachment, the personnel of which was as follows: Sergeant Cunningham, Privates Mize, Burgess, Garsuch, Greene, Rudrew, and Russell.

Reported to Colonel Hawkins, Tenth Pennsylvania Regiment, in charge, as General Greene had not arrived. Later reported to General Greene.

This office was situated on wire No. 1, there being but two other offices connected up; therefore less business was transacted than would otherwise have been the case. However, upward of fifteen official messages were sent and as many more received during the engagement. Among those officers availing themselves of the use of the wire were the following: Generals Anderson, Greene, Babcock; Captains Clark, Young; Lieutenants McCain, Gibbs, and others.

Detailed Cunningham and Greene as operators, Garsuch and Mize as linemen, the others as messengers, and am pleased to report that without exception the duties were promptly and cheerfully performed, although during the early part of the day a heavy rain storm was in progress.

Made notes of the following: First shot from war ship fired at 9.27 a. m.; first shot from light battery at intrenchments at 9.45 a. m. A few stray Mauser bullets overhead were the only indication of hostilities from the Spanish side, but much artillery fire from our intrenchments. General Greene soon vacated his headquarters, and soon thereafter, acting under orders, office was cut out and removed to beach. Later, orders to reestablish at old quarters without interrupting business were received. This was accomplished by making a loop, but, on account of scarcity of wire, established office in small native house on the breastwork some 75 yards nearer beach than original office.

Private Wadak reported for duty with this detachment in the afternoon, and all were present at retreat.

Divided the time so that each man stood one and one-half hour watch during the night. On your request sent Garsuch and Burgess to assist with line.

Line in operation till about 9 o'clock, when break occurred. Sent out Sergeant Cunningham and Privates Russell, Garsuch, and Mize, who returned about 10 o'clock, having found and repaired leak.

No provision had been made for commissary supplies, and the men began to feel the need of food; so about noon, after having failed to learn the disposition to be made of the office and men, I decided to send to Camp Dewey for supplies, detailing two men for this duty. Before their return word was received to take my detachment to Camp Dewey, leaving operator to attend to office. This was done, one man returning to take rations to men left at Station H. Reported at Camp Dewey, to pack and help move effects to new station near Manila. Lieutenant Chance in charge at Camp Dewey. Reported to him, thereby concluding tour of duty of detachment assigned the previous day.

I again wish to express my satisfaction with the conduct of the men under cir-

cumstances which were trying and well calculated to test a man's nerve to the utmost, viz, performing the duties of messengers and operators during action in the field.

PHILIP J. PERKINS,
First Lieutenant, United States Volunteer Signal Corps.

A true copy.

E. A. MCKENNA,
Captain, Volunteer Signal Corps.

REPORT OF FIRST LIEUT. CHARLES E. KILBOURNE, JR.

On June 9 I reported for duty in San Francisco, Cal., and was ordered to organize and drill the Volunteer Signal Corps men then at Camp Merritt. I proceeded at once to Camp Merritt, and on the following day issued orders for the government of the camp of the Signal Corps, with the hours for meals, roll calls, and drills. There were four hours' drill each day, and rapid progress was made in the signal drill, conducted by First-Class Sergt. Thomas B. Horne, Signal Corps, United States Army, and in the school of the soldier, which I conducted in person. In the latter I was greatly assisted by First-Class Sergeant Gibbs and Privates Knapp and Jurs. On June 25 you assumed command of the camp, continuing me as tactical officer under your direction.

From June 25 to August 3 I held no independent command. On the latter date, after a casco loaded with stores and men had been landed at Paranaque, I was given a squad of 8 men—Sergeant Sloan, Corporals Kelly and McKinstry, and Privates Hopkins, Bietau, Gellerman, Cooke, and Lindholm—with orders to run a wire in the direction of Cavite, using the insurgents' poles, and making as rapid progress as possible. Loading three carromatos with telegraph materials, and having each man carry his carbine and ammunition belt, we attached the wire to the pole on the right bank of the Paranaque River and started. The men worked with a will under direction of Corporal Kelly, who, being a practical lineman, was given charge of the details, and we were soon beyond the limits of the city. The insurgents had two wires strung on the poles and we cut in on the lower one, appropriating about 3½ miles of it. Here their line branched off and we had to string our own wire again. After proceeding about a mile farther I decided not to return to Paranaque for food and blankets, as it would require about two hours, but to live on the country and use every hour of daylight for work. Leaving the men under command of Sergeant Sloan, I went ahead to the town of Bakor, found the insurgents' headquarters, and asked for General Aguinaldo. He was not in town, but I obtained from his adjutant, Lieut. Col. Lazaro Makapag, a room for my men and supper for the whole detachment, and from the local president permission to set up our instruments in their local telegraph office and to use their wires to communicate with Cavite, where an office of the Signal Corps had already been established. Returning to my squad, I ordered them to stop work for the night. Throughout the day heavy rain had fallen, drenching the men to the skin; the roads were abominable, and the work was frequently interrupted to lift the carts out of deep mud holes; but I heard no complaint from any of the men, though a long sea voyage had unfitted them for such heavy labor. Corporal Kelly took the lead in cheerfulness, and I can not praise his work too highly.

After supper I took Corporal Kelly and Private Hopkins to the telegraph office, and, connecting our instruments to their wires, endeavored to raise Cavite, but without success. We could hear the alphabet used on a Wheatstone instrument, and finding that there was such a station between us and Cavite, decided that that was the difficulty. The local authorities were angry at the cutting of their wire, but I refused to discuss the matter with anyone but General Aguinaldo, whom I had decided to visit on the following morning, hoping to obtain permission to use his whole line until our own had been run. This I had been instructed to do by Major Thompson.

On August 4 I aroused the men at daybreak, and, after a breakfast of biscuits and coffee, furnished by insurgents, we started work again, using insulated wire where houses or trees would cause heavy grounds. This I did to save the time necessary for trimming trees. Leaving the men under command of Sergeant Sloan, with instructions to push ahead as rapidly as possible, I drove to Baleta, 4 miles away, where General Aguinaldo had established his headquarters. He was sick in bed, and refused to see anyone, but from his second in command I obtained a general permit to use any office in the country, setting up our own instruments and using their wires to send our messages, provided that we would reattach them to their own instruments when through. This, he said, was the limit of his authority. He protested at the cutting of their wire, and asked that it be not done again. I

told him it should not be unless necessity compelled it. Being unable to gain any greater concession, and ascertaining that there was no office between Baleta and Cavite, I returned to Bakor. There I met you (Captain McKenna) with Private Mize. You gave me a message from General Greene to General Merritt, and directed me to have it flagged to the *Newport*. I took Private Mize to the shore, and for two hours tried, without success, to flag the ship. I then hired a native boat, and started to the *Newport*, but about half a mile from shore the boat began to take in water heavily, and the natives refused to proceed. They ran in for the shore, and, on grounding, deserted the boat, leaving me in a rice swamp 2 miles from Bakor. I returned to that place and tried again, without success, to raise the *Newport* with the flag. Major Hale, the general's aide, came to the beach about 4 o'clock, and I delivered the message to him as he was going over in a launch. I then rejoined my party, which had run the line through Bakor, making about 2½ miles over most difficult ground. I found that they were about to stop work, being utterly exhausted and under the impression that they would have the long march to Paranaque to make. Sending a native to make arrangements for the men to have supper and room in Bakor as on the preceding night, I put them back to work until sunset. The heavy rains had continued, and the exhausting work, with but little food, had tired the men out; but they worked willingly, taking turns climbing poles and carrying wire, the carromatos being too small to hold the wire reel.

At dusk Lieutenant Rudd rode in from Cavite with Privates Fowle and Schoeneman. Lieutenant Rudd stated that Major Thompson had ordered him to inform me that the line must be completed that night. As we were still about 9 miles from Cavite, there was only one way to do this, which was to take the insurgent line. This could not be done without cutting out the office at the insurgent headquarters in Baleta, and it was necessary to obtain Aguinaldo's consent to this; otherwise he would cut us out again on discovering what we had done. I directed my men to cut in on the insurgent line, and then dismissed them for the night, excepting Corporal Kelly, who accompanied Lieutenant Rudd and myself to Baleta to cut out that office if we obtained permission. General Aguinaldo was still in bed, but we insisted so strongly that he finally consented to see us. We explained our errand and the necessity for it, and pressed our point for over an hour, but without success. He would grant anything else; but, having a large army in the field, he said, it was necessary for him to have his line in order to supply them with food and ammunition.

Finding that he would not yield us our wish, even for a day or two, we returned to Bakor, connecting his line again to avoid unnecessary complications with him. We had communication by telegraph from Camps Greene and Dewey to Bakor, and there was a large cathedral at the latter place where an excellent flagging station could be established. I decided to establish a station there and go to the *Newport* the following morning and report to Major Thompson the impossibility of reaching Cavite at once, but that messages might be flagged by the ship to Bakor, and thence by telegraph sent to the front.

On August 5 I arose at daybreak, and leaving orders with Corporal Kelly to establish flag station on cathedral with two men and with the others to continue the line toward Cavite, Lieutenant Rudd and I went in a native boat to the *Newport* and reported to Major Thompson. After breakfast messages were sent from the ship to the camp and back again, by flag to Bakor, and telegraph from thence to camp, showing the practicability of the plan. Major Thompson decided to establish an office at Bakor, and returned to the place with Lieutenant Rudd and me. There we met you (Captain McKenna) and proceeded to headquarters of the insurgents, where Major Thompson insisted upon having a house for an office. One was assigned, but was unsatisfactory, and before another could be had the Major left.

Later I secured the Tribunal Municipal, a stone building, well situated, and established an office there. Corporal Kelley had gone ahead with part of my squad, and some other members of the company had reached Bakor from Cavite. These I decided to keep with me. My new detachment consisted of Sergeant Sloan, Corporal Emerson, and Privates Stock, Walters, Shalda, Lindholm, Ray, and Cooke. The afternoon was spent receiving messages from the front over the wire and flagging them to the *Newport*, and vice versa. An order was received to concentrate carromatos and beasts of burden at Bakor on the following day to transport stores to camp. By applying at the insurgent headquarters I had native runners sent out over the country to gather them in. At night an important dispatch came over from General Greene to General Merritt, with orders to deliver at once. Having no torch, I went to the *Newport* in a small boat, delivering the message about 10 p. m. On returning I carried with me General Merritt's reply and some messages from Colonel McClure, chief paymaster. These were wired about midnight, and the answer received, but it was too late to get another boat, so I decided to flag them about daybreak. With Sergeant Sloan's assistance I made out the detail for flag and telegraph work. From this time, as long as I was in charge at Bakor, Sergeant Sloan was of great assist-

ance to me, and I can not commend him too highly for his energetic and faithful work or for his sound judgment in cases of emergency.

August 6: From 5.30 to 6.30 a. m., efforts were made to raise the *Newport*, but without success, heavy rain obscuring the vision. I then delivered the messages in person by means of a native boat. There was a storm, and being offered a trip ashore in the launch which was to take the paymasters ashore, I dismissed the native boat, which ran into Cavite for shelter.

I was given a message from General Merritt to General Greene. After the launch had left the *Newport* they decided to land at Paranaque, but were unable to do so on account of low water, so landed in canoes at Camp Greene. I delivered the dispatch to General Greene and returned to Bakor on horseback, reaching that place in time to reach General Merritt and staff at the shore and take them to the office. The afternoon was spent in receiving messages and sending them. The field telephones were attached, and General Merritt held a consultation with General Greene. Corporal Emerson and Privates Shalda and Walters being sick with cramps, were treated by Dr. Keefer, who accompanied General Merritt. This night, communication was established with Cavite, and messages sent through.

August 7: Was ordered about 11 a. m. to abandon office at Bakor and establish station at Paranaque. Leaving the men to bring forward the stores with a party on the way from Cavite, Sergeant Sloan and I drove to Paranaque, rectifying crosses and grounds on the way. By reason of permit obtained from insurgent authorities we were enabled, by using the local telegraph office, to establish communication a few minutes after reaching Paranaque. I then secured a permanent office, appropriated table and chairs to fit it up, and moved the instrument to that room. About that time you (Captain McKenna) reached Paranaque and took charge. Later, an order came from Major Thompson to keep up the station at Bakor, and I was ordered to return and reestablish it. Taking with me Sergeant Sloan, and leaving orders for Privates Lindholm, Cooke, and Shalda to follow, I returned to Bakor, intercepting the wagons carrying stores from there, and taking out enough for immediate use. I also turned back Private Ray. Sergeant Sloan and I reached Bakor about 7.30 p. m. and found that the local president had reestablished himself in the building, and that his council was holding session. We informed them that we must have the office again, and they agreed to vacate, leaving their furniture there till the following day. By 8 p. m. the office was cut in again and all working well.

August 8: Office work at Bakor.

August 9: Office work at Bakor. Lieutenant Perkins of your company landed some supplies, which were forwarded to the front in carromatos. I recommended the exchange of two operators for a flagman, as the work of the office was not heavy enough for so large a force. Private Stock was sent me, and I sent Privates Ray and Cooke to the front.

August 10: Office work at Bakor. Toward evening I received orders to turn the station over to Sergeant Sloan, and report to Camp Dewey the following day.

August 11: Turned over the office to Sergeant Sloan and reported at Camp Dewey at 9 p. m.

August 12: Received orders to connect the extreme left of our intrenchments with the point which was to be General MacArthur's headquarters in the approaching battle. With a squad consisting of Corporal Howser and Privates Bietau, Curtis, and Mize, I did so, using about six coils of insulated wire, which was raised so as to be out of reach of advancing troops.

August 13: Was established at 7.30 in charge of a station at Passay, where General MacArthur's reserve was to be posted. Shortly after 8, I reported to Colonel Ovenshine, who was in command of the reserve, and delivered a message that we had intercepted at Passay, it being sent over the wire, addressed to him at Camp Dewey. My squad consisted of Privates Curtis, Dunne, Fowle, and Walters, and after stationing Curtis and Fowle at the key, I took Dunne and Curtis over the line we would have to repair, so as to familiarize them with it. We had six pieces of insulated wire about 20 feet long, bared at both ends for rapid repair work, and each man was issued some insulating tape. About 10.30, the wire grounded between Passay and the main reserves, and was repaired in ten minutes by Dunne and Walters. At 11.06 a. m. Colonel Ovenshine, with the larger part of the reserves, was ordered to the front. Within half an hour the remaining troops, under Colonel Truman, were ordered forward. The current became so weak about noon that I cut my instrument out, reconnecting it from time to time in case any orders should be sent me. At 2.43 p. m. I received orders to report to you on the beach at Malate, cutting out my station before leaving. Reported at Malate, and after doing some line work in the outskirts and going forward with dispatches for Lieutenant McCain, A. A. A. G., I was left in charge of the telegraph station established at Malate. Colonel Jones was there in command of the Idaho troops and Utah battery, and I reported to him as chief signal officer of the station. At 7.30 he received a message over the

wire to bring his troops to General MacArthur's headquarters, and, except for the guard, the station was deserted.

August 14: In charge of station at Malate. Privates Fowle and Curtis repaired a heavy ground between our station and the intrenchments. We had no food. At 1 p. m. the station was ordered abandoned and an office established at General MacArthur's headquarters. This was done under your direction, and I reported to the Signal Corps headquarters.

CHARLES E. KILBOURNE, Jr.,
Second Lieutenant, Volunteer Signal Corps.

A true copy:

E. A. MCKENNA,
Captain, Volunteer Signal Corps.

REPORT OF SECOND LIEUT. A. J. RUDD, VOLUNTEER SIGNAL CORPS.

AUGUST 13, 1898.

Left Camp Dewey at 6 a. m. with detachment of four men, Sergeant Watkins and Privates Ten Eyck, Logan, and Ray, and followed telegraph line to my station one-half mile to the rear of the intrenchments. Proceeded at once to cut in the two loops from main wires on roadway to a hut about 150 yards distant, where General Anderson had established his headquarters, being in command of Second Division, Eighth Army Corps; set up instruments and intrenched the front of the building toward the firing line. Privates Ten Eyck and Logan were stationed at the key, both of them copying each message as it came in.

During my station here I handled a total of 39 messages; sent 18; received 21. At 2.40 p. m. General Anderson abandoned his station here, and I received orders from you (Captain McKenna) to cut out instruments and with my detachment report to you at the beach, where I arrived at 3.30 p. m.

REPORT OF LIEUTENANT RUDD WHILE ON DETACHED DUTY.

Upon orders received from you August 2, 1898, I proceeded at 9.45 a. m. with detachment of ten men, named as follows: Sergeant Neal, Corporals Sellar and Kelly, Privates Wadak, Logan, Lindholm, Williams, Schoeneman, Stewart, and Burgess to construct telegraph line from the arsenal at Cavite to the insurgent telegraph office on the outskirts of Cavite, a distance of half a mile. On account of the bad weather, and unsuitable conditions for stringing the wire, it took us till noon to complete the work.

On August 4, under orders from Major Thompson, left Cavite with detachment of two men, Privates Fowle and Schoeneman, at 9.45 a. m., on horseback, with instructions to follow the insurgents's telegraph wire until I met Captain McKenna or Lieutenant Kilbourne, and to inform either that there must be communication established within the next twenty-four hours and to hurry the work; in the meantime, to make occasional tests of the wire on the way, which was done, but were unable to break Cavite at our first test, about 4 miles from there. When our key was closed we could distinctly hear "C" calling "MC," so concluded wire was all right and that Cavite was not adjusted for us. Made numerous other tests along the road, sometimes hearing "C" calling "MC" and other times hearing nothing, but could feel strong current of electricity.

We met Lieutenant Kilbourne at 5 p. m., 2 miles west of Baker, with instructions to carry a new wire through to Cavite. I then delivered my message and was informed that General Aguinaldo had refused us the use of his wire, and was quite angry at our having interfered with his communications in our tests. It being impossible to run a wire through to Cavite by the next night, Lieutenant Kilbourne, myself, and Corporal Kelly therefore proceeded once more to General Aguinaldo's residence at Old Cavite to make one more effort to secure the use of his wire. After much parley we secured an interview, which lasted an hour, but were unable to persuade him to give us the use of his wire even for a day, as he claimed he must have it to communicate with his army at the front. From there we returned to Baker and spent the night. The next morning, August 5, at 6.30 a. m., with Lieutenant Kilbourne, hired a native boat which took us to the *Newport*, where I made my report to Major Thompson, after which did some flag work with Baker. At 10.30 a. m. I returned with General Merritt and Major Thompson to Baker. Upon arriving there met you and received orders to proceed to Paranaque and instruct Sergeant Cunningham to cut out his instrument, if he had already cut it in; also to stay there over night, but before arriving there you overtook me and gave the necessary instructions.

On August 6 received orders from you to report at Cavite, and there await orders. Upon my arrival at Bakor, order was countermanded, and was instructed to join Lieutenant Chance, who was continuing construction of line to Cavite. I joined him at 4.30 p. m., about 4 miles from destination, and reported for duty.

A. J. RUDD,
Second Lieutenant, United States Volunteer Signal Corps.

Captain, Volunteer Signal Corps.

INCLOSURE 2.

HEADQUARTERS DEPARTMENT OF PACIFIC AND EIGHTH ARMY CORPS,
OFFICE CHIEF SIGNAL OFFICER,
Manila, Philippine Islands, August 14, 1898.

ADJUTANT-GENERAL,

Department of Pacific and Eighth Army Corps, Manila, Philippine Islands.

SIR: In accordance with instructions contained in your telegram of August 23, I have the honor to submit the following list of names of officers and men of the Regular and Volunteer Signal Corps who are entitled to special mention and reward for services in the campaign ending in the capture of Manila, with a brief recital of the services deserving particular notice.

For conspicuous gallantry during the assault on Manila, August 13, 1898: Capt. E. A. McKenna, Volunteer Signal Corps. This officer advanced up the beach with the firing line, his signal flags displayed that the fire of the navy should fall in advance of the army, and, after passing the enemy's fort, in which his flags were the first emblems of the United States to appear, he established an advanced telegraph station under fire of the enemy's second line, and maintained communication with both wings of the army till the enemy's positions were carried.

For distinguished and meritorious service during the campaign terminating in the capture of Manila: Lieut. William W. Chance, first lieutenant, Volunteer Signal Corps; Lieut. Philip J. Perkins, first lieutenant, Volunteer Signal Corps; Lieut. Chas. E. Kilbourne, second lieutenant, Volunteer Signal Corps; Lieut. Alson J. Rudd, second lieutenant, Volunteer Signal Corps. These officers, by their energy, indifference to privations and hardships, and devotion to duty, maintained communication between the several bases, the reserves, and the most advanced positions, and during the assault transmitted orders and gave information of the most vital character relative to operations of the army.

For bravery and distinguished conduct in taking photographic views of the engagement while under fire, during the assault on Manila, August 13, 1898: First Class Sergt. Harry W. Chadwick, Signal Corps, United States Army.

For specially meritorious and gallant service during the assault on Manila, August 13, 1898: First Class Sergt. George S. Gibbs, jr., Volunteer Signal Corps; Sergt. Henry F. Jurs, Volunteer Signal Corps; First Class Private Arthur H. Frazier, Volunteer Signal Corps; First Class Private Charles F. Wadak, Volunteer Signal Corps. These men advanced up the open beach with the firing line, displaying signal flags that the fire of the navy should fall in advance of the army, and, after passing the enemy's fort, in which their flags were the first emblems of the United States to appear, assisted in the establishment of an advance telegraph station under fire of the enemy's second line.

For gallant and meritorious conduct in repairing the field-telegraph line, under fire, while on outpost duty in front of Manila, August 5, 1898: First Class Sergt. Earnest Dozier, Volunteer Signal Corps.

For distinguished service in running the field telegraph up the open beach and establishing an advance station under fire of the enemy's second line, during the assault on Manila, August 13, 1898: First Class Sergt. Edward E. Kelly, Volunteer Signal Corps; Sergt. Mortmer W. Sellar, Volunteer Signal Corps; Corp. William W. Howser, Volunteer Signal Corps; First Class Private John W. Burgess, Volunteer Signal Corps; First Class Private Leonard L. Garsuch, Volunteer Signal Corps.

Very respectfully, your obedient servant,

R. E. THOMPSON,
Major, Volunteer Signal Corps, Chief Signal Officer

A true copy:

E. A. MCKENNA,
Captain, Commanding First Company, Volunteer Signal Corps.

APPENDIX 2.

**REPORT OF COL. H. H. C. DUNWOODY, SIGNAL CORPS, UNITED STATES ARMY, ON
THE ORGANIZATION OF THE UNITED STATES VOLUNTEER SIGNAL CORPS.**

WAR DEPARTMENT, SIGNAL OFFICE,
Washington, September 12, 1898.

The CHIEF SIGNAL OFFICER,
United States Army.

SIR: I have the honor to submit the following report on the organization and equipment of the Volunteer Signal Corps, provided for by an act of Congress approved May 18, 1898, as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized to organize a volunteer signal corps for service during the existing war, which corps shall receive the same pay and allowances as are authorized by law for the Signal Corps of the Army.

"SEC. 2. The volunteer signal corps shall consist of one colonel, one lieutenant-colonel, one major as disbursing officer, and such other officers and men as may be required, not exceeding one major for each army corps, and two captains, two first lieutenants, two second lieutenants, five first-class sergeants, ten sergeants, ten corporals, and thirty first-class privates to each organized division of troops: Provided, That two-thirds of all officers below the rank of major and a like proportion of enlisted men shall be skilled electricians or telegraph operators."

In submitting report on the organization of the Volunteer Signal Corps, authorized by the above act, it will not be out of place to refer to that wise provision of the law which requires that two-thirds of the officers and enlisted men of the Volunteer Signal Corps shall be skilled electricians and telegraphists.

It should be noticed that this legislation was approved on the 18th day of May, 1898, about one month after the declaration of war, and that pressing demands had already been received from the various camps of volunteers, at that time rapidly filling up, for services of signal officers and skilled operators, which the Regular Signal Corps was not prepared to supply.

It was therefore necessary that this corps be organized, equipped, and placed in the field at the earliest moment, and no time could be spared for the slow process of examining into the efficiency of candidates for either appointment or enlistment in the Volunteer Signal Corps, the plan followed in 1861. The experience of the present war shows that the special requirements restricting the selection of the officers of the Volunteer Signal Corps secured the services of a large number of officers whose business experience and executive ability had previously been tested in electrical work, thus bringing valuable assistance to the Chief Signal Officer, who has supervision over the electrical work of the Army. This provision also tended in a measure to free the Signal Corps from appointments based solely on political preferment.

Another important advantage resulting from these special requirements of law, providing that a large percentage of the enlisted force of the Volunteer Signal Corps should be made up of electricians and operators, secured the services of a class of skilled men, possessing more than the average education, whose previous training enabled them to become proficient in signaling, including the use of the heliograph, with but a few hours' practice work.

On June 2 the formation of the corps was commenced, and within thirty days from that date the corps was practically organized and equipped, and one of its companies had joined the Regular Signal Corps, which was then with the army in Santiago de Cuba. In a number of States local signal corps were so well organized that it only required two or three days to recruit an entire company, and as soon as the quota assigned to each recruiting officer was filled, telegraph orders were at once issued directing him to proceed with his detachment to Washington Barracks, D. C., for equipment and further instructions.

On the day of the passage of the bill the Chief Signal Officer issued the following circular, giving in detail a general plan for the organization of this corps, the number of officers for each organized division, and the pay of the noncommissioned officers and privates:

"CIRCULAR.

"The act of Congress approved May 18, 1898, authorized the President to organize a Volunteer Signal Corps for the existing war. It is provided that each organized division of troops may have two captains, two first lieutenants, two second lieutenants, who will be appointed and commissioned by the President.

"The number of enlisted men with their monthly rate of pay is as follows: Five first-class sergeants, \$54; 10 sergeants, \$40.80; 10 corporals, \$24; 30 privates, \$20.40.

"In addition to the above each enlisted man will receive rations, clothing, and quarters in kind, and medical attendance when required.

"Enlistments are not made by the Chief Signal Officer, but applications must be made to officers commissioned in the corps, whose rendezvous must be ascertained through the agency of the public press.

"No telegrapher will be enlisted unless he presents a certificate from a manager of the Western Union, Postal, or some other well-recognized telegraph organization that he is a competent operator, of high moral character, correct habits, and of such standing that the manager or superintendent signing the certificate would be willing to employ him as an operator in his own office. A similar certificate will be required for electricians enlisted or commissioned.

"Each man must pass a strict examination as to his physical qualifications, which will be determined by the Medical Department of the Army."

The applications for enlistment on file in the Chief Signal Office were examined, tabulated, and arranged according to their geographical district, and in all cases where recruiting officers were assigned they were furnished with a list of applicants residing in that geographical district, with instructions to communicate with such applicants, giving conditions under which enlistments would be made. The applicants were informed that enlistments in the Volunteer Signal Corps would invariably be made as privates, and promotion to the rank of corporal and sergeant would depend upon meritorious service.

The applicants were required to present a certificate of good character, and in addition thereto telegraph operators who enlisted as such were required to present a certificate from a manager of a Western Union, Postal, or some well-recognized telegraph organization that he was a competent operator and of such standing that the manager or superintendent signing the certificate would be willing to employ him as a telegraph operator in his own office. Similar certificates were required from electricians, and if the applicant was a minor he was obliged to furnish the written consent of his parent or guardian to his enlistment.

The corps was recruited almost wholly by its own officers, and, although without experience in military methods, I was agreeably surprised at the promptness with which this work was performed. Each recruiting officer was directed to enlist a definite number of men; two-thirds of the number were required to be telegraph operators or electricians. In some instances where organized signal corps in different States had been formed, men able to operate the heliograph were considered as telegraph operators.

Realizing the importance of properly prepared food in camp life, each recruiting officer was authorized to enlist two good cooks for his detachment. In the selection of the men the usual regulations governing the physical examination were somewhat modified by authority of the Secretary of War, and recruiting officers were authorized to accept men who, in their judgment, were able to perform the special work for which the Signal Corps was authorized, noting carefully on the enlistment papers any deviation from the standard, as given in the instructions of medical examinations. They were required, however, to satisfy themselves that each man enlisted would be able to perform military duty.

The Volunteer Signal Corps was made up largely of telegraph operators, and had it been necessary to comply strictly with the requirements governing the recruiting of men many excellent men would have been rejected, as telegraph operators, as a class, are usually undersized men. This fact was forcibly shown when the time arrived for uniforming the men. Early in June I made a requisition for 1,000 uniforms of assorted sizes to be shipped to the post quartermaster at Washington Barracks, and upon the arrival of the recruits I found it necessary to return about 400 uniforms, and secure in exchange therefor that number of smaller-sized uniforms, and owing to the promptness with which the officers in charge of the clothing department of the Quartermaster-General's Department acted the exchange of uniforms was effected without any delay.

Immediately upon the arrival of the detachments at the central station, Washington Barracks, I found that it would not be possible to fully equip the first companies for active service with the necessary signal equipments, as the contracts which had been made for the delivery of heliographs and lanterns were not to be filled until after a date when a portion of the forces should be in the field. I therefore requested that sufficient supplies be purchased from the State of New York for the equipment of the two companies furnished by that State. These companies had previously been organized as a part of the National Guard, and the State had fully equipped them with the necessary signal equipments for field work. An officer was ordered to Albany to confer with the State officials and arrange for the purchase of these supplies, and by this means two companies of the Volunteer Signal Corps

were equipped without a day's delay and the companies were enabled to go into the field properly equipped to perform any work which might be assigned to the corps.

This plan for equipping the companies for required work before they left Washington Barracks was uniformly followed, and the fact that each company carried with it in all its movements the necessary equipments for campaign work doubtless contributed largely to the uniform success which has attended the operations of the Signal Corps during the present campaign.

As there was a question as to the manner in which the companies of the Volunteer Signal Corps should be equipped, and realizing the necessity for each company having under its own control the necessary equipments for field work, I organized a board of experienced signal officers, with instructions to report the equipments necessary for each company to insure efficient work upon entering the field. This report was of such service in the equipment of the corps that I include it in this report, in order that it may be available for further use.

**"CAMP OF INSTRUCTION, UNITED STATES VOLUNTEER SIGNAL CORPS,
"Washington Barracks, D. C., June 27, 1898.**

"In pursuance of instructions from Col. H. H. C. Dunwoody, of the United States Volunteer Signal Corps, a board of officers consisting of Capt. Edward B. Ives, Capt. William H. Lamar, and Capt. Frederick T. Leigh, all of the United States Volunteer Signal Corps, are now at Washington Barracks, Washington, D. C., for the purpose of discussing with a view of recommending the uniform organization and equipment of the Signal Corps companies or detachments.

"The various officers of the corps stationed at this point, and also Capt. Edgar Russel, of the Volunteer Signal Corps, who was casually at the post, were present and took part in the discussion. After mature consideration for the organization and equipment of the companies of the Volunteer Signal Corps, the board reports unanimously as follows:

"First. In regard to company organization: Each company should be divided into eight squads of six men each, remaining seven men to be used for a relief of such men who need it, for special duty as the captain of the detachment requires, for cooking, for clerical work, and for the administrative work of the company generally.

"The organization of each company is to be strictly on the 'squad' basis, the squad being a permanent organization, the members of which will live and mess together, become thoroughly well known to each other, and accustomed to each other's method of work. The selection of those who shall constitute each particular squad shall be the function of the captain, who shall do this according to technical fitness.

"The disposition of signaling equipments and supplies will also conform to the squad organization, and each squad shall be supplied with a uniform set of apparatus so as to enable it to act as an independent organization. The apparatus supplied to each squad is as follows:

1 signal kit with canteen and haversack.	1 heliograph.
1 signal lantern.	1 field telephone.
1 combination telegraph set, main-line sounder.	1 compass.
1 telescope.	1 telescope tripod
1 camp stool, for telescope reader.	1 field glass.
1 crosscut saw.	1 rip saw.
1 hatchet.	1 ax.
1 pair climbers.	1 splicer.
1 "come along" and straps.	1 8-inch pliers.
1 6-inch pliers.	1 hand vise.
1 6-inch Baxter wrench.	1 small screw-driver.
1 large screw-driver.	Assorted screws and nails.
2 clasp knives.	1 100-foot rope ($\frac{1}{4}$ -inch).
2 red-light railroad lanterns.	1 bucket.
2 white-light lanterns, railroad.	1 hand reel and wire.
1 ball twine.	5 pounds office wire.
6 pairs blue or smoked glasses.	1 hand level.
1 cavalry sketch board.	1 18-inch ruler.
2 100-foot steel tape lines.	1 engineer's field book.
1 blank book, 8 by 10 inches, 100 pages.	2 field message books.
2 fountain pens.	6 lead pencils
2 scratch pads.	25 official envelopes.
1 packing chest for above apparatus.	25 letter envelopes.

"This apparatus will pack in a box or chest, approximately 54 by 15 by 20 inches, and will, when packed, be in the best possible condition for care and transportation. Only in an emergency, or when the squad is pushing out to the front, and when car-

rying the chest is absolutely impracticable, then such apparatus as they may need may be taken from the box and carried by the men.

"It is to be understood and required that the proper place for this valuable and delicate property, except when in actual use, is in the box. In no other way can these articles be kept from being lost or injured during transportation, distribution, or care.

"In the selection of the equipment mentioned herein, the board has kept in mind that fact that the Department expects to furnish telegraph trains with wagons, apparatus, wire, etc., for building military telegraph lines. The apparatus and tools described herein, however, are such as are necessary for tapping and repairing lines, doing minor work, the construction of temporary lines where telegraph trains would not be available, and for visual signaling.

"It is further recommended that these articles be obtained from the available sources and proper departments, assembled in the prescribed boxes and stored at this post, to be delivered or shipped with company commanders on their requisition. It is deemed, in the opinion of the board, that this property should be so delivered to the company commanders before they start to the front, for the reason that if the property is not in such shape much of it would be lost, injured, or destroyed on account of the inexperience of the officers and men and confusion incident to organizing.

"In addition to the squad equipment enumerated, each company will be supplied with such camp and garrison equipage, stationery, books, blanks, ordnance stores, etc., as may be required. This will be governed by the locality and nature of the contemplated work, and will be supplied on special requisition of each captain, duly approved by the proper authority.

"Two boxes like those supplied to the squad are to be supplied to each company headquarters, in which are carried such miscellaneous and other articles, books, maps, stationery, blanks, etc., as pertain to a company; also one field desk.

"Second. In regard to arms: It is deemed inadvisable to arm the Signal Corps with any arms except the .38-caliber Colt's revolver, model of 1894. As the squads of the corps, when on duty, can always be properly protected by the line troops with which they are serving, it seems unnecessary to arm them. It is also recommended that each man be armed with an engineer's knife in a scabbard. These knives are very necessary in tropical countries in cutting through underbrush.

"Third. The question of the number of men mounted is one that can only be determined by the immediate local provisions. To avoid having any question as to the number of horses and horse equipments allowed to a company, it is recommended that the limit be not less than one for each enlisted man. In view of the amount of property to be carried, and the fact that the company is to be divided, it is recommended that the allowance of transportation of a signal company be three escort wagons. This in addition to the wagons that now constitute a signal train.

"The board respectfully requests that this recommendation, as modified and approved by the proper authority, be embodied in Army Regulations, in order that in considering requisitions for supplies there may be no question as to authority to issue, and in this way promptness in the equipment and supplying of companies will be obtained.

"This action of the board is taken by the advice of a Regular officer of experience in the issue of supplies, who strongly urges that the equipping of the Signal Corps shall, as far as practicable, be covered by succinct orders.

"Respectfully submitted.

"EDWARD B. IVES,

"*Captain, United States Volunteer Signal Corps, President.*

"WILLIAM H. LAMAR,

"*Captain, United States Volunteer Signal Corps, Member.*

"FREDERICK T. LEIGH,

"*Captain, United States Volunteer Signal Corps, Member.*"

I forwarded this report to the Chief Signal Officer, with the following indorsement:

"WAR DEPARTMENT, CHIEF SIGNAL OFFICE,

"*July 5, 1898.*

"Respectfully forwarded to the Chief Signal Officer.

"Inclosed is a recommendation by three of the most efficient officers of the Volunteer Signal Corps, setting forth what is absolutely necessary for each company in order that efficient services may be performed in the field.

"I therefore recommend that the disbursing officer be authorized to supply the equipments named within so far as it may be practicable for at least twelve companies of the Volunteer Signal Corps.

"Each company should be well equipped before taking the field. I am prepared to supply uniforms, arms, tents and cooking utensils, and everything that is authorized by the ordnance quartermaster's supplies, but for the signal equipments, which

are of the most importance, I fear that some delay may be caused by failure of contractors to fill the orders for the signal equipments, and it is of the first importance that the Signal Corps should lose no time in supplying most of these equipments. There may be a few minor articles named in this requisition which can be dispensed with, such as fountain pens, etc.; but what we want are the signal equipments and the necessary articles to enable a signal party to work in the field."

This received the favorable indorsement of the Chief Signal Officer, which follows:

"WASHINGTON, *July 7, 1898.*

"The Chief Signal Officer appreciates the valuable suggestions made by the members of this board. He desires, however, to give the signal officers of each corps and the captain of each company as free a hand as possible. Any desired equipments will be supplied at as early a date as the article can be obtained. The varied character of signal duties, entailing the management of field telegraph trains, balloon sections, etc., makes it difficult to say what shall be the equipment of any single company. For instance, the Signal Corps officers may desire to have one telegraph train, one balloon section, and one signal company, selecting officers and men for such duty."

I desire to state that in my judgment the liberal view which the Chief Signal Officer announced in the above indorsement, as a guidance to his assistants, enabled me to carry out the plan which I had in mind of fully equipping the companies for work before they left the rendezvous.

The organization had proceeded so rapidly that before June 30 twelve companies had been completely organized, and captains assigned to the commands, as follows: First Company, Capt. Elmore A. McKenna; Second Company, Capt. Howard A. Giddings; Third Company, Capt. Frederick T. Leigh; Fourth Company, Capt. Charles B. Hepburn; Fifth Company, Capt. William H. Lamar; Sixth Company, Capt. Charles S. Conner; Seventh Company, Capt. John B. Inman; Eighth Company, Capt. George W. Butler; Ninth Company, Capt. Edward B. Ives; Tenth Company, Capt. Thomas F. Clark; Eleventh Company, Capt. Carl F. Hartmann; Twelfth Company, Capt. Frank Lyman, jr.

The remaining six companies were in progress of formation, and captains to command were designated as follows: Thirteenth Company, Capt. George R. Gyger; Fourteenth Company, Capt. Charles T. McIntire; Fifteenth Company, Capt. Ambrose Higgins; Sixteenth Company, Capt. Samuel S. Sample; Seventeenth Company (balloon) ———; Eighteenth Company, Capt. E. Russel.

The following recruiting stations were established:

Augusta, Me.: Enlistments were made under Capt. George W. Butler, who was authorized to enlist 40 recruits for the Volunteer Signal Corps. Ordered to Washington Barracks June 11. Was the first company to leave this station, June 30, joining the Fifth Corps at Tampa, and accompanied it to Cuba.

Boston, Mass.: Enlistments were made under Capt. Thomas F. Clark, who was authorized to enlist 60 recruits for the Volunteer Signal Corps. Ordered to Washington Barracks June 23. July 8 this company was ordered to Santiago de Cuba, via Tampa, and arriving at its destination was not allowed to land there on account of yellow fever and returned to Tampa, after which, not being allowed to land there on account of yellow fever on the vessel, a large portion of it was sent to New York and afterwards assigned to the Fourth Army Corps, at Huntsville, Ala.

New York, N. Y.: Enlistments were made under Capt. Edward B. Ives, who was authorized to recruit 60 men for the Volunteer Signal Corps. Ordered to Washington Barracks June 23, from which station this company was ordered to Newport News to take steamer, joining the Porto Rico expedition under Gen. J. H. Wilson.

Brooklyn, N. Y.: Enlistments were made under Capt. Frederick T. Leigh, who was authorized to recruit 60 men for the Volunteer Signal Corps. Ordered to Washington Barracks June 23, from which station this company was assigned to the Third Army Corps, at Chickamunga Park. Both the New York and Brooklyn companies were made up of the signal corps of the National Guard of the State of New York, and were almost exclusively made up of telegraph operators.

The third station was that at Albany, where enlistments were made under Lieut. H. G. Opdycke, who was authorized to recruit 20 men.

Hartford, Conn.: Enlistments were made under Capt. H. A. Giddings, who was instructed to recruit 40 men. This company was made up of men from the signal corps of the National Guard of Connecticut, ordered to Washington Barracks, and from this station, June 27, to the Seventh Army Corps at Jacksonville, Fla. Six men were recruited at Fort Trumbull, Conn., completing this detachment.

Newark, N. J.: Enlistments were made under Capt. Carl F. Hartmann, who was instructed to obtain 40 men from the signal corps of the National Guard of New Jersey. Ordered to Washington Barracks June 27, and on July 8 was assigned to the *Second Army Corps*, under Lieutenant-Colonel Strong.

Philadelphia, Pa.: Enlistments were made under Capt. Ambrose Higgins, who was instructed to enlist 40 men. A greater number had been authorized, but owing to the rapid enlistments it was necessary to cut down the number of men which had been previously authorized in his instructions. Ordered to Washington June 23; from this station the company was assigned to Montauk Point, Long Island, where complete telephone and telegraph lines were erected for the use of troops returning from Cuba, also an electric-light plant which was placed in operation within two weeks after authority had been given for its installation.

Washington Barracks, D. C.: Enlistments were made under Capt. William H. Lamar, who was assigned as recruiting officer of the Volunteer Signal Corps. Recruits were obtained from the signal corps of the National Guard of Maryland, and recruits were enlisted from the States of Virginia and Maryland. He enlisted 55 men, and remained as recruiting officer at the barracks until his company left for the field. A number of men enlisted by him were assigned to other companies. On July 8, with his company, he was ordered to Charleston, S. C., to accompany the Porto Rico expedition, under Gen. J. H. Wilson.

Indianapolis, Ind.: A portion of this company was enlisted by Lieut. Charles H. Martin, who was afterwards transferred to Pittsburg, Pa., where he enlisted a detachment of 15 men. The Indiana company was completed by Capt. Charles T. McIntire, and made up largely of men from the signal corps of the National Guard of Indiana. This company brought with it the signal equipments furnished by the State, which were purchased by order of the Chief Signal Officer. Ordered to Washington Barracks July 2, from which station it was assigned to the Seventh Army Corps at Jacksonville, Fla., where it remained until mustered out.

Columbus, Ohio: Enlistments were made under Capt. G. R. Gyger, of the signal corps of the Ohio National Guard, where he obtained 30 men. Lieut. H. D. Coe was assigned to Cleveland, Ohio, where he enlisted 20 men. Ordered to Washington Barracks July 5. This was the last company to leave Washington Barracks, but detachments were furnished from this company for Montauk Point, Long Island, to aid in the installation of the electric-light plant at Camp Wikoff, and details were also furnished from this company to put in telephonic communications at the hospitals of Forts Myer and Monroe.

Springfield, Ill.: Enlistments were made under Capt. John B. Iuman, who was authorized to recruit 20 men. Capt. John W. McConnell, of the same city, was assigned to duty as recruiting officer at Chicago, Ill., where the greater portion of the Illinois company was recruited. Ordered to Washington Barracks June 27. From this station the company was ordered to Chickamauga Park as a part of the signal battalion of the First Army Corps.

Des Moines, Iowa: Enlistments were made under Capt. Frank Lyman, jr., who was instructed to enlist 50 men, largely made up from the signal corps of the Iowa National Guard. Ordered to report to Washington Barracks June 23, from which station the company was ordered to Chickamauga Park and assigned to the Third Army Corps.

St. Louis, Mo.: Enlistments were made under Capt. Samuel S. Sample, who was authorized to enlist 20 men, it being necessary to cut down the number previously assigned as his quota, owing to rapid enlistments. Lieut. W. W. Colt was assigned as recruiting officer at Kansas City, with instructions to enlist 30 men. On July 11 orders were issued directing the Missouri company to report to the Washington Barracks. From this station the company was assigned to Camp Thomas, Chickamauga Park, relieving the signal battalion of the Fifth Army Corps, which had been ordered to Porto Rico.

Smaller detachments were enlisted at Nashville, Tenn., by Lieut. Charles B. Rogan, Jr., who secured a detachment of 20 men; Lieut. J. J. Ryan enlisted 15 men at San Antonio, Tex.; Lieut. A. J. Rudd enlisted 15 men at Fort Snelling, Minn. The men from Fort Snelling were ordered to the Pacific coast for the Manila expedition, as were also 6 recruits from Fort Harrison, and 23 men, in charge of a sergeant, were sent from Washington Barracks, with instructions to report to Major Thompson for duty. Ten telegraph operators were enlisted at Raleigh, N. C., for the Manila expedition. The remaining portion of the two companies organized at San Francisco were made up from recruits enlisted for the service at that point.

The above shows that 820 enlistments were made for the Volunteer Signal Corps under my direction and the remaining portion of the corps was made up of men transferred from the line of the Army, at their own request, and these men were, in almost every case, skilled electricians or telegraph operators.

Immediately upon the arrival of troops at Washington Barracks a school was organized for the instruction of the men in practical work of constructing and operating telephone and telegraph lines. The men were also exercised in cavalry drill, having secured the horses left by the light battery which had recently left the barracks for Manila. Although little time was available for such instructions the recruits made rapid progress in the work. Lectures on the general duties of signal officers, given by those of most experience, were also regularly attended by all commissioned off-

cers at the camp. Telegraph tests as to the efficiency of the men as operators were made at night after the drill of the day, and in some cases competitive tests as to the rate of receiving were made, and attended with enthusiasm, which developed the fact that among these men were some of the best operators in the United States.

Officers receiving appointment in the Volunteer Signal Corps, in most cases, were ordered to report to me at Washington Barracks, where the companies were formed and officers assigned thereto.

The organization of the companies, such as the appointment of noncommissioned officers was, by the direction of the Chief Signal Officer, almost exclusively placed in the hands of the commanding officers of the different companies, although political pressure was frequently brought to bear by those interested to secure preferment in the noncommissioned force.

For the purpose of arming the command, a requisition was made for 500 carbines and 500 revolvers of .45 caliber. This caliber was taken on account of the limited supply of smaller caliber in the Ordnance Department. The carbines were selected as the most suitable arm for mounted troops, and the revolvers were intended more especially for the members of the corps assigned to telegraph and telephone work. The character of the arms of each company was left to the captain commanding the company, but the majority of the companies were supplied with carbines.

In Inclosure A will be found a report showing organization of companies of the Volunteer Signal Corps upon entering active service.

In Inclosure B will be found a narrative report of the organization of each company of the Volunteer Signal Corps, setting forth the qualifications of the men, their previous training and vocation, place of enlistment, character of equipments, and the training received before leaving station for duty in the field.

In Inclosure C will be found a list of the signal equipments and Government property supplied to each company.

In closing this report I desire to place on record my high appreciation of the sterling qualities of this superior organization, including both the commissioned force and the enlisted men, many of whom left lucrative positions in civil life to enter the military service, in which the pay was practically no consideration, while they brought with them that skill and education which enabled them to master with readiness all details of the technical service which they were called upon to perform.

I uniformly found not only a readiness but a desire to master the details of military service. Both officers and men were not satisfied with the usual instructions and practice in signaling, and it was not an unusual occurrence to observe squads of men continuing the exercises after the regular hours for drill.

In the above report I have briefly set forth the plan followed in the organization of the Volunteer Signal Corps, the brilliant services rendered in the field by this organization having been well stated by yourself in the congratulatory order issued on the occasion of the mustering out of the Fifteenth Company, the first to leave the organization after the cessation of hostilities.

Very respectfully,

H. H. C. DUNWOODY,
Colonel Signal Corps, United States Army,
Assistant Chief Signal Officer.

INCLOSURE B.

REPORT ON THE ORGANIZATION AND EQUIPMENT OF THE VOLUNTEER SIGNAL CORPS

OFFICE OF THE CHIEF SIGNAL OFFICER,
HEADQUARTERS SECOND ARMY CORPS,
Camp George Gordon Meade, Pa., September 12, 1898.

The CHIEF SIGNAL OFFICER OF THE ARMY,
Washington, D. C.

SIR: I have the honor to submit herewith a narrative report embracing the period from about June 9 until August 7, 1898.

In pursuance of S. O., No. 135, c. s., A. G. O., I opened an office in New York City, my office being the armory of the First Signal Corps, National Guard, New York, which armory was kindly tendered to me by Capt. Homer W. Hedge as a recruiting office.

I was instructed to enlist 50 recruits, and upon completion of this to report the fact to the Chief Signal Officer. In order to expedite the enlistment of these men, I took advantage of the fact that New York City included the boroughs of Brooklyn, Bronx, etc., as well as Manhattan, and also established an office at No. 800 Deane street, Brooklyn, the armory of the Second Signal Corps, National Guard, New York. The use of this armory was tendered me by Capt. F. T. Leigh, signal officer, National Guard, New York, who had received an appointment in the United States Volunteer Signal Corps, and who was also recruiting at the same point. We were authorized to use this armory as a rendezvous until the required quotas were enlisted, when we would proceed to Washington Barracks, D. C. In recruiting men for the Signal Corps I endeavored to obtain as many telegraph operators, electricians, linemen, and electrical engineers as possible, while my instructions required that two-thirds of all men enlisted should be either operators or electricians. I used every endeavor to have all of them such, and I restricted the acceptance of those not thus technically qualified to men who had seen previous service in the Army or National Guard, with three exceptions, two of whom were cooks, and one an experienced hostler, whom I had selected to be instructor for my men in the care of their horses.

I was very much assisted in my work by telegraph and telephone companies, electric-light companies, and the newspapers, all of whom gave their best endeavors to make the desires of the Government known, so that I was enabled to select the men from a large number of applicants.

I was authorized by the Surgeon-General to employ a civilian physician to make the physical examinations, and selected for this purpose First Lieutenant Campbell, assistant surgeon in the New York Signal Corps. He performed this duty very strictly, and I consider the good showing that my company made as regards health and physical condition due to his care.

Upon completing the enlistment of 50 recruits, I reported the fact to the Signal Office, and was authorized to enlist 10 more telegraph operators, if possible. This I succeeded in doing without any trouble whatever. The company as recruited consisted of about one-third telegraph operators, one-third electricians and linemen, one-sixth men who were not only telegraph operators, but also electricians and linemen, and one-sixth ex-regulars and ex-members of the New York National Guard. Many of the telegraph operators and electricians had had previous military experience in the National Guard. I can only approximate in this, for the reason that I have not access at present to the company papers.

Each applicant for enlistment was required before he was accepted to present a certificate of good character from his employers, and a certificate from the manager of the Western Union, Postal, Bell Telephone, or an electric light company that he was a man of such capacity and qualifications as would satisfy their requirements if he sought employment with them. These certificates were all attached to the enlistment papers, and are now on file in Washington. In addition to these enlistments, there were three special enlistments by order of the Chief Signal Officer, viz, Andreae, Spratt, and Lumb. Spratt and Lumb presented themselves with a statement that they were to be enlisted as sergeants. To this I demurred, and after considerable discussion they agreed to enlist as privates, subject to my approval, their appointments as noncommissioned officers being subject to my future approval, I having insisted that when my company should take the field and go to the front that I had the right and power to reduce to the ranks any noncommissioned officer whom I deemed unfit to hold that position, and that as they were without technical skill as telegraphers or electricians and without previous military experience, that I could not consider them as capable noncommissioned officers. I would state, in parenthesis, that Lumb and Andreae were transferred from my company, and that Spratt proved himself subsequently in every way qualified to act as a sergeant.

About the 25th of June I proceeded with my detachment to Washington Barracks, and was there organized as the Ninth Company of the United States Volunteer Signal Corps. During the period of June 9 until June 25 the detachment was quar-

tered in the armory of the Second Signal Corps, No. 800 Deane street, Brooklyn. Those men who so desired were allowed to take their meals and live at home. Those who did not were quartered in the armory. The routine of company work was established, and two drills a day in signaling and in the school of the "soldier dismounted" were required, at which all the men who were enlisted had to be present. Captain Leigh, the commanding officer of this armory, deserves thanks for this very convenient offering of his quarters. It caused his men to be crowded and inconvenienced, but he cheerfully and willingly did everything he could to make the men comfortable, and assisted me in getting my detachment into military shape.

After I arrived at Washington Barracks my instructions were to proceed with my company to Santiago de Cuba, but there being some delay in the furnishing of equipments, I was instructed to proceed to Albany, N. Y., and purchase the signal property pertaining to the New York Signal Corps. With this equipment I was ready for duty at the front. When I returned from Albany a number of my men had been transferred to Captain Russel's company, with orders to proceed to Manila, and their place was taken by an Ohio detachment of 20 men, who had just arrived at Washington Barracks under command of First Lieutenant Coe. I knew nothing of these men and was a little anxious at first, fearing that they would not be of as high an order of technical and other merit as the men whom I had brought from New York, but they proved to be first-class—First Lieutenant Coe having selected them himself, and being an officer well-fitted for his duties. First Lieutenant Woodard and Second Lieutenants Davenport and Wood were assigned to my company as lieutenants. Lieutenants Coe and Davenport were telegraph operators. Lieutenant Woodard was not only a telegraph operator, but an electrical engineer of considerable experience. Lieutenant Wood was without previous experience, military or technical.

Upon the 4th of July I left Washington Barracks with my company and proceeded to Newport News, Va. From there my orders were to go by the first transport to Santiago de Cuba and report to Major Greene, chief signal officer of the Fifth Army Corps. Up to that time my company had been taking their meals with Captain Leigh's company, and when the time came to leave there was no way of making an equitable division of the rations, owing to the fact that the bread and meat rations were issued daily, the ration return having been signed for several days ahead. The post commissary was ill and unconscious and there was no commissary sergeant, the civilian clerk of the commissary being absent on a holiday. I therefore had to proceed without any rations whatsoever—travel, or otherwise. Fortunately, I had on hand about \$100 left over from funds which had been invoiced to me when I was recruiting officer in New York City. I took the responsibility of using this money to purchase meals for the men until I could draw rations at Newport News. Having arrived there, the company went into camp to await the departure of the transport, *La Grande Duchesse*, which was being prepared for service. During this period the men were instructed in the routine of camp duty, the methods and importance of hygienic and sanitary precautions, and were also drilled twice a day in the school of the "soldier dismounted" and in signal drill. In due time, about the 7th of July, we boarded the transport, at the same time turning in our property for shipment. We sailed from Newport News on the following day and proceeded to Charleston, S. C., where additional troops were to be loaded on the steamer. During every day of the trip there was theoretical instructions and signal drill. The cabins and quarters of the men were regularly inspected and every effort made to impress upon them the necessity of scrupulous cleanliness and carefulness in diet. They were assigned in squads to various lifeboats and instructed what to do in case of impending catastrophe. They were regularly bathed in squads, the water being played over their bodies from a hose. I would state in this connection that no relaxation as regards cleanliness and hygienic methods was ever allowed, no matter how hard worked or tired the men might be, and I am glad to be able to report that they cheerfully acquiesced in this at all times, even when they were almost physically exhausted with hard and unaccustomed work, and to this cheerful subordination on their part must be given the credit for their healthy condition, from the time they left Washington Barracks to the time I left them in Porto Rico, on August 7. After our arrival at Charleston, S. C., orders were received holding the transport at that city until further orders; then came instructions that the ship was not to go to Santiago, but was to go to Porto Rico. As the orders for the Ninth Company took them to Santiago, and as the property belonging to that company was buried under a thousand tons of general stores, and as the indications were that the Ninth Company was to be ordered ashore to take some other transport to Santiago, and as the weather was intensely hot, I was caused much anxiety lest I might be required either to be separated from my property and equipment, or compelled to handle the entire cargo of the vessel in order to get our signal property. For this reason, Santiago having capitulated, I felt justified in asking that my orders be changed and that I be sent with my command to Porto Rico. My orders were so changed.

During the time my company was in Charleston I am proud to report that the conduct was most exemplary. They had five consecutive hours' drill daily at visual signal work, the object being to accustom to the long-continued transmission of messages and the resulting strain that would follow upon nerves and eyesight. The rest of the time I gave them all the liberty I could, they living on board the ship, and found that I had no reason to regret so doing. The members of the company were the recipients of much hospitality from the citizens of Charleston, which took the form principally of offering food and drink indiscriminately. The men, however, had learned by this to look out for themselves, and there was not as much sickness as I had feared. We had some, owing to the drinking of ice water and overindulgence in melons and other fruits. Just before sailing, the surgeon on board of the ship reported that First Lieutenant Coe was suffering from a very high fever, typhoid being suspected. There was no time to consult the Department, so I took the responsibility of ordering him ashore, and detailed First-Class Private Brubaker to attend him. We had just time to get these men off the ship when it sailed. I regretted losing Lieutenant Coe very much, as he had up to that time had charge of the property, was a good signal officer, and a man both careful and industrious. The journey from Charleston to Porto Rico was without incident. Toward the latter part of the trip there was considerable suffering, due to the lack of good drinking water, which was brackish, owing to the condensers having broken down to an extent that allowed salt water to leak in. When off the eastern coast we were hailed by the U. S. cruiser *Columbia* and instructed by order of Major-General Miles to Guanica, a point about 20 miles west of Ponce. At Guanica we remained only long enough to unload some of the horses, and then proceeded to Playa de Ponce, where the final disembarkation was to take place. There the command went ashore and established a camp at the landing hut of the English Panama Cable Company. When the *Grande Duchesse* arrived off Ponce, information was received that the stores on board were not to be delivered at Porto Rico, but were to be sent on to Santiago. This necessitated overhauling the entire cargo to get at the property pertaining to the signal company. This exhausting and laborious work was done almost entirely by the Signal Corps. It was very important that we should get all of our supplies. Unfortunately, we did not. A part of our ammunition and property was overlooked, and just as the ship sailed a report was sent me that some of it had been found. From Charleston, south, the ship was very much crowded. Five men were assigned to each stateroom, and the necessities of all kinds were inadequate, so that the discomforts of the men were extreme. Notwithstanding this they were cheerful and willing to do more than their share of the labor that fell upon them. They performed guard duty in addition to drill and technical instruction. This was made necessary by the fact that the volunteer regiment which accompanied us on the trip was undisciplined, and contained petty thieves. We had landed at sunset. The next morning, without waiting instructions, visual signal stations were established. One on top of the custom-house, which was right at the wharf, and in which General Miles had established his headquarters, and other stations upon such of the transports as were being unloaded. It was found that the swinging of the vessels, with the changing of the tide, caused signaling to be impossible to some of the ships that were farthest out at sea, they becoming screened by those nearest shore. It therefore became necessary to establish an auxiliary station on the Light-House Island at the entrance of the harbor, which was used to relay the messages to the ships which could not be communicated with directly. The work done by these signal stations facilitated the disembarkation, in that the naval officers detailed to superintend the work could be immediately notified when the lighters at the ships were loaded or when empty lighters were required at the ship's side. There were a number of these lighters captured from the Spaniards when our command entered the harbor, but the only means of taking them to and from the shore were the steam launches of the men-of-war, of which there were only three in service. It therefore became necessary that the time of these launches should be fully occupied, and that they be constantly employed either in getting empty lighters to the ships or loaded lighters from the ships to the shore. This work was managed by a lieutenant of the Navy, detailed for that purpose, and was facilitated by the Signal Corps, which enabled him to communicate instantly with any transport. These visual stations were under the charge of Second Lieutenant Wood, and the details of the work were left entirely to him.

The telegraph offices were under charge of Second Lieutenant Davenport, Ninth Company. Telegraph offices were established at the following points the day after we landed: General Miles's headquarters, the cable office, the cable hut on the east shore, where the Ninth Company was camped, the town of Ponce, General Wilson's headquarters in Ponce, the railroad station in Ponce, the town of Yauco, one or two temporary intermediate stations, between Yauco and Ponce, for the convenience of the troops marching from Yauco to Ponce, which stations were abandoned when these movements were completed. There was also a station at Guanica. The Ninth

Company furnished operators and messengers for General Miles's headquarters, the cable office, and company camp. It also furnished a few operators scattered among the other offices, which offices, however, were principally manned by details from Captain Lamar's company. The station at Guanica was manned by a detail from Captain Clark's signal train. The line from Guanica to Yauco was a military line, on lance poles, built by his company; the rest of the lines were the Spanish Government lines repaired and put in order. Lieutenant Davenport, Ninth Company, had charge and supervision of all these lines, with a detachment organized after the manner of the commercial telegraph companies. He had his chief operator, his chief lineman, and assistants, all with their duties succinctly specified. As in the case of Lieutenant Wood, the instructions given him were general in their nature and the details were left entirely to him to work out upon his own responsibility.

I would state in parenthesis that when I first took command of the company I performed the duties of captain, lieutenant, first sergeant, company's clerk, and everything. I found, however, that this arrangement would not do, that the officers, noncommissioned officers, and men, all seemed to rely upon the captain's taking the initiative in the most minute particulars, so that the discipline and efficiency of the company was not progressing as rapidly as the intelligence of the men would warrant me to expect. I therefore made up my mind to assign the different branches of the work to the officers and noncommissioned officers, and allow them to act more on their own responsibility. The result was that, while some of the work was not done possibly as well as I would have wished, yet in the end the result was much better than I was accomplishing by doing all the work myself, and I found that by correcting mistakes little by little, by changing things slightly from day to day, and by giving instructions in small quantities, the improvement, though gradual, was permanent, and the self-reliance and industry of the officers and men materially strengthened.

It gives me pleasure to state in this particular that during the entire time I was in command I did not find it necessary in a single instance to speak a harsh word to either officers or men. The charge of the company camp at the cable hut was put in the hands of First Lieutenant Woodard. His duties were to see that the camp was kept clean, that hygienic principles were enforced, that the meals were well prepared and promptly served, that the discipline was good, the property well cared for, and the requisitions for men by Lieutenants Wood and Davenport would be promptly filled by members of the command whose technical attainments were best suited for the work which they would have to do. For this purpose Lieutenant Woodard remained in camp all the time, there being occasions when there was no one there but himself, the first sergeant, and cook. I do not remember of his leaving camp once to visit the town of Ponce to see the sights, to visit officers, or to take advantage of any of the possible relaxations which come from time to time to soldiers in the field. He performed his duties cheerfully, conscientiously, and with industry, though he, of all the command, was the one who might have had cause for complaint. His work was hard, arduous, and made no ostensible show whereby he could have the gratification of obviously accomplishing results. The skill and tact with which he performed this duty and the justice with which he apportioned the work among the various details of men had much to do with the successful administration of the company, and in leaving it in his command I felt absolute confidence that things would go on smoothly and effectively. If there is a possibility of promoting him he will prove a valuable officer, being a civil engineer by profession, a telegraph operator, and a man of executive ability above the average. All the officers of the company were temperate in the use of stimulants.

My duties during this period consisted in keeping a general supervision over the entire company and endeavoring to find out and anticipate the requirements of the command. The Signal Corps started into this war with a burden upon it of having to prove the necessity of a signal corps. This was a great disadvantage, in that it required an ambitious officer to anticipate where the services of the corps might possibly be required, and involved the expenditure of much labor which subsequently was proved to be unnecessary. At the same time this labor was not to be regretted, in that from the first it trained our men to habits of industry and thoroughness, and will result, in my opinion, in the development of a substantial lot of soldiers suitable as candidates for a permanent corps should this branch of the service be increased hereafter.

The telegraphic and electrical work done by the company consisted in putting up an independent circuit from General Miles's headquarters to the cable office. This was done with a view of requiring all the cable messages to be filed originally with the Signal Corps and tended to help us to retain absolute control of the cable messages. All cablegrams were received at headquarters and were telegraphed to the cable office, and from there sent out of the country. We had an all-metallic open-circuit system for the work, and the circuit was used for no other purpose. The

other telegraphic line was worked on the closed-circuit system. Starting from a gravity battery at the cable office it passed through the cable hut, thence to army headquarters, then back to the cable hut, thence back to the cable office, thence to a battery at Captain Lamar's company barracks at Ponce, thence to General Wilson's headquarters, thence to the railroad station at Ponce, thence to Yauco, and thence through battery at Guanica to ground. From the cable office to Ponce we used the old Government line repaired. From the railroad station to Yauco we used partly the railroad and partly Government wires. From Yauco to Guanica we used a field line put up with lances by Captain Clark's company. The telephones were not used much, only when the lines were too bad to work the telegraph, and for advance and scouting parties. It was replaced by the telegraph as soon as possible. In visual signaling we used all the apparatus furnished except the torch. The torch was never used at all. At night we found the flash lantern or two ordinary railroad lanterns perfectly satisfactory. We used one lantern for footlight and swung the other from right to left and the reverse, so as to make letters according to the Myer code. For short distances this could be done with one hand. For longer distances the lantern was passed from hand to hand as it swung past the center, and for extreme distances the operator stepped to the right as far as he could when swinging to the right and to the left when swinging to the left. The flash lantern, however, was the most satisfactory at night and the heliograph in the daytime. Strict discipline soon made the men exact and particular in preserving the adjustment. The navy, however, were not prepared to read it readily, and in most cases called for the flag.

At this point I would state that each company should be provided with two sets of international code flags and two international code books. These latter should have an appendix added for such military messages as would most likely be sent. We were at a disadvantage in not being prepared to communicate with the navy by means of their code. The code book, by means of the abbreviations used, would shorten enormously the time of sending messages by the signal flags. Since messages sent by flag were not being paid for, there was no way to make the writers condense, and valuable time was taken up in transmitting useless verbiage; at the same time none of us cared to take the responsibility of editing and condensing any of the messages given us to transmit.

The conclusions I have drawn from what I have seen and experienced are as follows:

That paragraph of the law which provides that each division shall have two captains, two second lieutenants, etc., has resulted in a misunderstanding. Each division commander seems to look upon a signal company as part of the effective force of the division, whereas circumstances may require that one division shall be served by almost two companies, while another division may be amply served by a small detachment. It should be well understood that all the signal companies of a corps should be under the immediate jurisdiction of the chief signal officer, and that the commanding general of the corps shall assign companies or detachments to the division as seems best according to circumstances. Where the division is independent it should have a signal company actually attached to it, but otherwise its signal force should be governed by the existing conditions. It is these same existing conditions which regulate the equipment of a signal company or detachment, and no fixed rule can be made to establish a uniform of a company. The efficiency shown by my company at Ponce was due to the fact that its equipment was meager as far as horses and transportation were concerned. As a result of not having horses, mules, or wagons to care for, my entire company could be assigned to duty as signalmen, telegraphers, and linemen, while other companies had almost all they could do to look after their animals and transportation. Nevertheless, Captain Lamar's company was able to show especial efficiency owing to the fact that he was well provided with horses and wagons, so that while he had few men handy doing signal work, yet his company, as an organization, did valuable service. This made obvious the fact that equipment was determined by surroundings. To accomplish this, however, necessitated that I, who was senior to him, should assume the work and duties of a junior, as we were in the beginning both attached to General Wilson's division, and as the senior signal officer present I had the right to take charge of the more immediate work around headquarters, which I could not have done and gotten the best results from the two companies.

There was no friction whatever, but from my experience as an officer in the Army I can state that the possibility of friction and poor service resulting therefrom were very obvious, and I was anxious about the matter all the time that this condition existed. When Lieutenant-Colonel Reber arrived my company, Captain Clark's signal train and Captain Lamar's company were consolidated under Colonel Reber's command, the resulting organization being very satisfactory to all but General Wilson, who opposed the taking away "of my signal corps." There is no question but that he should have had a signal detachment, possibly an entire company, or

even more than a company, but men and material should have been furnished him by Colonel Reber, who could have selected both, according to the necessities of the prospective signaling about to be done.

I concluded from all this that the chief signal officer is the individual who should command the organization and storehouse, where most of the supplies can be kept to be issued to the companies in such quantities as the immediate work requires. The question of the supplies and equipment of a signal corps is one requiring thought, and which can not be overlooked or slighted. We lose sight of the fact that the Signal Corps may be considered to consist primarily of property and incidentally of men, in that it is the material and apparatus which is indispensable to the proper performance of their functions. The tendency on the part of the commanding officers and others is to overlook this. Results are expected simply from the presence of men with cross flags on their hats, irrespective of what apparatus they may have with them, it being so easy to say, "Let a flag be improvised." A number of signalmen not completely supplied and equipped is no more a signal corps than artillerymen without cannon are artillery, or cavalymen without horses are cavalry. Another point is that military instructions and preparation in time of peace should include a thorough appreciation of the importance of a signal corps. It is impossible that this branch of the staff should accomplish its best results unless commanding generals appreciate its usefulness. The chief signal officer should be thoroughly posted in advance of intended movements, so that important locations can be connected to headquarters as soon as occupied. It is a mistake to have to wait until an important point is occupied by troops before commencing preparations for establishing communications with it.

In regard to the arms: We found carbines a source of trouble without any prospect of an opportunity to use them. All the other officers commanding companies agreed with me in this and considered that the only firearm suitable for signalmen was the pistol. Lieutenant Coe's Ohio detachment brought with them a number of bowie knives and scabbards. These proved to be most serviceable in many ways, and I would recommend that each signalman carry such an instrument. They are indispensable in clearing away underbrush and freeing the electric wires from "grounds."

In regard to equipments: The electrical and visible equipments furnished the Signal Corps are everything that could be desired. The torch, however, is unnecessary and its use should be discontinued. It is heavy and takes up valuable space. For the care of the smaller tools, visual apparatus, etc., it is indispensable that each company should be provided with six or eight packing boxes, these to be uniform and to be filled each with a complete set of tools and apparatus necessary to completely equip a signal station. I was unprovided with these boxes, while Captain Lamar had succeeded in obtaining them, so that it was possible to compare the work of the two companies, one having them and one not having them. It is almost impossible to avoid losing the smaller articles unless such boxes are provided, each with an inventory of its contents marked on the inside of the lid.

In regard to transportation: The amount is regulated by the amount of property which each company may be called upon to carry along with it. As this is regulated by circumstances, I would recommend that the transportation be furnished to the chief signal officer, who apportions it out among the different companies according to their actual need. The same reasons govern this as those regulating the equipment.

In regard to the number of men who should be mounted on horseback: I am opposed to any being mounted except the five first-class sergeants. To have more horses takes away men who can be better employed in actual signal work than in the care of horses. Further, it is an inducement to throw upon the signal companies more than their share of orderly work.

In regard to bicycles: They are very valuable in some cases and of no use whatever in others. Where an army corps is consolidated in camp or is in a country provided with good roads, at least five to each company is none too many.

In regard to drill and instruction of a signal corps: The rules and principles laid down in Myer's Manual can not be improved upon.

In regard to the personnel of the Signal Corps: The legal requirements that two-thirds shall be telegraph operators or electricians is just about right. Electricians seem to be of a class naturally ingenious, and make good all-around men. Many telegraphers can be obtained who are also electricians. The remaining one-third will furnish the necessary cooks, clerks, stenographers, teamsters, and hostlers which are necessary to each organization, but what is most essential of all is that every man before going into active service shall be a soldier. Every day since I have been in the volunteer service I have been more and more impressed with the fact that it is absolutely impossible to do soldiering without soldiers, the general impression of the American people to the contrary notwithstanding. There seems to be four stages in the passage from a recruit to a soldier: First, when he puts on a

uniform and thinks himself a soldier; next, when he has seen a little drill and looks like a soldier; third, when he begins to act like a soldier, and finally when he thinks like a soldier. Until he reaches the latter condition he is not fit for anything from a military standpoint. He is a care on the officers who know their business and a source of danger to himself and those in his vicinity. For this reason it will be essential in time of peace to have a highly trained Signal Corps capable of being enlarged to the requirements of war. Their pay must be high to attract the proper technical skill. They must be thoroughly instructed in military requirements and drilled to a high degree of efficiency. From what I have observed in actual service and from my experience as professional electrical engineer, I am convinced that the Signal Corps should be officered by men of talent and attainments above the average.

In regard to the organization of the Signal Corps: The present one is admirable in all particulars but one. It is for some reason impracticable to have two captains to a company. I can give no arguments theoretically against it, but observation has convinced me that it simply does not work and seems to be a cause of trouble and heartburning.

Very respectfully,

EDWARD B. IVES,
Lieutenant-Colonel and Chief Signal Officer,
Second Army Corps.

OFFICE OF THE CHIEF SIGNAL OFFICER,
HEADQUARTERS SECOND ARMY CORPS,
Camp George Gordon Meade, Pennsylvania, October 3, 1898.

Gen. A. W. GREELY,
Chief Signal Officer, U. S. A., Washington, D. C.

SIR: I have the honor to submit to you the following narrative, as a report of the organization of the Eleventh Company, United States Volunteer Signal Corps. I was commissioned on May 20, 1898, captain in the Volunteer Signal Corps and qualified on June 1.

On June 9, 1898, by Special Order 135, A. G. O., Washington, D. C., paragraph 13, I was assigned to duty as recruiting officer for the Signal Corps at Newark, N. J. There being no medical officer available at Newark, I asked authority from the Surgeon-General of the Army to employ a civilian physician and was authorized to do so by telegraphic orders on June 11, 1898. By direction of the Chief Signal Officer, I was authorized to enlist 35 men, at least two-thirds of which number should be telegraph operators or electricians. I enlisted the first of these men on June 13. On June 25 I had secured the last man. I then requested authority to enlist three more men who had applied to me, and received the necessary authority. These men were sworn into the service on June 27. These 38 men were selected from over 125 applicants.

While other officers in the Signal Corps also assigned to recruiting duty secured a greater number of men in the same time, I have always felt that I have been repaid for the care in which I selected the men by the way in which they have performed the duties required of them.

I had obtained for use as a recruiting office a large hall and two adjoining rooms owned by Marcus L. Ward Post 88, G. A. R., which had been used by the Provisional First Signal Corps of New Jersey, of which I was then captain, as its armory and drill hall and where appliances for visual signaling were kept. Telegraphic instruments were set up and connected, and likewise telephone instruments, which were also taken apart and then reconstructed for the instruction of the recruits. Every applicant for enlistment, before being examined, was required to produce a letter of recommendation from either the Western Union or Postal Telegraph Company, or other reliable and well-known institution or firm, setting forth his qualifications and his ability, either as telegraph operator or electrician, and stating that they would be willing to employ him in their own establishment. This was done pursuant to instructions from the Chief Signal Officer, with the result that the men obtained were as carefully selected and came as well recommended as one usually takes into his own personal employ. This care brought fruit when, several weeks later, the men were required to construct and operate telegraph and telephone lines, which they did in a satisfactory manner, without unusual effort or friction.

On June 16, 1898, by Special Order 141, A. G. O., Washington, D. C., First Lieut. Hugh Haddow, jr., was ordered to report to me in person at Newark, N. J., for duty. Lieutenant Haddow was then first lieutenant in the Provisional First Signal Corps of New Jersey. While at Newark, and until the full quota had been recruited, as many of the men as desired were permitted to go to their homes for meals. Very few took advantage of this offer, and most of them received their meals at a restaurant in the vicinity of the recruiting station. The meals furnished were paid for by the Subsistence Department at the rate of 25 cents per meal, and were clean, wholesome, and well cooked. The men were marched to the restaurant and back in two

detachments, each in charge of an acting sergeant. A number of the men were also quartered by me nightly at an expenditure of 25 cents per night, which was paid by the Quartermaster's Department. Of the 38 men enlisted by me, 29 were either electricians or telegraph operators, a little more than half of this number being electricians. One also enlisted as a cook.

On June 28 I received telegraphic orders directing me to proceed with my detachment to Washington Barracks, D. C., in consequence of which I left Newark the following morning (29th) and arrived at my destination on the afternoon of the same day. The barracks being extremely crowded at that time and the weather being very warm, the second day after my arrival I drew tentage for my detachment and we went into camp, my organization being the only one that lived in tents at the barracks until my departure from there for Camp Alger, Va., on July 13, at which time I transferred my camp to Capt. Ambrose Higgins, and received from him in exchange an equal number of tents, he being enabled thereby to move into a camp already established. On July 8, 1898, First Lieut. Charles De Forest Chandler was assigned to duty with my company.

On July 10 First Lieut. Henry G. Opdycke, who had recruited 18 men at Albany, N. Y., reported at Washington Barracks with his detachment and was assigned with his men for duty with my company, which had been designated as the Eleventh Company, by order of the Chief Signal Officer. On July 13, Lieutenant Opdycke was transferred to Captain Lyman's Company; his men, however, remained with my company, which then had a total strength of 56 men. Of the men enlisted by Lieutenant Opdycke, 13 were telegraph operators, 1 stenographer, 1 photographer, and 3 electricians.

While at Washington Barracks the men were drilled daily in the use of visual signals, received some instructions in guard duty and other duties pertaining to the life of a soldier, and were taught how to ride and care for horses. They were uniformed and received their personal equipment, such as haversacks, canteens, knives, forks, spoons, meat cans, bed sacks, shelter-tent halves, blankets, and ponchos, and 25 carbines and 30 revolvers, which were distributed among the men, the noncommissioned officers receiving the revolvers.

July 11 I received orders to proceed with my company to Camp Alger, Va., which I did on July 13.

August 15, while at Camp Alger, Va., Second Lieuts. Carl Darnell and Byron B. Daggett, pursuant to Special Order 191, A. G. O., Washington, D. C., reported to me for duty, while I was acting chief signal officer of the Second Army Corps, and were by me assigned to duty with the Eleventh Company.

As signal equipments of every kind that might possibly be required for visual signaling, as well as for telegraphic and telephonic constructions, had been sent to the chief signal officer attached to the Second Army Corps at Camp Alger, Va., my company took with them no signal equipments from Washington Barracks, except two heliographs and some telescopes.

The equipment furnished us after we reported for duty with the Second Army Corps was certainly, both in quality and quantity, such as to enable the Signal Corps to maintain operations under all sorts of conditions. Three battery wagons were to be used as portable telegraph and telephone offices during time of action in the field, a wire reel wagon loaded with four strand insulated wire, which can be laid upon the ground, over roads, and through streams, and communication over which would not even be interrupted by the passing of wagons over the same, field instruments to be operated in connection with this wire, all material and tools necessary for the construction and operation of military lines, and every kind of appliance for visual signaling, both day and night, from the now obsolete signal torch to the acetylene gas lamp of the latest model, and while this property formed a great bulk when concentrated in one place, by judicious distribution among detachments it can readily be moved from place to place to which the detachments may move.

Thirty-five horses were assigned to each company of the Signal Corps. This number is far in excess of the number of horses which the Signal Corps could use to advantage; fifteen or twenty horses at the most being enough for any one company. The care and attention required for the extra horses impairs the efficiency of the Signal Corps companies.

The only thing which was possibly lacking in our equipments was a wagon or truck suitable for the rapid transportation of lance poles used in the construction of the military lines. We used for this purpose an ordinary army wagon, and, being too short, the tail board had to be removed, with the result that whenever the wagon was hauled on an upgrade, the lance poles were certain to slide out of the rear end. The wire-reel wagon was faultily constructed to some extent, but these faults were readily overcome by changes made under my direction, an account of which is contained in separate report heretofore rendered by me. Some slight changes were also necessarily made by us in the fitting of the battery wagons. The necessary material

for establishing an incandescent electric-light system for 50 lamps was also a part of our equipment, the lights being put in the headquarters tents by the signal corps.

Trusting I have not been too brief in the matter of this report, I have the honor to remain,

Very respectfully,

CARL F. HARTMANN,
*Captain, Signal Corps, United States Volunteers,
and Acting Chief Signal Officer.*

WAR DEPARTMENT, SIGNAL OFFICE,
Jacksonville, Fla., August 25, 1898.

CHIEF SIGNAL OFFICER, U. S. A.,
Washington, D. C.

SIR: In compliance with instructions from your office, I have the honor to make the following report upon the organization of the Second Company, United States Volunteer Signal Corps:

I was assigned to duty as recruiting officer for the Volunteer Signal Corps at Hartford, Conn., by S. O. 135, H. Q. A., June 9, 1898, and between June 9 and June 16 enlisted 26 men, many of them members of the Connecticut Signal Corps.

On June 17, 1898, in accordance with S. O. 141, H. Q. A., June 16, 1898, I proceeded to Fort Trumbull, Conn., to which post recruits had been sent each day as enlisted, and started with detachment for Washington Barracks, D. C., at which post I arrived on June 18.

Subsequently my company was filled to the maximum by assigning to it recruits enlisted at Washington Barracks by Captain Lamar, and at New York by Captain Ives, and at Brooklyn by Captain Leigh.

While at Washington Barracks the company was uniformed and equipped and instructed in the rudiments of signaling and military drill. The men were all armed with Colt .45-caliber pistols. The signal equipments consisted of the articles prescribed by your office for each company of the Signal Corps.

The company left Washington Barracks July 3, 1898, for Jacksonville, Fla., arriving on July 4, for service with the Seventh Army Corps; this in accordance with letter from Adjutant-General of the Army, dated June 27, 1898.

The officers attached to the company are Capt. Howard A. Giddings, First Lieut. Samuel M. Butler, and Second Lieut. William Mitchell.

A roster* of the company, with complete data, is inclosed herewith.

Very respectfully, your obedient servant,

H. A. GIDDINGS,
Captain, United States Volunteer Signal Corps, Commanding Second Company.

REPORT ON THE ORGANIZATION AND EQUIPMENT OF THE FOURTH COMPANY.

SIGNAL CORPS, UNITED STATES TROOPS IN PORTO RICO,
Ponce, Porto Rico, September 19, 1898.

Respectfully forwarded to the Chief Signal Officer, United States Army.

The Fourth Company was formed of men enlisted for the United States Volunteer Signal Corps from time to time at Camp George H. Thomas, Ga., during May and June, 1898, or of men transferred from regiments of volunteers to the United States Volunteer Signal Corps during those months. These men have been attached to the detachment of Signal Corps, United States Army, at Camp Thomas. Until July 11, 1898, those men (43) were assigned by order No. 6, Signal Corps, First Army Corps, as Fourth Company to the command of Captain Hepburn. Subsequently assignments of men were made to the Fourth Company to fill it to the authorized complement. During their stay at Camp Thomas they were instructed and drilled in Signal Corps duties, signaling, field telegraph, etc., until their departure thence, July 23, 1898, for this island. Instructions and practice were also maintained when the men were not otherwise engaged on this island until departure on September 13, 1898, for the United States.

W. A. GLASSFORD,
Lieutenant-Colonel and Chief Signal Officer, United States Troops in Porto Rico.

* Omitted.

REPORT ON THE ORGANIZATION AND EQUIPMENT OF THE TENTH COMPANY.

CAMP WHEELER,
Huntsville, Ala., August 23, 1898.

CHIEF SIGNAL OFFICE,
United States Army, Washington, D. C.

SIR: Replying to your favor of August 13, 1898, through Col. H. H. C. Dunwoody, would say that the following is the desired information:

Previous to my reaching Boston, Mass., the recruiting for the Signal Corps was in charge of Lieutenant Chase, at 37 Kneeland street, Boston, who had enlisted 5 telegraphers and 2 electricians. When I opened recruiting office at East Armory, these men were transferred to my detachment June 21, on which day I began enlistment which was completed on Saturday June 25, with 65 men, their qualifications being as follows: Twenty-nine telegraphers, 8 linemen, 3 laborers, 9 signalmen, 2 electrical engineers, 7 electricians, 4 stewards, 2 civil engineers, and 1 stereotyper.

On Monday morning, June 27, we were furnished with a canvas working uniform and campaign hat by the State of Massachusetts, and in the evening of the same date at 6.30, with Lieut. H. W. Sprague, left for Washington, arriving there and reporting to post commander at 4 p. m., June 28. We remained in barracks until July 11, furnishing all necessary details and drilling on marching manuevers and signaling, wigwag, heliograph, and telegraphing. During this time the following changes were made: We lost 1 telegrapher by transfer to Washington District Company, also on same date by transfer, 9 men to the balloon detachment, 6 linemen, 1 telegrapher, 1 electrical engineer, and 1 laborer. On July 9 we lost by transfer, 1 telegrapher, and gained by same 1 signalman from the District Company.

We received a first-class Signal Corps outfit, including heliographs, flags, torches, telegraph instruments, tents, cooking utensils, and personal equipment for every man. On July 11 we gained by appointment First Lieut. Charles H. Martin and Second Lieut. Don A. Palmer, and Second Lieut. H. W. Sprague was promoted to first lieutenant. Accompanied by these officers and full quota of 55 men, we left Washington at 11.15 a. m. Monday, July 11, and arrived in Tampa, Fla., 8.20 p. m. July 12, remaining on board the train that night. The following morning we pitched camp behind the Tampa Bay Hotel, Capt. J. E. Brady commanding.

While here the men were drilled in signals at every opportunity. A supply of khaki uniforms and 60 hammocks were drawn anticipatory of the Cuban expedition. On July 19 we were joined by First Lieutenant Pellew, who remained with us until the 28th, when he left to join Captain Butler's detachment in Santiago. On July 23, having been furnished with fifteen days' traveling and forty-five days' field rations, we left Tampa for Port Tampa, leaving at 2.25 p. m., being loaded on board the U. S. transport *Port Victor* at 4.30 p. m. That night Private Corbin, telegrapher, was transferred to Lieutenant Wildman, pending a discharge for sickness. The same has since been granted, date unknown.

We remained in Port Tampa Harbor July 23, and pulled out at 11.30 a. m. July 24. On board the boat we furnished all necessary guards, and gave as much drilling as our cramped quarters would allow. This drilling, together with the setting-up exercises, was maintained during our entire stay on the transports. Arriving in Santiago Harbor July 27, we were informed that we would not be allowed to land, and we transferred entire company and stores to the *Seguranca*, United States transport No. 12, at 4 p. m. July 29. We left Santiago on this boat at 8.30 a. m. July 31, and arrived off Egmont Key 7.30 a. m. August 4. Transferred to *Comal*, United States transport No. 7, at 10 a. m. August 7.

Received orders that evening to send 25 men and 2 officers to Porto Rico. Pursuant to these orders, First Lieutenant Martin, Second Lieutenant Palmer, 5 first-class sergeants, 6 sergeants, 8 corporals, and 6 privates were detailed for the trip, and the following morning these, with apportionment of equipment and stores, were transferred to the *San Marcos*, United States transport No. 20. The remaining 29 men, including 2 sergeants, the detachment under command of First Lieut. H. W. Sprague, were transferred to the *Seguranca*, United States transport No. 12, and sailed that morning, August 8, for New York, where they arrived Friday evening, August 12, going into barracks at Governors Island Saturday morning, the 13th.

Wednesday, August 18, this detachment in charge of Sergt. H. S. Hathaway, leaving First Lieutenant Sprague sick in hospital and Sergt. William Schwab behind, left Jersey City and arrived in Huntsville, Ala., at 12.30 a. m. Friday, August 19, joining us at 9 a. m. same date. The Porto Rico detachment remained on board the *San Marcos*, United States transport No. 20, until the following Monday, August 15, when they were ordered to the fumigating station at Egmont Key, thence to Huntsville via Port Tampa. Additional rations were taken aboard the tug *Charles Foster* at Egmont Key, and the detachment reached Port Tampa at 5.30 p. m. Monday,

August 15, leaving there at 7.05 p. m. for Huntsville, at which point we arrived Wednesday 4.30 a. m., August 17. Encampment was made temporarily a quarter of a mile from headquarters the same date. We were joined by the other detachment Friday morning, August 19, and permanent camp established opposite headquarters on that date, Lieutenant-Colonel Strong commanding Signal Corps, Major-General Coppinger, commanding general.

Immediately upon our arrival here we were called upon to furnish construction men for telephone and telegraph lines from corps headquarters to the various regimental headquarters, and also to supply telegraphers and telephone men for operating same.

No effort has been spared by my officers or myself in endeavoring to recruit this company with the very best material obtainable, and every man was chosen because of his special fitness for some branch of the work.

Their former experience, together with the training which they have had while in service, will, in my opinion, make them a most valuable adjunct to the army corps to which they may be attached.

The following are the names of the officers attached to my command: First Lieut. Charles H. Martin, First Lieut. Henry W. Sprague, and Second Lieut. Don A. Palmer.

Very respectfully,

THOS. F. CLARK,
Captain Tenth Company, United States Volunteer Signal Corps.

REPORT ON ORGANIZATION AND EQUIPMENT OF THE FIFTEENTH COMPANY.

HEADQUARTERS FIFTEENTH COMPANY,
UNITED STATES VOLUNTEER SIGNAL CORPS,
Camp Wikoff, Montauk, N. Y., October 2, 1898.

CHIEF SIGNAL OFFICER,
United States Army, Washington, D. C.

SIR: I have the honor to submit the following report of the organization of my company of the Volunteer Signal Corps:

I was assigned on June 25 to the duty of recruiting, and for that purpose proceeded to Philadelphia, Pa. I was engaged on that duty at No. 1312 Filbert street up to and including July 7, on which date I was recalled and directed to proceed with recruits under my command to Washington Barracks, D. C.

I reported at Washington Barracks on the 8th of July with 24 men, and on the following day a detachment of 11 men, under Lieutenant Martin, reported to me, the latter having been recruited at Pittsburg, Pa. On July 11 I enlisted one man at Washington Barracks. Since then the under-noted alterations have taken place:

Transfers to my company, 1 man from Second United States Volunteer Signal Corps, 1 man from Sixteenth United States Volunteer Signal Corps, 1 man from Eleventh United States Volunteer Signal Corps, 1 man from Fourteenth United States Volunteer Signal Corps, 9 men from Sixth United States Volunteer Signal Corps. Transfers from my company, 1 man to Thirteenth Company United States Volunteer Signal Corps. Discharged, 1 man enlisted in Philadelphia.

On the 6th instant I was ordered to proceed to Montauk Point, and on the 8th instant my company was ordered to Montauk to report to me at that place; this was done, the company, consisting of 1 first lieutenant and 2 second lieutenants and 45 men, joining me here on the 9th of August.

I hereto attach a detailed list of the men showing first, qualifications; second, their previous training and vocations, and third, their place of enlistment.

During our stay at Washington Barracks our men were trained in military tactics, riding, and signal work. We practiced signals daily, averaging five hours per day. When we reported at Montauk all of our men were proficient in flag signaling and heliograph signaling, and many good horsemen. They were assigned to their various duties according to their qualifications.

Respectfully,

AMBROSE HIGGINS,
Captain Fifteenth Company, United States Volunteer Signal Corps.

REPORT OF THE ORGANIZATION AND EQUIPMENT OF THE THIRTEENTH COMPANY.

WASHINGTON BARRACKS, D. C., *September 1, 1898.*The CHIEF SIGNAL OFFICER,
Washington, D. C.

SIR: In compliance with instructions from the Chief Signal Officer, dated August 13, 1898, I have the honor to submit the following report of the organization, equipment, and personnel of Thirteenth Company, United States Volunteer Signal Corps.

The nucleus of the company was 30 men, recruited at Columbus, Ohio, between the dates of June 25 and July 6, 1898, by George R. Gyger, captain, United States Volunteer Signal Corps, in pursuance of Special Orders, No. 140, A. G. O., dated Washington, June 15, 1898. Four of these men had been members of the signal corps of the Ohio National Guard, and were well up in everything pertaining to the service, 15 were telegraph operators, 7 were electricians, 3 were linemen, 3 were students, and 1 was a photographer.

This detachment arrived at Washington Barracks, D. C., July 9, 1898, at the same time with a detachment of 12 men recruited at Fort Snelling by Lieutenant Palmer, United States Volunteer Signal Corps. These men were assigned to the Thirteenth Company, 8 being telegraphers and 4 linemen. Thirteen men, recruited by Lieutenant Colt, United States Volunteer Signal Corps, at Kansas City, Mo., were shortly afterwards assigned to this company. Of this number 6 were operators, 2 were electricians, 3 were linemen, and 1 was a photographer. This completed the quota of 55 enlisted men. Since arriving at the barracks, by verbal instructions from the Chief Signal Officer, 2 men, H. H. West, a newspaper correspondent, and Louis Leckert, a cook, have been enlisted. Several changes have since been made by the transfer of men from other companies or detachments to this company, and also from this company to other companies. At this time the membership of the Thirteenth Company consisted of 5 officers, viz, Capt. George R. Gyger, of Alliance, Ohio (commanding company); Capt. A. W. Yancey, of Memphis, Tenn. (temporarily assigned); First Lieut. C. M. Duffy, of Guthrie, Ky.; First Lieut. P. J. Reddy, of Evanston, Wyo.; Second Lieut. Gustav Hirsch, of Columbus, Ohio; 2 first class sergeants, 4 sergeants, 10 corporals, and 39 privates, or a total of 55 enlisted men.

The company is armed with 55 Springfield carbines (caliber .45), with web cartridge belts. It has 60 pieces shelter tents, 20 common tents, 5 wall tents, 1 Hunt cooking outfit, with a complete outfit of haversacks, canteens, and mess kits for field service.

The signal outfit consists of 2 acetylene gas flash-light outfits, 4 heliographs, complete, and 6 flag outfits; these are all new, but have been used for drill.

There are but 4 men in the company who are unable to send and receive messages by flag or heliograph; these are the post baker, company cook, and 2 men who have been kept on special duty.

Since the organization of the company it has had an unusual amount of fatigue duty to perform at the post, having to police the entire reservation from the barracks to the gate, which required a detail of one-fifth of the entire company every day, except Sunday. This was in addition to the ordinary guard and fatigue duty required of a company in connection with its own quarters and stable. We have lately been relieved from this duty, which is now being done by the artillery troops stationed at the post, and the company will now have more time to devote to signal work.

On August 21, 1898, Corpl. T. C. Jones, with a detachment of 14 men, was sent to Montauk Point, Long Island, to assist in the erection of an electric-light plant at Camp Wikoff; three of these men, Privates Steel, Brooks, and Finney, have volunteered to go to Cuba and have returned to Washington Barracks. The others are still at Montauk.

In addition to the work done on the lines and instruments at Washington Barracks this company has furnished a detail to inspect and repair the telephone line between Anacostia Bridge and Fort Washington; also to construct and maintain a telephone system at Fort Meyer. The fort was also connected by wire with the Western Union Telegraph cable at the west end of the Aqueduct Bridge at Washington. Special reports of all this work have been made to your office.

Five telegraphers are now on duty at the War Department. This detail was made to take the place of civilian operators who were on a strike.

The health of the company has been unusually good. There has been but little sickness among the members; none of a serious nature.

The company is now quartered in the south dormitory at Washington Barracks, and have all the modern conveniences in kitchen, bath, and quarters.

There has been but little complaint as to the quality and quantity of rations furnished us, although for the first few weeks there was a shortage.

The company is in excellent shape for field service.

Respectfully, your obedient servant,

Geo. R. GYGER,
Captain, United States Volunteer Signal Corps.

HEADQUARTERS INDEPENDENT DIVISION, EIGHTH ARMY CORPS,
OFFICE SIGNAL OFFICER,
San Francisco, Cal., July 10, 1898.

The CHIEF SIGNAL OFFICER,
Washington, D. C.

SIR: I have the honor to submit the trimonthly report of operations up to and including July 10, 1898.

Up to the time of the arrival of Sergeant Andreae's detachment from Washington there were 5 regulars and 18 volunteers in camp. Sergeant Andreae's detachment of 1 regular and 22 volunteers, the arrival of 1 recruit from Raleigh, N. C., the same day, the enlistment of 1 man, and the completion of the transfer of another, brings the present strength of the detachment up to 6 regulars and 43 volunteers. Much annoyance and delay in making up records has been caused by recruits arriving without proper papers, and in some cases with none at all. It may be impossible to complete all records before embarking.

The drills are being held four hours daily; when practicable from one to two hours being in setting-up drills, and the remaining time being utilized in wand, flag, and heliograph practice. Difficulty is experienced in heliograph practice because of foggy and cloudy weather.

The health of the men is good, only one case of sickness having developed; this in the Washington detachment, the man suffering from a disability which, the surgeon thinks, should secure his discharge.

The behavior of the men has been excellent, with the exception of two who were charged with drunkenness and who were sent before a garrison court.

The operators have been given little opportunity to practice owing to the unsettled state of the camp. Steps have been taken to supply the necessary facilities.

Delay in filling requisitions has given trouble, and no ordnance supplies have been received beyond a partial equipment for messing. The arms and other equipment will probably be received by Monday, July 11, 1898. It was hoped that the company could be organized and equipped in time to go on the *Peru* or the *Puebla*, which sail about July 13, 1898, but the lateness of the arrival of Lieutenant Tilly's recruits (telegram states that they will arrive July 12, 1898) and the delay in getting equipments will probably render it impossible to go until the next transports sail. It is intended to send transports out as fast as they can be gotten ready. The time of sailing of the other transports is indefinite.

Captain Martin has offered to assist in drilling in the camp, while Lieutenant Gordon is constantly with the men. Lieutenant Lawrence, upon the completion of recruiting duties, has been assisting me. First Lieut. F. H. Bailey reported for duty July 8, in accordance with telegraphic instructions; he was given a few days in which to complete his equipment. Second Lieut. William O. Bailey has purchased most of the nontechnical supplies required for signaling and telegraphic equipment from funds allotted for that purpose. The technical equipments from the Signal Office have not yet arrived.

In accordance with instructions left me by Major Thompson I shall leave Lieut. William O. Bailey, First Class Sergeants Davis and Horne, and Sergeant de Beaumont to clear up property matters and to follow on a later transport. Sergeant Davis is in charge of the storeroom; Sergeant Horne is acting as first sergeant; and Sergeant de Beaumont is in charge of the records and returns of the office. As early as practicable recommendations for appointment and promotion of noncommissioned officers will be made. As yet the short time permitted for observing the men will make the value of recommendations somewhat uncertain.

Major Thompson requested me to invite your attention to the complications which may arise regarding the enlistment of many of the men; some are for two years, and some are for "during the existing war," according to law and the practice in enlisting here.

Inclosed is trimonthly report for the first third of July, 1898.

Very respectfully, your obedient servant,

EDGAR RUSSEL,
Captain, Volunteer Signal Corps.

REPORT ON THE ORGANIZATION AND EQUIPMENT OF THE SIXTEENTH COMPANY.

CAMP GEORGE H. THOMAS,
Chickamauga Park, Ga., August 18, 1898.

The CHIEF SIGNAL OFFICER,
Washington, D. C.

SIR: In response to yours of August 13, 1898, I report:

My commission as captain is dated June 21, 1898, to rank June 13, 1898, and of the 5 ranking same date you name me first upon roster July 5, 1898. I qualified at St. Louis, Mo., June 27, 1898.

William E. Davies's commission as second lieutenant is dated June 4, 1898, to rank May 20, 1898, and of the 18 ranking same date you name him seventh upon roster July 5, 1898. He qualified at Butte, Mont., June 23, 1898.

By S. O. 152, A. G. O., my first assignment was made June 29, 1898, as recruiting officer, St. Louis, Mo., and in accordance with S. O. 159, A. G. O., Second Lieutenant Davies reported to me for duty there July 10, 1898.

Part of recruiting instructions were to notify about 60 men at various points in Missouri and Nebraska, who had made application to Washington, that enlistment at St. Louis was their opportunity, although but 2 responded for examination and 1 of them was rejected; giving all a fair chance after notice, involved delay. From July 6 to 12, inclusive, I recruited 25 men, the maximum permitted at St. Louis.

Upon receipt of S. O. 161, A. G. O., dated July 11, 1898, ordering myself, Second Lieutenant Davies, and recruits to Washington Barracks, District of Columbia. I closed recruiting station, left St. Louis with command July 13, and reported at Washington Barracks July 15, 1898, to Capt. George R. Gyger for duty, and to Col. H. H. C. Dunwoody as to recruiting service.

Of the 30 men recruited at Kansas City, Mo., by Second Lient. W. W. Colt, after Lieutenant Colt and 11 men had been taken by Captain Gyger for the Thirteenth Company, the remaining 19 were transferred to my command July 15, 1898.

Having no noncommissioned officers, and need of one being imperative, I appointed Charles Sherman Reber acting first-class sergeant July 15, 1898, in accordance with orders from Capt. George R. Gyger, commanding.

Gained July 17, 1898, Corp. George E. Reed, coming from Company K, Sixth Massachusetts Volunteer Infantry, in accordance with S. O. 146, A. G. O., June 22, 1898. My command having been constituted the Sixteenth Company, and I named its commander, I recommended, in addition to Reed, and your order No. 9, July 21, 1898, appointed the following noncommissioned officers: First-class Sergt. Charles Sherman Reber; Sergts. Robt. T. Junkin, Howard H. Craig, Charles O. Willette, Charles A. Smith, Thomas Z. Franklin, and Myron C. Gould; and Corps. James J. Grady, Alphonse M. McGerry, Ownby F. Hocker, William D. Duncan, Lynu P. Hale, Louis C. Witt, and Eugene F. Kent; these to be subject to revision, and the remainder to be recommended after further rivalry and varied duties had proven comparative merit.

Changes at Washington Barracks involved: Gain, William C. Harrington, Harry Leonard Thomas, and Henry B. Smith, by transfer from other companies; Arthur W. Huse and Joseph W. Porter, recruits in volunteer corps ordered to Washington Barracks and assigned to Sixteenth Company; and Harry H. Davis, Prentice B. Hill, and Bernhardt Wiemeier, recruits for regular corps, temporarily assigned to Sixteenth Company volunteers. Loss, Michael P. Kernan, Harry Leonard Thomas, and Ralph J. Day, by transfer to other companies, which left me 50 enlisted men, "all for duty," upon leaving there. Second Lieut. Merchant H. Baldwin was attached to the Sixteenth Company one day, but then reassigned to the Fourteenth Company.

When advised, on the evening of August 30, 1898, Sixteenth Company would be ordered here, I completed vaccination, supplying clothing, signal equipments, and ordnance, also payment of the company, and left at 11.15 a. m., August 5, 1898, with orders to report to Maj. Gen. J. C. Breckinridge, commanding Camp George H. Thomas, Chickamunga Park, Ga., where I arrived and reported at 9 a. m., August 6, 1898. I also reported to Lient. Col. George O. Squier, commanding Third and Twelfth companies, whose force I relieved, taking charge of telegraph on date of arrival and all else the following day, so enabling them to start for Newport News the 8th instant. In accordance with the spirit of instructions, that they should leave with me men, animals, and equipments unfit for a Porto Rico campaign, Captain Lyman transferred from the Twelfth Company to the Sixteenth Company Cook Joseph T. Terrell, an epileptic; and Captain Leigh transferred from the Third Company to Sixteenth Company Keene Ryan, having kidney disease and nervous prostration; Joseph Percy Conklin, suffering effects of partial sunstroke; George E. Evans, in bad health; and William H. Gallagher, an incorrigible, worthless vagabond. Of these the discharge board has recommended the discharge, for causes not in line of duty, of Keene Ryan and Joseph F. Terrell, both having their respective diseases before enlistment. Conklin remains in hospital awaiting further observation, and I shall ask General Breckinridge to secure a summary and dishonorable discharge for Gallagher. Sergt. Robert Emmet Brennan, of Third Company, guilty of insubordination with Third Company, and absent without leave when that company left, has been ordered to the Sixteenth Company; expects reduction to private by Captain Leigh, and wishes that punishment as final, and his transfer to the Sixteenth Company. He is capable and behaving well, and I am willing to accept him as a private.

Exclusive of the last 5 named, Sixteenth Company comprises: Telegraphers, 26; electricians, 4; lawyer, 1; stenographer, 1; linemen, 10; surveyor, 1; editor, 1; business, 6; balloonist, 1; making a total of 51.

Variation from vocations on enlistment papers are truthful corrections based on experience. My men are a good lot, made rapid progress in drill and signaling at

Washington Barracks, handled telegraph and telephone well, are practicing heliograph now, are willing campaigners, and have won compliments upon inspections and reviews. I judge this to be such a report as you invite.

Most respectfully submitted.

SAMUEL S. SAMPLE,
Captain, United States Volunteer Signal Corps, Commanding Sixteenth Company.

REPORT ON THE ORGANIZATION AND EQUIPMENT OF THE SEVENTH COMPANY.

SPRINGFIELD, ILL., September 13, 1898.

H. H. C. DUNWOODY,
Colonel, and Assistant Chief Signal Officer.

SIR: In accordance with instructions contained in your circular letter under date of August 12, 1898, I have the honor to report as follows:

The Seventh Company, United States Volunteer Signal Corps, was recruited in Chicago and Springfield, Ill., between June 10 and June 28, 1898.

The Springfield detachment was ordered to Washington Barracks, District of Columbia, June 24, by telegraph, and started same date. The Chicago detachment reached Washington, D. C., July 1, 1898, and was consolidated with the Springfield detachment, which was then known as the Seventh Company, as per Order No. 6, War Department, Signal Office, dated June 30, 1898.

On July 8, 1898, proceeded to Chickamanga Park, Ga., pursuant to A. G. O. dated July 1, 1898 (order shows no number). Reported as per order to Maj. W. A. Glassford, chief signal officer First Army Corps, and thereafter became a part of his command.

No signal equipments were received by this company, and they used the various equipments from the central storage warehouse of the chief signal officer First Army Corps. Constant drilling was indulged in at Washington Barracks, and a good degree of efficiency attained.

Of the 55 men of the Seventh Company, 51 were expert telegraph operators, 2 were cooks, 1 was a lineman, and 1 an expert telephone inspector. They had largely been employed on the board of trade and in the main office of the Western Union Telegraph Company in Chicago, while a few came from the Postal Company from that city. Some 8 or 10 were from the various railroads throughout the State.

The noncommissioned officers, as a rule, were selected from the members of the Signal Corps, Illinois National Guard, and the splendid reputation enjoyed by this company during the war was largely due to the high state of proficiency to which these national guardsmen had been brought through the indefatigable efforts of the former chief signal officer of the State, Capt. W. J. Lloyd.

The high grade of intelligence which characterized the Signal Corps membership was not lacking in the Seventh Company, and the fact that we lost not a man speaks volumes for their ability and disposition to take proper care of themselves in the matter of health conditions.

They were armed with 30 carbines and 25 revolvers, and I am convinced that this proposition of arming the signal companies with carbines was highly essential to safe operations in the enemy's country.

The company was officered as follows: Capt. John B. Inman, commanding; Capt. John W. McConnell, First Lieut. R. O. Rickard, First Lieut. Charles O. Clark, Second Lieut. Meldrum Gray.

Respectfully submitted.

JOHN B. INMAN,
Captain, Commanding Seventh Company United States Volunteer Signal Corps.

REPORT ON THE ORGANIZATION AND EQUIPMENT OF THE SIXTH COMPANY.

CAMP MEADE, PA., September 4, 1898.

Gen. A. W. GREELY,
Chief Signal Officer, U. S. A., Washington, D. C.

SIR: In compliance with your instructions, I herewith submit a brief history of the Sixth Company, United States Volunteer Signal Corps.

The company was organized at Camp Alger, Va., by Maj. (now Lieut. Col.) R. P. Strong, chief signal officer Second Army Corps, by transferring enlisted men from the line of the Army. The company records show that Maj. R. P. Strong reported at the headquarters of the Second Army Corps, at Camp Alger, Va., on June 6, 1898. On June 8, Noble F. Potts, Company C, Sixth Illinois Infantry was attached. On the

9th, 10th, and 12th, several privates were attached. On the 19th the Chillicothe, Ohio, Signal Corps detachment of the Seventh Ohio Volunteer Infantry was attached, 13 men in all.

On the 15th, Second Lieut. B. F. Lenoir was attached to the company; July 4, Capt. Charles S. Conner, and Second Lieut. Frank P. Tate were assigned to the company and reported for duty. On July 7, Second Lieutenant Tate was promoted to be first lieutenant. On July 9, Second Lieutenant Lenoir was transferred to the Washington Barracks by order of the War Department.

The company was recruited up to 65 men on July 18. Lieutenant Tate was detailed as property officer of the corps July 9. On August 6, 9 men were transferred to Captain Higgins's company at Washington Barracks.

The Sixth Company built the entire telephone and telegraph systems at Camp Alger, Va. It was ordered to Camp Meade, Pa., August 16, arriving at that point August 17, and at this point has built and completed the entire telephone and telegraph system at Camp Meade.

The company has a fine lot of young men now. August 27, 25 men asked for their discharges. They were recommended. Twenty-five more men were at once transferred from the line.

On August 3, First Lieut. H. D. Coe was assigned to the company. On August 9, Second Lieut. E. E. Bawsell was assigned to the company.

Respectfully,

C. S. CONNER,

Captain Sixth Company, United States Volunteer Signal Corps.

REPORT ON ORGANIZATION OF TWELFTH COMPANY.

TWELFTH SIGNAL COMPANY,

Camp Greely, Newport News, Va., August 18, 1898.

The CHIEF SIGNAL OFFICER,

War Department, Washington, D. C.

(Through military channels.)

SIR: I have the honor, in compliance with orders from Col. H. H. C. Dunwoody, Assistant Chief Signal Officer, under date of August 12, 1898, to report upon the organization of my company, the qualification of the men, changes in the command since organization at the central station, and service rendered, etc.

My commission as captain was issued June 10, 1898, with rank from May 20, 1898. On June 13, in compliance with orders from Colonel Dunwoody, I opened a recruiting office in the armory of Company A, Fifty-first Iowa, at Des Moines, Iowa, and within twelve days had selected the 50 men required, from at least 200 applicants.

To my ten years' service in the National Guard, reading in Myer and other signal works, and the aid of Dr. George M. Chappel, forecast official at Des Moines, formerly a sergeant in the Signal Corps, I attribute what success I had in securing the right kind of men for the service.

The following list will show the qualifications of these men: Operators, 24; electricians, 14; clerks, 3; stenographer, 1; draftsman, 1; soldier, 1; cooks, 2; blacksmiths, 2; photographer, 1; veterinarian, 1; barber, 1. The operators are all of the best class. A "pony line" was used in the armory to test the applicants for enlistment, and only the best were enlisted. The electricians are of what might be termed three grades: First, graduates of colleges who have made a specialty of electricity and electrical engineering; second, practical linemen who can do anything from putting in a telephone switch board to splicing a telephone cable of 300 wires and testing it out; third, electricians who have made a specialty of heavy currents, dynamos, electric motors, etc. Half the linemen were enlisted while at work splicing a 204-wire telephone cable in front of the recruiting office.

The detachment in two separate parties started for Washington Barracks, District of Columbia, June 25, in compliance with orders A. G. O., June 23. They arrived at their destination June 27, and the work of equipment and organization was at once taken up. The men were uniformed with blue, but were unable to get stable or fatigue clothing. They were armed half with the revolver and half with the carbine, caliber .45. No lieutenants were assigned until July 14, when First Lieut. Henry G. Opdycke, of Jersey City, N. J., was assigned. Other lieutenants were assigned as follows: First Lieut. R. B. Ogelsbee, of Indiana, July 21; Second Lieut. W. C. Cannon, of the District of Columbia, August 6; First Lieut. Charles B. Rogan, jr., of Tennessee, August 13.

At Washington Barracks I drew from Capt. A. W. Yancey, quartermaster and ordnance officer, a complete mess outfit for the men, including Buzzacott's stove, meat cans, knives, forks, and spoons. Sufficient canvas to shelter the men, four in a tent, was drawn. From the disbursing officer a complete signal equipment was secured,

including torches, signal lanterns, heliographs, telegraph instruments, etc. Upon arrival at Camp Thomas, Chickamauga Park, Ga., July 23, additional equipments were drawn, until when the command was ordered to Newport News, Va., August 8, as the advance party of Major General Wade's Porto Rico expedition, which did not sail, I had, besides the property above enumerated, 24 mules, 3 signal corps wagons, 3 army wagons, 12 horses and equipments, and sufficient wire, etc., to last the command in the field for some time.

While I may not be called upon to do so, yet I can not refrain at this time from expressing my appreciation of the many kindnesses of the officers of your office, and the quartermaster and ordnance officer at Camp Thomas in aiding me in securing a full equipment.

While at the central station the men were drilled from six to eight hours daily in the school of the soldier, company movements, and signaling with the flag, wand, and heliograph. Much progress was made. Since then the drills have continued at Camp Thomas and here.

The men have shown a marked versatility. Sergt. James Austin Mortland was appointed photographer for the provisional division intended for Porto Rico with Major-General Wade. He is doing excellent work. First Class Private Emerson K. Paine, a practicing veterinary when enlisted, was made battalion veterinarian. Phillip Vander Myden was placed in charge of the blacksmith force. The stenographer has taken the records of boards of survey, the draftsman made maps of camps and practice marches, while mechanics have burned charcoal for filters, made bridges across streams at Camp Thomas from wire cables, and shown a desire to make a success of any task, no matter how new or novel.

Instructions in building telephone and telegraph lines have been unnecessary in this command. The men thoroughly understood this business when enlisted. At Camp Thomas linemen from this company reconstructed the 13 miles of line after Major Glassford had left for the front, put in a new switch board, and made the lines more serviceable.

At this place a detail of 8 men in charge of Lieutenant Opdycke has reorganized and repaired the telephone lines at Fort Monroe, which gave much trouble for months until the arrival of the signalmen. Plans for constructing new lines and overhauling special lines used in connection with the batteries are now under consideration.

On August 13 a detachment of 20 men, under command of a first lieutenant, was divided between Captain Leigh's Third Company and myself, Lieutenant Rogan and 9 men coming to the Twelfth Company. These men were enlisted by Lieutenant Rogan, and are divided as follows: Operators, 4; civil engineer, 1; farmers, 2; electricians, 2. These men are the pick of the 20.

First Class Private Russell is at work upon an electric shutter for the heliograph, ideas for which were furnished by myself. Should it be a success your office will be notified.

A prize has been offered by the company commander to the sergeant having the best drilled signal squad, which has awakened much interest.

I take pleasure in informing you that the discipline of this company has been most excellent. The esprit de corps has been pronounced and the men individually filled with a desire to learn their duties and make this branch of the service a success.

While this company, like all other troops from Iowa, has not had a chance to see active service, I feel confident that it is not because of any lack of ability on the part of the men.

Most respectfully, your obedient servant,

FRANK E. LYMAN, Jr.,

Captain, United States Volunteer Signal Corps, Commanding Twelfth Company.

REPORT ON THE ORGANIZATION AND EQUIPMENT OF THE THIRD COMPANY.

To the CHIEF SIGNAL OFFICER, *United States Army.*

SIR: I have the honor to submit the following narrative report regarding the Third Company, United States Volunteer Signal Corps:

This company was organized from a detachment of 61 men enlisted by me in Brooklyn, N. Y., from the 13th to the 22d of June, 1898.

A recruiting station was established in the armory of the Second Signal Corps, N. G. N. Y. The men recruited were of a high order of intelligence and had, to a great degree, that technical ability needed by the Signal Corps. Seventeen members of the Second Signal Corps of New York joined, all of whom were proficient in visual signaling, besides having a certain knowledge of the general duties of a soldier.

The law requiring two-thirds of the Volunteer Signal Corps to be telegraph operators or electricians was carefully observed. Of the 61 men enlisted, 46 were telegraph

raphers or electricians, 12 had previous military service in the Army or the National Guard, 2 were cooks, and 1 was a hostler.

Capt. Edward B. Ives, recruiting officer for New York City, enlisted many men at the same location as I did. Indeed, the recruiting in New York and Brooklyn progressed at the same time by an arrangement between Captain Ives and myself.

The patriotism of telegraph operators was warmly seconded by the officials of the telegraph companies of Greater New York, who, upon advice from the recruiting officers that any of their employees had enlisted, furnished a certificate of his ability and character and promised to employ such men when they returned from the war. Many of the telegraph operators who enlisted were men who at the time were filling the most responsible of positions in these companies, and who were being paid the highest of salaries obtainable for such skill.

The detachment remained in Brooklyn until June 25, 1898, when it proceeded to Washington Barracks, D. C. While in Brooklyn, drills were given daily in the elementary part of the Cavalry Drill Regulations and much progress was made by the men in learning the Myer code and becoming familiar with the different methods of signaling.

This was possible because the men were quartered in a signal corps armory containing equipment which was loaned to the recruits that they might readily obtain such information as they needed.

Although attached to this Brooklyn Signal Corps, I am constrained to say that while the men remained in Brooklyn the fact that they were quartered in this armory was an advantage in many ways. Apparatus for instruction was ready to be used, cots and blankets were available so that the convenience and comfort of all concerned was considerably conserved.

Arriving in Washington, D. C., the detachment became designated as the Third Company. The issue of arms, uniforms, and equipments was quickly made. The arm issued was the pistol, and, in view of my experience of the next few months, I have been confirmed in my idea that any other weapon than the pistol would have been a disadvantage to the signalman.

The equipment received by the company was very complete, including everything except transportation and the supplies necessary for the construction of electric lines. The drills commenced in Brooklyn were continued while in Washington, and the men became quickly accurate and rapid in the use of the Myer code by motion and flash.

The company proceeded to Camp Thomas, Chickamunga Park, Georgia, arriving at that place on July 8, 1898, reporting to Lieutenant-Colonel Squier, the chief signal officer of the Third Army Corps. Camp was established near the army corps headquarters, and the company, with the Twelfth Company, formed the signal corps battalion. The work of the battalion was the operating and the repair of the telegraph and telephone lines in Camp Thomas, besides the continuing of such instructions as was necessary for the men. Such work as the company had to do seemed to be performed satisfactorily. While at this place the equipment of the company was added to by sufficient transportation, horses, etc.

On August 8, 1898, the company, with the battalion, proceeded to Newport News, Va., for the purpose of embarking for Porto Rico. Upon arriving at Newport News, however, the orders were countermanded and the battalion established Camp Greely at that place. The company left the battalion at Camp Greely on August 21, 1898, and proceeded to New York City, embarking there for Santiago, where it arrived August 29, 1898, relieving the Signal Corps battalion of the Fifth Army Corps. The duty required in Santiago was the construction and operation of telephone and telegraph lines in the city and province.

With the exception of a few telephone stations, such communication as the Department of Santiago required had to be established. Many additional telephones were immediately placed in and about the city and the work of connecting the different cities with telegraph lines commenced. The slowness with which the supplies of the company were unloaded from the transport delayed considerably the work to be done.

By an arrangement with the superintendent of the railroad company running to San Luis, telegraph communication was established from Santiago to San Luis over the railroad line and a new line constructed from San Luis to Palma Seriana. This line was working nicely on September 9, 1898, the date at which this report is ended. The company, since the time of its being recruited in June, had changed considerably. Gains in number had been made by the joining by transfer of men from a detachment recruited in the State of Tennessee and by men from the Twelfth Company. Losses, however, by transfer to other companies had brought the membership down to 37 men. This large loss of men was because the company had been ordered on two occasions to go on foreign duty, and men who were unfit by their physical condition, or who were disinclined for foreign service, were at each time

ordered to be transferred to other companies. The health of the company was very good until the company reached Santiago. In Camp Thomas many men suffered from attacks of bowel troubles, but only one case of typhoid fever developed. The absence of any serious illness at Camp Thomas was the result, I think, of the rigid enforcement by Colonel Squier of those rules of cleanliness through which good health can only be expected. The health at Newport News was very good, owing to the splendid opportunities for sea bathing which that place afforded. The men were encouraged to bathe and seemed to enjoy the facilities with much benefit to themselves.

In Santiago many cases of illness—typhoid, malaria, and yellow fever—attacked the officers and men, notwithstanding that great care was observed in the diet and exposure of the company, and the cleanliness of the several stations occupied.

There have been assigned to the company at various times Capt. Edward T. Winfield, First Lieuts. Alvar G. Thompson, William Jarvie, jr., and Charles B. Rogan, jr., and Second Lieuts. Francis Creighton and Henry C. Baldwin. All of these have been enthusiastic and conscientious in the performance of their duties.

Very respectfully,

FREDERICK T. LEIGH,
Captain, United States Volunteer Signal Corps.

INCLOSURE C.

REPORT ON THE ORGANIZATION AND EQUIPMENT OF THE VOLUNTEER SIGNAL CORPS.

List of Signal Corps property drawn for the following companies of the Volunteer Signal Corps.

APPENDIX 3.

REPORT OF COL. JAMES ALLEN, CHIEF SIGNAL OFFICER, ARMY OF PORTO RICO, ON THE OPERATIONS OF THE SIGNAL CORPS ON THE SOUTH COAST OF CUBA AND IN PORTO RICO, WITH SUPPLEMENTAL REPORT BY LIEUT. COL. SAMUEL REBER, UNITED STATES VOLUNTEER SIGNAL CORPS.

HEADQUARTERS OF THE ARMY IN THE FIELD,
Ponce, Porto Rico, September 1, 1898.

The CHIEF SIGNAL OFFICER, U. S. A.,
Washington, D. C.

SIR: I have the honor to report that in compliance with telegraphic order, I left Governors Island, N. Y., April 23, 1898, and reported to the Major-General Commanding the Army on the 24th, and, having received his verbal instruction, proceeded the same day to Key West, Fla., where I arrived April 26, and took charge of the cable and telegraph offices.

Before leaving New York a ship had been chartered and equipped as a cable ship for the purpose of establishing communication between Key West and the base of operations of the army in Cuba, which, at that time, it was supposed would be established on the northern coast of Cuba in the vicinity of Havana.

Arrangements were made by which confidential information could be obtained from Cuba. This information, obtained from various sources, was forwarded to the Major-General Commanding, or directly to the Departments interested.

On the morning of May 19 the Spanish fleet under Admiral Cervera was located at Santiago de Cuba. Its presence was at once telegraphed to the Chief Signal Officer of the Army, Washington, and reported in person to the senior naval officer at Key West.

The arrival of the Spanish fleet at Santiago having changed the plan of campaign, I was directed to proceed to that point and destroy the cables landing at Santiago and Guantanamo.

I left Key West on the S. S. *Adria* on the morning of May 29, under convoy of the U. S. S. *Dolphin*, arriving at Santiago on the afternoon of June 1.

Commenced dragging for the cable on the morning of June 2, being cautioned by the naval officer in command that there were "hot batteries," having range of 5 miles, on each side of the entrance. The water at that distance from the shore being too deep to hope for success, and having instructions to keep, if possible, within the 3 mile limit, we were compelled to work within range of the guns.

Late in the afternoon a cable on direct bearing from Santiago to east end of the Island of Jamaica was hooked in 900 fathoms of water.

As we were quite near the shore and unable to move if fired upon by the batteries or attacked by torpedo boats, the signal "Help wanted" was set just before dusk. The *Dolphin*, Captain Lyon, immediately responded, and gave us some men to assist in getting up the cable. The *Texas*, Captain Philip, also came up at once and took position between the *Adria* and the batteries.

About 3 o'clock a. m., June 3, the S. S. *Merrimac* was sunk in the entrance to the harbor.

Shortly after daylight as we were going in position to drag, the *Adria* was fired at from a shore battery. Later in the day the *Breton* and *Texas* were sent in to protect the *Adria*. They both cleared for action, moved in close to shore, and the work was continued.

June 4. Dragged from daylight until about 1 p. m., when I went aboard the flagship to consult with the admiral. As he informed me he was going in with the entire fleet to make a demonstration and develop the batteries, no further work was done during the day.

June 5.—Spanish torpedo boats were at entrance to harbor all the morning. About 2 p. m. one of them came out so far that Captain Philip of the *Texas* came to our relief. The torpedo boats withdrew and work was continued under the protection of the *Texas*. Caught a cable about 6 p. m. in 1,044 fathoms of water. Captain Philip sent a detail of sailors to assist, and about 9 p. m. the bight was brought on board and about 20 feet cut out and the ends dropped overboard.

June 6.—The bombardment of the batteries begun by the fleet about 7 a. m., and no work was done during the day. During the bombardment a number of shells came over the *Adria*, with the unfortunate result that the next morning the crew refused to do further work, on the ground that the *Adria* was a neutral ship and that their Government would not protect them in cutting international cables.

June 8.—Started for Mole St. Nicholas at 11 p. m. on the U. S. S. *Yankee*, Captain Brownson, with dispatches for the Major-General Commanding and to arrange with French Cable Company for instruments to open an office at Guantanamo.

Returned to Santiago June 10.

June 11.—Started for Mole St. Nicholas on U. S. S. *St. Louis*, Captain Goodrich. The *Adria* was convoyed to Guantanamo. Returned to Guantanamo with cable instruments June 13, and immediately began the work of repairing cables at that point which had been cut by the *St. Louis*. Opened communication with Washington from the ship on the night of June 20, and reported arrival of General Shafter's army.

Established office on shore June 21.

June 22.—Commenced repairs on Guantanamo-Santiago section, which were completed at 1 a. m., June 25. Started at once for Daiquiri and reported to General Shafter that communication had been established with Washington. As the western landing of this cable at Aguadores was in possession of the Spanish, it was cut at sea, outside of Siboney, spliced to the cable in the ship's tanks, and landed at Siboney, the landing place of the troops. This was completed June 29. A supply of specially constructed and insulated wire had previously been forwarded from the *Adria* to Major Greene and lines constructed by him to the front. Additional supplies of wire, with long-distance telephones, were at once moved forward to him at the front to enable him to complete his system of wires. The landing of the cable completed direct electrical communication between the headquarters of the army in front of Santiago and the headquarters of the Army in Washington. There being some complications regarding the use of the Guantanamo-Siboney section of the French Company's cable, an American cable was laid from Guantanamo to Daiquiri and connected with the land lines from Daiquiri to Siboney, which had been constructed by Major Maxfield. This work was completed July 15, giving two independent lines from Guantanamo to Daiquiri, Siboney, and General Shafter's headquarters.

From the very inception of the enterprise the want of means for its execution was apparent. There was no cable ship under the American flag, and efforts to procure a suitable foreign ship were unavailing. The stock of available deep-sea cable in the United States was limited to small amounts held by different companies for repairs, and the cable factories were all working to their full capacity on orders already given by the War Department. The Western Union Telegraph Company had at Key West a set of machinery suitable for the work, which was placed at the disposal of the Department. A ship was immediately chartered with a view of sending her to Key West and completing her equipment there, but on returning to the Western Union office, after an absence of an hour, it was found that the Secretary of the Navy desired the immediate use of this machinery, and, as he had a ship at Key West on which the installation could be made at once, all claims of the War Department were instantly released.

I was, through the Western Union Company, put in communication with President Scrymser, of the Mexican Telegraph Company, who placed at the disposal of the Department all the machinery, etc., of that company, which was installed on the *Adria* under the direction of Mr. Robertson, of the Mexican Company. The ship was sent to Boston and there took 24 miles of deep sea cable, furnished by the Western Union Company, then returned to New York, took on 29 miles of intermediate type cable and 50 miles insulated, but unarmored, wire, also telephones, telegraph instruments, and supplies for land lines and proceeded to Key West.

All arrangements were completed on the morning of the 28th of May for sailing at dark that evening for Santiago under convoy of the U. S. S. *Nashville*. About noon the captain of the *Adria* informed me that owing to the hazardous nature of the work to be undertaken he declined to go. However, after arrangements had been made to have another captain sent out he decided to continue in charge of the ship. I had informed Commodore Remey that I would not be able to sail at the hour agreed upon owing to the action of the captain of the ship, and, as the *Nashville* was needed on the blockade, he did not feel justified in holding her. He, however, after the adjustment of the trouble with the *Adria*, ordered the *Dolphin* to be made ready to sail the next morning. About 5 p. m. Captain Hellings, who had engaged a competent crew of cable hands to accompany the expedition, informed me that they all declined to go. The Chief Signal Officer immediately procured an order directing the detail of 10 volunteers from the artillery garrison at Key West Barracks. The order was received at 11 p. m., and the men reported to me at daylight the next morning, and the *Adria* proceeded to sea under convoy of the *Dolphin*, Captain Lyon, and reached Santiago June 1.

The first cable was hooked on the afternoon of June 2, in 900 fathoms of water. The weakness of the machinery and the helplessness of the crew were at once manifest. The machinery was designed for cables in from 60 to 100 fathoms of water. Of the cable crew only one man had ever been to sea before, and none of the men had ever seen a cable. The work of raising the cable proceeded slowly and irregularly, and when near the surface either broke or slipped off the grapple.

The bottom of the sea off the coast of Cuba is extremely uneven, the depth of water

changing abruptly from 100 to 700 and 800 fathoms. This necessitated the continual paying out and taking in of the grappling rope. The grapple frequently caught on rocks, when the entire rope had to be taken in and coiled in the hold and again paid out, a work of two or three hours.

Three days were thus occupied before another cable was caught in 1,044 fathoms. Straining the machinery to its utmost, and with the assistance of a detail of sailors from the *Texas*, it required more than three hours to bring the bight on board.

The work of repairing the cable at Guantanamo and Siboney and the laying of the new cable from Guantanamo to Daiquiri was but a repetition of the slow and uncertain work of grappling, of delays incident to the conditions encountered. When the work was completed on July 15 the entire resources of the *Adria* were exhausted. Every grapple was broken, all of the 2,000 feet of grappling rope was worn out or lost, and every mile of cable expended. Twenty miles of the insulated wire had been landed for use in constructing land lines, together with supply of telephones for working them. Ample means of communication had been established between all points in Cuba occupied by our troops and between Cuba and the United States.

I especially recommend for brevet of major Capt. Martin L. Hellings, United States Volunteer Signal Corps, to whose experience and skill and untiring energy, under dangerous and difficult circumstances, was largely due the success of the undertaking.

The valuable assistance and devotion to duty, under the same circumstances, of Lieut. Victor Shepperd and Lieut. F. M. Jones should not go unrewarded. I recommend that they be appointed second lieutenants in the regular establishment.

Lieut. Walter L. Clarke, United States Volunteer Signal Corps, under whose direction the *Adria* was fitted out, rendered services of the highest value, and I especially recommend him for appointment as second lieutenant in the regular establishment.

Mr. E. H. Strickland, an expert operator of the Western Union Telegraph Company, is entitled to great praise for valuable services rendered at Key West and during the entire expedition.

Acknowledgments for services rendered at critical times are due to Col. Charles S. Diehl, of the Associated Press; to Mr. Frank B. Richards and Mr. Willis J. Chamberlin, of the New York Sun; to Mr. Ernest K. Coulter, of the New York Herald, and to Mr. Henry B. Chamberlain, of the Chicago Record.

July 16.—Went alongside the *Yale* and reported to the Major General Commanding.

July 18.—Transferred signal material from the *Adria* to the S. S. *Comanche* and sailed July 21 for Porto Rico.

July 22.—Lieutenant-Colonel Reber, United States Volunteer Signal Corps, on the S. S. *Stillwater*, with Captain Clark's telegraph company and ample supply of material on board, joined the fleet.

The official report of Lieutenant-Colonel Reber is appended and marked "A."

The reports of Lieutenant-Colonel Glassford and Captain Lamar were made direct to you and are on file in your office.

The Ninth Company, Captain Ives, was promptly landed at Ponce on the morning of July 28. Captain Ives immediately established communication with all the men-of-war and transports in the harbor by signal stations on the top of the headquarters building and took charge of the telegraph office at Ponce. Captain Ives rendered most efficient service and on August 4 received a merited promotion to lieutenant-colonel and chief signal officer of the Second Corps.

I landed at Ponce on the morning of the 28th with the Major-General Commanding. On breaking open the cable but it was found to contain the junction of the cables to Jamaica and Santa Cruz. The cable was cut and instruments placed on both lines. Failing to get a reply from either office, I reported to the Major-General Commanding, and at his request I was furnished passage on the U. S. S. *Dixie*, Captain Davis, and proceeded on to St. Thomas, Danish West Indies, where arrangements were made for opening a West India and Panama office at Ponce. As only one operator could be spared from St. Thomas it was necessary to send to Santa Cruz for another. The offer of Mr. Chamberlain, of the Chicago Record, to perform this service was accepted. He sailed at once on his yacht for Santa Cruz, taking on board an operator of the West India and Panama Company, and landed him at Ponce the next morning. The *Dixie* returned to Ponce by the way of San Juan and the Mono Passage, notifying several transports of the landing at Port of Ponce and directing them to proceed to that point. A central office was established at Ponce. From this office there were two cable lines to the United States, one via Jamaica and the other via Santa Cruz; land lines to Arroyo and thence to General Brooke's headquarters; to Juan a Diaz, Coamo, and General Wilson's headquarters; to Adjuntas and Utuado and General Henry's headquarters; to Yauco, Guanica, and General Schwan's headquarters; to the Port of Ponce, and thence by signals to all men-of-war and transports in the harbor.

The several local headquarters and hospitals were connected by telephone.

The following order was issued August 3 from the headquarters of the army in the field:

"SPECIAL FIELD ORDERS, }
No. 13. }

"PAR. II. (1) All means of communication by telegraph, telephone, or otherwise, will be established and maintained by the Signal Corps under the direction of the chief signal officer at the headquarters of the army.

(2) Corps commanders will establish, and at all times maintain, communication between their headquarters and headquarters of the army.

(3) The chief signal officer of each corps will furnish promptly to the chief signal officer, headquarters of the army, a diagram of his system of communication between corps and army headquarters, indicating the method of transmitting intelligence, and the area and distance covered. Any change will be at once reported.

(4) All official communications offered for transmission must be written (except personal communication over telephones between officers). These will be forwarded to the chief signal officer of the army at headquarters as soon as practicable after filing with the operator. Operators are positively forbidden to receive or transmit any but written communications.

(5) Lieutenant-Colonel Reber, United States Volunteer Signal Corps, will report to the chief signal officer at army headquarters. The Ninth Company, United States Volunteer Signal Corps, Captain Ives; the Telegraph Company, Captain Clark; and the Fifth Company, Captain Lamar, are hereby assigned to duty at army headquarters and will be consolidated under the immediate command of Lieutenant-Colonel Reber, United States Volunteer Signal Corps."

So much of it as relates to the Fifth Company was subsequently changed by verbal orders of the Major-General Commanding, and Captain Lamar reported directly to Major-General Wilson.

Lieutenant-Colonel Reber was in charge of the central office and the lines to Port of Ponce, Guanica, General Henry's headquarters, and General Schwan's headquarters.

Lieutenant-Colonel Reber is an officer of exceptional ability, and is entitled to special commendation for the prompt and efficient manner in which he performed his duty.

During the month of August from 8,000 to 10,000 words per day were transmitted by telegraph, and the telephone lines were constantly in use.

The entire system was turned over to Lieutenant-Colonel Glassford, chief signal officer on General Brooke's staff, September 1, 1898.

Very respectfully, your obedient servant,

JAMES ALLEN,
Colonel, United States Volunteer Signal Corps.

HEADQUARTERS SIGNAL CORPS BATTALION,
ATTACHED TO HEADQUARTERS OF THE ARMY IN THE FIELD,
Ponce, Porto Rico, September 2, 1898.

The CHIEF SIGNAL OFFICER, U. S. A.,
Washington, D. C.

(Through Col. James Allen, Chief Signal Officer, Headquarters of the Army in the Field.)

SIR: I have the honor to submit the following report of the operations of the Signal Corps under my command from July 1 to the present date.

From July 1 to July 8 work on the balloon plant was continued and July 9 you made a personal inspection of our establishment at Tampa. The erection of the plant was delayed by a most unfortunate accident to the gasometer, which was badly wrecked by the railroad company 150 feet from its point of erection. The gasometer, a cylinder 12 feet in diameter, was pulled through a 10-foot trestle by the railroad company and so badly distorted that it required three days' continuous work to put it in a serviceable condition.

On July 8 I received telegraphic orders from the Major-General Commanding the Army to embark Capt. C. C. Clark's field telegraph train for Santiago de Cuba. The quartermaster's department, after several delays, supplied the U. S. transport *Stillwater* for this purpose. The loading was begun on July 13 and finished on July 14, when telegraphic orders were received by the quartermaster at Port Tampa to ship no more troops to Santiago. This order, as far as the *Stillwater* was concerned, was revoked the next day and the transport sailed on July 16, having on board Capt. C. C. Clark and J. P. Wooten, United States Volunteer Signal Corps; First Lieut. and Asst. Surg. Francis D. Patterson, Third Pennsylvania Volunteers; Second Lieut. Albert J. Dillon and W. M. Talbott, United States Volunteer Signal Corps, and Capt.

A. D. B. Smead, United States Volunteer Signal Corps, who had orders to join Captain Ives's company at Siboney, myself, 50 enlisted men, 13 teamsters, 10 wagons, and 65 horses and mules.

After an uneventful voyage around the west end of Cuba, Santiago de Cuba was reached at 8 a. m. on July 21, where I went ashore and not finding the Major-General Commanding the Army, I reported to General Shafter, who directed me to proceed to Guantanamo Bay at once. The *Stillwater* sailed that afternoon, after discharging part of the equipment of the Second United States Cavalry, which had been left on board from the first Santiago expedition. We reached Guantanamo Bay and anchored at 8 p. m. Immediately upon dropping anchor, the boat of the captain of the port came alongside and informed us, after asking what our orders were, that the squadron with General Miles had sailed eastward for Porto Rico. Anchor was immediately raised and we proceeded to sea, overtaking the fleet at 11 p. m. that night. At daylight the next morning I reported by flag to General Miles, on board the U. S. transport *Yale*.

The *Stillwater* accompanied the fleet, and on July 25, at 8 a. m., was off the harbor of Guanica, Porto Rico. The U. S. auxiliary cruiser *Gloucester* entered the harbor first and fired a few shots, clearing the shore, when the *Lampasas* and *Nueces* entered the harbor, followed by the *Stillwater*. I immediately disembarked two signal parties, and on landing on the beach found Brig. Gen. J. C. Gilmore, United States Volunteers, in charge of landing the forces. Leaving one party in charge of Lieutenant Talbott, with General Gilmore, I proceeded to the front, then about three-fourths of a mile from the beach, and found Col. W. M. Black, United States Volunteer Engineers, with two companies of the provisional engineer battalion on the right of the road, and Maj. S. A. Day, Fifth Artillery, with the men of one battery of the siege train on the left of the road. We established communication with the beach at 10.45 a. m., and pushed forward with the advance line. It is to be noted that from that day to the present there has never been a time when the advance line has not been in communication with the headquarters of the army, during the entire campaign, and all the movements of the troops communicated to it by the appliances and methods supplied by the Signal Corps. As more troops disembarked the line was thrown out, and that afternoon a telephone line was run to the outposts.

On July 26 signal parties were established at various parts of the line and intercommunication had by telephone, flag, heliograph, and lantern. Our field telephone kits proved of great value in this service. As the outposts were moved toward Yauco on the 27th the telephone line was extended. On this day I received orders from the Major-General Commanding to build a telegraph line into Yauco and open communication with Ponce. On the morning of the 28th the lance truck and wire wagon were unloaded, and at 12 m. construction of the line was begun, 3 miles being erected before dark. More rapid progress was impossible, owing to the difficulty of building the line through Guanica, a village scattered over a large area, with the houses surrounded by dense foliage, making it necessary to cut out a right of way in a number of places. I pushed on to Yauco that afternoon, taking 20 men of the Sixth Massachusetts Volunteers from one of the outposts, and instead of encountering resistance was received by great demonstrations of joy on the part of the populace. At the junction of the Yauco and Sabana Grande road the Spanish telegraph line leading from Yauco to the west was found intact. On reaching Yauco it was discovered that the instruments and most of the battery in the telegraph office had been broken and the records carried away by the Spaniards the day before. The telegraph line, belonging to the Compañía de Ferrocarriles de Puerto Rico (French company), was in operation between Yauco and Ponce, and communication was established over this line with the headquarters of the Army, which had just landed at the Playa de Ponce. While I was in the railroad station Gen. Roy Stone, United States Volunteers, arrived at 4.55 p. m. with a detail of 20 men from Ponce, and I turned the command of the city over to him. The inclosed map, Exhibit A, shows the lines operated by the Spanish Government just previous to our landing. The next day, July 29, the flying telegraph line was completed to the junction of the Yauco and Sabana Grande line, a distance of 6 miles, and the Spanish line repaired from that point to Ponce, a distance of 23 miles. The line from Yauco to Ponce followed the railroad and was easily rendered serviceable by sending an engine and car, obtained from the railroad company, with a repair party from Yauco to Ponce. I accompanied that party, and by 4 o'clock had communication from Guanica to Ponce over our own wire. On the 30th offices were established at Tallaboa and Guyanilla.

The Fifth Company United States Volunteer Signal Corps, which was landed on the 28th at the Playa de Ponce, pushed on to Ponce; occupied the telegraph office that afternoon and cleared up some of the wreck left by the Spaniards, who having moved all the instruments, broke the office furniture, and nearly all the cells in the battery room. The next day, the 29th, this company cleared some of the lines leading

from the main office to the railroad station, where I had just brought the line in from Guanica.

The Ninth Company United States Volunteer Signal Corps, which having landed on the 28th and occupied telegraph and cable offices at the Playa, found the cable instruments destroyed and the loop from the cable hut on the beach to the office cut. This company, remaining in camp on the beach, cleared the circuit from the Playa to Ponce and established an office in the Aduana, where the headquarters of the army were located. It also established a signal station on the roof of the Aduana and placed signal parties on each of the transports in the harbor. This station giving immediate communication with each of the vessels, greatly facilitated the landing of the troops and supplies.

On July 30, Capt. C. C. Clark's company (Company D, regulars) was transferred from Guanica to Ponce on the *Stillwater*, while the animals belonging to it, which had been swum ashore at Guanica on the 25th, were sent overland to Ponce under charge of Lieutenant Talbott.

On the 2d of August, Colonel Allen returned from St. Thomas, when I reported to him and was instructed to take charge of the land communications in this part of the island. On August 3, Special Field Orders No. 13 were issued from headquarters of the army (copy attached marked B), establishing all means of communication under Colonel Allen.

Previous to this order the Fifth Company had been assigned to the Ponce office, and maintained, in addition, the office at Guanica, Yauco, Guayanilla, and Tallaboa. Its commanding officer was instructed to clear the line to Adjuntas and Utuado, where offices were opened respectively on the 2d and 4th of August. Lieutenant Wagner was directed to clear the line following the military road leading to San Juan, where, on the 1st of August, he opened a telephone station at Juana Diaz, which station was subsequently changed to a telegraph office as General Wilson's column advanced along this road. On the 5th, this entire company was relieved from Ponce and the outlying offices to the north and west, and assigned to the duty of maintaining communication along the line of General Wilson's advance to the eastward. On the 1st, a loop was run from the main office of the Calle de la Salud and the Calle de la Salud to General Wilson's headquarters in the Calle Mayor, and maintained there until the 7th, when his headquarters were moved to the Rio Descalabrado, where the office was reopened on the 8th instant, and on the 9th the line extended to Coamo. This company maintained communication in a satisfactory manner, always keeping General Wilson's headquarters in telegraphic touch with the main office at Ponce, and furnishing constant telephonic communication between his headquarters and his advanced outposts, the extreme telephone stations being frequently located within range of the enemy's guns, and under fire on the afternoon of the 12th.

The Ninth Company, United States Volunteer Signal Corps, remained in camp on the beach at Playa until the 5th instant, where it repaired the loop from the cable hut on the beach to the cable office in the Calle de la Marina, and ran a separate loop for cable service to the headquarters at the Aduana. On the above date this company was moved to Ponce and relieved the Fifth Company, manning the offices at Yauco, Playa, Adjuntas, Utuado, and the main office at Ponce. It maintained a signal station on the roof of the Aduana, and kept signal parties on the transports until the 10th instant, when their services were no longer necessary.

The regular telegraphic train (Company D, United States Signal Corps) supplied working parties for general line repair in the vicinity of Ponce, and built a new line from the cable hut on the beach to the main office in Ponce, which permitted the location of the cable instruments in the same building with the telegraph office, and greatly facilitated the dispatch of all cable business. On the afternoon of the 11th telegraphic orders were received from the headquarters of the army, directing the establishment of telegraphic communication with General Schwan, who was at this time west of San Germain, and some twenty-odd miles beyond the end of our system. Up to this time it had not been thought necessary to establish communication with this column. Capt. C. C. Clark, with his characteristic energy, ably assisted by Capt. J. P. Wooten, loaded the train on the railroad and reached Yauco that night, repaired the line to Mayaguez by the 15th, rebuilding it in parts, and opening offices at Sabana Grande on the 12th, San Germain on the 13th, and Cabo Rojo on the 14th. Captain Clark, together with Captain Wooten and Lieutenant Dillon, deserve great credit for the rapid manner in which they rendered this line serviceable by overcoming almost insuperable difficulties caused by the weather and terrible roads. Subsequently, at General Schwan's request, he extended the line to Las Marias on the 23d instant. On the 1st of September Captain Clark was directed to return to Ponce with the train, leaving operators at the various offices and a repair station at Cabo Rojo. He arrived at Ponce on the 5th and reported to my successor.

The main office at Ponce was the center of the entire system and controlled five circuits, having approximately 170 miles (see map marked C): one to Juana Diaz,

Coamo, and to General Wilson's headquarters on the military road; one to Guayama and Arroyo, opened on the 9th, giving communication with General Brooke's headquarters; one to the Playa, where the headquarters of the army was stationed; one to Yauco, Mayaguez, and General Schwan's headquarters; and one to Adjuntas and Utuado, where General Henry was located. An idea of the importance of this office and the invaluable part that the telegraph played in this campaign may be judged from the fact that from the 7th to the 8th of August alone 4,613 messages were handled in the Ponce office. It would have been impossible to have transacted this large amount of business with dry cells and open circuit keys. The use of dry cells on an open circuit proved anything but satisfactory, owing to the difficulty of keeping instruments in adjustment, even on short lines. The adoption of this untried system was a risky experiment, owing to the instability of the dry cells and the inflexibility of the system.

The volume of business at Ponce necessitated the construction of a switch board, which was built by myself out of some strips of copper and parts of broken captured instruments. A photograph of this board, together with a view of the operating room at Ponce, and a phototopographic map of the Spanish position at Vibonito at the time of the suspension of hostilities on August 13, are appended and marked D, E, and F.

Although the operations of the Signal Corps were hampered by the lack of material for repair, maintenance, and operation of permanent lines (having material alone for the construction of flying telephone and telegraph lines), the command deserves great credit for its ingenuity in meeting and solving difficulties that arose during the progress of the work. We were, however, extremely fortunate in obtaining from the enemy sufficient glass jars, coppers, and zincs to install all the batteries necessary to operate the entire system.

Lieutenant Davenport, superintendent of the lines at Ponce, deserves great credit for the promptness with which he handled the cablegram from Washington on August 13, suspending hostilities, and the subsequent orders of the major-general commanding. The cablegram was received from the cable company at 10.34 a. m. and sent to headquarters of the army by 10.37 a. m.; the subsequent orders of the major-general commanding were received from Playa, and by 11.15 an OK was obtained from the headquarters of Generals Brooke, Wilson, and Henry. The message to General Schwan was OK'd by Yauco at 11.20 and delivered by special courier at daylight the next morning at a point 20 miles north and east of Mayaguez.

At the request of Captain-General Macias, and with the approval of the major-general commanding, I directed the establishment of a transfer office within our own lines at Coamo and opened communication direct with San Juan on August 29.

On September 2 I was relieved from my duties by Lieut. Col. W. A. Glassford, who was announced as chief signal officer of all the forces on the island by Special Order No. 14, First Army Corps, Guayama, September 2, 1898.

All the officers and men under my command deserve great credit for the intelligence, energy, and zeal with which they performed their duties and the successful way in which they maintained communication, and met in an ingenious manner difficulties which in ordinary telegraph and telephone practice are deemed insuperable.

I can not recommend too highly for the zealous and efficient manner in which they performed their multitudinous and difficult duties the following officers: Capt. C. C. Clark, J. P. Wooten, and H. H. Canfield, who almost ruined his health by his zealous application to duty; First Lieuts. Wilkie Woodard and Albert J. Dillon; and Second Lieuts. William M. Talbott, W. T. Davenport, and Max Wagner; and First Lieut. and Asst. Surg. Francis D. Patterson, Fifth Pennsylvania Volunteer Infantry, who unfortunately contracted typhoid and was invalided home.

Very respectfully,

SAMUEL REBER,
Lieutenant-Colonel, Signal Corps, U. S. A.

APPENDIX B.

SPECIAL FIELD ORDERS, }
No. 13. }

HEADQUARTERS OF THE ARMY,
Ponce, Porto Rico, August 3, 1898.

PAR. II. (1) All means of communication by telegraph, telephone, or otherwise, will be established and maintained by the Signal Corps under the direction of the chief signal officer at headquarters of the army.

(2) Corps commanders will establish and at all times maintain communication between their headquarters and headquarters of the army.

(3) The chief signal officer of each corps will furnish promptly to the chief signal officer at headquarters of the army a diagram of his system of communication between corps and army headquarters, indicating the method of transmitting intelligence and the area and distance covered. Any changes will be at once reported.

(4) All official communications offered for transmission must be written (except personal conversation over telephones between officers). These will be forwarded to the chief signal officer at army headquarters as soon as practicable after filing with the operators. Operators are positively forbidden to receive or transmit any but written communications.

(5) Lieutenant-Colonel Reber, United States Volunteer Signal Corps, will report to the chief signal officer at army headquarters. The Ninth Company, United States Volunteer Signal Corps, Captain Ives; the Telegraph Company, Captain Clark; and the Fifth Company, Captain Lamar, are hereby assigned to duty at army headquarters, and will be consolidated under the immediate command of Lieutenant-Colonel Reber, United States Volunteer Signal Corps.

By command of Major-General Miles:

J. C. GILMORE,
Brigadier-General, United States Volunteers.

APPENDIX 4.

REPORT OF LIEUT. COL. FRANK GREENE, UNITED STATES VOLUNTEER SIGNAL CORPS, CHIEF SIGNAL OFFICER FIFTH ARMY CORPS, OF THE OPERATIONS OF THE SIGNAL CORPS AT SANTIAGO DE CUBA, WITH SUBREPORT OF MAJ. G. W. S. STEVENS, UNITED STATES VOLUNTEER SIGNAL CORPS.

HEADQUARTERS FIFTH ARMY CORPS,
OFFICE OF THE CHIEF SIGNAL OFFICER,
Santiago de Cuba, August 15, 1898.

The ADJUTANT-GENERAL, FIFTH ARMY CORPS,
Santiago de Cuba.

SIR: I have the honor to report as follows upon the duty performed by the Signal Corps in the operations leading to and resulting in the capitulation of the Spanish army commanded by General Toral, and the occupation of the city and province by the Fifth Corps of the United States Army.

The corps comprised two detachments with separate and distinct duties. First, a detachment of 35 men, under command of Capt. G. W. S. Stevens, United States Volunteers, to which was assigned the duty of establishing and maintaining communication between the commanding general and his division commanders and the supply depots. Second, a detachment of 23 men, under command of Maj. Joseph E. Maxfield, United States Volunteers, which was attached to the Fifth Army Corps by paragraph 21, S. O. 129 c. s., headquarters of the Army, A. G. O., equipped with a balloon, compressed hydrogen for inflation, and the necessary paraphernalia, to which was assigned the duty of observation and reports from the balloon in the air.

On June 6 30 men from Captain Stevens's detachment were placed on board 30 transports (1 to each), and from that time to June 25, whether in port, in convoy, or in the debarkation from the fleet, flag communication was maintained between the different transports and the flagship of the commanding general and the vessels of the naval escort squadron, all necessary orders being transmitted with celerity and precision.

On June 25 small details of signalmen, equipped with flags, heliographs, glasses, etc., were sent to report to headquarters of the First, Second, and Cavalry divisions, to the independent brigade, the light artillery battalion, and the mounted cavalry squadron, with the object of providing communication between separated parts of the forces, but the nature of the country to be traversed, with its narrow and few trails, the dense and high tropical growth obscuring the vista in all directions, and the absence of any commanding points upon which stations could be established, soon demonstrated to me that visual signaling could not be depended upon, but that communication could only be had and maintained by telegraph or telephone, so the men were withdrawn from the commands as soon as opportunity offered.

On June 27 a detail under Captain Stevens began the work of extending a telegraph line from Siboney toward Sevilla, using for the purpose a light rubber-covered cable having a core of seven steel and one copper wire, happily provided by the forethought of General Greely. The value of this wire can not be overestimated. Having no poles, and the chapparel being too slight to sustain the weight of a wire, the perfect insulation of the wire furnished enabled it to be laid upon the brush as far back from the trail or road as possible, or on the ground itself where no course was open and a clearing back from the trail could be found, and so long as it was not cut or broken communication by its means was perfect. This work, and in fact all the telegraph line construction and repair throughout the campaign, had to be

prosecuted without interruption on account of the state of the weather, sometimes under a blazing sun and at others under torrents of rain, when the narrow, bogged road became a roaring knee-deep water course.

On June 28 the balloon and material was landed at Daiquiri, placed in wagons and brought to Siboney; thence on June 29 to the headquarters camp about 3 miles west of Las Guasimas. The telegraph line passing from Siboney up the hill behind the town by the blockhouse, thence over the trail, joining the main Sevilla road at Las Guasimas, was completed to the headquarters camp on June 29 and telephone communication established, and on the same day the end of the cable between Santiago and Guantanamo, which had been cut by Lieutenant-Colonel Allen, Signal Corps, was landed at Siboney. By these means telegraphic communication through the necessary intermediate repeating offices was established direct between Washington and the headquarters of the commanding general at the front near Santiago de Cuba.

On June 30, under the personal direction of Major Maxfield, the balloon was inflated, and in the afternoon, after the daily thunderstorm had passed away, Major Maxfield made an ascension to an altitude of about 1,000 feet. Several other officers ascended afterwards.

An advance upon the enemy having been ordered for July 1, small details of 2 men each, equipped only with the flag and field glass, were sent the night before to each division commander and to the light artillery battalion and the mounted squadron of cavalry. On July 1, at 4.30 a. m., Captain Stevens and Lieutenant Burnell, Signal Corps, with a detachment of signalmen, began extending the telegraph line from the headquarters' camp to the front, a work of great difficulty, as the single narrow road was crowded with troops marching to the front, but by perseverance the line was pushed forward in the brush well to one side of the road so that it might not be disabled. Understanding that the advance headquarters were to be located at El Poso, I proceeded to that point early in the morning for the purpose of locating the station. It was intended to place the instrument in the abandoned hacienda of El Poso, and by 8 a. m. the wire was at that point, but located as it was, upon lower ground and some 150 yards in the rear of Loma del Poso, upon the crest of which Grimes's Battery was in position and in the line of fire from the enemy's battery replying to Grimes, it was soon evident that the telephone could not be maintained there, so the line was recovered and the instrument located in the shelter of the bank of the Aguadores River alongside the Sevilla-Santiago road, some 250 yards to the north of El Poso. The latter part of the work was performed under a smart shower of shrapnel, which continued more or less in the vicinity of the station all day. From the station orders were sent and received all day, and the line was carefully and constantly patrolled to guard against interruption. The rapid movements of the different divisions, the extent of ground covered, and the increasing advance, with the hard fighting all day, did not require the use of the signalmen, and I gathered them in as soon as practicable.

I have not received a report from Major Maxfield, commanding the balloon detachment and personally operating the balloon, but I know from my own observation that the inflated balloon was towed along the road toward the front by wagon, and that Major Maxfield, acting under orders, very gallantly took the balloon upon the skirmish line between the last crossing of the Aguadores River and the Rio San Juan, and there, with Lieutenant-Colonel Derby, engineer officer, who gave the orders, ascended and remained up under a heavy rifle fire and an excellently well-directed fire of shrapnel until the balloon was pierced many times and a descent was unavoidable. After descending the balloon was riddled and rendered totally unserviceable and of no further avail during the campaign. It is the first time a balloon has taken up observers on the skirmish line and will probably be the last time.

On July 3 the line was extended to the foot of what is known as the San Juan Hill, where were the headquarters of Generals Wheeler and Kent, thence to the headquarters of General Lawton, upon the right of the line of investment, and subsequently a branch line built from General Wheeler's to General Bates's headquarters, on the left of the line of investment. The maintenance of so many stations, with the constant patrol and repair to remedy faults both of accident and malicious disregard of the value of these indispensable lines, and the increasing sickness, required more men than the original detachment, so men were taken from the balloon detachment.

On July 7 I went to the mouth of the Aguadores River, found the telegraph line along the coast between that point and Siboney in good condition, and located and established a station about half a mile east of the railroad bridge, in a position screened from the fire of the batteries and rifle pits upon the Spanish side (right bank) of the river. Afterwards during every bombardment of Santiago by the fleet the plottings of the fall of the shots in the city were telephoned from the station near Loma San Juan to the commanding general, whose directions as to range and direction were in turn telephoned direct to Aguadores and at once flagged to the admiral.

On July 8 I went to Daiquiri, repaired the telegraph line between there and Siboney, and made ready to connect this line to the United States Government cable between Daiquiri and Playa del Este, better known as Guantanamo, which was laid for use in event of a denial to the Government of further use of the French cable. The denial did not take place and the Government cable was used only a very few times.

Captain Butler, with the Eighth Company, United States Volunteer Signal Corps, reported at Siboney on July 9, and his men were placed on duty at Aguadores, Daiquiri, Siboney, and the ammunition camp. From this time to July 17 the lines were constantly maintained in working order over their entire extent, comprising the line of investment with a line extending from the middle thereof through the corps headquarters and the different supply camps to Siboney, the land line from Aguadores to Daiquiri, and in addition the French cable from Siboney to Playa del Este, which had been seized temporarily by the United States, all the operators being soldiers of the Signal Corps. Those at the front worked and lived in mud and took their share of all hardships and exposure to fire with the remainder of the army.

Upon July 17, immediately after the occupation of Santiago de Cuba, the Spanish military telegraph line from Santiago was tapped at the junction of the Caney and Sevilla roads and extended into corps headquarters and communication opened, and afterwards, as requested, the different camps were connected by telephone.

Very respectfully,

F. GREENE,
Lieutenant-Colonel, United States Volunteer Signal Corps,
Chief Signal Officer, Fifth Army Corps.

WASHINGTON, D. C., August 24, 1898.

The CHIEF SIGNAL OFFICER, U. S. A., Washington, D. C.

(Through the Chief Signal Officer, Fifth Army Corps, United States of America.)

SIR: I have the honor to submit the following report of my movements and duties, dating from June 9, 1898, and covering the period to July 31, 1898:

Special Orders, No. 130, paragraph 49, A. G. O., Washington, D. C., June 3, 1898, reached me on the afternoon of June 8, and I left Fort Caswell, N. C., by the first boat available. This order directed me to report to Maj. Frank Greene, United States Volunteer Signal Corps, at Tampa, Fla. I arrived at Tampa June 10, at night, and finding that Major Greene was on a transport at Port Tampa, I reported to Major Reber, United States Volunteer Signal Corps, temporarily, and reported to Major Greene by telegraph for instructions. On June 11 I reported to Major Greene on board transport *Seguranca*, and, owing to lack of accommodations on this steamer, I was assigned to the steamer *Oliette*, hospital ship, for quarters. This last steamer was watering the fleet and uncertain in her movements, and I was therefore compelled to remain on board lest I should be left on departure of the fleet. I assumed charge of the flag and code communication on the vessel by direction of Chief Surgeon Appel, commanding.

During the passage to Santiago this steamer was supposed to visit daily each vessel in the fleet and receive the sick. This entailed constant communication all day, and the available signal party of one naval cadet, one private of the Signal Corps, and myself were needed day and night.

The fleet having arrived off Santiago, I remained on board with the party till ordered by Major Greene to come aboard the *Seguranca*, on the evening of June 26.

On the morning of June 27 I landed at Siboney with a party of eight members of the Signal Corps and 10 miles of wire and two type D kits, with directions from Major Greene to repair the telegraph line up the valley road to Sevilla and as far beyond Sevilla as the commanding general at or near that point might direct, reporting to Major-General Wheeler, United States Volunteers, for signal duty, and to maintain connection with headquarters at Siboney, and then to send back the men to the *Seguranca*. (Later it will be seen that the men had to be retained, and that these directions were changed of necessity.)

I was to have the services of one packer and two pack mules, which were to join me at Siboney during the afternoon, when the headquarters train should pass through that place.

Reports of the existence of a broken line along the road from Siboney to Sevilla had come in to the headquarters of the Corps. It was supposed, presumably, that the line could be quickly patched, and the detachment was landed without arms, without blankets, and with one day's rations. I was most agreeably surprised to find the wire furnished me to be insulated 7-strand wire. Owing to the absence of the telegraph section, the party had but their hands and one pair of pliers—no climbers, tackle, brackets, or tools. Immediately on landing I occupied the old

telephone room of the Juragua Iron Company, and found that attempts had been made to destroy the telephones, also that some telephones reported to exist in a hut near the blockhouse partly up the hill west of Siboney had been removed. I set men to work tracing out an available wire to the blockhouse, others repairing telephones and running a ground wire at the building, and stationed a man to make sure of obtaining the pack animals as the train passed Siboney. I personally started with Sergeant Capron up the valley road to find the supposed line. After going some distance this line failed to materialize and I returned to Siboney. There I heard mention of a line over the hill trail to La Guasima. The packer and the mules arrived in the afternoon. I had by this time anticipated what proved necessary in the end, the building of our own line of wire. As I had 10 miles of wire, and supposed at the time that this was my limit, I calculated that I could barely reach Santiago, and determined not to waste time and wire if possible. The valley road was winding, and I proceeded to trace out this road and also the trail over the western hill, which joined the valley road at La Guasima. I took the packer as a guide and mounted one of the pack mules, followed up the trail over the hill as shown by the black line in accompanying map, and found no wire. I then came back down the valley road and found the remains of two wires in places. These were utterly useless and would have caused faults; they were overgrown with vines and no available stretches existed. This line showed evidences of being abandoned for some time. This proved correct; the Spaniards had used the railroad line along the sea front from Siboney to Santiago. The telephone room at Siboney had wires marked "C," meaning "Cuba," or Santiago, and "F," meaning Firmeza, a little village up near the mines in the hills. The line from Siboney to Daiquiri ran over the bluffs near the sea, and also another line to Daiquiri, I believe, ran in the valley behind the bluffs, in part along the Juragua Iron Company's railroad. (This railroad does not run to Daiquiri, as supposed by some, but to the mines in the hills. At Daiquiri a different company has another road running to its mines. The Siboney-Santiago road is narrow guage, the road at Daiquiri is broad guage. In each instance they run eastward from Siboney to Daiquiri, respectively, and then across the valley road, and turn westward into the mountains and reach their respective mines.)

Undoubted proof of the disuse of the valley lines from Siboney to El Pozo is shown by the accompanying list of telephone calls dated July 28, 1897, and taken from the San Juan blockhouse, the last station held by the Spanish before their enforced retreat into Santiago. This list of calls shows that El Pozo was the nearest station to Siboney on the road over which the American army advanced. On reaching Siboney, after this examination, I started a party running our own wire from the blockhouse on the hill northwest of Siboney up the trail and over the ridge, as shown by black line. The men had to carry the heavy coil as they laid the wire, and it was a tedious and difficult work. I had the packer take up several coils on his mules and distribute them ahead on the trail, for a mile could be saved by this trail in reaching La Guasima.

It became evident that not only had the line to be built in toto to secure freedom from faults and constant trouble, but that it would be a lengthy piece of work unless something could be devised to help. The line was passed over the crest of the hill that evening; a telephone had been made from the wrecks of instruments, and all connections made in the building, including a good ground. Private Kinkaid had been on shore and joined my detachment by order of Major Greene. This soldier had used his time well, and hunted out the railroad supplies, found sal ammoniac, bluestone, cells, zincs, and coppers, and had followed down the wires along the railroad toward Aguadores till he was fired on by the Spaniards. I now more than ever regretted the absence of keys, sounders, and telephones. Nothing but pieces of an old printing telegraph instrument could be found. The night was spent by the detachments as best they could.

On the morning of the 28th I started a party to continue the wire as best they could, while Sergeant Dillon with an assistant endeavored to make some kind of a reel for carrying wire and paying out. The coils were difficult to handle when once broken and unrolled by hand. I applied to General Garcia in person, asking for a machete, our passage through brush being impossible in places and the instrument being an absolute necessity. I was refused, but was offered the services of two Cuban soldiers "who could cut for me." Sergeant Dillon cleverly managed to make a sort of litter having a pivoted reel in the center, enabling men to carry the coil while one unwound it. After this the party managed to make more headway. The Cubans proved a waste of time, requiring valuable time to explain to them what I wanted and to get the work done with celerity. The dense undergrowth proved very useful, for by using a pole with a fork at its end the wire could be thrown over the higher brush and thus be above the ground; moreover it was free from interference. By this process some 2½ miles were laid this day. I found on ascending the hill early that morning that the line had been broken at the blockhouse near Siboney, apparently purposely. I mended it myself securely, and as each half-mile coil

was laid the type D kit was used to test back. Men were left at Siboney to use the station instrument and to draw rations.

The type D kit worked with fair success only up to the end of the day's work, some 2½ miles from Siboney. The detachment marched into Siboney this night and again slept as best they could. The Cubans had proved of so little service that I sent one away and told the more intelligent one to report at 5 a. m. next day. This individual failed to report on the morning of the 29th till about 9.30 a. m. I started the detachment to pick up the work and remained at Siboney to obtain a machete. I made another appeal to General Garcia and failed to attain my object. I finally impressed upon his adjutant-general the importance of the work and the fact that I was losing time and wished the instrument and not the Cuban. I finally obtained this second day an old machete, though I took one Cuban along, and continued the work.

Lieutenant Burnell met me this day at La Guasima and offered to assist with the men attached to General Kent's headquarters, the general having no use for the signal party at the time and kindly allowed Lieutenant Burnell to join me. This gave me much-needed assistance, as my own party was small. Each day we had not only the natural obstacles to overcome, but suffered the daily deluge of rain, and as we worked from early morning till dark, we were wet continually and often stayed wet at night. The absence of blankets and protection proved trying, but none of us worried over the physical discomforts, our interests being so keen and all of us being too busy to think much of such things. I had, of course, by this time seen that Siboney was no longer to be reached by us as a camp. The party had acquired an old kettle, and henceforth we lived and camped wherever we happened to stop.

The chief signal officer had authority to call for assistance of men from commands should it be necessary, and on this day I was passed by the commanding general between Sevilla and La Guasima, and he gave me personal directions to call on any commander or organizations for men. I needed more men, but I felt that the men familiar with the work would do better, even if few, than strangers would. After Lieutenant Burnell met me I arranged with him to go ahead of me and begin laying wire from General Kent's headquarters on out the road, passing General Wheeler's headquarters and aiming at reaching the corps headquarters. I sent wire ahead to Lieutenant Burnell by the little pack train, and he with his party began about a mile beyond Sevilla, near what I presume must have been General Wheeler's division camp and the artillery camp of the 29th and 30th of June. Meantime I continued on from La Guasima through Sevilla, and at dark reached a large encampment in which I noticed the artillery, Colonel Wood's cavalry regiment, and some other troops at K K. It had become understood now that the line was to go on out as it was needed. I found Lieutenant Burnell's starting point just at dark, and found a problem in crossing the large open spaces around this camp, for as will be seen with this splendid wire the main danger was open spaces and the difficulty of erecting poles. Where heavy chaparral existed the line was safe, and with a machete and the help of an occasional tree, we had a very good line. I had changed the type D kit and taken a type A kit in hopes of better results, and had tested back as usual. Major Greene joined us about 1 p. m. this day and talked with Siboney.

When my party reached K the darkness and the exhaustion of the men prevented any further work. Early the morning of the 30th one of the men accomplished the feat of climbing one of those very tall palms, and from this a long reach was obtained for the wire. A couple of improvised poles carried the line to a tree, and here the forward section of the line was joined, and the headquarters of the Fifth Corps in the field was connected by wire with America, Lieutenant Burnell having reached A. Near this place were several of the division and brigade camps, and I had the pleasure of informing the adjutant-general Fifth Corps that the line was at his disposal. However, on this day the field instrument caused me much misery. First someone cut the line near Siboney, taking about 20 yards of wire.

Patrols had been arranged, and two men went from A into Siboney. These men repaired the break; but even after this the getting through of messages was sometimes tedious and difficult with this instrument. I knew that the line was good, and indeed a splendid one, with no faults unless tampered with, or perhaps accidentally cut by pack trains at a few points. The horses had been left at Tampa, and were sadly needed, as patrols had a round trip of some 15 miles, and it was slow work. Indeed, my own supervision was hampered, as I could not move with the desired facility.

At A during the 30th of June I found several Signal Corps men and wrote to General Young asking him to let me have his party if not needed by him. This he very kindly complied with. I was anticipating the running of the line farther out and the necessity of equipping the stations with operators. Some men had already gone to Guantanamo and some were at Siboney. I collected this day about twenty men, but on the evening of the 30th of June the detachment was again divided up, the commanding general desiring parties to be attached to each of the following bodies

of troops: The First Division, the Second Division, the Third Division, the cavalry division, and Major Rafferty's independent cavalry. The artillery brigade had already its men. These parties were named and directed to join at dawn on July 1.

During the afternoon of June 30 I received directions from the commanding general to run the line the next morning to the sugar mill and to El Pozo, it being expected to make this the field headquarters for July 1. Grimes's Battery was stationed at El Pozo, and I walked over the route and had my first glimpse of Santiago from this position. The wire had already been run down the road past the division hospital, and early on the morning of July 1, with Lieutenant Burnell and the remains of the detachment, the line was prolonged to the sugar mill and stretched to El Pozo building, but the Spanish shell fire was so accurately covering this space that the building could not be used, and the sugar mill near by and about 200 yards to the right of and below Grimes's Battery became the field headquarters. The line was tied up to a tree behind the battery and then tapped at the bank of the creek at the sugar mill for a station. From this station we then had communication with A and with Siboney.

During the day of July 1 the packer appeared at the sugar mill with a long-distance telephone sent by the chief signal officer. It was a great pleasure to see it, for it at once assured perfect communication; after this there was no further trouble. Indeed I was so afraid that this instrument might be struck by fragments of some shell that I had it placed with its connection under the bank, and for a time it was used thus. It was brought out after the firing ceased. During the construction of the line the small pack train had rendered most valuable service, bringing out wire and placing it at intervals ready for use. The packer, Anderson by name, was a most willing and intelligent man and proved of great assistance in many ways; he worked untiringly till he was finally taken down with fever and was replaced by another man.

The chief signal officer informed me that there was more wire and had a supply sent out from Siboney, so that there was plenty for all emergencies. I had given directions to the patrols to, if possible, board the *Seguranca* at Siboney and get blanket rolls of the men. This was accomplished and the camp at the sugar mill station became more habitable.

A slight description of the relative positions of the points marked on the sketch is necessary. San Juan is really nearer the city, and the position of Grimes's Battery and El Pozo should be nearer Santiago. The distance between Sevilla and K and A should be greater than shown. The creek does run parallel to the trail at the sugar mill, and a trail should come in here from the north. The sketch shows this last trail as coming in farther up toward Santiago.

Major Maxfield kindly loaned me several men after the destruction of the balloon on the 1st of July.

On the morning of the 2d of July, by directions received from Lieutenant Miley, aid to the general commanding, the line was carried to the San Juan River at F, the station at C being still maintained, and on the afternoon of the 3d, under direction of the chief signal officer, Major Greene, the line was carried forward, and at H a station was established at the headquarters of General Wheeler, at the American trenches on San Juan Hill. From this point the line was afterwards carried right and left to the headquarters of Generals Lawton and Bates, respectively, thus connecting by wire the center and both flanks of the American trenches with America. I am unable to give any dates on which the last was done, as I was so ill on the 4th of July as to be compelled to lie down, and I do not know what took place. I remained at the sugar mill some days and finally went into Siboney, hoping to get relief by getting off the ground. I had supposed that it was a temporary illness, but yellow fever developed after malarial fever and I was sent to the fever camp in the hills, where I remained until the 23d of July, when I was sent home on the *Concho* by the medical authorities at Siboney.

Several of the detachments went into the hospital, and most of the men felt badly at the end. As time went on the original signal detachment was pretty well distributed at stations, and I believe the balloon detachment was eventually used in laying lines.

On the night of July 2 the night attack by the Spanish and the fire of our own lines looked from Grimes's Battery like a flank movement, and the balloon detachment and what men I had were collected and armed with rifles picked up from the roads and then formed under Major Maxfield with a view to protecting the outlook of the trail from the north at its juncture with our line of communication. All stragglers were impressed and guards were established for the night.

The line as I last left it had stations at Siboney, at A, at sugar mill, C, and at H, General Wheeler's headquarters. This line had all of its telephones in series at that time. I understand the line was carried out to General Lawton's headquarters on the right and this instrument placed in series, while the line to the left was made a separate circuit with an instrument, probably a type A or type D at H. Attached

is a photograph from Harper's Weekly which is incorrectly titled. On reaching San Juan with our line, Major Greene discovered the Spanish telephone under the Santiago side of the blockhouse, and with his approval and the permission of the officer in charge I, with much delight, put it under my arm and carried it off. It was the last station instrument used by the Spanish, and they had evidently no time to destroy it. In the photograph this instrument is standing at the foot of the tree where I placed it on July 3, and it was eventually used at General Lawton's headquarters on the right. The photograph represents the station at the foot of San Juan Hill.

I can not speak too highly of the behavior of the men in the detachment. They were not only intelligent and without thought of comfort or self, but anticipated everything. It was a great pleasure to me to serve with these men. Lieutenant Burnell pleased me very much, and I am indebted to him for much assistance and cheerful service. Many of the men were under fire at some time, and I experienced the pleasure of hearing officers voluntarily speak very highly of them. In all the work done by my detachment everything went smoothly and the establishing of the line was accomplished without a setback.

The insulated wire enabled the line to be built. With iron wire and no equipment the line would have been not only endlessly delayed, but have given much trouble, if successful at all. The dense undergrowth proved a help, for we were enabled to run long stretches of wire by placing it in comparative security in forks and in the tops of small trees. The pack train saved us more time than anything else. A wagon would have never proved as mobile. Indeed, I should most earnestly recommend that a couple of pack mules be attached to each section. The absence of the horses proved a loss, especially to the patrols, and in this very rapid movement on Santiago the line needed rapid patrolling, owing to the small number of men available for the work. The operators were busy day and night, and assisted during the day in laying lines. Even a guard was used on two nights at the Sugar Mill station, so that the men were pretty thoroughly worked. I can not make mention of individuals in the detachments, as the men were all so gratifying in their behavior that I was proud of them and of the corps.

The number of men was far too small for the attendance on the corps had the campaign proved more extended. The men could not stand a lengthy continuance of each effort in the climate. Indeed, the fortunate supplying of the insulated pliable wire and the jungle enabled us to accomplish the work with celerity. If to the situation above described the continued necessity for flag and heliograph parties had existed, the demand could not have been complied with. At least three men were required at stations to operate telephones, day and night, and to occasionally carry messages. We met with most kindly interest and assistance on the part of the officers at corps headquarters.

I have attached a brief summary of the progress of the line.

Very respectfully, your obedient servant,

G. W. S. STEVENS,
Major, United States Volunteer Signal Corps.

SUMMARY OF PROGRESS OF TELEPHONE LINE FROM SIBONEY, CUBA, TO THE AMERICAN TRENCHES IN FRONT OF SANTIAGO DE CUBA.

June 27, 1898.—The detachment of 8 men landed in forenoon, equipped station, reconnoitered roads, and ran the line from Siboney up and over the ridge to the northwest of that place.

June 28.—The line was extended to near Las Guasimas.

June 29.—The line was established through Las Guasimas to Sevilla, past Sevilla to headquarters of the cavalry division, and from this point to corps headquarters, a mile short of El Pozo or the Sugar Mill.

June 30.—The line was in use and was patrolled to and from Siboney, and the detachment was subdivided for service in the battle of July 1.

July 1.—The line was extended to El Pozo and the Sugar Mill, and was used from this point at field headquarters during the battle of July 1.

July 2.—The line was again carried forward to San Juan River, by some called the Agnadores River. (See map.)

July 3.—The line was carried to San Juan Hill and the center of the American trenches.

Later, on dates unknown to me, the line was extended to both flanks of the American trenches.

APPENDIX 5.

REPORT OF LIEUT. COL. JOSEPH E. MAXFIELD, UNITED STATES VOLUNTEER SIGNAL CORPS ON WAR-BALLOONING AT SANTIAGO DE CUBA.

WAR DEPARTMENT, SIGNAL OFFICE,
Washington, September 10, 1898.

Maj. Gen. WILLIAM R. SHAFTER,
Commanding Fifth Army Corps, Montauk Point, New York.

SIR: I have the honor to transmit for your information copy of a report made by Lieut. Col. Joseph E. Maxfield, United States Volunteer Signal Corps, who was obliged to leave Cuba owing to sickness.

This report was made by my orders in order that there might be on file in this office a report of the operations of the balloon train of the Signal Corps during the siege of Santiago de Cuba.

Very respectfully,

A. W. GREELY,
Brigadier-General, Chief Signal Officer.

[First indorsement.]

HEADQUARTERS FIFTH ARMY CORPS,
Camp Wikoff, Long Island, September 18, 1898.

Respectfully forwarded to the Adjutant-General of the Army. The services rendered by the balloon detachment as well as by the whole of the Signal Corps was satisfactory.

WM. SHAFTER,
Major-General, United States Volunteers, Commanding.

JACKSONVILLE, FLA., August 20, 1898.

The CHIEF SIGNAL OFFICER, U. S. A.
Washington, D. C.

SIR: I have the honor to make report of the operations of the balloon sections of the Signal Corps during the present war with Spain.

Pursuant to telegraphic orders, I was relieved from duty as signal officer, Department of the Lakes, on April 13, 1898, and left the same night for Governors Island, New York, where I reported to the major-general commanding the Department of the East for duty. I was instructed to put the balloon equipment of the Signal Corps, which had been shipped from Denver to Fort Wadsworth, N. Y., in thorough repair, it being intimated that a balloon might be employed at Sandy Hook as a means of obtaining early notice of the approach of an enemy's fleet. Shortly after, however, I was informed by the Chief Signal Officer that an allotment for the equipment of a balloon train had been obtained, and was instructed by him to thoroughly equip a balloon train for the field. Shortly after these instructions were amended so as to require the equipment of two trains instead of one.

The apparatus already in the possession of the corps embraced 1 silk balloon, 1 small generator (which was out of repair), 1 small gas compressor (also out of repair), 180 steel tubes for holding compressed hydrogen, 1 balloon wagon, 1 wagon for the carriage of tools and miscellaneous supplies, and 5 wagons for the carriage of the gas tubes. Both the compressor and generator, while large enough for use for purposes of instruction, were too small to give good results in actual service.

The plan adopted looked to the organization of 2 balloon companies, each equipped with 2 balloons, 1 generator for hydrogen gas, and 160 tubes filled with compressed hydrogen, together with the necessary wagons for the carriage of the apparatus and the material used in the manufacture of gas. In addition, a permanent gas plant was to be installed at the base of supplies, consisting of a generator and compressor of large capacity, to which the gas tubes could be sent for refilling after use. I was informed by the Chief Signal Officer that the necessary wagons, aside from those already belonging to the service, would be procured from the Quartermaster's Department, and that bids for additional gas tubes had already been invited by the disbursing officer of the Signal Corps. Apart from these, all necessary apparatus and material was to be ordered by me. Both in the repairing of the apparatus already on hand and in the ordering of new, great difficulty was had in finding firms who could, without delay, perform the necessary work. In spite of these difficulties, by the middle of May all the apparatus on hand at the beginning of the war had been placed in thorough repair, the work upon the new apparatus was approaching com-

pletion, and orders had been placed for the necessary tools and material for the generation of gas.

During the latter part of this work I had the assistance of Mr. L. B. Wildman, aeronautical engineer, afterwards first lieutenant, United States Volunteer Signal Corps. As fast as the materials and apparatus were ready they were shipped to Tampa, Fla., at which point it was decided to erect the permanent gas plant, at least temporarily. Much delay occurred in the shipment of the balloon material from Fort Wadsworth, owing to its great weight and the lack of men to properly handle it, the garrison at that time being small and engaged in other work.

In addition to having placed in thorough repair all the apparatus on hand, there was purchased 1 portable gas generator, 1 semiportable generator of large size, 3 balloons, 1 compressor of the capacity of 25,000 cubic feet per day, 1 large sheet-iron gasometer, 5,000 feet of balloon cable, an additional cable reel so designed as to be easily placed in an army wagon and dismounted at will, 1 portable boiler for the operation of the gas generator, 1 large stationary boiler for the operation of the compressor. In addition there was also purchased a large variety of tools of all kinds suitable for working both in wood and metal, to enable repairs to be readily made in the field. Large quantities of iron turnings and sulphuric acid for the generation of hydrogen were also shipped to Tampa. By the middle of May all orders had been placed and work had progressed, so that it was possible for me to leave New York and to proceed to Tampa for the purpose of organizing the balloon companies. As I was at the same time acting as censor over the cables terminating in New York, and as the Volunteer Signal Corps had not been organized at that time, I was informed by the Chief Signal Officer that it would be necessary for me to remain in New York for some time longer. I did so remain until May 31, placing the work of inspection of the apparatus undergoing construction under the immediate supervision of Mr. Wildman.

Under telegraphic instructions I left New York on May 31 and proceeded to Tampa, Fla. On reporting there to the Major-General Commanding the Army, I was informed that it was desired to send a balloon train with the expedition at that time fitting out for Santiago de Cuba, and was by him directed to report to the major-general commanding the Fifth Army Corps. Upon so doing I was informed that I had but two or three days in which to organize a company and get the necessary apparatus and material ready for transportation. At this time there was under my command not a single officer or man, and it was found that the articles pertaining to the balloon equipment which had been shipped from New York had not been unloaded from the cars at Tampa, but were at various points in the railroad yards at Tampa and vicinity. On applying to the depot quartermaster at Tampa I was informed that he knew nothing of the shipments, but was given permission to go over the bills of lading in his office. On some of these bills of lading it was found that the number of the car in which the goods had been shipped was missing, and it seemed almost a hopeless task, in the short time available, to locate and get together the necessary equipment for the Santiago campaign. The depot quartermaster, however, immediately detailed a clerk who, in conjunction with the railroad officials, traced and found most of the cars containing the balloon material, while Major Greene, United States Volunteer Signal Corps, placed at my disposal three army wagons and a small force of men. A detail of 30 men from an infantry regiment was also secured. The five tube wagons pertaining to the balloon train were unloaded first, giving me eight wagons in all. With these the work of unloading progressed rapidly, and on the night preceding the departure of the troops from Tampa to Port Tampa all the material necessary for the equipment of a balloon train had been gotten together. Ten men of the Signal Corps, United States Army, from Chickamauga, 4 from Atlanta, and 10 from Major Greene's command at Tampa, had in the meantime reported to me for duty. Major Greene also placed at my disposal the services of Second Lieut. George C. Burnell, United States Volunteer Signal Corps, and the promotion of Sergt. Walter S. Volkmar to the grade of second lieutenant gave me two officers. Two cars containing the gas tubes and some of the heavy material were not unloaded, but at my request were shipped by the depot quartermaster to Port Tampa. Request was made for two cars upon which the other necessary apparatus and stores could be loaded, and I was informed that these would be ready at the yards of the railroad company at 10 o'clock that evening. These cars, however, could not be found at the designated place when the loaded wagons arrived there, but by going directly to the yardmaster of the railroad company two other cars were secured, and all property except camp and garrison equipage and rations were loaded thereon before 3 o'clock in the morning. Requisitions had in the meantime been made for necessary tentage and ordnance property to equip my small command. All the necessary tents were secured, but practically no ordnance supplies could be had, and the command sailed from Port Tampa with but a portion of the men equipped with a mess outfit, while none of them had any arms. In order to be sure that no delay would arise in the shipment of tents and rations to Port Tampa, these were sent over the road by

wagon together with the men of the command. I myself left for Port Tampa at 4 o'clock the same afternoon, but did not reach there until after 9 o'clock, owing to the delay caused by the passage of troops trains. The next day was the one devoted by the troops to the loading of the transports. It was found that no assignment to any transport had been made for the balloon detachment, and it was only after some time and by the order of the commanding general that such assignment was obtained. The cars containing the balloon material were found early in the morning, and by placing an officer upon the train of which they formed a part, these cars were at last brought opposite the designated transport, the *Rio Grande*, and the supplies unloaded. Loading upon the transport at once began, but owing to the fact that the carboys of sulphuric acid could not be placed in the hold but had to be hoisted up over the ship's side, it was not until the next morning that the loading was completed. Lieut. James R. Steele, United States Volunteer Signal Corps, reported to me before the sailing of the expedition.

On June 22 the landing of the troops of the expedition began at Daiquiri. The order of landing, as issued by the commanding general, prohibited all persons not serving immediately with organizations designated in the order from landing, and the balloon detachment remained on board the transport until June 28. On June 27, I was informed, verbally, by Maj. Frank Greene, United States Volunteer Signal Corps, chief signal officer of the Fifth Army Corps, that the major-general commanding directed that the balloon detachment should land and proceed to the front for the purpose of making a reconnaissance from the balloon. Request was at once made for authority to land the generator with the necessary acid and iron-turnings, and to inflate the balloon at the landing place and tow it to the front after inflation. The object of this was to keep the compressed gas stored in the cylinders as a reserve, as, if these were once exhausted and the generator was not landed, but one inflation of the balloon could be made. This request was refused. That evening, as soon as the necessary facilities could be obtained, the landing of the balloon and the gas cylinders was begun. Before all the tubes had been placed upon the lighter the sea became extremely rough, and after one man had fallen overboard and was rescued with great difficulty, it was found necessary to delay the unloading until the next morning. Landing was completed on the morning of the 28th, the equipment loaded upon seven army wagons, and the march to the front began. Owing to the condition of the roads it was found necessary several times to partially unload the wagons at bog-holes, and it was not until that night that Siboney was reached. I reported to the commanding general that night and received instructions to continue the march the next morning and report to him at whatever point should be established as his headquarters upon my arrival. The detachment reached headquarters early in the afternoon of the 29th, but a heavy rainstorm prevented any work being done with the balloon that day. On the next day the balloon was spread. It was found that the extreme heat had softened the varnish so that the two sides of the envelope were stuck together. It was also found that either from scorching or the use of improper varnish portions of the balloon were badly rotted. This balloon was the old balloon in the possession of the corps at the beginning of the war. After the envelope had been fully spread, numerous small holes in it were found, as well as several rents of considerable extent. It was in such condition that had the ascents to be made in time of peace it would have been felt unsafe to use it. The rents were carefully sewn and covered with adhesive plaster and the balloon inflated. Three ascents were made that afternoon—the first by myself and Sergeant Baldwin, Signal Corps, United States Army; the second by Second Lieut. Walter S. Volkmar, General Castillo, of the Cuban army, being carried as a passenger; and the third by the chief engineer officer of the Fifth Army Corps and myself. These ascents resulted in an increase of knowledge as to the direction and course of roads and streams immediately in our front. The fact that the Spanish fleet of Admiral Cervera was in the harbor of Santiago was at last definitely settled. It could not be determined, however, how strongly the fortifications in our front were held, nor could they be located except with the greatest difficulty. A most flattering verbal report as to the value of the balloon in war was made by the chief engineer officer to the commanding general, with the recommendation that it be employed during the battle planned for the next day. That evening verbal orders were brought me by the chief engineer officer of the Fifth Army Corps from the commanding general to report with the balloon, at as early an hour as practicable, at El Poso, which was to be the headquarters of the commanding general during the battle, and that there I would find the chief engineer officer who would accompany me in the ascents. The balloon was secured in the most sheltered place possible for the night, and the detachment rose at daybreak and proceeded to replace the gas which had been lost during the night. It was also found that new rents had been caused by the wind during the night, which had to be repaired before the balloon could be used. As soon as these repairs were completed the detachment took up its march for El Poso, towing the balloon by means of captive ropes. On arriving at the foot of the hill at El Poso

the detachment was halted, and I rode up on the hill for the purpose of finding Lieutenant-Colonel Derby, the chief engineer officer, and selecting a suitable place for the ascension. Upon reaching the summit of the hill none of the officers attached to headquarters were visible, and it was found that the hill was covered by a slow, but remarkably accurate, shrapnel fire from the enemy's guns. I rode over the hill in search of headquarters, my horse being shot just as I turned to regain the base of the hill. Here I met Lieutenant-Colonel Derby, and the balloon was carried to a place in the river bottom, about a quarter of a mile to the rear, and an ascent made, Colonel Derby and myself occupying the basket. From this point a message was sent to the adjutant-general of the corps, setting forth the movement of troops both at El Caney on our right and upon the road to our front, which led to the hill at San Juan. Under orders from the chief engineer officer, the balloon was then pulled down to within a few hundred feet of the ground—the occupants of the basket still remaining in it—and towed toward the front until a more suitable position for viewing the intrenchments at San Juan could be found. It was supposed that the balloon would be halted at El Poso and that point taken as a station for the balloon detachment, as had been originally intended. As this was not done, a statement was made by me as to the results of artillery firing at balloons in experimental work abroad and the conclusions to be drawn from such, and the fact stated that in my opinion it was unwise to carry the balloon farther to the front. No formal protest, however, was made, as it was felt that the chief engineer officer was the representative of the commanding general and that his desires were to be carried out. As a consequence, the balloon was carried rapidly to the front until it was immediately in the rear of the troops, who were then deploying for an attack upon the block-house and trenches on the San Juan Hill. As no further progress to the front could be made, the balloon was then carried across the bed of the San Juan River and into a large meadow just to the right of the road and river.

In passing through the trees and brush along the river banks the ropes holding the balloon captive became badly tangled in this brush, and no movement for a time was possible; nor, for the same reason, could the balloon be given the necessary elevation to enable it to do its best work. Nevertheless, from this position the fact was determined that the intrenchments on the San Juan Hill immediately in our front were strongly held, and a message to this effect sent to the commanding general with the suggestion that the artillery upon the hill at El Poso should reopen its fire upon them. This was done. The attention of the occupants of the basket was given almost solely to an examination of the ground held by the enemy and that immediately in their front, and it is impossible for that reason to state what was the disposition of our own troops in the immediate vicinity, most of whom were hidden by the brush. It was noticed, however, that dismounted cavalry were deploying in the open meadow in which was the balloon, about 50 yards in our front. It was at that time that the enemy opened fire. This fire appeared to be musketry alone. In a very few minutes it became apparent that the balloon had been struck, as there was a decided loss of gas, and the rope having not yet been cleared from the brush I gave the order that the balloon should be pulled down, hoping to be able to disentangle it, carry it to the rear, repair the holes in it, and replace the lost gas from the tubes which still remained full. This order was obeyed, and for twenty or thirty minutes the detachment was busy endeavoring to disentangle the captive cord and extend it along the bed of the river. During this work the detachment was exposed to a heavy musketry fire, from which they were fortunately fairly well sheltered by the banks of the river, and although the leaves oftentimes fell in showers from the bushes and trees overhanging the bank, but one man, Private Heywood, Signal Corps, United States Army, was struck, he receiving a wound in the foot.

An examination of the balloon having shown several holes in the upper portion, and the loss of so much gas as to render the further use of it impossible, orders were given to secure it and to retreat along the river bottom. This was done, and the detachment in a short time reported at El Poso. Later in the day Second Lient. Walter S. Volkmar was instructed to make an examination of the balloon and report whether it had been so badly damaged as to render its recovery useless. He reported that the gas had entirely escaped and that there were numerous holes and rents in the envelope, which would render it totally unserviceable for future use in the field where facilities for repairs upon a large scale were lacking. He, however, folded the balloon and placed it in the basket, and it was afterwards recovered and brought to Siboney. During the rest of the day and evening of July 1 the detachment was employed in relieving armed men coming to the rear with wounded soldiers, and in any way in which it was thought they could be useful. On the next day a portion of it was directed to report to Maj. Frank Greene, chief signal officer, Fifth Army Corps, for duty in connection with telephone work. A detail was also made from it for the purpose of carrying some rapid-fire guns to the front. Until the morning of July 3 the detachment remained camped at El Poso, at which time it was marched back to the headquarters of the commanding general and there went into

camp. A cablegram having been received from the Chief Signal Officer stating that a new balloon had been shipped me which would soon arrive at Santiago, a report of this fact was made to the commanding general, who informed me that no further work with the balloon would be necessary in the present campaign. Request was made on the same day, through Maj. Frank Greene, chief signal officer, for permission to ship back to Siboney and to the United States the empty gas tubes, so that they might be refilled and be available for further work at the earliest possible moment. This permission was refused on the ground of lack of transportation.

On July 5 the detachment, with the exception of six men who were detailed for work upon the telephone lines under Maj. Frank Greene, Signal Corps, was marched to Siboney for the purpose of storing the balloon, reel, and apparatus other than tubes. Here it was found that Lieut. Col. James Allen, United States Volunteer Signal Corps, to whom, in compliance with orders, I had reported by letter upon my arrival at Tampa, was at Guantanamo on the cable steamer *Adria*. A cablegram was sent him, requesting an interview relative to the future operations of the balloon sections, and asking if he could come to Siboney, as I had no means of reaching Guantanamo. Colonel Allen reached Siboney that evening and immediately made request to the commanding general for detail of myself and ten men of my command to aid in the laying of a submarine cable from Daiquiri to Guantanamo. This detail having been made, I left Siboney upon the cable steamer *Adria* that night with the ten men, the remainder of the detachment being ordered to repair the Spanish telegraph line from Siboney to Daiquiri, so that it could be used in conjunction with the new cable about to be laid. On July 14 I returned to Siboney, where I was joined two days later by the absent members of my command. Permission was again requested to transport the gas tubes, which had been left near Sevilla, to Siboney and thence to the United States. This was granted, and on July 16 the detachment was marched to Sevilla and the tubes loaded upon wagons which were returning empty from the camps at the front. The cable steamer *Adria* having been ordered back to the United States, these tubes were loaded upon her at Siboney on the night of July 18, and the property for which I was responsible was turned over to the care of Second Lieut. James R. Steele, United States Volunteer Signal Corps.

It is with pleasure and pride that I refer to the conduct of the small detachment under my command in the field. Second Lieut. James R. Steele performed his duty in the same quiet, thorough, and faithful manner which had marked his entire previous career in the Signal Corps. Second Lieut. Walter S. Volkmar proved himself to be an energetic and courageous young officer. The entire command bore itself well, not only while under fire, but also during the days of hard work and privations which followed. To Sergeant Kennedy, Signal Corps, United States Army, praise is due for display of courage and uniform cheerfulness, which did not fail to have its effect upon the entire command.

On July 19 I sailed upon the steamer *Adria* for Tampa, in obedience to the provisions of paragraph 1, Special Orders, No. 40, dated Headquarters Fifth Army Corps, July 17, 1898, which directed me to proceed to Tampa, Fla., and report for orders to the Adjutant-General of the Army. Tampa was reached on July 27, where it was found that under the able direction of First Lieut. L. B. Wildman, United States Volunteer Signal Corps, the apparatus pertaining to the gas plant for the generation and compression of hydrogen had been instituted. A balloon company was also found there under his command, together with two balloons and all the necessary appliances for the equipment of a balloon train. On July 29 I was seized with fever and was taken to the hospital at Tampa, where I remained until August 5. On that date I left for Jacksonville, Fla., in compliance with the provisions of S. O. 168, W. D., A. G. O., dated July 19, 1898, or rather upon telegraphic notice that such an order had been issued. After my departure Lieutenant Wildman reports that the balloon section which still remained at Tampa was made ready for duty at Porto Rico in obedience to orders received by him, but that owing to the cessation of hostilities it has remained at Tampa, where ascensions for purposes of instruction were made on one day.

The difficulties met with in securing the rapid manufacture of apparatus needed have already been referred to. No less difficulty was found in securing the services of experts in the varnishing and care of balloons. While in New York innumerable applications for enlistment were received from professional aeronauts, but it was found to be wholly impossible to obtain the services of men of the class desired. The American aeronaut, making his ascensions as he does for purposes of exhibition only, desires to land in the shortest possible time. It is therefore a matter of little importance to him whether his envelope is made highly impermeable to the gas contained in it or not, and the result is that he knows little or nothing about the proper processes to be employed in making and keeping the envelope highly impermeable. It is understood that the services of two French experts were offered after I left New York, but only at the most exorbitant salaries. In spite of the difficulties met with, however, it can be said that within five weeks after the declaration of war the Signal

Corps was able to put a fully equipped balloon train in the field, and that by the time the companies of the Volunteer Signal Corps had been organized and were ready for service another train was practically completed. At the time of the cessation of hostilities, one set of equipment was at Santiago de Cuba, with all the necessary apparatus and material for making balloon ascensions, although work could not have been done with it as rapidly as would have been the case had a fresh supply of tubes containing compressed gas been available. Another balloon section was at Tampa, likewise fully equipped.

As regards the conclusion to be drawn from the work of the balloon section in the campaign of Santiago, in its bearing as to the value of the use of the balloon in warfare, a few remarks may be useful. As has been stated above, the use of the balloon in this campaign was very limited. Had it been brought ashore and used daily from the time of landing until the day of the battle upon July 1, it is believed a large amount of exceedingly valuable information would have been obtained. As it was, the few ascents made on the afternoon of June 30 were not rich in results, although some additions to the map of the country in our front were made possible by them. On July 1 at least two items of information of value were obtained by the use of the balloon. These were as follows: First, the fact that the intrenchments at or near the hill of San Juan were strongly held by the enemy. The obtaining of this information resulted in the opening of fire by the battery at the hill of El Poso earlier than would have otherwise been the case. Second, the official report of Brigadier-General Kent, commanding the First Division, Fifth Army Corps, as published in the press, states:

"The enemy's infantry fire, steadily increasing in intensity, now came from all directions, not only from the front and the dense tropical thickets on our flanks, but from sharpshooters thickly posted in trees in our rear, and from shrapnel apparently aimed at the balloon. Lieutenant-Colonel Derby, of General Shafter's staff, met me about this time and informed me that a trail or narrow way had been discovered from the balloon a short distance back leading to the left to a ford lower down the stream. I hastened to the forks made by this road, and soon after the Seventy-first New York Regiment, of Hawkins's Brigade, came up. I turned them into the by-path indicated by Lieutenant-Colonel Derby leading to the lower ford, sending word to General Hawkins of this movement. This would have speedily delivered them in their proper place on the left of their brigade."

The country in which the army was operating was covered with brush and trees and, moreover, was hilly. Such a country is the one least likely to afford to the balloon a good opportunity of proving its usefulness. Movements and positions which upon a flat, open country could have been easily distinguished from the basket of a balloon, and in no other way, were hidden or only discerned with the greatest difficulty.

Experiments made abroad in photography from balloons, using a telephoto lens, have shown that in this way objects that could not be seen even with strong glasses can be located. It is believed that the use of a telephoto lens is almost essential if the best results are to be obtained from the observations. Negatives thus made could be rapidly developed and the pictures greatly enlarged by being thrown upon a screen by the aid of a magic lantern, thus enabling the making of a very complete map of sections of country even when occupied by the enemy.

The balloon used in the Santiago campaign was one of about 15,000 cubic feet capacity. This raised the two observers, the necessary instruments, and the captive cord, but not enough ballast could be carried to give easy control of the balloon in case it had broken away; furthermore, even in a slight wind it was found that the lifting power of the balloon was sensibly lowered. It is therefore believed that balloons employed for military reconnaissance should be of at least 18,000 cubic feet capacity.

The use of gas compressed in steel cylinders for the inflation of the balloon seems to be the best method until new processes of generation of hydrogen shall have been discovered, thus enabling portable generators of light weight to be utilized. The present portable generator to be of sufficient capacity is almost too large and too heavy to be moved over rough roads, while the weight of the material for the generation of the gas is excessive. It would therefore seem preferable, wherever possible, to place the generator at the base of operations and to keep the balloon supplied with gas by the shipment to the front of tubes.

The carriage of large quantities of sulphuric acid is difficult when carried in carboys, as was the case during the Santiago campaign. It was found that the stoppers often were knocked out or the necks of the carboys broken while being transported. On the other hand, the carriage of acid in lead-lined iron cylinders, while much more convenient, offers the objection that even the slightest hole in the lead lining will lead to leakage of the acid and possibly a serious accident.

It is also believed that it would be better in the case of field operations, where expense is a matter of minor importance, to substitute ingots of zinc for the iron

turnings ordinarily used. By doing this a greater rapidity of generation would be secured and less transportation would be required.

Taken as a whole, the present apparatus for balloon work is cumbersome, and can be transported over bad roads only with great difficulty. There is a wide field for improvement, and it is to be hoped that in the coming years sufficient appropriations may be secured to enable a thorough series of experiments to be made looking toward the finding of new methods of generation and the lightening of the apparatus employed and the weight of material used.

Very respectfully, your obedient servant,

J. E. MAXFIELD,
Lieutenant-Colonel, United States Volunteer Signal Corps.

APPENDIX 6.

REPORT OF SECOND LIEUT. GRANT SQUIRES, UNITED STATES VOLUNTEER SIGNAL CORPS, ON TELEGRAPHIC CENSORSHIP.

New York City, October 25, 1898.

The CHIEF SIGNAL OFFICER, U. S. A.,
Washington, D. C.

SIR: In compliance with your instructions, I have the honor to respectfully submit the following report as military censor at this station during the recent hostilities between this country and Spain:

On April 25, 1898, by order of the President, the cable-telegraph systems, seven in number, having their termini in this city, were constructively taken possession of by yourself, as Chief Signal Officer, charged by law with the control of all telegraph and cable lines within the United States in time of war, and you designated Lieut. Col. Joseph E. Maxfield as military censor at this station, to represent you in the work of performing such military occupation of the telegraphic cable systems as the exigencies of the war then just begun should from time to time make manifestly needful.

Lieutenant-Colonel Maxfield went into actual possession of the office of the United States and Haiti Cable Company at No. 17 William street, this city, as it was recognized that over the lines of this company the greater part of information between the United States and the points most likely to be the scene of hostilities would be transmitted. This office was the actual terminus of the 1,500-mile cable starting from this city and extending to Cape Haitien, on the island of Haiti, at which latter point the line diverged, in connection with the French company's cable system, both westward, to points in Cuba, and eastward along the Island of Porto Rico, and thence southward to the Island of Martinique.

The military occupation of the telegraphic-cable systems at this point on April 29 was continued under Lieut. Col. George O. Squier, succeeding Lieutenant-Colonel Maxfield as military censor on May 15, and later, on June 11, by the undersigned, who continued to occupy the position until the censorship over telegraphic business was raised on August 18, 1898, five days after the signing of the peace protocol between this country and Spain.

The first weeks of the censorship were chiefly employed in preventing information regarding projected movements of bodies of troops, naval vessels, and transports from reaching the press, and to that end it became necessary to charge the responsibility for the observance of this regulation ordered by the Chief Signal Officer upon at least two sworn assistants in each of the cable companies' transmitting offices who were citizens of the United States, and who made oath to faithfully observe the orders of the military censor at this station in obedience to the written engagements of the presidents of the various telegraph cable companies made to the Chief Signal Officer when he assumed possession constructively of their system on April 29. Competent men were found to fill all these positions, and during the one hundred and twelve days during which the censorship was enforced there was not an hour during the twenty-four on any day when military censor was not in immediate telegraphic and telephonic communication with the various cable offices when not actually present at them to supervise the business passing over their lines.

It was avowedly the desire of both the President and the Chief Signal Officer that the military censorship at this point should be exercised throughout the war with the least possible inconvenience to all legitimate commercial business, including press business and when the subject-matter of the messages themselves did not conflict with the known requirements insisted on by the Government, no delay or con-

sorship was allowed to interfere with the free and prompt conduct of business as transacted before the Government took control.

It was part of the duty of the undersigned as military censor to expedite the large volume of Government business which went almost exclusively between Washington and Cuban and Porto Rican points over the lines of the United States and Haiti Cable Company. All Government business had an absolute preference over all other matter awaiting transmission in either direction over the line of this cable, and as between the various governmental matter the business of the Navy Department was given the preference until our forces were landed on the Island of Cuba, whereupon the preference was given to the War Department, next the Navy Department, then the State and Post-Office departments in their order, and careful regard being had on all special occasions by the undersigned to give the preference to any Government messages plainly calling for prompt transmission, regardless of the department whence it emanated. Instructions as to the same requirements were given by the undersigned to the officials of the French cable system, whose lines were used from Cape Haitien westward to Guantanamo and Caimanera, and later on the reestablishment of the line to Santiago de Cuba, and to their faithful observance thereto not a little of the promptness which was afterwards obtained in the transmission of Government business in large volume must be credited.

On special occasions, and on the special request of the officers of the Executive and War and Navy departments, including the commanding officers of armies and fleets, most rapid service was had in the transmission of messages between Washington and the front.

Twenty minutes was the average time for the transmission of important messages between the War Department and headquarters in the field before Santiago, and on one occasion, to make some specific illustrations of the advantage gained by military occupation of cable offices in time of actual warfare, another instance may be given. Early in August, after the occupation of Santiago by our military forces, the censor received the request at the Haiti cable office in New York that he furnish to the admiral commanding the American naval forces at Santiago with true Washington time for the purpose of correcting the chronometers on the flagship, and that an officer from that vessel was then at the Santiago cable office awaiting the desired information. It lacked about fifteen minutes of the noon hour when this request was received. The censor made known the wishes of the admiral to the officer in charge of the Naval Observatory at Washington by telegraph, and the line between New York and Washington running into the Haiti cable office was cleared of business. The signal of one click of the key was agreed upon as notification from Washington of the moment of noon. The operators at the Cape Haitien end of the cable were ordered to stop transmitting or receiving over any of the lines terminating at that point and to keep the line clear. The Santiago office was notified of the arrangement, and promptly at midday the agreed-upon signal was flashed from the Naval Observatory at Washington into the Haiti cable office; the operator at the recording instrument of the cable, not 10 feet away, sent the signal instantly to Cape Haitien; the operator there flashed it to Santiago, and in a period of time which could not have exceeded two seconds the officer from the admiral's flagship was made acquainted with Washington time, and a new and unique record made for the rapid transmission of information was obtained.

Again referring to the more specific work of censorship at this station, the undersigned reports that there was a wide misinterpretation put upon the performance of the duties of the Government in connection with the military occupation of cable-telegraph lines. It was deemed, and the press largely are responsible for this widespread impression, that the censorship by the Government was directed against the press to the exclusion of all other class of cable business. As a matter of fact it was not directed against the press at all except incidentally. The censorship was the control over all classes of cable business—private, press, and commercial—made necessary by the exigencies of war. At times it fell with some severity upon the press, but at no time with anything like the degree of inconvenience that it caused the commercial interests, that have to employ the cable in the transaction of business. It became necessary in the early stage of the hostilities to promulgate an order that no code or cipher messages were to be transmitted other than those to and from Governmental authorities at Washington and the legal diplomatic and consular representatives of neutral foreign governments. To the latter at all times the privilege of communicating in code and cipher was extended freely.

A simple record of the source and destination of these messages in both directions was kept for the information of the authorities at Washington, but at no time did the censorship operate as a prohibition on any class of cable business except those in Spanish to and from Spain and to and from the islands of Cuba, Haiti, Porto Rico, Jamaica, and St. Thomas, in which, of course, were included the restrictions as to cipher and code messages above noted.

As promptly as it was deemed safe by the Chief Signal Officer after the conclusion

of the peace protocol all restrictions were raised, even those relating to Spanish messages, and exceptions were made even at an earlier date, when the peace negotiations had actually commenced, to enable the Governor-General of Cuba to communicate freely through the cable leaving New York with his home Government regarding the disposition he was to exhibit to meet the changed conditions then existing in both the eastern and western half of the Island of Cuba.

After the capture and transfer to this country of large numbers of Spanish officers and men it was the privilege and pleasure of this Government to direct the censor at this station to pass without question numerous messages sent by and addressed to those of the enemy who had fallen into our hands and were confined at Portsmouth, Annapolis, and Norfolk, and at military prisons in Georgia, and it was noticeable that the phraseology of those messages indicated the surprise and pleasure which both the senders and recipients felt at the kind treatment they were receiving at the hands of their captors, the safety and good fare they enjoyed, and their lack of nothing to make them comfortable.

This relaxation of the censorship conduced not a little to the diminishing of bitter feeling between the large numbers of people in Spain whose relatives were confined to this country, and with whom they were enabled readily to communicate by their captors. It was the policy of the Government to extend every possible facility in matters of telegraphic communication to their captive enemy, while exercising the strictest censorship over all matters emanating from our enemy still in arms.

Allusion has already been made to the censorship as it incidentally applied to press business. All orders which the censor was obliged to announce were addressed to the officers of the cable companies, and hence arose some confusion at various stages of the war as to the regulations in force. These instructions were private and were not always intended for the information of the press or public. It was manifestly improper if a contraband message was stopped, delayed, or censored, to notify the sender or recipient of the standing or changed condition of his message, and as time is always the most important element in the transmission of press messages, any delay that occurred to that class of business at this city was sure to cause friction between the cable companies and their press patron particularly affected. Cable companies were bound to obey the Government in the person of the censor, and by like order were not privileged to give any information as to failure or delay in service of the censored condition in which messages were sometimes delivered.

But the utmost care was exercised at all times to guard against abuses of this authority, undoubtedly possessed by the Government, over all classes of business, and the censor can recall at this moment not a single instance from among the patrons of the cable companies, whether they were commercial houses, press association managers, foreign newspaper correspondents, or private individuals, where those concerned were reputable, in good standing, and loyal Americans, of any complaint being made of the censorship exercised during the late war.

This report can not be closed without an expression on the part of the censor of his sense of obligation and appreciation of the cordial cooperation extended to him at all times by the officers of the various cable companies, especially the managers and operators at the office of the Haiti Cable Company, with whom he was brought hourly for many weeks in peculiarly intimate relations in moments most trying to all concerned. He bears hearty testimony here to their unvarying loyalty at all times, giving proof of a rarely unselfish devotion to interest only their own by reason of their citizenship, and alone making it possible, as he never otherwise could have done, for the censor to carry out his directions with the measure of success or of satisfaction he may have given to the Government to whom he was responsible.

Respectfully submitted.

GRANT SQUIRES,
Second Lieutenant, United States Volunteer Signal Corps, Military Censor.

APPENDIX 7.

REPORT ON THE PERMANENT MILITARY TELEGRAPH LINES OF THE GOVERNMENT.

The United States military telegraph lines, whose operation devolve by law on the Chief Signal Officer of the Army, aggregate in length about 900 miles, the larger portion of which are in the Department of the Colorado, where upward of 368 miles are maintained and operated.

The principal divisions are the Holbrook-Willcox section, in Arizona, 274 miles, connecting the military posts of Fort Apache, Fort Grant, and the San Carlos Indian Agency with the commercial system of the country. The Bismarck-Fort Yates section, in North Dakota, 65 miles in length, and the Fort Brown-Fort McIntosh section,

in Texas, 200 miles in length. On this latter line 7 stations are maintained. At the beginning of the fiscal year these divisions were in charge of the department signal officers wherein situated, viz: Capt. William A. Glassford, Department of the Colorado; Capt. Richard E. Thompson, Department of Dakota, and First Lieut. Samuel Reber, Department of the Gulf. On the commencement of hostilities with Spain it was imperatively necessary to relieve these officers from their important duties in connection with the management of these lines, and the charge thereof was vested in Second Lieut. E. L. King, Eighth United States Cavalry, acting signal officer, Department of the Colorado, with headquarters at Denver, Colo.

In addition to the sections mentioned, the Signal Corps maintains and operates a large number of short lines connecting isolated military posts with the commercial system, among which may be mentioned Fort Bayard, N. Mex., which is connected with Silver City by a line 10 miles in length; Fort Niobrara, Nebr., connected with Valentine, Nebr.; Fort Washakie, Wyo., connected with Lander, Wyo., 16 miles distant; Fort Sill, Okla., connected with Rush Springs, 28 miles; Fort Reno, Okla., with El Reno, 5 miles; Fort Bliss, Tex., with El Paso, 6 miles; Fort Huachuca with the railroad station, 7 miles; Fort Wingate, N. Mex., with the railroad station, 3 miles. At many military posts, as well as department headquarters, the commercial companies of the country have connected their lines therewith by a loop, but as the business does not warrant the companies' furnishing operators, these offices are operated by the enlisted men of the Signal Corps in connection with their other military duties.

While the permanent military lines are maintained primarily for military purposes, yet they also subserve commercial interests by affording speedy communication with business centers, and the income from such sources assumes respectable proportions, averaging about \$2,000 per annum, the amounts received from such sources being covered into the United States Treasury monthly. This, of course, does not represent the amount of business transacted, as probably 90 per cent of the business of these lines is transmitted free, originating in military sources, or some of the departments of the General Government or the several States. It has been estimated that the regular tariff charge of messages transmitted free over these lines would, if paid for, involve the disbursement of about \$15,000 annually by the Government.

Upon the declaration of war the Chief Signal Officer of the Army was obliged to mobilize his extremely inadequate enlisted force at the several military camps in the East preparatory to active campaigning; hence it became necessary to relieve the sergeants on duty at all the military telegraph offices and so far as possible supply their places by civilians, a very expensive as well as unsatisfactory procedure from a military standpoint.

Notwithstanding the fact that the Chief Signal Officer had repeatedly called the attention of Congress to the great necessity of electrical intercommunication between the various fortifications in the great harbors of the country, particularly New York, Boston, and San Francisco, the beginning of the war found these forts cut off and isolated from the War Department, except in some cases by long and circuitous routes, involving delays in the transmission of important dispatches, fatal in times of emergency. The President and the Secretary of War, understanding the importance of these matters, upon the representation of the Chief Signal Officer made an allotment from the national defense fund, and work was immediately commenced on this long-neglected work. Cables had to be manufactured, and other details that were almost discouraging, where time is an important element, had to be overcome, and it was only by the indomitable energy and perseverance of the commissioned and enlisted force of the Corps that the work was pushed to a successful accomplishment.

In New York Harbor Fort Hancock, N. J., was connected by a cable to Fort Wadsworth, N. Y., 12½ miles in length. The cable is a three-conductor, two conductors being utilized for telephonic and one for telegraphic intercommunication between these two posts. Between the terminal of the cable and Navesink light, New Jersey, 25 miles of overhead telephone wires for the purpose of intercommunication and range-finding systems were erected. From Fort Wadsworth a six-conductor cable was laid, 1½ miles long, to Fort Hamilton, N. Y., two of the conductors being for intercommunication between Forts Hancock, Wadsworth, and Hamilton, and the remaining four conductors for range-finding system.

The following briefly sets forth the electrical installation at fortifications on the Atlantic seaboard which the Signal Corps of the Army was compelled to install within a few weeks after the beginning of hostilities.

Fort Warren, Mass.—Cable to Long Island Head, Mass., 9,500 feet; from this point a short land line connects with the Boston municipal line, thence, via Deer Island and Winthrop Head, connecting with the New England Telephone Company's wires.

Fort Greble, R. I.—A cable 3,000 feet long, three-conductor, connecting at Fox Hill

with the lines of the Providence Telephone Company, giving service to Newport and thence to Fort Adams, R. I.

Block Island to Narragansett Pier, R. I.—Nineteen miles of two-conductor cable.

Fort Schuyler to Fort Totten, N. Y.—One and one-fourth miles of six-conductor cable for intercommunication and range finding between these two posts.

Fort Delaware, Del.—Connected with Battery Point, Del., and Fort Mott, N. J., by a three-conductor cable, 3 miles in length. In addition, 7 miles of land line constructed from Fort Mott to Salem, N. J., giving the post direct telegraphic communication.

Fort Washington, Md., Sheridan Point, Va., line.—It being essential to connect the fortifications on the Potomac River below Washington city, 1 mile of three-conductor cable was laid between Fort Washington and Sheridan Point. From Sheridan Point a land line was constructed connecting the post with Fort Meyer, Va., from whence there is a commercial line direct to the War Department. An alternate line was also constructed from Fort Washington, Md., to the naval Indian Head line, and on the poles of the Navy Department line to Anacostia, D. C.

Baltimore Harbor.—An overhead telephone line was constructed from Fort McHenry to North Point, about 3 miles, to connect with the lines of the Chesapeake and Potomac Telephone Company in the Sparrow Point road; from Hawkins Point to Fort McHenry by an overhead wire to Shedd's Point; from Hawkins Point to Quarantine, some 2 miles, both poles and wire the property of the Signal Corps; from Quarantine to Shedd's Point, about 1½ miles—wire belongs to the Signal Corps, which is strung on the poles of the Chesapeake and Potomac Telephone Company; from Shedd's Point a three-pair cable crosses Curtis Creek to Floods Point, and from there to Fort McHenry, over the wire of the Telephone Company; at Hawkins Point a telephone system about 1½ miles long on the base line of the 8-inch B. L. R. Battery at that point.

Fort Adams, R. I.—A single wire was stretched to connect with the commercial line at Newport, R. I.

Fort Caswell, N. C.—A land line connects the fortification with Southport, a distance of almost 2 miles.

Fort Monroe, Va.—At this post 850 yards of overhead line was constructed for the signal system and 600 yards of line for post intercommunication.

Fort Slocum, N. Y.—Connected to Neptune Dock, New Rochelle, N. Y., by 4,100 feet three-conductor cable, one conductor being used for telegraph and two for telephone service. A short land line then connects the cable with the Western Union wire.

Fort Trumble, Conn.—About 14 miles of one-conductor cable was furnished by the Engineer Corps and laid by the Signal Corps from Goshen Point, Conn., to Gull Island; thence to Plum Island and across Plum Island by one-half mile of land line, connecting with the cable running to Gardiners Point. Connection is to be made at Goshen Point with the line of the commercial company, which work is not yet completed and will require 1,483 yards of twelve-conductor, twisted pair, insulated wire, crossing river from New London to Groton Point, for use of range-finding system.

Fort Preble.—Connected with Portland by a telephone line, which line is intersected by the post line.

Governors Island, N. Y.—About three-fourths of a mile of fifteen-conductor cable was laid between this island and the Barge Office, in connection with the Treasury Department. Three of these conductors are for the use of the Signal Corps.

In the vicinity of San Francisco land lines were constructed from Point Bonito to Fort Baker and Sausalito; also from the Presidio wharf to Point Lobos. A cable for connecting the important forts of the harbor is yet to be provided.

Considerable work in connection with electrical intercommunication was also done at the various fortifications in the Department of the Gulf.

The following table shows the location and length of the United States military telegraph lines in the several military departments:

Sections and stations.	Length.	Sections and stations.	Length.

APPENDIX 8.

REPORTS ON ELECTRICAL INSTALLATION AT CAMPS ALGER, CUBA LIBRE AND SAVANNAH, GEORGE H. THOMAS, HAMILTON, POLAND, MEADE, AND WIKOFF.

WAR DEPARTMENT, SIGNAL OFFICE,
Camp George Gordon Meade, Pa., October 25, 1898.

The CHIEF SIGNAL OFFICER OF THE ARMY,
Washington, D. C.

SIR: In reply to your telegram of yesterday, which only reached me this morning, I have the honor to submit the report called for, as follows:

The chief signal officers of the Second Army Corps, from the time of its organization to the present, have been as follows: Lieut. Col. R. P. Strong, from the organization of the corps until July 30; Capt. Carl F. Hartmann, from July 31 to August 19; Lieut. Col. Edward B. Ives, from August 20 up to the present date.

Until August 16 the Second Army Corps was stationed at Camp Alger, Va. On the following day it was transferred to Camp Meade, Pa.

When I reported for duty its headquarters was at Camp Meade, and the several regiments were arriving daily. I have no data in this office from which a map of Camp Alger can be made for you, showing lines at Camp Alger, but am informed by Capt. C. F. Hartmann that maps, data, and information regarding the work of the Signal Corps during the time that the Second Corps was at that point are on file in the office of the Chief Signal Officer.

I inclose herewith a map of Camp Meade, showing the location of lines and telephone offices as follows:

Telephones: 1, telephone exchange; 2, office of corps commander; 3, corps headquarters; 4, corps headquarters; 5, provost marshal; 6, chief surgeon; 7, depot quartermaster; 8, depot commissary; 9, depot quartermaster; 10, long-distance telephone; 11, bakery; 12, headquarters Second Division; 13, Second Division commissary; 14, Second Division, Second Brigade; 15, Second Division, Third Brigade; 16, First Division, Second Brigade; 17, First Division hospital; 18, headquarters First Division; 19, First Division, Third Brigade; 20, First Division, First Brigade; 21, First Division corral; 22, Second Division hospital; 23, Red Cross Hospital; 24, Second Division, First Brigade; 25, Engineer Corps.

The lines are of standard Signal Corps construction No. 14 galvanized-iron wire on lances. There are a total of 30 miles standing; altogether 33 miles have been constructed, and 3 miles have been taken down.

The telegraph offices are as follows: At corps headquarters, at headquarters Two hundred and third New York Volunteer Infantry, at Commercial Telegraph center.

All of the wires of these offices were installed by the Signal Corps company, part

of the material being furnished by the Signal Corps and part by the several telegraph companies. The operators at the telegraph offices at corps headquarters and the Two hundred and third New York are Signal Corps men, as are also the messengers for delivering the messages. These offices are kept open day and night. Both commercial and military business is done, the money accounts being kept by the sergeant in charge of these offices, an arrangement satisfactory to the companies and the military. At the point marked "Z" on the map the Western Union, Postal, and Bell companies have an office for commercial business. Over these the Signal Corps has no jurisdiction other than what military necessity may dictate. At a point about 100 yards north of corps headquarters, on a little stream, a small water power has been installed which drives an electric generator. The energy furnished is one-eighth of a horsepower and supplies electricity for ringing the telephone call bells. This arrangement saves much time in making calls and exchange connections. The work was installed by men from both companies of the Signal Corps, under the immediate supervision of First-Class Sergeant Lewis, of the Sixth Company, who built the water wheel. This installment is unique, in being the smallest power house in the world. It is absolutely complete, with dam, race, sluices, gates, etc.

An electric-light system has been installed at headquarters by the Signal Corps, which furnished the material and labor. The power is supplied by the Middletown Electric Light Company, the quartermaster's department paying the bill. The special daily duty performed by the two companies is as follows: 11 mounted orderlies (bicycle orderlies have been discontinued temporarily), 5 telegraph operators, 1 telegraph manager or chief operator, 3 telephone operators, 3 telephone exchange operators, 2 dismounted orderlies, 1 chief lineman, 1 electric-light electrician, 1 foreman of the repair squad, 1 stenographer in the chief signal officer's office.

The routine duties of the Signal Corps consist in mounted drills, care of horses and transportation, instruction in visual signaling, dismounted drills, and camp routine generally, also the repair and maintenance of electric lines and in photographic work. Special experiments have been made with acetylene gas flash lanterns, which have proven very successful for night work. When the commercial use of calcium carbide becomes more general, so that reliance may always be put upon getting it, then these lanterns will naturally replace those using oil. The torch is never used at all, and I would recommend its discontinuance. It is cumbersome, uses an enormous quantity of oil, and messages can be transmitted by it only very slowly. No experiments have yet been made with a view of determining whether acetylene can be used in the daytime to supplement the heliograph in cloudy weather, but these experiments are in contemplation.

Owing to the shortage of officers and the amount of work falling on those present for duty, there has been as yet no chance for establishing an officers' school, but such a school is contemplated to be started as soon as possible, the curriculum to consist of lectures and essays on professional subjects, readings and recitations from Myer's Manual, instruction in Spanish, minor electric engineering, and the elements of hygiene.

The Signal Corps force here consists of the Eleventh Company, Captain Hartmann, and the Sixth Company, Captain Hepburn. These companies are below their quota, the Eleventh Company lacking 2 officers and 19 men, and the Sixth Company lacking 3 officers and 27 men. Most of these are absent sick.

It would be very advisable if a third company could be assigned to this corps, so as to give an opportunity for technical instructions to officers and men. The Eleventh Company has a noncommissioned officer's school; the Sixth has not. The equipments of the company are in general as follows: To the two companies combined there are 42 horses and 28 mules, 1 mountain wagon, 3 battery wagons, 1 wire-reel wagon, and 5 army wagons. Animals and wagons are in fair condition. The companies are well equipped with the usual complement of camp and garrison equipage, all in good order. The signal property, both visual and electric, is ample and in good condition; there are no lance trucks and I would advise that we be supplied with three of them.

As far as I have been able to observe, the esprit de corps of our arm of the service is exceedingly high.

The inclosed report covers the work done at Camp Alger previous to my joining the Second Corps.

Very respectfully,

EDWARD B. IVES,
Lieutenant-Colonel, Chief Signal Officer.

HEADQUARTERS SECOND ARMY CORPS,
OFFICE OF THE CHIEF SIGNAL OFFICER,
Camp George Gordon Meade, Pa., August 19, 1898.

Gen. A. W. GREELY,
Chief Signal Officer, United States Army, Washington, D. C.

SIR: I have the honor to report to you that, after conferring with me, the major-general commanding the Second Army Corps ordered me as acting chief signal officer, with one company Signal Corps, to proceed with his headquarters to Middletown, Pa., on August 16, 1898.

The Sixth Company, Captain Conner commanding, received orders to move at reveille on that day. They proceeded to break camp at once, and by noon had everything packed and loaded on wagons. The Signal Corps horses, property, and equipment were expeditiously loaded on the cars at Dunn Loring and arrived at Middletown, Pa., about 4 o'clock a. m. on the 17th instant, about one hour after the train bearing the major-general commanding.

I was invited by the chief engineer and quartermaster to assist in selecting a site for our camp. I do not hesitate to say that the situation and location is equal to the site selected for the headquarters of this army corps, and probably superior to that of any command therein. The Signal Corps company was the first detachment to get into camp and under shelter, the entire company being under cover before 6 o'clock, the camp site having only been finally determined on at 3 o'clock. The headquarters of this corps did not get into camp until the 18th instant, being in the meantime in parlor cars on a railroad siding about 1 mile from the present location. The transmission of all orders and information was performed by couriers furnished from my command on horses and bicycles. On the 18th instant telephone communication was established between the signal camp and corps headquarters and also with the quartermaster and commissary depots near the railroad, about 1 mile distant, these being the only points ready at the time. On the 19th instant, at 9.30 and 10.30 a. m., telegraph connection was completed with the Postal Telegraph and Western Union Telegraph companies, respectively. Since then the office of the chief surgeon and the Second Division hospital have been connected with our telephone system.

In the installation of our telephone system and in making connections with the telegraph lines Lieutenants Coe and Bawsell rendered efficient assistance. In order to get telegraphic communications immediately it was necessary that I should use my own material, the telegraph companies not having a supply at hand. I have reason to believe that the work of the Signal Corps is entirely satisfactory to the major-general commanding.

The collection and distribution of mail, courier service, mounted-orderly service (horses and bicycles), and telegraph-messenger services are all being performed by the Signal Corps.

I beg to say in conclusion that there is little room for improvement in the services rendered by the Signal Corps generally, and none at all in the telegraph and telephone system.

I have the honor to remain, your obedient servant,

CARL F. HARTMANN,
Captain, Signal Corps, United States Volunteers.

OFFICE OF CHIEF SIGNAL OFFICER,
HEADQUARTERS SECOND ARMY CORPS,
Camp George Gordon Meade, Pa., September 23, 1898.

Gen. A. W. GREELY,
Chief Signal Officer, United States Army, Washington, D. C.

SIR: I have the honor to submit to you the following narrative in order to complete my report of work done at this camp and also at Camp Russell A. Alger, Va., during the month of August. * * *

From August 16 to August 30 First Lieutenant Chandler was in command of the Eleventh Company, which was during this time and up to September 2 encamped near Dunn Loring, Va., at the headquarters of the First Division, Second Army Corps, to which this company was attached. On August 17, the day after General Graham left Camp Alger, the Western Union Telegraph and Chesapeake and Ohio lines were continued to the headquarters of the First Division at Dunn Loring, Va., about 1½ miles distant. The telephone exchange and all wires were removed from the old exchange building and established in the house used as division headquarters one of the rooms on the second floor in this building being given up to the Signal

Corps as a telephone and telegraph station. This work was completed on that day. On the next morning the company moved camp to a point near First Division headquarters. A telephone order from Col. H. H. C. Dunwoody on that day directed that Fort Myer hospital be connected with the First Division camp by telephone. The men and material were immediately sent to Fort Myer hospital to connect it with the Camp Alger telephone line. By 4.30 p. m. the next day the line was completed and in operation. This work was in charge of Lieutenant Daggett. Owing to the fact that a considerable part of the route was through dense underbrush, which had to be cut out, and that two wires were necessary to reach the main line, it being a metallic circuit, the work was necessarily slow and tedious.

On August 20 the entire telephone system was changed. Instead of having a number of telephones in parallel on each line a separate line was run to each telephone, using the ten drops on the switch board. This was possible owing to the fact that the number of telephones in use had necessarily been decreased because of the move of the Second Division and part of the First Division to Camp Meade, Pa. All new lines had been run and men were stationed at all the telephones, so that precisely at 12 o'clock noon the telephones were cut in on the new system without interrupting the service one minute. This work was in charge of Lieutenant Darnell. A line was constructed that day from central station to the Signal Corps camp and another to the quartermaster's office. * * *

On August 30 the company made three most interesting tests of line construction. The first was a test of lance-line construction, one-half mile of which was constructed by a squad of six men in twenty-eight minutes; this time includes making the grounds and connecting the instruments (the Allen telegraph and telephone field kits). The second test was in taking up the same half mile of lance line, which was accomplished in eleven minutes and fifteen seconds. In putting up and taking down this line a quartermaster's mule wagon was used for carrying the portable and adjustable wire reel on the seat box and carrying the lances on the bottom of the wagon. The third test consisted of laying $1\frac{1}{4}$ miles of four-strand insulated coil wire from the wire-reel wagon. The work was accomplished by three men and a driver. The line was laid, the grounds made, and the Allen telegraph and telephone field kits connected, and the line was in operation in eleven minutes. Two men were on the wagon to guide the wire and make the connections, and the third man, mounted on a horse, came in the rear, moving the wire across the road to prevent its being run over. The location was across fields and over roads, a part of the latter being corduroy; these tests were made under the supervision of First Lieutenant Chandler. * * *

On September 2, having received orders to move to Camp Meade, I left Camp Alger and proceeded to this place with my company, except Lieutenant Darnell and six men. Most of the lines were taken up before we left, as only three regiments, division headquarters, and the First Division hospital remained at Camp Alger when we left. Before leaving most of the telephone lines and other connections had been taken down, leaving as little work as possible to be done by the detachment which remained behind under command of Lieutenant Darnell.

Although I intended that this report should only include the operations of my company up to September 1, I think it well to report here the final work done at Camp Alger and thus close that part of our history.

On September 7 Lieutenant Darnell received orders to be ready to move with his detachment of six men to Camp Meade by 6 p. m. on September 8. He thereupon removed all wires and instruments not previously taken out, reserving only the long-distance telephone and the telegraph until the last moment. He terminated the contract with Mr. H. E. Church for the long-distance telephone and delivered the instrument to him, receiving his receipt therefor, thus closing our relations with him. As the contract with him entitled the Signal Corps to the use of his telephone circuit for nearly three months longer, the telephone at Dunn Loring was left connected and a short spur was run to the First Division hospital, where it was connected with the Cabinet telephone belonging to Mr. Church, which he loaned to the hospital. This last line was constructed in a very temporary manner, as the surgeon in charge said it would only be in use for a few days. The telephone I speak of at Dunn Loring was connected with the long-distance telephone to Falls Church and Washington. Lieutenant Darnell and his detachment of six men arrived here in good health and reported for duty on the 8th instant, bringing with them the little material I had left behind at Dunn Loring for their use.

Very respectfully,

CARL F. HARTMANN,
Captain and Acting Chief Signal Officer.

HEADQUARTERS UNITED STATES VOLUNTEER SIGNAL CORPS,
FIFTEENTH COMPANY,
Montauk Point, Long Island, October 26, 1898.

CHIEF SIGNAL OFFICER,
War Department, Washington, D. C.

SIR: The following is an official report of the signal work at Camp Wikoff performed by the Fifteenth Company of the United States Volunteer Signal Corps.

Montauk Point, Long Island, having been selected as an official camp for the reception of the Fifth Army Corps upon its return from the campaign in Cuba, I was, on the 5th of August, 1898, detached from my company and ordered to report to the commanding officer at this place for special duty. I arrived at Montauk at noon, Saturday, August 6, and having reported to the commander, Major-General Young, I was immediately assigned to the duty of surveying and staking out camps, and also directed to take charge of the Government telegraph work.

At that time the facilities for handling telegraph business at this point were limited, the Western Union being the only telegraph company having an office here, their work being done by the railroad employees. These men failed to conceive the importance of dispatch in handling Government telegrams, and it became necessary for me personally to act as telegraph operator at this end of the line. I immediately notified the Western Union officials at New York that official telegrams would have to receive preference over all others, and that it was imperative that they at once make adequate arrangements for the proper handling of telegraph business here. These arrangements were promptly made, and Government business at all times during the existence of the camp received preference and telegrams were transmitted without any delay whatever.

Expert telegraphers having arrived from New York, I resumed the work of surveying and laying out the plan of the camp until the arrival of my company on the evening of August 9. We established our camp at a point conveniently near the commanding general's headquarters, and immediately located flag and heliograph stations, and began the work of putting the various parts of the camp in telephone and telegraph communication. By Thursday, the 11th, we had made connection by telephone between General Young's headquarters, the Signal Corps, general hospital, and the depot (the distance between the depot and General Young's headquarters being 3 miles).

It having become apparent at this time that the railroad station would soon be congested with business, it was decided that the Western Union and Long Distance Telephone companies should establish their offices at a point near the Signal Corps headquarters (see map attached); this was accordingly done, and the railroad office was instructed to handle nothing but railroad messages. By an arrangement with the Western Union and Long Distance Telephone companies a building 60 feet long and 12 feet wide was erected and utilized as a headquarters by these two companies and the Signal Corps.

On account of the difficulty and delay in communicating with our soldiers in Cuba, the number of telegrams sent and received by the soldiers became so numerous that it was impossible for the Western Union Company to properly handle the business; we therefore established telegraph stations throughout the camp—nine in all—and detailed operators and mounted orderlies at each of these stations. The locations of these offices were as follows: General Young's headquarters, General Shafter's headquarters, General Wheeler's headquarters, Signal Corps headquarters, detention camp, general hospital, General Ames's headquarters, General Sumner's headquarters, and the bureau of information.

Until the troops began to leave this camp the number of telegrams which we handled averaged 1,500 per day.

Having put up a telephone switchboard, we increased the telephone service as occasion demanded, and when fully completed we had 28 telephones in use; 6 circuits were erected, all metallic, and by an arrangement with the Long Distance Company, who ran a pair of wires from their switchboard to ours, we were enabled to make long-distance connections from any of our telephone stations. Our telephone system was unusually successful, and the number of connections made at the central office averaged 400 daily; every department of the army corps had telephone communication with the central office.

One of the most important features of our work was the sighting and reporting of transports as they came up along the Atlantic coast. A flag station was located on a piece of high ground back of our headquarters and a detail of men was kept there continually. By the use of telescope and field glasses the transports could be sighted from 12 to 15 miles away. As soon as the number and name of the transport could be deciphered they were sent immediately to the commanding general, and whenever possible communication was established with the transport by flag, though in most cases there were no flagmen on board the transports.

A detail of flagmen was sent out daily on the quarantine tug, and it became possible for the examining surgeon to send in a report from each transport as to the nature of the command on board, the condition of the troops, the number of sick, and whether or not any infectious diseases were on board; as a result, the officers in charge were given from two to three hours' time to prepare for the reception of the troops before they were actually disembarked.

On one occasion we learned at night by telephone that the transport *Prairie* had run aground near Amagansett, about 7 miles west of the camp, and we immediately sent at daybreak one of our sergeants on horseback to the scene of the accident. Upon his arrival there he at once sent to camp a report as to the condition of the vessel and the men, and also made arrangements for the moving of the troops to the railroad track, and notified the Long Island Railroad to stop a train to take the men in camp.

Shortly after the camp was established it became evident that no work could be done at night, and that it would be almost impossible to move from one point to another unless the camp was lighted. The commander, General Young, having approved of a plan which I submitted to him for the erection of an electric-light plant, I submitted the same to General Greely, the Chief Signal Officer of the Army, who authorized me to purchase and erect an electric-light plant having a 50-arc light capacity, and directed me to place the lights at advantageous points throughout the camp. In compliance with these instructions, we bought an 80-horsepower engine, a 5-ton horizontal boiler, an 80-foot smokestack, a 50-arc light generator, 50 arc lamps complete, having a 2,000 rated candle capacity, 8 miles of wire, and 225 standard poles. We began the erection of a power house, which was to be 44 feet long, 28 feet wide, and 30 feet high. We made foundations for machinery, set up the power house, and put up 20 lights in twelve days, and at the end of fifteen days all of the 50 lights were up and the plant was running at its full capacity.

Still another feature of our work was the making of maps. We made one of the camp as it was originally intended to be, and another of the camp as it actually was after the arrival of the troops from Cuba and the south. (See map attached.)

It having been decided that this place be abandoned as a camp, the troops were gradually withdrawn, and as the various headquarters were broken up we recovered our telephone and telegraph instruments and wire. We erected in all 22 miles of telephone lines, 8 miles of telegraph lines, and 8 miles of electric-light lines, all of which we have since recovered and invoiced to Lieutenant Clarke, Governors Island, and Captain Dodds, Atlanta, Ga., with the exception of about 2 miles of wire which is now in use for the purpose of giving the general hospital permanent communication with the depot and the commander of the camp.

Being advised that the electric-light plant was to remain here for the time being, we carefully stored in the power house all of the material used in the operation of the plant, and an inventory of same sent to the disbursing officer. Having been ordered to Huntsville, Ala., to report to the chief signal officer of the Fourth Army Corps, we left Camp Wikoff on October 27, 1898.

In conclusion I wish to state that the success of the signal work at Montauk was due entirely to the intelligence, skill, and energy of my officers and men. Every man in the company was untiring in his efforts, and all demonstrated their patriotism by doing everything in their power to make this camp both convenient and comfortable for those who had done such noble work in the campaign at Santiago.

Very respectfully,

AMBROSE HIGGINS,
Captain, United States Volunteer Signal Corps.

HEADQUARTERS FOURTH ARMY CORPS,
OFFICE OF CHIEF SIGNAL OFFICER,
Huntsville, Ala., October 27, 1898.

The CHIEF SIGNAL OFFICER OF THE ARMY,
Washington, D. C.

SIR: I have the honor to submit herewith the following report of operations with the Fourth Army Corps at Tampa, Fla., and Huntsville, Ala., from August 4, 1898, until October 28, 1898.

Pursuant to paragraph 15, Special Order 179, War Department, August 1, 1898, I reported in person to Major-General Coppinger at Tampa, Fla., August 4, 1898, as chief signal officer.

The corps headquarters being under orders to proceed to Porto Rico, I at once made careful examination of the signal property stored at Tampa, with a view of obtaining a suitable equipment for service. There was found one balloon company well equipped, under Lieutenant Wildman, Volunteer Signal Corps, the odds and

ends left behind by other companies which had gone to Cuba and Porto Rico, and some other property received since their departure.

The facilities for transportation on the steamer selected for the headquarters being limited, and it being desirable that a signal party should be available for service the moment a landing at Porto Rico should be made, I organized a detachment of 1 officer and 10 men with a section of field train to accompany the corps commander, and proceeded to Port Tampa City August 10 to embark. The Tenth Company, which was being held in quarantine at Egmont Keys, and the balloon company (Seventeenth) were to follow on the next steamer.

During embarkation on the steamer *Santiago* on August 11 orders were received by the corps commander to disembark and send the steamer to Santiago. The Signal Corps was then marched back to Tampa.

On the same day, August 11, orders were received to move to Fernandina, Fla., and almost immediately after orders to move to Huntsville, Ala. Accompanied by 2 enlisted men, I proceeded to Huntsville, Ala., arriving there August 13, and going into camp August 15.

By use of material borrowed from the Bell Telephone Company, work was commenced August 15 (the previous two days having been given to selection of routes), and on August 19 telephone and telegraph communication was opened between corps headquarters and the Western Union Telegraph Company, Huntsville, Ala.

On August 17 part of the Tenth Company, Signal Corps, United States Volunteers, Capt. T. F. Clark, reported, having been released from quarantine at Egmont Keys, Fla. This company was without any signal equipment whatever. On the 19th instant 10 men of Seventeenth Company, under Lieutenant Shepherd, reported from Tampa, Fla., and also a detachment of the Tenth Company from New York, which had been shipped from Egmont Keys, Fla., to that place by mistake.

The Seventeenth Company brought the first signal material for use, and work was prosecuted the next day. On August 21 the remainder of the signal train arrived from Tampa, and on September 2 the remainder of the Seventeenth Company reported from Camp Greely, Fla.

On August 25 I addressed the following telegram to the Chief Signal Officer of the Army: "Signal material reached here August 19. Fourth Army Corps headquarters, division and brigade headquarters, corps and brigade hospital, all supply depots, telephone exchange in Huntsville, and Western Union Telegraph Company now all connected by telegraph or telephone."

Since that date a large number of important stations have been connected with the telephone system. This places every division and brigade headquarters, supply depot, and hospital in this army corps in communication with the Huntsville telephone system and with each other.

During the time the system has been in operation, a period of sixty-nine days, 5,691 telegraph messages have passed over the signal lines to the Western Union Telegraph Company and 3,162 telephone messages have been sent and received at these headquarters. The messages sent and received through the field exchange by the 21 outlying stations (of which it was impossible to keep a record) would aggregate many times the above number. It is believed that this record sufficiently demonstrates the necessity for as well as the value of such service.

During the existence of this camp the reorganization of brigades has been almost continuous, each change making necessary the recovery of old lines and the building of new ones to the new headquarters. The total number of miles of field lines erected has been 18.

On September 11 a detachment of 10 men was ordered to Omaha, Nebr., and on October 3 the Tenth Company left here for Boston, Mass., to be mustered out of service. Owing to the very small number of men available for work (only 23 being the average number), details from regiments have been necessarily made at all points excepting at headquarters and at the telephone exchange, where the Signal Corps men exclusively have been employed. They have also done all patrol work and line building.

The accompanying map and attached memorandum show the stations and field-telegraph lines as they exist in the Fourth Army Corps at this date. Electric time is furnished to the command daily over the Western Union telegraph lines.

To the great promptness with which all supplies have been furnished from your office, and the ample facilities that have always been afforded me to aid in my work, is due the greater part of whatever success has been attained.

The signal camp has this day been inspected by Maj. Gen. Grenville M. Dodge and ex-Governor Urban A. Woodbury, of the War Department investigating committee. Its condition reflected great credit upon the Seventeenth Company and the officers attached thereto.

Very respectfully,

R. P. STRONG,
Lieutenant-Colonel, Signal Corps, United States Volunteers,
Chief Signal Officer.

HEADQUARTERS SECOND ARMY CORPS,
OFFICE OF CHIEF SIGNAL OFFICER,
Camp Alger, Va., August 2, 1898.

The CHIEF SIGNAL OFFICER OF THE ARMY,
Washington, D. C.

SIR: In compliance with instructions, I have the honor to submit the following report of operations of the Signal Corps, United States Volunteers, with the Second Army Corps at Camp Alger, Va., from June 4, 1898, until August 2, 1898, inclusive:

In accordance with paragraph 19, Special Order No. 131, Headquarters of the Army, A. G. O., June 4, 1898, I reported June 6 to Maj. Gen. William M. Graham, United States Volunteers, at Camp Alger, Va.

The next day, June 7, operations were commenced with one enlisted man detailed from a volunteer regiment. Supplies were promptly furnished by your office, and by means of selected men from the various regiments it was possible within a few days to report to the Chief Signal Officer "that all brigade and division headquarters, commissary and quartermasters' supply depots and division hospitals were connected with Second Army Corps headquarters and with each other;" also, "that corps headquarters was connected by telegraph and telephone with the War Department and the chiefs of the supply departments at Washington, D. C."

This service was specially acknowledged by the Chief Signal Officer in a letter dated June 21, 1898.

The records not being available at this time, I am unable to give details as to the amount of business done over the lines.

It was necessary to maintain incessant communication, and the amount of service rendered was very great.

The organization and equipment of the regiments was progressing continuously, and the time required to accomplish this work was greatly lessened by the facilities for communication furnished by the signal department. This was notably so in the case of ordnance and clothing equipment.

The continued arrival and departure of troops, necessitating changes of brigade organizations, kept the Signal Corps busy recovering field lines and reerecting them

as the new headquarters were established. The removal of brigade and division headquarters to the new camps near Dunn Loring also added much to their labors.

The total number of miles of field lines erected up to August 2 within the limits of Camp Alger was 15½ miles, and in addition 9 miles each of telegraph and telephone line connected the camp with the War Department, making 43½ miles in all.

The Sixth Company, Signal Corps, United States Volunteers, which was organized at Camp Alger, and which performed most of the work, was composed of men selected for special qualifications from over twenty-five thousand men. They were well equipped in every way and performed excellent service. The services of Second Lieut. Basil Lenoir, Signal Corps, United States Volunteers, were especially valuable.

On the 13th the Eleventh Company, Signal Corps, United States Volunteers, under Capt. Carl F. Hartmann, reported for duty.

When the cavalry was detached from the corps a bicycle-orderly service was established in connection with the headquarters offices and Signal Service lines. The service was efficient and an improvement upon that performed by cavalry orderlies.

As an instance showing the value of perfect communication within the limits of a military command and with the outer world the following episode is cited: The command had been paid July 2; through a misunderstanding as to the scope of orders suspending the usual drills over July 4, a large portion of one of the volunteer regiments left camp on the night of July 3 without authority, with the avowed purpose of visiting their homes in a distant State. Being met on the road leading to Washington by the commanding general, they disregarded his orders to return. Hurrying to his headquarters, the general ordered his provost marshal to arrest these men with his guard, and then called upon his chief signal officer to put the machinery of the Signal Corps in operation. Orders were at once telephoned to the provost marshal at Falls Church, the terminus of the electric-car line leading to Washington, to turn all men back; to the power house, to cut off the current and stop the cars then en route and loaded with absentees; to the chief of police at Washington to warn the guards at the Virginia terminus of the Aqueduct Bridge, Georgetown, D. C.; to the chief of the mounted squad to place mounted men at the Washington end of the Long Bridge and Aqueduct Bridge to prevent passage of soldiers, and to chief of detectives to station men at all railroad depots in Washington to arrest men attempting to leave the city on trains without passes.

Each division headquarters was "called" and the commanding officers summoned to the telephone by the corps commander. Personal orders were given to each to have the long roll sounded, each regiment paraded, and rolls called so that every man absent from the command might be determined. Soon the bugles were sounding throughout the camps, and shortly after the reports came rolling into headquarters.

The lines of communication had answered their purposes well; no part of the system failed. Men on the electric cars, which had been brought to a standstill, took to the roads, but the cavalry scouts herded them in. In Washington the guards at the railroad depot gathered in about thirty, who were returned the next morning after a night in the police station.

Here was a case of a whole army, scattered over several square miles, brought to "attention," as it were, in a few minutes, and orders issued accomplishing simultaneous action over many square miles of territory. In less than an hour the whole work had been accomplished and the camp resumed its usual quiet, broken only by the passage of the guards bringing in captives.

The means of communication furnished by the Signal Corps to commanding officers have been very extensive and of great value. The service has been of a high order, and any departure from the standard will be quickly noted and criticised. Quick methods of communication are no longer luxuries, but necessities, and the best will be demanded hereafter.

On August 1, I was relieved from duty with the Second Army Corps by Special Order No. 179, Headquarters of the Army, and ordered to report to Tampa, Fla., as chief signal officer Fourth Army Corps. At the instance of the commanding general my departure was delayed one day to arrange details for proposed move of the headquarters to Manassas, Va., leaving August 2.

The accompanying map and attached list will show the location of signal stations and the lines of communication at Camp Alger during my service there.

Electric time was furnished the command daily through the Western Union Telegraph Company.

Very respectfully,

R. P. STRONG,
Lieutenant-Colonel, Signal Corps, United States Volunteers,
Chief Signal Officer.

WASHINGTON, D. C., November 4, 1898.

The CHIEF SIGNAL OFFICER, UNITED STATES ARMY,
Washington, D. C.

SIR: I have the honor to submit herewith a brief report upon the operations of the Signal Corps troops under my command from the date of my assignment as chief signal officer of the Third Army Corps on the staff of Major-General Wade until the present, with outline maps showing the telegraph and telephone lines constructed and operated at Camp Thomas, Chickamauga Park, Ga., Camp Hamilton, Lexington, Ky., and Camp Poland, Knoxville, Tenn.

The Third Army Corps was organized in two divisions at the time of my arrival for duty, June 27, 1898, and no Signal Corps troops or equipment had previous to this time been assigned to the corps, the necessary signal service being performed by the signal detachment attached to General Brooke's headquarters, and under the immediate command of Capt. (now Lieut. Col.) William A. Glassford, of the regular Signal Corps. Under Colonel Glassford's efficient command telephone lines had been constructed, connecting each corps, division, and most of the brigade headquarters with a central station at General Brooke's headquarters, where a signal sergeant was constantly kept on duty day and night, and lines to the quartermaster's depot, the commissary depot, the chief quartermaster's office, chief commissary office, General Boynton's headquarters, the different division hospitals and ambulance companies were constructed and connected to "central" for the efficient and speedy transaction of the administrative business of a great camp of over 50,000 men. The Western Union and Postal Telegraph companies had also field offices for commercial business at general and corps headquarters and at two or three other points in the park, while the local telephone company of Chattanooga had a special wire run to General Brooke's headquarters, by which also the city was connected with the camp. Upon my arrival application was made to the Chief Signal Officer for at least two

full Signal Corps companies, one for each organized division of the corps, and for signal equipment complete for each company.

On July 8 the Third Company United States Volunteer Signal Corps, under command of Capt. Frederick T. Leigh, consisting of 4 officers and 54 enlisted men, arrived at Camp Thomas from Washington Barracks, D. C., and reported for duty with the Third Corps. They were encamped about a mile and a half from corps headquarters, as shown on the accompanying map.

On July 14 a detachment of Signal Corps recruits from Nashville, Tenn., under command of Second Lieut. Charles B. Rogan, jr., consisting of 1 officer and 20 enlisted men, reported for duty and were attached temporarily to the Third Company, for subsistence, equipment, and instruction.

On July 22 the Twelfth Company, United States Volunteer Signal Corps, under command of Capt. Frank Lyman, jr., consisting of 3 officers and 52 enlisted men, from Washington Barracks, D. C., reported for duty. For the proper and uniform equipment and instruction of these troops, they were encamped together and a battalion organization completed. The Third and Twelfth companies were each equipped with clothing, tentage, ordnance and signal supplies at Washington Barracks before leaving, and the wisdom of this was strikingly shown by comparison with Lieutenant Rogan's detachment from Nashville, which reported with no equipment whatever of any kind. Despite the most strenuous efforts not even a knife, fork or spoon could be obtained for these men for several days after their arrival, and it was necessary to borrow these articles at each meal from Captain Leigh's men after they had finished their meal. Owing to the large number of troops at Camp Thomas to be clothed in a short time, it was difficult to secure clothing for this detachment within a reasonable time, so that these men were finally clothed by measuring each man and telegraphing the entire list to your office, where this clothing was selected, packed, and shipped by express. By this prompt method much time was gained, and these men were enabled to be assigned later to the two companies in the battalion, and furnished some of the most efficient men in the command. The organizations had no transportation when they reported, and effort was made to secure this as soon as possible. Each company was finally equipped with transportation about as follows: Fifteen horses for mounts, 16 mules, 2 army wagons, 2 Signal Corps wagons. Besides these, for each company, the battalion as a whole had a wire wagon for the field telegraph train. Much delay was experienced in obtaining the horse equipments, which had to be secured by sending a requisition by mail to Washington, from there to Rock Island Arsenal, and from the arsenal the material was sent to the organization at Chickamauga. There was no ordnance depot or storehouse at Camp Thomas where these articles could be drawn directly.

Believing that the Third Corps would soon be sent to Cuba, the instruction and discipline of the signal battalion was pushed with vigor and with gratifying results. The high technical character and varied attainments of the officers and men made efficiency certain. The daily exercises and practical instruction instituted aimed to cover the varied duties which signal men may be called upon to perform before the enemy. A schedule of daily routine is given in battalion orders, a file of which is in your office.

Upon the departure of Colonel Glassford with General Brooke for Porto Rico, the maintenance and operation of the Signal Corps lines throughout the camp were assumed. At corps and division headquarters Signal Corps men were installed throughout the twenty-four hours to conduct the field telephone service. Their duty was to call the parties wanted, receive and deliver messages, and keep a record of the official business transacted over the lines. Owing to the nature of the country in the park, and the frequent rains, a party of linemen were kept constantly on duty or subject to call at any time.

For the convenience of officers and men who in some parts of the camp were 2 or 3 miles from general headquarters, commercial messages were received and the proper toll collected at Signal Corps telegraph offices and sent to general headquarters for transmission by the regular companies. A careful account was required of each operator upon being relieved daily, and the amount turned over to the proper company.

The conditions for preserving the health of the men were not good, and therefore extra efforts were made to guard against disease. A surgeon visited the camp daily at sick call, and a hospital steward and hospital private were detailed for duty with the Signal Corps camp. A hospital tent and ordinary medical supplies were obtained for the exclusive use of the battalion. Because the water was bad, filters were finally obtained, and each man required to drink filtered water only, but the conditions made it difficult to strictly carry out such an order.

Several practice marches were made for the instruction of the men in packing the wagons and supplies, and in hasty subsistence on the march, and they proved instructive and beneficial to officers and men. Occasion was had at such a time to have a limited amount of target practice with pistols.

On August 6 the Sixteenth Company United States Volunteer Signal Corps, from Washington Barracks, under command of Capt. S. S. Sample, reported for duty to relieve the signal battalion of the Third Army Corps, which was under orders to proceed to Newport News, Va., for embarkation with General Wade's expedition to Porto Rico.

On August 8 the third and twelfth companies, under my command, left Camp Thomas on a special train for Newport News, arriving there on the morning of the 10th.

There being no transport ready, the battalion went into camp on a high bluff on the banks of the James, on a vacant lot within the town, kindly offered for the purpose. The order for further troops to proceed to Porto Rico having been suspended, the battalion remained in camp at Newport News for about two weeks, when it was broken up and assigned to other duty. While at Newport News a detachment of specially selected men, under command of First Lieut. Henry G. Opdycke, was sent to Fort Monroe with transportation, tentage, and subsistence, where within ten days they rendered valuable assistance in overhauling and repairing the electrical connections at that post.

The Third Company, under command of Capt. Frederick T. Leigh, was selected for duty at Santiago, and left by the steamer *Old Dominion* for New York, for embarkation on the Government transport *Seguranca* for Santiago de Cuba.

Although orders were received from Washington that no man disinclined for service in Cuba should be required to go with the company, since the protocol had been signed and opportunity would be given for discharge, yet 39 men volunteered to go.

August 25 the Twelfth Company, Capt. Frank E. Lyman, jr., commanding, left Newport News for Chickamauga Park.

After superintending the departure of the Third Company at New York for Santiago, I reported again at Camp Thomas, Chickamauga Park, August 26, 1898, to Major-General Breckenridge and was assigned as chief signal officer of the camp.

Upon the arrival of the Twelfth Company from Newport News the Signal Corps troops at the camp at that time were the Twelfth and Sixteenth companies, which were encamped together on Snodgrass Hill, and a new battalion organized. At this time the troops were fast leaving for smaller camps at Anniston, Ala., Knoxville, Tenn., and at Lexington, Ky. Orders were received to send Signal Corps detachments for service at each of these camps, and accordingly Captain Sample, with two lieutenants and a detachment of men from the Sixteenth Company, left for Anniston, Ala., with Brigadier-General Frank, on September 2, 1898, arriving on the morning of September 3.

First Lieut. A. G. Thompson, with one officer and a detachment from the Twelfth and Sixteenth companies, left Chickamauga Park on September 3 for Camp Poland, Knoxville, Tenn.

Capt. Frank E. Lyman, jr., with two officers and a detachment of the Twelfth Company, left Chickamauga Park on September 4, 1898, for Camp Hamilton, Lexington, Ky.

Sergt. Lyman P. Hale, of the Sixteenth Company, with a small detachment, was left at Camp Thomas in charge of the Signal Corps lines left standing at the park for the use of the hospitals and the different supply depots not yet closed. For a detailed account of the Signal Corps work of each of these detachments, I refer to the reports of each of the officers commanding, which are forwarded herewith. Outline maps of the signal lines at Camp Thomas, at Camp Hamilton, and at Camp Poland are also submitted and explain themselves.

I wish, in closing this report, to record my appreciation of the zeal, intelligence, and skill shown by the officers and men of the Signal Corps battalion, and especially to acknowledge the efficient services of First Lieut. William Jarvie, jr., Third Company, now in Santiago, who was battalion adjutant, and to First Lieuts. A. G. Thompson and Henry G. Opdycke, who served at different times as battalion quartermasters.

Very respectfully,

GEORGE O. SQUIER,
Lieutenant-Colonel, United States Volunteer Signal Corps.

SAVANNAH, GA., November 5, 1898.

The CHIEF SIGNAL OFFICER, UNITED STATES ARMY,
Washington, D. C.

SIR: I have the honor to make the following report relative to the work of the Signal Corps companies attached to the Seventh Army Corps:

As this corps has as yet had no active service, the work has consisted principally in the maintenance of a system of intercommunication by telephone and telegraph between its different subdivisions.

Second Lieut. H. W. Stamford, United States Volunteer Signal Corps, reported at the headquarters of the Seventh Army Corps, at Jacksonville, Fla., on June 28, 1898,

with twenty-three men. The Second Company, United States Volunteer Signal Corps, under command of Capt. Howard A. Giddings, arrived on July 4, and Captain Giddings assumed command of the signal camp which had been established. Capt. Charles T. McIntire arrived on the 31st day of July with the Fourteenth Company, United States Volunteer Signal Corps. I arrived at Jacksonville on August 6, and reported for duty as chief signal officer of the Seventh Army Corps. The Fourteenth Company having been ordered mustered out, left for Indianapolis on September 14. A portion of the Thirteenth Company, United States Volunteer Signal Corps, under command of First Lieut. Charles M. Duffy, reported September 15, Capt. George R. Gyger, its permanent commander, arriving on the 26th. Capt. Howard A. Giddings, Second Company, United States Volunteer Signal Corps, having resigned on September 28, 1898, Capt. John J. Ryan, United States Volunteer Signal Corps, was assigned to this company and reported for duty on October 16.

The main system of intercommunication established at Jacksonville was a telephonic one, the several headquarters, depots, hospitals, and offices of the staff departments being placed upon lines which were brought together at the camp of the Signal Corps, where a small telephone exchange was kept in operation. In addition to this, a short telegraph line connecting the headquarters of the Seventh Army Corps and the telephone exchange with the main office of the Western Union Telegraph Company was constructed, as well as a line of about 25 miles in length connecting corps headquarters and the Western Union telegraph system with the camp for convalescents at Pablo Beach. The location of offices upon the telephone lines was changed from time to time as troops were moved from one camp to another, and while the First Division was camped at Miami, Fla., an independent telephone line connecting its subdivisions was constructed for its use and operated by a detail of one noncommissioned officer and two men. The location of the several offices, telephonic and telegraphic, as they were at the beginning of October, 1898, is shown upon the inclosed map.

During the months of August and September a systematic course of instruction was pursued looking to the thorough instruction of the officers and men of the command. This comprised drills and practical work with the field train and signal equipments, as well as schools for officers and noncommissioned officers. The mustering out of the Fourteenth Company and the large number of discharges made from the other companies, together with the absence of many men on furlough, necessitated the cessation of the regular course of instruction in the latter part of September.

On October 22 the command left Jacksonville and arrived at Savannah that evening. As the troops comprising the Seventh Army Corps arrived they were rapidly placed in communication with the signal corps camp, and through it with the De Soto Hotel, where corps headquarters had been established. At Savannah the telephonic system has been reinstalled and telegraph lines have been built connecting corps headquarters and the telephone exchange with the telegraph system of the country, and also lines connecting corps headquarters with each of the division headquarters. The system of call bells and annunciators on the target range at Savannah has also been put in thorough repair. A map showing the location of lines and offices established here is appended.

In view of the probable service abroad of this corps in the near future, the filling up of the Thirteenth Company to its maximum limit is requested. Although it would appear that there are two signal companies on duty here, the Thirteenth Company is a mere skeleton. It was found, immediately after the move from Jacksonville to Savannah, that rapid work in the replacing of the system of communication required the addition of more men. The total length of lines built at Jacksonville was about 42 miles. At Savannah not as much line was required, owing to the more compact arrangement of the camps, but a great deal of line erected here was through the business streets of the city, where the poles of commercial companies had to be used.

Very respectfully, your obedient servant,

J. E. MAXFIELD,
Lieutenant-Colonel, United States Volunteer Signal Corps,
Chief Signal Officer.

APPENDIX 9.

ORDERS, }
No. 13. }

WAR DEPARTMENT, SIGNAL OFFICE,
Washington, September 13, 1898.

The disintegration of the United States Volunteer Signal Corps begins with the relief this day from active duty of the Fourteenth Company, under orders, with a view to its furlough and muster out. Debarred by stress of duties at his designated

post from participating in field service with the companies of the Signal Corps, the Chief Signal Officer of the Army can not permit his men to return to civil life without some word of acknowledgment of their loyal, efficient, and valuable services to the nation.

Despite this being an age of electricity, nearly a month passed after the legislation creating a great volunteer army before authority of law was granted for the organization of a volunteer signal corps; nevertheless its members can truly claim that this corps has failed in no duty and been found wanting in no emergency, and there were many.

The history of the volunteer and regular corps are inseparably connected; for the 60 regulars—men and officers—were but a framework to the 116 officers and 1,000 men in the volunteers. Apart from the Chief Signal Officer, every regular signal officer but one served as a volunteer, and all, without exception, have been merged and unified into one command.

With the war practically ended, the brief recital of your services is not vainglorious, but may serve as a standard which we trust the American soldier of the twentieth century will strive to excel in days of future peril to the Republic.

In the Santiago campaign you were the first of the army to arrive, as you were the last to leave. Destroying within range of Spanish guns the submarine cables that gave the enemy daily information of inestimable value, when the occupation of Santiago was ordered you repaired cables with such celerity that you opened communication between the United States Marine Camp at Caimanera (Guantanamo), and New York City on June 21, the day prior to the landing of the Fifth Army Corps off Santiago. Detained even after the homeward voyage of your commanding general, you formed the last organized command to leave the conquered city, and some even now are not free from detention camp. Battles may be fought and epidemics spread, but speedy communications must nevertheless be maintained, and owing to your efforts the American army in Cuba has not been isolated telegraphically a single day.

In the Cuban campaign you arranged, maintained, and operated a system of cable and land lines—partly commercial, partly war cables, partly flying-telegraph lines, and partly telephone lines—that enabled messages to pass in twenty minutes from the Executive Mansion in Washington to the headquarters of the army before Santiago, and which offered direct and immediate communication between the Secretary of War in his office and the Signal Corps men in the advanced rifle pits on the right, the left, and in the center of our intrenched army within 400 yards of the enemy. When the city fell your lines followed immediately army headquarters as it moved therein.

No one will ever know the difficulties—physical and moral, climatic and service—under which you labored in Cuba. Heat and thirst, hunger and fatigue—these present sufferings, with impending disease and death—you endured and faced uncomplainingly with the rest of the army; but these conditions never prevented the prompt, cheerful, and efficient discharge of the important duties devolving unremittingly day and night on the Signal Corps.

Although not counted a part of the fighting force of the army, you unhesitatingly advanced, in obedience to orders and under the direction of an officer of another corps, the signal corps balloon to the skirmish line, where you sent up and occupied it under sharp fire of shrapnel and heavy fire of musketry until, rent and perforated, it fell useless to the ground. Later, your balloon destroyed, you carried to the front, under heavy fire, rapid-firing guns for the use of the First United States Volunteer Cavalry (Rough Riders).

In Porto Rico you were ever with the advance, participating as scouts and skirmishers in the capture and occupation of towns. From the beginning to the end of the campaign you kept each important command in telegraphic or telephonic communication both with the corps commanders and also with the base of operations. Your action and persistency speedily replaced the special cable instruments destroyed by the enemy, thus making possible immediate telegraphic communications with the United States. Such were your energy and dispatch that nearly 200 miles of wire were being operated by you in Porto Rico when the peace protocol initiated an armistice.

In the Philippines you were always to the front, and throughout siege operations constructed and maintained telegraph and telephonic lines in the advance trenches at Manila, remaining with the rest of the army under fire daily, under conditions so dangerous that 5 officers were brevetted and several men recommended for medals of honor. The city taken, your application and ingenuity repaired the severed Manila-Hongkong cable days in advance of the arrival of the English cable ship, and this very day marks the laying of a signal-corps cable between Cavite and Manila.

Less exciting, but scarcely second in importance, were your duties at the great camps of the country, Alger (Falls Church, Va.), Cuba Libre (Jacksonville, Fla.),

Meade (Middletown, Pa.), Thomas (Chickamauga Park, Ga.), Wikoff (Montauk Point, Long Island), and others, where telephonic and telegraph systems, indispensable for proper administrative purposes, were promptly established without waiting for formal application.

The connections by cable of the principal forts in our great harbors and the initiation and installment of an entirely new electrical fire-control system were also your labors. Meanwhile, throughout the war, the military telegraph lines around the great Indian reservations and along the Mexican frontier were as regularly maintained and faithfully operated as in peace.

Wise restrictive legislation by Congress, in obliging two-thirds of the Signal Corps to be electrical experts, recognized, theoretically, the value to the Signal Corps of competent officers and intelligent men. It has remained for you to practically demonstrate this in the unique character of service rendered by you to the Government. While your service everywhere has been of the highest character, you have especially illustrated that development of character necessary to expert work by your devotion as officers and your obedience as men under the trying and monotonous conditions of camp and garrison life, where the soldier and officer are fashioned day by day for the supreme moment of battle. The lessons there learned have served you well.

The Signal Corps has filled neither the guardhouse nor the hospital. Serving in the field in Cuba, in the Philippines, and in Porto Rico, and in home garrisons at Tampa, Chickamauga, Camp Alger, Jacksonville, and Montauk, yet your total aggregate of over 1,300 has lost by disease in camp and field, to date, only 5—officers and men included.

As our roads part and the greater number of the Signal Corps go back to the paths of civil life, the Chief Signal Officer of the Army gives you all God-speed, hoping that the hardships of war, while making you advocates of all peace that is not shameless and unpatriotic, will ever make you mindful of the value and welfare of the regular Signal Corps, of which you have been so great a part in the war, to the glory of the American Army.

A. W. GREELY,
Brigadier-General, Chief Signal Officer, United States Army.

APPENDIX 10.

REPORT OF MAJ. EUGENE O. FECHÉT, DISBURSING OFFICER OF THE UNITED STATES VOLUNTEER SIGNAL CORPS.

The CHIEF SIGNAL OFFICER, U. S. A.,
Washington, D. C.

SIR: I have the honor to submit the following report for the period of June 1 to September 30, 1898:

PERSONAL.

Under General Orders, No. 128, A. G. O., Washington, June 1, 1898, I relieved Maj. Robert Craig, Signal Corps, United States Army, as disbursing officer, receiving from him all funds and property for which he was accountable.

Major Craig was taken sick in April, and up to date of relief was unable to perform any duty, consequently when I assumed the duties of disbursing officer the current work of the office was very greatly in arrears.

With the passage of the act making appropriations for "national defenses" the clerical force on duty in this division consisted of but two enlisted men—sergeants, United States Signal Corps.

In order to handle the largely increased amount of work resulting from the purchasing and forwarding of supplies to the commands in the field, the small clerical force was increased by three clerks, one of whom was an accountant; so that during the period of the greatest activity, from June 1 to September 30, all the work of the division was practically performed by the disbursing officer and this exceedingly small force.

Owing to the very limited room space at the disposal of the Chief Signal Officer for the entire Bureau, the clerks of the disbursing division had to share a room 20 by 20 feet with three other clerks. This room is on the fourth floor and has a western exposure, consequently excessively hot.

In this limited room space seven clerks have worked throughout the summer, and notwithstanding two large electrical fans were constantly in motion, the temperature in this room ranged for many days from 95° to 97° F.

Under these unsanitary conditions and with great physical discomfort my clerks faithfully performed their arduous duties; regular hours for stopping work were disregarded and nine to ten hours daily became the rule, and a part of the clerical force worked every Sunday throughout June, July, and August.

CHARACTER OF THE WORK.

The usual routine work of the disbursing officer consists in the preparation of the estimates for appropriations; the purchasing, under bids and specifications, of signal supplies; packing, shipping and invoicing of same; the preparation of money accounts and property returns of the disbursing office, etc., but with war conditions the work necessarily took a larger range.

A large army was to be furnished with all the appliances for advanced methods of electrical and visual signaling, and also provision was to be made for the procurement of all the requisites for electrical installation of the fire-control system of the forts guarding the harbors in the country.

All this meant the purchasing of a great variety of supplies—from the simple flag and staff to complex electrical instruments, from ordinary telegraph wire to armored submarine cable, and from signal kites to great war balloons.

Hardly any class of supplies and equipment could be found ready-made and awaiting a purchaser. Signal equipment, whether for visual or electrical communication, is special and technical; hence time became an important factor in the problem that was to be solved, viz, to so order equipment from the manufacturer as to be able to fill requisitions at once and with the minimum of delay.

It is believed that the work has been fairly well accomplished and as economically as possible.

APPROPRIATIONS.

As a result, several years ago, of the reduction in the annual appropriation for the Signal Corps from \$22,000 to \$18,000, there was on hand upon the declaration of war but \$800 available to supply the entire Army with modern, up-to-date signal equipment.

Upon the declaration of war the work imposed by law upon the Chief Signal Office required a large addition to the regular appropriation to meet the new conditions. Allotments from the several war appropriations were made as follows:

National defenses (war)	\$241,400.00
Deficiency acts, May 9 and July 7, 1898, "Signal Service of the Army, January, 1899"	367,000.00
Total	608,400.00

DISBURSEMENTS.

The chief items of war expenditures from March 25 to September 30, 1898, fall under the following headings:

For maintenance, operation, and rental of cables	\$182,830.47
Telegraph and telephone lines, instruments, batteries, and supplies	65,670.53
Heliographs, kites, lanterns, and other visual signaling	16,833.65
Field glasses and telescopes	12,614.25
Lance trucks and wire wagons	7,616.42
War balloons and expenses in connection therewith	21,514.42
Electrical installation at posts of fire-control system, etc.	16,484.36
Miscellaneous (company outfits, stationery, furniture, photographic material, etc.)	12,278.07

ESTIMATES.

The estimates for the fiscal year ending June 30, 1900, of \$47,500 are based upon the assumption of the Army being increased to 75,000 men. Calculations for the above estimates were very carefully made, and it is not believed that any material change should be made in them. Should the Regular Army be increased beyond 75,000 men, the appropriations for the Signal Corps for the coming fiscal year should be proportionately increased.

The estimate of clerical force required in the disbursing branch of the Chief Signal Office is respectfully submitted:

1 storekeeper and assistant to disbursing officer	\$1,400
1 invoice and property clerk	1,200
1 stenographer and typewriter	1,000
1 messenger	840
1 laborer	600
1 packer	600
Total	5,640

It provides for but two skilled accountants, viz, a storekeeper and assistant to the disbursing officer and an invoice and property clerk at an annual cost of \$2,600. The third clerk, who shall be a stenographer and typewriter, is needed for the large correspondence of this office. The messenger, laborer, and packer are equally indispensable, since the chief supply depot of the entire Signal Corps is located in Washington, and forms a part of the disbursing branch.

The total cost of the administration of the disbursing office for the fiscal year ending June 30, 1900, is but \$5,640, and in view of the probable increase of the Regular Army fully threefold its present strength, and the large increase of work in this office, it is not believed that any reduction from this amount should be made.

Very respectfully,

EUGENE O. FECHÉT,
Major, United States Volunteer Signal Corps, Disbursing Officer.

APPENDIX 11.

REPORT OF CAPT. OTTO A. NESMITH, UNITED STATES VOLUNTEER SIGNAL CORPS, ASSISTANT TO THE CHIEF SIGNAL OFFICER, ON GENERAL CLERICAL WORK OF THE SIGNAL OFFICE.

WAR DEPARTMENT, SIGNAL OFFICE,
Washington, October 29, 1898.

The CHIEF SIGNAL OFFICER, U. S. A.

SIR: In compliance with instructions from the Chief Signal Officer, I have the honor to submit the following brief report on the work of the Signal Office:

The work accomplished by this office can be told in the most general way only, for to enter into detail would involve repetition and defeat the purpose of brevity sought.

This office, the clerical force of which has been for years most inadequate even under normal conditions, was confronted in the early part of the calendar year with the approach of war, and long before actual hostilities were declared was overwhelmed with communications bearing either directly or remotely upon the work of the Signal Corps.

Thousands of letters from applicants for commissions, for enlistment or employment, from inventors or promoters of aerial, telegraphic, signaling, and other devices, poured in until it became impossible to separately consider or treat them, and skeleton letter forms, for different subjects, were devised to fit typical cases and, so far as possible, save clerical labor, and yet furnish a reply to the communications.

The thousands of applications for enlistment above referred to were as rapidly as possible classified and abstracted, the writers instructed as to further mode of procedure on their part, and lists prepared showing name, address, qualifications, and recommendations of each applicant, so that when the Volunteer Signal Corps was authorized by law and its recruiting officers ready to enroll, these lists, geographically divided, gave to them invaluable information and greatly facilitated the work of enlistment, doing much toward securing for the corps the high standard of quality it developed.

In addition to all the new class of work forced upon the office, its original work was increased in proportion to the increased activity and necessities engendered by war conditions, the regular correspondence and routine clerical work assuming proportions far beyond the power of the small force to properly handle.

To still further complicate matters the working force of the Signal Office was suddenly reduced to one experienced clerk, and the temporary appointments made were necessarily those entirely unacquainted with the technical and military work of the office, requiring that each one should be specially instructed; and, as circumstances required that each clerk should be a general clerk, and not confined to one class of work, the matter of instructing new appointees, devolving as it practically did upon the officer in charge, in addition to his other and more important duties, became a serious problem, and with the repeated changes occasioned by transfers, sickness, etc., requiring renewed instructions in each case, greatly embarrassed the office, and in addition the lack of office space enhanced the difficulties encountered.

When it is understood that not only the general correspondence pertaining to such an office, but correspondence of every kind bearing upon the movements of the Corps, either collectively or individually, and with reference to its personnel and kindred subjects, has been carried on by this small force, some idea may be had of the energy, intelligence, and constant work required to accomplish it.

Under a comprehensive card system the records of the military history in detail of every officer and man of the Corps have been kept, showing date and circumstance of entry into the service, rank, subsequent promotion, assignments, duties, etc., which,

having been added to and kept up to date, so far as records received at the office have rendered possible, have been brought into use daily in the work of the office, and will prove invaluable when the permanent records of the Signal Corps are to be completed.

The control by the Chief Signal Officer of the telegraph and cable censorship increased to a great extent the work of the office, making necessary the handling of much business that came to it unexpectedly though legitimately. In the matter of telegrams alone (the majority of which were necessarily in cipher, requiring unusual care on the part of the typewriters to avoid errors while writing words having no meaning to them and at the same time attain the necessary dispatch) the strength of the force was often greatly taxed.

In spite of all these drawbacks the work of the office has been carried on at all times with but a minimum of delay, and important matters received practically immediate attention.

It was expected that when the organization and muster-in of the Volunteer Signal Corps was accomplished the amount of work would lessen, but with actual service in the field and camp, with frequent changes, came new conditions that required adjustment and routine matters to be disposed of, so that no relief resulted, but together with the work attendant upon the muster-out of some of the companies, made necessary by the reduction of the Volunteer Army, have continued to keep up the high limit of office work.

And yet under such conditions no effort, in obedience to the expressed wishes of the Chief Signal Officer, has been spared at any time to promote the welfare of the members of the Signal Corps in field or camp, and particularly those with the invading armies on foreign soil, to facilitate correspondence between the men and their relatives and friends at home and to keep them advised as to physical condition when occasion for anxiety arose.

There still remains an enormous amount of work to be done to properly classify, card, etc., the thousands of communications that in the rush of such a period could be only acted upon and so treated as to be available for current reference, leaving to the future the work of regular entry, which work, however, is now being attempted as opportunity offers in the handling of a paper, or where a moment can be spared from the necessary current work.

In conclusion, I can not refrain from speaking in appreciative terms of the clerical force of this office. Intelligent and industrious, their capacity for work has been only equaled by their zeal and willingness. Leaves of absence have been almost unknown even throughout the unusually trying weather of the past summer, and the constant call through these many months for extra hours of labor, necessarily imposed, has in no wise affected their cheerfulness or the quality of their work.

Very respectfully,

OTTO A. NESMITH,
Captain, United States Volunteer Signal Corps, Assistant.

APPENDIX 12.

REPORT OF LIEUT. COL. GEORGE O. SQUIER AND PROF. ALBERT C. CREHORE ON DISCOVERIES AND EXPERIMENTS IN SINE-WAVE TELEGRAPHY.

WASHINGTON, D. C., *October 29, 1898.*

The CHIEF SIGNAL OFFICER, U. S. A.,
Washington, D. C.

SIR: We have the honor to submit herewith a preliminary report upon recent experiments with the sine-wave system of transmission of signals over submarine cables.

A technical report upon the physical side of this work will be submitted as soon as the time and opportunity have been afforded which the subject demands.

In compliance with Special Orders, No. 212, A. G. O., dated Washington, September 9, 1898, Lieut. Col. George O. Squier, United States Volunteer Signal Corps, was directed to proceed from Camp Thomas, Chickamauga Park, Ga., to Cleveland, Ohio, and New York City, under special instructions from the Chief Signal Officer of the Army, which were to conduct, with Prof. Albert C. Crehore, assistant professor of physics, Dartmouth College, some preliminary tests of a new system of submarine cable transmission.

These tests were made in New York between the dates of the 25th of September and the 16th of October, 1898, upon a cable of the Commercial Cable Company, known as the Coney Island Cable, extending from New York City to Caneo, Nova

Scotia, which is a part of one of the regular commercial circuits used by this company between the United States and Europe.

It is desired to record, at the outset of this report, our obligation to the Chief Signal Officer of the Army for his encouragement and support.

The first experiments upon the sine-wave system of telegraphy were made at the Artillery School, Fort Monroe, Va., a description of which was given in a paper* read before the American Institute of Electrical Engineers in New York and Chicago, April 21, 1897, to which reference is made.

The next logical step was to test the system upon long telegraph lines, and for this purpose the inventors went to England, and were afforded every facility to do so over the Government telegraph lines, through the courtesy of the postmaster-general, and Mr. William H. Preece, engineer-in-chief of the British postal system. These experiments were made with the object of determining whether there was an advantage for code telegraphy in the use of a modern alternating current smooth wave, the typical form of which is the simple sine wave, and the experiments were conclusive in favor of the use of such a wave, in distinction from that now exclusively employed throughout the world. With the sine-wave system words were sent and received at the rapid rate of over 3,000 words per minute.

The speed of the commercial telegraph receiver now generally used in England, known as the Wheatstone receiver, was at that time increased by the new method of transmission as much as threefold when operated under identical conditions of the line. These experiments were described in a paper† before the Franklin Institute, Philadelphia, January 19, 1898, to which reference is made.

Up to this time only experimental apparatus was required, but when the physical superiority of this character of wave was confirmed the next step was to construct transmitters capable of meeting actual commercial conditions.

The results obtained over aerial lines strengthened the opinion that the type of sine wave would be more efficient than the square-topped type heretofore employed for the transmission of electric signals over submarine cables; and at the same time that machines were being constructed to operate on land a cable transmitter was also made. The cable transmitter was completed and the other instruments were well advanced when the war with Spain interrupted further immediate progress.

When in September the opportunity to continue these experiments was presented it was determined to test the cable transmitter without delay, and for this purpose the Commercial Cable Company kindly consented to the use of one of their cables for the purpose. The cable experimented with is that between New York City and Canso, Nova Scotia, which has a length of 826.67 knots, an electrical resistance of 13,706 ohms, and an electrical distributed capacity of 231.4 microfarads. Messages are prepared for transmission in the new system by perforating a paper tape with the same perforator which is at present universally used for cable working, and are transmitted by feeding the prepared paper through the transmitter in the usual manner.

The receiver to be used is not different from that generally employed—the siphon recorder. The only change introduced is in the transmitter, and in this there is a distinct physical difference from other transmitters, which may be briefly described by saying that it sends upon the cable electrical waves of very different shape from those sent by the present instruments. Experiment shows that whatever the shape of the electromotive force wave employed in transmission, if it is periodically alternating the resulting record received is about the same in all cases, and resembles a sine wave very closely in shape. Whatever irregularities and sharp corners existed in the original waves, these are all smoothed over and removed by the action of the cable in transmission, so that the record received has much the same appearance in any case. If, however, a wave is employed in the transmitter of the same shape as that which is naturally received, it should be anticipated that better results would be obtained, because the cable, so to speak, has no work to do in removing the irregularities and sharp corners of the transmitted wave, since they did not exist.

The result of the tests with the cable is that the signals received show a greater amplitude and have better definition when the new transmitter is used, and when the present automatic transmitter is employed. This is true, whatever the speed of transmission, the comparison being made between the transmitters under identical conditions of the line, extending over a range of speed from 100 to 180 letters per minute. This means that the sine-wave transmitter may be employed at a greater working speed than the present transmitter and secure an equally legible record at the receiver.

* The Synchronograph, a new method of rapidly transmitting intelligence by the alternating current—Crehore and Squier. Journal of United States Artillery, July, 1897. Paper presented to the International Postal Congress, Washington, May, 1897.

† Tests of the Synchronograph on the telegraph lines of the British Government, the Wheatstone receiver operated by the alternating current.

The conditions for the transmission of intelligence over long cables are quite distinct and different from those on aerial lines, and the necessity for each additional letter per minute is hardly appreciated until examined from a commercial standpoint. An increase of a single word per minute, at 25 cents per word, bearing in mind that the cable is used duplex—that is, to transmit messages in opposite directions at the same time—gives some estimate of the value of increasing cable speeds.

It is thought that these experiments are particularly pertinent at this time from a governmental point of view, when the United States finds itself necessarily interested in cable transmission more than at any previous time.

For a period of thirty days during the war with Spain the telegraph expenses of the War Department alone approximated \$75,000, and are at present averaging, approximately, \$10,000 per month.

Although this report refers to the results of recent experiments with a submarine cable, yet as bearing upon the general subject of intelligence transmission which we are investigating, some observations upon the importance of improving the art of transmission on aerial lines are given.

It is a fact that at the present time, more than fifty years since the introduction of the telegraph, nine-tenths of the telegraph business of the world is transmitted by hand. From an electrical point of view, one naturally asks why it is, that during this period which represents more electrical progress than all time previous, the rapid transmission of intelligence has not made more advance.

To show the volume of intelligence transmission in the United States, including the mail, the telegraph and telephone services, reference is made to fig. 1, where these statistics are presented in graphical form.

It is noticed in general that there is an increase in all departments of the intelligence transmission service from the earliest dates. The number of pieces of mail sent during 1896 was 5,693,000,000, which is the greatest amount ever sent in a single year. The greatest number of telephone messages on record for a single year is 757,000,000 in 1895. The largest number of telegraph messages was sent in 1893 and amounted to 66,000,000. Thus the greatest number of telegraph messages as compared with telephone messages is in the ratio of 1 to 11½. The greatest number of pieces of mail is in the ratio of 86 to 1 as compared with telegraph messages, or in the ratio of 7½ to 1 as compared with telephone messages. It is also seen that the cost of the mail service of the United States in 1896 was \$90,626,000, or about \$1.25 per capita; the greatest receipts for any year of the American Bell Telephone Company were in 1895 \$16,400,000, about 25 cents per capita, while the greatest receipts of the Western Union Telegraph Company were in 1893 \$24,978,000, about 35 cents per capita.

It appears therefore that the people of the United States pay for a telegraph service of about one eighty-sixth the amount about one-fourth of that paid for the entire mail service of the United States. It also costs one and a half times as much for telegraph service as for the telephone service, although the number of telephone messages is about eleven and a half times as great.

A conclusion seems to be that the people are willing to pay more in proportion for a kind of service like that of the telegraph than any other. From the point of serving the people, as well as from a business standpoint, it appears that improvement in this class of intelligence transmission is at present much to be desired. The present state of the art of telegraphy points to improvements along the line of automatic machine transmission.

It is of interest to inquire what effects a system of telegraphy capable of sending continuously 3,000 words a minute would have on the existing methods. To take a single example of the business between New York and Chicago, where about 40,000 letters are carried daily, it would require but two lines in continuous operation to handle the entire business. At present it takes three days to receive by mail a business reply between New York and Chicago. This transmission by automatic telegraphy could be accomplished easily the same day. It is thought that an effect of this would be to increase business transactions to such an extent that the total volume of intelligence transmitted would be augmented rather than to diminish the business now done by existing methods.

The class of business which such a system would probably at first obtain would be the less urgent telegraph business of greater volume, such as the Associated Press dispatches and newspaper press reports. Among the possibilities is the simultaneous publication of the same newspaper in different parts of the country. For example, in an edition of a daily paper having 12 pages and 8 columns per page, making 96 columns in all, there are less than 185,000 words. At the rate of 3,000 words per minute it would only require about an hour to transmit the entire contents of the paper. This calculation furthermore assumes that the whole paper is uniformly printed in fine type. It would require a single operator, working by hand and averaging 20 words per minute, over six days of twenty-four hours each to send this amount,

It is thought that a telegraph company of the future will fulfill a somewhat different function from the present ones. The tendency of the offices proper will be to transmit and receive letters already prepared rather than to undertake the preparation of the letters as well. The income of the company will be derived from the rent of its lines at a fixed price per minute, or a fixed price per hundred words. The service of the telegraph office then becomes like that of the post-office, its duty being to receive and deliver telegraph letters already prepared, as the post-office does. The difference between the two offices is in the manner in which this is accomplished. The telegraph office becomes a post-office which employs an electric current in a copper wire to carry its letters instead of a railroad train. The advantages in point of speed of delivering letters by the former method are apparent. Instead of requiring twenty-four hours to deliver letters between New York and Chicago, it will require but a few hours at most, and make it possible to receive a reply the same day. It is probable that such a system would take more business from the present postal system than any other; for when telegraph letters can be sent at reasonable rates comparable with postage in a few hours instead of as many days, a certain amount of present post-office business will be diverted. More than this, when business can be done with greater facility than at present, the total volume of business will undoubtedly be increased, because transactions may take place in a day which now require a week.

A telegraph-letter service has actually been in operation during the recent war with Spain, and is responsible as much as any other agent for the great results accomplished in so short a period.

The Army has been organized, equipped, and operated by telegraph letters, and war between civilized nations is impracticable at present without such a service.

The commercial and industrial benefits to the people of the United States of a telegraph-letter service at rates which are not prohibitive as at present, would be no less evident than they have been during the war with Spain.

Very respectfully, your obedient servants,

GEORGE O. SQUIER,
Lieutenant-Colonel, Signal Corps, United States Volunteers.

ALBERT C. CREHORE,
Assistant Professor of Physics, Dartmouth College.

APPENDIX 13.

[Public Resolution—No. 24.]

JOINT RESOLUTION authorizing the printing of extra copies of the military publications of the War Department.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of War be authorized to print, in excess of the one thousand copies authorized by the act of January twelfth, eighteen hundred and ninety-five, such extra number of copies of the military publications of the War Department as may be necessary for the instruction of the National Guard of the various States.

Resolved, That there be printed for immediate distribution by the Secretary of War to the National Guard of the various States the following manuals, regulations, and drill books:

- Three thousand copies of Infantry Drill Regulations.
- One thousand copies of Cavalry Drill Regulations.
- One thousand five hundred copies of Light Artillery Drill Regulations.
- One thousand copies of Manual of Drill for the Hospital Corps.
- Three thousand copies of Manual of Arms, Infantry Drill.
- Three thousand copies of Army Regulations.
- Five hundred copies of Regulations Pertaining to Uniforms.
- Five hundred copies of Military Laws of the United States.
- Five thousand copies of Manual for Army Cooks.
- One thousand copies of Hand Book of Subsistence Stores.
- One thousand copies of Manual for Subsistence Department.
- One thousand copies of Manual for Medical Department.
- One thousand copies of Manual for Quartermaster's Department.
- Five hundred copies of Paymaster's Manual.
- Two hundred copies of Manual of Photography.

Also that there be printed the following:

Three thousand copies of Infantry Drill Regulations, of which one thousand shall be for the use of the Senate and two thousand for the use of the House of Representatives.

Six hundred copies of Cavalry Drill Regulations, of which two hundred shall be for the use of the Senate and four hundred for the use of the House of Representatives.

One thousand five hundred copies of Light Artillery Drill Regulations, of which five hundred shall be for the use of the Senate and one thousand for the use of the House of Representatives.

Two thousand copies of Manual of Arms, Infantry Drill, of which six hundred and fifty shall be for the use of the Senate and one thousand three hundred and fifty for the use of the House of Representatives.

Three thousand copies of Army Regulations, of which one thousand shall be for the use of the Senate and two thousand for the use of the House of Representatives.

Two thousand copies of the Military Laws of the United States, of which six hundred and fifty shall be for the use of the Senate and one thousand three hundred and fifty for the use of the House of Representatives.

Under this resolution the "usual number" not to be printed.

Approved, April 25, 1898.

**REPORT OF THE CHIEF OF THE RECORD AND
PENSION OFFICE.**

REPORT

OF THE

CHIEF OF THE RECORD AND PENSION OFFICE.

RECORD AND PENSION OFFICE,
WAR DEPARTMENT,
October 1, 1898.

SIR: During the fiscal year ended June 30, 1898, as in years past since the organization of the Record and Pension Office, the public business has been promptly dispatched. All the cases received were taken up for action immediately upon receipt, and more than 95 per cent of all cases received were acted on and disposed of within twenty-four hours from the time they reached the office.

The number of cases received and disposed of during the fiscal year ended June 30, 1898, is as follows:

From the Pension Office.....	121,707
From the Auditor for the War Department.....	28,002
Remuster cases.....	6,390
Desertion cases.....	5,038
All other cases, miscellaneous.....	32,159
Total.....	193,296
On hand June 30, 1898.....	None.

This table shows a large increase in the current business of the office during the last fiscal year as compared with that of the preceding year, being a net increase of 43,489, more than 29 per cent, in the number of cases received and disposed of.

This increase is distributed among all classes of cases with which the office has to deal, the largest increase being in the number of applications for the recognition of commissioned officers under the "remuster" act of February 24, 1897. A very marked increase is, however, noted in the number of calls from the Commissioner of Pensions and the Auditor for the War Department for the military histories of former officers and soldiers for use in the adjudication of pending claims, the increase in the former class over the receipts for the preceding fiscal year being 24,664, more than 25 per cent, and of the latter class 8,465, or more than 43 per cent. The number of desertion cases was increased more than 20 per cent, and the number of miscellaneous cases nearly 19 per cent.

It may be mentioned that the miscellaneous cases referred to in the statistical table are largely of the class embraced in the general correspondence of the office, requiring special investigation or administrative action, and that this general correspondence during the last fiscal year was larger than ever before, 54,496 cases having been of that class.

REMUSTER.

As before remarked, there was a large increase during the last fiscal year in the number of remuster cases received. These cases arise under the act of Congress approved February 24, 1897, "to provide for the relief of certain officers and enlisted men of the volunteer forces" in the war of the rebellion. This act was adopted as a substitute for the similar act of June 3, 1884, and the acts amendatory thereof, which expired by limitation June 3, 1895.

The old law provided for payment for services rendered as commissioned officers by persons who were not recognized by their muster into service as of the grades to which commissioned at or for the time the service was performed, and it also gave to its beneficiaries a pensionable status. The new law not only confers the same material benefits, but it also recognizes the persons to whom it is applied as having been in the United States military service in the grades to which they were commissioned from the dates upon which they entered upon duty, under the conditions specified in the law, or otherwise fulfilled the requirements of the law.

REMOVAL OF CHARGES OF DESERTION.

Applications for removal of the charge of desertion standing against ex-soldiers of the volunteer service are considered by this office under the general provisions of the act of Congress approved March 2, 1889, and the acts amendatory thereof, providing "for the relief of certain volunteer and regular soldiers of the late war and the war with Mexico." This law, which is the only law under which such cases can be considered, was evidently intended for the relief of men who, though guilty of a technical violation of military law, were not willful or intentional deserters.

The 5,038 desertion cases mentioned in the statistical table include only those briefed and recorded as applications for removal of the charge of desertion. They do not include the cases in which the charge of desertion was incidentally encountered and considered under the law without a formal application therefor. During the last fiscal year, as usual, the latter class of cases exceeded the former in number, the incidental cases having numbered 7,897, making a total of 12,935 cases adjudicated during the fiscal year under the provisions of the act of March 2, 1889.

CERTIFICATES OF HONORABLE SERVICE IN THE MILITARY TELEGRAPH CORPS.

By an act approved January 26, 1897, "for the relief of telegraph operators who served in the war of the rebellion," the Secretary of War was "authorized and directed to prepare a roll of all persons who served not less than ninety days in the operation of military telegraph lines during the late civil war, and to issue to each, upon application, unless it appears that his service was not creditably performed, or to the representatives of those who are dead, suitable certificates of honorable service in the military telegraph corps of the Army of the United States, stating the service rendered, the length of such service, and the dates, as near as may be, between which such service was performed." It was provided in the enactment "that this law shall not be construed to entitle the persons herein mentioned to any pay, pension, bounty, or rights not herein specifically provided for."

The Record and Pension Office has charge, under the direction of the Secretary of War, of the preparation of the certificates and of their transmission to the persons entitled thereto, as well as of all correspondence or other details in connection with the subject, including the preparation of the roll provided for in the above-mentioned act. One hundred and twenty-eight certificates were issued up to the end of the fiscal year.

Some questions have arisen as to the class or classes of persons entitled to the certificates provided for by the law, the act, according to its title, being for the relief of "telegraph operators" only, but the act itself specifically provides that certificates of honorable service shall be issued to persons (or to their representatives) who served for the requisite period "in the operation of military telegraph lines," and it has been decided by the Assistant Secretary of War that the act includes not only "telegraph operators," but "all who performed services for the United States in the matter of the operation of military telegraph lines;" and these are deemed to include "all classes of employees of the Government engaged in the matter of maintaining and operating the lines themselves over which the messages were sent, including the operators and other civilian employees who were engaged in sending, receiving, and delivering the telegraphic messages."

It has also been decided by the Assistant Secretary of War that "men in the military service who were detailed for or employed on telegraph duty are entitled to the certificates the same as civilians hired for that duty."

INDEX-RECORD CARD WORK.

The work of reproducing the individual military and medical records of the officers and enlisted men of the volunteer forces by the index-record card system has been minutely described and the object of the work fully explained in prior annual reports, so that a further description of the work or explanation of the object for which it was undertaken does not seem to be necessary. During the last fiscal year, and up to the present date, the work has been prosecuted with all of the clerical force available for the purpose, and has made such progress as the nature of the records would permit. The great mass of the volunteer records of all wars in which the country has been engaged (except those of the recent war with Spain, which have not yet been filed in this office) have been carded, and the work during the past year has been generally confined to those of a miscellaneous character, difficult of reproduction, and the transcription of which is necessarily slow. The records, however, are of great importance, and it is essential that those containing evidence of personal military service shall be included in the general system of index-record cards. This is especially the case with regard to service in the Revolutionary war, the only evidence of service in that war being, in many instances, the personal mention found in the miscellaneous and fragmentary records now in process of examination and reproduction.

The index-record card work for the fiscal year included the preparation of 637,633 military cards (479,811 of this number were a consolidation of 2,898,781 cards made from monthly returns) and 9,067 medical cards, making, with the number prepared in prior years, a total of 40,215,914 of the former and 6,970,663 of the latter class, aggregating 47,186,577 index-record cards prepared up to and including June 30, 1898.

No special effort has been made since the date of the last annual report to obtain from the State authorities or from historical societies the Revolutionary war records in their possession for the purpose of reproduction, the material now in the custody of this office being sufficient to fully occupy the time of the clerks engaged upon the index-record work, but it is hoped that the War Department collection of such records will be largely augmented by the loan of Revolutionary war records not now in its custody, so that the collection may be made as nearly complete as it is possible to make it after the long lapse of time since the Revolutionary armies were disbanded. The records in the possession of some of the States have already been loaned to this Department, and after having been copied have been returned to their former custodians. The Department in all such cases guarantees the prompt and safe return of the original records and pays all charges for their transportation.

PUBLICATION OF RECORDS OF REVOLUTIONARY WAR AND WAR OF 1812.

One object of the transfer of the records of the Revolutionary war and the war of 1812 to the War Department, as announced in the act approved August 18, 1894, providing for their transfer, was that they should be "prepared for publication." As remarked in the last annual report of this office, Congress will doubtless make the necessary appropriation for the publication of these records at the proper time, but it is clearly not advisable to undertake the publication of any portion of them, especially of those relating to the individual histories of officers and enlisted men, until the compilation shall have been completed and every available source of information shall have been exhausted. In view of the difficulties encountered and the consequent slow progress of the work of compilation the date of the contemplated publication is necessarily uncertain and can not even be approximated with any degree of accuracy, but it is evident that the date of publication is still somewhat remote.

It is due to the employees of the office to state that the prompt and satisfactory dispatch of the business of the office is the natural result of the commendable industry, faithfulness, and zeal which they display in the performance of their respective duties.

Very respectfully,

F. C. AINSWORTH,
Colonel, U. S. Army, Chief of Office.

The SECRETARY OF WAR.

**REPORT OF THE BOARD OF PUBLICATION OF
WAR RECORDS.**

REPORT OF BOARD OF PUBLICATION OF WAR RECORDS.

WAR DEPARTMENT, WAR RECORDS OFFICE,
Washington, October 1, 1898.

SIR: The Board of Publication of the Official Records of the War of the Rebellion respectfully submits the following report of its operations during the fiscal year ended June 30, 1898:

Eleven thousand copies each of Vols. LI, Parts I and II; LII, Parts I and II, of Series I, and Vols. I and II of Series II, were received from the Public Printer during the year and distributed. Three books of Series II and one book of Series III were put in type during the same period.

With the publication of Vol. LIII, which was distributed during the months of July and August last, Series I of these records, containing the record of military operations, such as battles, campaigns, sieges, etc., is practically completed, and the public is now in possession of this extensive and valuable series of military papers consisting of 111 books. Serial numbers 112 and 113 have been reserved for such additional historical matter as may be discovered before the publication of the final volumes of the work.

During the fiscal year 108,357 books and 60,000 plates of the Atlas were received. All the plates and 98,357 books came from the Public Printer; 10,000 books were received from other sources. There were distributed and sold 99,727 books and 2,937 parts (or 14,685 plates) of the Atlas. Letters, circulars, postal cards, etc., to the number of 12,052 were prepared and sent by mail in answer to inquiries respecting the sale and distribution of the work, and over 100,000 labels for mailing volumes, etc., were prepared and verified. The sales during the year numbered 1,750 volumes and 284 $\frac{2}{3}$ parts of the Atlas, with 25 copies of extra plates and indexes, the proceeds, amounting to \$1,441.70, being deposited in the Treasury, as required by law. The sum of \$598 was paid to the Public Printer, upon bills rendered by that officer, for binding the Records and Atlas for subscribers to the work.

On June 30, 1897, there were 57,875 surplus volumes on hand, and this number has been increased during the last twelve months to 67,505. There are also 105,015 plates of the Atlas on hand—equal to about 600 complete copies of that document.

In previous reports of this office attention has been called to the accumulation of these records by reason of the death or removal of individuals or the dissolution and abandonment of libraries and organizations. Under the rules relating to the distribution, volumes due the

classes of beneficiaries named are held, in the case of individuals, until letters of administration are filed, when distribution is continued to the estate. In the case of libraries or organizations this method is not practicable, and the result is an accumulation of books which are not available for distribution without further legislation by Congress. These broken sets are of but little value in their present condition, and it is respectfully suggested that Congress be asked to give you authority to reprint a sufficient number of certain volumes to complete about 1,000 sets. One set could then be supplied to each Senator, Representative, and Delegate of the Fifty-fifth Congress who has not heretofore been furnished with the publication, and two sets could be assigned each member of that Congress for distribution to his constituents. The draft of a bill to accomplish the purpose indicated is given below:

That the Secretary of War is hereby authorized and directed to furnish one complete set of the Official Records of the Union and Confederate Armies to each Senator, Representative, and Delegate of the Fifty-fifth Congress not now entitled by law to receive the same; and in addition thereto he is also authorized and directed to furnish two complete sets of said work to each Senator, Representative, and Delegate of the same Congress, irrespective of his having been already supplied, using for this purpose, as far as possible, those now stored in the War Department and remaining unsold or unclaimed by beneficiaries designated to receive them under the several acts of Congress providing for the distribution and sale of this publication: *Provided*, That the Secretary of War may call upon the Public Printer to print and bind such number of copies of certain volumes or parts as may be found necessary to complete the sets referred to.

A clause in the sundry civil act approved June 4, 1898, provided for supplying each Senator, Representative, and Delegate of the Fifty-fourth Congress, who had not heretofore received the work, with one complete set of these records, and the incomplete sets stored in the Department were made available as far as possible for the purpose. All members entitled under the act mentioned will receive their books, as far as printed, by the time Congress assembles in December.

The financial exhibit for the War Records publication from the beginning of the work is as follows:

Appropriations from commencement of the work in 1874, including		
fiscal year 1897.....		\$2, 494, 708.50
Expended of above:		
Salaries, contingent, and miscellaneous.....	\$1, 211, 781.95	
Printing and binding	1, 261, 699.11	
Covered into Treasury	21, 227.44	
		<hr/>
Total.....		2, 494, 708.50
		<hr/>
Appropriated for the fiscal year 1898:		
Sundry civil act	115, 000.00	
Legislative act.....	15, 380.00	
Deficiency act	15, 000.00	
		<hr/>
Total		145, 380.00
Expended of above:		
Salaries.....	75, 911.24	
Stationery and miscellaneous.....	2, 351.32	
Printing and binding	49, 028.49	
		<hr/>
Total.....		127, 291.05
		<hr/>
Balance on hand		18, 088.95
Outstanding obligations, estimated.....		10, 147.84

The expenditures for the past nine years have been as shown in the following table:

Year.	For salaries and services.	For printing and binding.	For miscellaneous.
1890	\$32,962.41	\$93,332.81	(a)
1891	68,149.42	186,980.20	\$9,539.33
1892	85,262.52	163,595.04	17,403.97
1893	106,726.69	151,747.23	7,662.18
1894	117,041.12	82,769.24	6,834.06
1895	96,909.78	88,051.08	3,808.02
1896	72,795.55	83,108.14	3,433.92
1897	72,582.48	77,408.09	4,751.97
1898	75,911.24	49,028.49	2,351.32

a Not stated.

The appropriation for the current fiscal year is.....	\$94,080.00
Of this sum it is estimated that with present force the expenditures will be:	
For services	\$30,246.52
Miscellaneous.....	1,800.00
Total.....	32,046.52
Leaving available for printing and binding	62,033.48

In April last a deficiency appropriation of \$15,000 was asked, to enable the office to complete the publication of Volume LIII of Series I and Volume III of Series II by the close of the fiscal year. Owing to the deficiency bill not passing until after the 30th of June, it was impracticable to fully avail ourselves of the appropriation or completely effect its object, and the greater part will therefore lapse into the Treasury.

At the date of the last annual report there were 4 army officers and 69 civilian employees connected with this office. Owing to the completion of several branches of the work it has been found practicable to reduce these to 1 army officer and 22 civilian employees—our present force—less than one-third of the former number. This reduction has been effected without material decrease in the capacity of the office.

Respectfully submitted.

F. C. AINSWORTH,
Colonel, United States Army,
President of the Board of Publication.

The SECRETARY OF WAR.

**REPORT OF THE BOARD OF COMMISSIONERS OF
THE SOLDIERS' HOME.**

REPORT

OF THE

BOARD OF COMMISSIONERS OF THE SOLDIERS' HOME.

THE SOLDIERS' HOME,
OFFICE OF THE BOARD OF COMMISSIONERS,
Washington, D. C., October 25, 1898.

SIR: Under the requirements of section 1 of the act of Congress approved March 3, 1883, prescribing regulations for the Soldiers' Home in the District of Columbia, I have the honor to submit the following report of the Board of Commissioners of the Soldiers' Home for the year ended September 30, 1898.

The changes in the number of beneficiaries during the year are shown in the following table:

	Regular.	Temporary.	Total.
On the rolls September 30, 1897.....	1,038	103	1,141
Admitted since.....	181	255	436
Readmitted since	164	164
Total.....	1,383	358	1,741
Withdrawn from the Home.....	129	129
Dropped, dismissed, etc	62	170	232
Died.....	49	5	54
Transferred to permanent roll.....	100	100
Total.....	240	275	515
Leaving on rolls September 30, 1898.....	1,143	83	1,226

This shows an increase of 85 beneficiaries on the rolls since the last annual report.

The number (1,226) on the rolls September 30, 1898, is accounted for as follows:

Present at the Home, 771, an increase of 47 over last year and of 84 over the preceding year; on outdoor relief, 364, an increase of 22; in the Government Hospital for the Insane, 26; on furlough, 65.

The daily average number of inmates during the year was 751. Last year the average was 724, and the preceding year 685.

The total number of deaths was 54, the same as last year. Of these 26 died at the Home, 19 on outdoor relief, 6 on furlough, 2 near the Home, and 1 in the Government Hospital for the Insane.

During the year temporary relief was given to destitute discharged soldiers who were not entitled to admission to the extent of 15,935 meals, of whom 246 were provided with lodgings for a few nights each.

The following statement shows the amounts received and expended during the year and the amount of the permanent fund of the Home deposited in the United States Treasury:

PERMANENT FUND.

Balance in the United States Treasury October 1, 1897.....	\$2, 737, 597. 95
Settlement by Treasury Department for the current year..	\$109, 142. 13
Amount withdrawn for current expenses.....	121, 000. 00
	<u>11, 857. 87</u>
Balance in the United States Treasury September 30, 1898.....	2, 725, 740. 08

ACCOUNT OF THE TREASURER OF THE HOME.

Remaining on hand October 1, 1897	\$8, 264. 14
Received during the year:	
From the permanent fund	121, 000. 00
Interest on the permanent fund	81, 413. 33
Effects of deceased inmates subject to demand of legal heirs	750. 20
Miscellaneous receipts	2, 486. 54
Total receipts.....	<u>213, 914. 21</u>
Disbursements:	
Current expenses	\$168, 996. 46
Permanent improvements	37, 569. 82
Total disbursements.....	<u>206, 566. 28</u>
Balance on hand September 30, 1898	7, 347. 93

The foregoing statement of the permanent fund shows that the settlements made by the Treasury Department in favor of the Home on account of forfeitures of deserters and dishonorably discharged men, deceased soldiers, and court-martial fines was \$25,114.10 less than last year, and that the amount withdrawn from the permanent fund to meet the expenses of the Home was \$11,857.87 greater than the amount placed to its credit. This was not due to excessive expenditures nor to a decrease in the amount which actually accrued to the Home during the year, but simply to the Auditor's office, having been prevented by the pressure of current work, caused by the war, from making the usual settlements of accounts in favor of the Home, and this may continue for some time to come, as it did for several years during and after the war of the rebellion.

The current expenses of the Home, as shown by the treasurer's statement, were \$11,720 greater than last year, which is accounted for by expenses incurred in making much-needed permanent improvements, the installation of an electric plant, repairs to buildings, and purchase of cows for the dairy.

Some of the principal items of the current expenses were:

Subsistence.....	\$34, 843. 87
Expenses of hospital.....	12, 880. 87
Clothing for inmates.....	10, 927. 24
Farm, garden, and ornamentation of grounds.....	19, 107. 51
Extra-duty pay and monthly allowances to nonpensioners	20, 790. 24
Commutation to members residing outside of Home	29, 708. 33

The treasurer's account of funds received for the inmate pensioners shows that he had on hand September 30, 1897, \$43,715.67; that he received during the year \$85,057.47, and paid to pensioners and legal heirs of deceased inmates \$83,053.68, leaving on hand deposited in the United States Treasury, as required by law, \$45,719.46.

The report of the governor of the Home shows that of the 771 resident inmates, 629 are receiving pensions, as follows: One hundred and ninety-five receive from \$6 to \$8 per month; 330, from \$10 to \$16; 76, from \$17 to \$20; 25, from \$22 to \$30; 2, \$50; and 1, \$72 per month.

There are 208 beneficiaries of the Home who served in the war with Mexico, 160 of whom are drawing outdoor relief, and 443 who served in the war of the rebellion, of whom 116 are on outdoor relief, making a total of 651 members who had war (other than Indian war) service.

The attending surgeon reports that 393 patients were treated in hospital; that the daily average was 74.91, and the average age of patients admitted was 53.92; that 2,398 were treated at sick call, and the proportion of deaths to 100 inmates per annum was 3.33. The attending surgeon also reports that 16 patients from the Army, not members of the Home, were temporarily admitted to the hospital for treatment for inguinal hernia.

The sanitary condition of the Home and grounds has been excellent throughout the year, and the water supply and drainage are satisfactory.

The account of the farm and dairy shows that the cultivation of the farm and the reestablishment of a dairy, which was authorized by the board, have proved profitable, both in saving a considerable sum in money and in producing at the Home early and late vegetables and a better quality of milk than that which has been supplied by contract for several years past.

The name of the amusement hall at the Home was changed from Marble Hall to Stanley Hall, in honor of Brig. Gen. D. S. Stanley, the late governor of the Home, who was relieved April 15, 1898.

The act of Congress approved January 19, 1891, requiring the treasurer to keep the current funds on deposit in the United States Treasury, has been complied with, and all supplies for the Home which could be conveniently purchased by contract were so purchased.

The library of the Home contains 6,406 volumes. Nine daily and 16 weekly papers and 17 monthly magazines are provided. The daily average number of inmates who visited the library and reading room was 220, about one-third of the inmates.

The affairs of the Home during the year have been administered by its officers with zeal and wisdom, evidenced by the excellent condition of the buildings and grounds, the kind and just treatment of inmates, and the general care displayed in guarding the best interests of the Home and its beneficiaries. Good, wholesome food, comfortable clothing, clean quarters and beds, and rational amusements have been provided, leaving no reasonable room for complaint.

The following changes occurred in the Board of Commissioners and the officers of the Home during the year:

Brig. Gen. Thomas C. Sullivan, commissary-general of subsistence, retired on November 14, 1897, was succeeded on that date by Brig. Gen. William H. Bell, who was retired January 28, 1898, and was succeeded by Brig. Gen. Samuel T. Cushing. He retired April 21, 1898, was succeeded by Brig. Gen. William H. Nash, who retired May 2d, and was succeeded by Brig. Gen. Charles P. Eagan May 11, 1898, now a member of the board.

Brig. Gen. Samuel Breck, adjutant-general, retired February 25, 1898, and was succeeded by Brig. Gen. H. C. Corbin on that date.

Brig. Gen. David S. Stanley was relieved from duty as governor of the Home April 15, 1898, by Brig. Gen. George D. Ruggles, United States Army, who was selected as his successor.

Byt. Brig. Gen. R. F. Bernard, deputy governor of the Home, was

detailed July 2, 1898, to perform the duties of secretary and treasurer of the Home, commencing June 30, during the absence of First Lieut. Eugene F. Ladd, secretary and treasurer, absent on duty with troops in the field as major and quartermaster of volunteers.

The accompanying papers are reports of the governor, the attending surgeon, and the treasurer of the Home; a statement of receipts and expenditures; statements of the permanent fund and of the interest account; statements of accounts of the pension money of inmate pensioners and their rates of pension; the debit and credit accounts with the farm and garden, and report of members on outdoor relief, all of which are required to be published for distribution to the Army, as directed by the section and act mentioned in the first paragraph of this report.

Very respectfully,

NELSON A. MILES,
Major-General Commanding the Army,
President Board of Commissioners.

The SECRETARY OF WAR.

REPORT OF THE GOVERNOR OF THE SOLDIERS' HOME

GOVERNOR'S OFFICE, UNITED STATES SOLDIERS' HOME,
Washington, D. C., October 1, 1898.

GENTLEMEN: Under the order of the President, upon the acceptance of the resignation of my predecessor, I assumed the duties of governor of the Soldiers' Home on the 15th of April, 1898.

I forward herewith reports of the surgeon in charge of the hospital, and of the secretary and treasurer of the Home, which present in detail information as to the medical and financial administration of the institution for the past year.

The alterations since last annual report, dated September 30, 1897, are as follows:

Schedule of admissions to the Home.

Permanent beneficiaries, September 30, 1897.....	1,038
Admitted during the year.....	181
Readmitted during the year.....	164
Total.....	1,383
Dropped:	
By withdrawal.....	129
For absence without leave.....	20
Dismissed.....	18
Abandoned the Home.....	3
Dropped by order.....	5
Died.....	49
From outdoor relief.....	16
	240
Permanent beneficiaries, September 30, 1898.....	1,143
Temporary inmates:	
Present September 30, 1897.....	103
Admitted during the year.....	255
Total temporary beneficiaries.....	358
Transferred to permanent rolls.....	100
Dropped.....	164
Dismissed.....	6
Died.....	5
	275
Remaining temporary inmates, including 8 in insane asylum.....	83
Total beneficiaries.....	1,406

Of whom 771 are inmates of the Home, 364 receive outdoor relief, 26 are in insane asylum, and 65 are on furlough. Decrease in the number of temporary inmates for the year, 20; increase in the number of regular inmates for the year, 105. The aggregate is 85 more than was shown last year. Of the 54 deaths reported, 6 died on furlough, 1 in insane asylum, 25 in Home hospital, 19 on outdoor relief, 2 near the Home, and 1 in his quarters at the Home. Daily average number of inmates present during the year, 751. Last year the average was 724, and the preceding year 684½.

Transients.—During the year 15,935 meals have been furnished to destitute discharged soldiers, of whom 246 have been provided with lodgings for a few nights each.

Number of pensioners present at the Home and rate of pension.

Rate per month.	Num-ber.	Rate per month.	Num-ber.	Rate per month.	Num-ber.
\$6	92	\$16	28	\$30	6
\$8	103	\$17	71	\$50	2
\$10	57	\$18	2	\$72	1
\$12	199	\$20	3		
\$12.50	1	\$22	1	Total	629
\$14	43	\$24	17		
\$15	2	\$25	1		

Total present, 1897	566
Total present, 1896	563
Readmitted	164
Temporarily readmitted for medical treatment	13
Denied readmission	4

Number applying for readmission during the year	181
Granted outdoor relief	75
Denied outdoor relief	43

Number applying for outdoor relief	118
Inmates present having service in Mexico	48
Inmates on outdoor relief having service in Mexico	160

Total inmates having service in Mexico	208
Inmates present having service in the war of the rebellion	327
Inmates on outdoor relief having service in war of the rebellion	116

Total inmates having service in war of the rebellion	443
--	-----

Nativity of inmates present and absent.

United States	462	Sweden	6
Ireland	344	Russia	5
Germany	191	Holland	5
England	48	Belgium	3
Canada	20	Norway	2
Switzerland	12	Italy	2
Scotland	12	Portugal	1
Austria-Hungary	11	Cuba	7
Denmark	9		
France	8	Total	1, 143

Home library.

Number of volumes on hand	6, 406
Number of volumes added during year	158
Periodicals in reading room:	
Daily papers	9
Weekly papers	16
Magazines, monthly	17
Number of books issued during year	13, 109
Average daily issue	36
Daily average of inmates visiting the library and reading room	220

The farm and dairy have been consolidated and have yielded a profit to the Home, as set forth in the treasurer's report, notwithstanding the severe drought of the past summer, which materially injured the crop.

Improvements during the year.

1. Erection of a hay barrack for storing hay; capacity about 200 tons.
2. Addition to the gardener's cottage.
3. Completion of electric plant.
4. Complete installation of a hot-water system for heating four sets of officers' quarters.
5. Repainting dining hall throughout.
6. Reflooring in King and Scott buildings, excepting the third floor of the latter, which is not yet completed.

The rules of discipline authorized for the Home have been enforced, and have maintained good order. The delinquencies for the last year are set forth in the following table:

Number of delinquencies at the Soldiers' Home, District of Columbia, from October 1, 1897, to September 30, 1898.

Drunkenness	114
Drunk and disorderly	23
Habitually drinking to excess	11
Introducing liquor into the Home	9
Drunkenness on duty	19
Absence without leave	156
Neglect of duty	17
Disobedience of orders	13
Destroying Home property	12
Disorderly conduct	10
Disposing of Home clothing	12
Abusing other inmates	5
Fighting other inmates	5
Disgraceful conduct in public	7
Total number of delinquencies	413
Number of inmates tried once	324
Number tried twice	31
Number tried more than twice	9
Number tried for drunkenness	167
Number tried for insubordination	44
Number tried for other offenses	103
Number not tried	1,414

From this it appears that offenders for drunkenness have numbered 94 per cent of the inmates. It is probable that some and perhaps many of the offenses for absence without leave were the result of drink. Granting that they were all so, the total number of offenders on this account would number 323, or less than 19 per cent of the inmates cared for.

The number of entertainments given in Stanley Hall during the year was 101, at an expense, exclusive of light and heat, of \$739.25.

The band, under its competent leader, has improved constantly during the year, and the Home has now not only an excellent military band but also a fine string orchestra. There is an excellent assortment of music on hand. The good effect of this band upon the discipline and tone of the inmates has been noticeable. The men take pleasure and pride in the daily concerts, and throng the grounds in the vicinity of the band stand every afternoon, excepting Saturdays and Sundays, upon which days the band is not required to play.

Religious services—Roman Catholic, Lutheran, and Episcopal—are held each Sunday in the chapel.

The deputy governor, treasurer, and surgeon have performed their duties most faithfully and acceptably, and I desire to acknowledge the cordial support given by them to the governor in his administration of the Home. The noncommissioned officers, headed by the sergeant-major (who also performs the duties of acting assistant secretary, and whose able service here for the past sixteen years has won the earnest appreciation of successive governors), form an efficient body of men, who faithfully perform their respective duties.

The clerical force is intelligent and faithful.

Very respectfully,

GEO. D. RUGGLES,
Brigadier-General, U. S. A., Governor.

The BOARD OF COMMISSIONERS OF THE SOLDIERS' HOME,
Washington, D. C.

REPORT OF THE ATTENDING SURGEON OF THE SOLDIERS' HOME.

UNITED STATES SOLDIERS' HOME,
Washington, D. C., September 30, 1898.

SIR: I have the honor to submit the following report of the medical department of the Home for the past year ending September 30, 1898:

Peritonitis from perforating ulcer of stomach.....	1	Vertigo	3
Pharyngitis.....	2	Vision, defective	1
Pleurisy	1	Wounds.....	3

This list exhibits only the diseases complained of by the patients at the time of admission to the hospital, and does not include the numerous complications, operations, nor secondary affections arising during the course of treatment. The principal troubles are tuberculosis, chronic rheumatism, heart disease, hernia, catarrh, epilepsy, dyspepsia, and constipation. Many of the men are affected with two or more of these diseases at the same time, and yet may be admitted to hospital for some minor complaint not connected with either.

The 2,398 cases treated at sick call are not included in the above list of diseases. The following patients, not members of the Home, were temporarily admitted to hospital for treatment during the year:

Name.	Service.	Disease.
Spoerry, Otto	Private, Company A, Sixth Infantry	Inguinal hernia.
Coleman, Raymond	Civilian.....	Do.
Gallagher, Walter	do	Do.

The general sanitary condition of the Home and grounds has been excellent throughout the year. The water supply and drainage are satisfactory. There has been no prevalent or epidemic disease among the inmates.

Very respectfully, your obedient servant,

W. H. FORWOOD,
Surgeon, U. S. A., in Charge.

The GOVERNOR OF THE HOME.

[illegible]

Nineteen members on outdoor relief have died since date of last report.
Eleven members were dropped from outdoor relief, after June 30, 1898, in compliance with resolutions of the Board of Commissioners dated June 19, 1891, and July 27, 1898.

R. F. BERNARD,
Lieutenant-Colonel, United States Army, Retired, Secretary and Treasurer.
The GOVERNOR OF THE HOME.

REPORT OF THE INSPECTION OF THE SOLDIERS' HOME.

WAR DEPARTMENT, INSPECTOR-GENERAL'S OFFICE,
Washington, D. C., January 13, 1899.

SIR: I have the honor to submit the following report of the inspection of the Soldiers' Home, District of Columbia, made December 9 to 16, 1898, as required by the act of March 3, 1898. Lieut. Col. E. A. Garlington, inspector-general, and Maj. Thomas T. Knox, inspector-general, rendered valuable aid in the inspection, and Mr. W. T. Kent, the accountant of the Inspector-General's Department, assisted in the examination of the financial transactions and business methods of the Home.

The buildings, grounds, roads, etc., all seemed in admirable condition, showing much thoughtful attention on the part of those whose duty it is to watch over and care for them. There have been a number of recent changes and improvements, all tending to increase the comfort and convenience of the worthy veterans for whose benefit this great institution was established.

Since the last inspection there has been quite a change in the personnel of the officers of the Home, the present officers being Brig. Gen. George D. Ruggles, governor; Lieut. Col. R. F. Bernard, deputy governor; Capt. Charles W. Taylor, Ninth Cavalry, secretary and treasurer, and Maj. L. A. La Garde, surgeon.

General Ruggles relieved Brig. Gen. D. S. Stanley; Capt. C. W. Taylor relieved Lieut. E. F. Ladd, Ninth Cavalry, and Major La Garde relieved Col. W. H. Forwood, all of whom were active, careful, and zealous officers, under whose fostering care the Home improved and flourished.

MEMBERS.

The average number of officers and men present during the Home year ending September 30, 1898, was reported as 755, or 27 more than for the previous year. The highest number present was 780, on August 25, 1898, and the lowest was 672, on June 16, 1898. The total cared for was 1,741, against 1,501 for the previous year. The average number absent was 401, or 1 less than the average for the preceding year, and these were generally absent on outdoor relief. Some men were borne temporarily for months. There were 13 vacant beds in the barracks and 8 in the hospital at the time of inspection. The beds seemed comfortable, though some mattresses were too short. The age of the members present September 30, 1898, ranged from 24 to 92 years and averaged $55\frac{1}{2}$ years, and their length of army service varied from 2 months to 31 years, with an average length of service of 15.2 years.

On the morning the inspection began, December 9, the morning report showed the following:

Present on duty: 1 deputy governor, 1 treasurer, 1 surgeon, 1 hospital steward, 21 sergeants, 5 corporals, 400 privates; temporarily admitted, 66; sick, 77; invalided, 95; extra duty, 143 privates, 1 non-commissioned officer; total, 812. Absent: 1 governor; 379 outdoor relief; on leave, 40 privates; insane asylum, 26. Aggregate present and absent, 1,258.

There were paraded outside the building 574 inmates and 12 civilian members of the band; counted elsewhere about the Home, 52 men. Total number of inmates actually counted, 626.

The behavior of the men appeared to be good, though not so good as for the previous year, as 56 more offenses had been committed than for that year. The total number of offenses committed during the year was 413, by 364 men, of whom 324 offended but once, 31 twice, and 9 more than twice. No members were tried for fence jumping during the year, and of the average present $51\frac{1}{2}$ per cent have never been punished at all.

The books and records of the adjutant's office were examined and found to be up to date and correct, except the record of men receiving outdoor relief footed up 383, while the morning report showed 379.

AMUSEMENTS.

There is no lack of amusements for the old veterans, there being a theater, band, library, billiard, pool, and bagatelle tables, and rooms for smoking, cards, and indoor games and recreations. Variety entertainments at the theater seem to be most liked by the inmates; billiards and cards come next in their favor, and all the means of amusement seem to be appreciated and enjoyed. During the year 101 performances were given at the theater, at a cost of \$739.25. Inmates of the Home are not charged for admission.

The band, which continues to be highly appreciated by the inmates, is composed of 20 men (9 members and 11 civilians), and gave during the year 245 concerts, at a total cost to the Home of \$4,603.34 (including subsistence). That made the average per musician \$230.16, and the average cost per concert \$18.78.

The library was in good condition. At the close of the year it contained 6,407 volumes, an increase of 158 volumes during the year. Thirty-three newspapers and 17 periodicals are subscribed for. The circulation during the year is reported as 12,979, which makes an average of over 17 books read by each man. Fiction is in the greatest demand. The seating capacity of the reading room is 28, and there is an average daily attendance of 215.

BUILDINGS.

The buildings were in a generally good condition.

SHERIDAN BUILDING.

This building has beds for 151 men. Present at inspection, 95 men. The building, in all its parts, was carefully examined and found to be in an excellent state of police and in good repair, except the windows on the west side of the building, which extend to the floor, seem to need weather strips or other means of keeping out the cold. One

heater in the second floor lavatory was leaking. The walls of the basement were dingy and needed calcimining. Hot water is furnished the inmates of this building, once a week only. It would seem more appropriate to have hot water for these old men every day during cold weather, and if the capacity of the boiler is not sufficient it should be increased.

ANDERSON BUILDING.

This building is an old residence, in which are 15 rooms furnishing beds for 43 men. Present at inspection, 38 men. One heater in third story, located in the hall, furnished heat for that floor. Certain rooms in this building, having windows which swing on hinges, are badly ventilated. The floors are old and must soon be replaced. The walls in various places need repapering. A fire in this building would result disastrously to the occupants of the top floor, as the only means of descent is one very narrow pair of stairs located at the extreme end of the building. This building was in a good state of police.

POWER HOUSE.

This house contains a heating and electrical plant. The entire plant seemed to be in excellent condition. The force consists of one chief engineer, one assistant engineer, and four firemen. The chief engineer reported this force as insufficient in extremely cold weather.

SHOPS.

The shops consist of the carpenter shop, blacksmith shop, and paint shop. All were in good condition, and seemed ample for the purposes intended.

HOT HOUSES.

These seem to be in good condition. One florist and one of the assistants was an inmate.

STABLES.

The stables were inspected and found to be in a fair state of police. In stable No. 1 were 7 private horses and 1 public horse; in stable No. 2, 8 public horses and 1 mule; stable No. 3, 2 public horses and 3 private horses. Exhibit P shows only 4 authorized private horses cared for. These stables, the sheds for vehicles, and granary building formed the sides of a small rectangle. Some of them are of wood, and in one of the buildings is stored a large quantity of hay. The nearest fire plug is in front of the main building, and in case of fire at the stables the danger to other buildings would be imminent. The stables are very inconveniently arranged and not at all well adapted to the uses to which they are put. It would be well to construct new stables and storehouses at some more appropriate location.

DISBURSEMENTS.

Since the date of last inspection, November 20, 1897, the office of treasurer of the Home has been filled by three officers as follows: Lieut. E. F. Ladd, Ninth Cavalry, from November 20, 1897, to June 30, 1898; Lieut. Col. R. F. Bernard, U. S. A., from July 1, 1898, to October 31, 1898, and Capt. C. W. Taylor, Ninth Cavalry, from November 1, 1898, to December 8, 1898. Their accounts and disbursements during the

above periods were inspected and the transactions under the separate funds may be summarized as follows:

HOME FUND.

Balance on hand November 20, 1898.....		\$20, 460. 90
Received from United States Treasury.....	\$192, 194. 61	
Received from sales.....	1, 682. 83	
Received from collections	774. 91	
Received from pension fund.....	590. 00	
		<u>195, 242. 35</u>
Total to be accounted.....		215, 703. 25
Disbursed as per vouchers:		
By check	207, 893. 79	
By cash.....	2, 866. 27	
		<u>210, 760. 06</u>
Balance on hand December 8, 1898.....		4, 943. 19

PENSION FUND.

Balance on hand November 20, 1897.....		41, 415. 77
Received from pension agent.....		107, 814. 06
		<u>149, 229. 83</u>
Paid to pensioners	\$82, 367. 71	
Transferred to Home fund.....	590. 00	
		<u>82, 957. 71</u>
Balance on hand December 8, 1898.....		66, 272. 12
Total balance December 8, 1898.....		<u>71, 215. 31</u>
Distributed as follows:		
United States Treasurer.....	71, 045. 59	
Assistant treasurer, New York.....	10. 38	
Cash on hand.....	159. 34	
		<u>71, 215. 31</u>

For the first five months involved in this inspection the cashbook showed an average of \$392.79 cash on hand at the end of the month, and during this period many checks were drawn for cash to pay the pay rolls when the amount of cash on hand very largely exceeded the amount required for such payments, and in more than one instance it seems that the check so issued, presumably for immediate use, was not paid by the Treasury Department until the following month. The average cash on hand at the end of the succeeding seven months was \$170.79. In the matter of public money the law requires that the disbursing officer receiving it shall deposit it with an authorized depository and draw for the same only as it may be required for payments to be made, and then only in favor of the person to whom payment is made. There would seem to be no question as to the wisdom and prudence of this law. There seems to be a constant balance to the credit of the pension fund varying from \$40,000 to \$45,000. The interest on this, even at 3 per cent, would more than pay the cost to Home incident upon keeping the pension accounts.

The income of the Home is derived from the deduction of 12½ cents per month from each enlisted man in the Regular Army; fines and forfeitures of men by sentence of courts-martial; amounts forfeited by deserters; effects of deceased soldiers unclaimed, and interest at 3 per cent on the permanent fund.

The following statement shows the amounts placed to the credit of

this fund by the Treasury, and the amounts withdrawn therefrom to meet the expenses of the Home during the past four years:

	1895.	1896.	1897.	1898.
Balance October 1.....	\$2, 574, 036. 79	\$2, 690, 042. 83	\$2, 711, 124. 52	\$2, 737, 597. 95
Credit settlements.....	188, 006. 04	145, 700. 49	134, 256. 23	109, 142. 13
Drawn for current expenses.....	2, 762, 042. 83 72, 000. 00	2, 835, 743. 32 124, 618. 80	2, 845, 380. 75 107, 782. 80	2, 846, 740. 68 121, 000. 00
Balance September 30	2, 690, 042. 83	2, 711, 124. 52	2, 737, 597. 95	2, 725, 740. 68

There seems to be quite a falling off in the amount placed to the credit of this fund by the Treasury, but this may, to some extent, be due to the inability of the Auditor to make prompt settlements of the accounts of the Regular Army on account of the increased volume of work coming to his office arising from the late Spanish war.

The following are the amounts relating to the Home fund accounted for by treasurer for the year ending September 30, 1898:

Balance on hand October 1, 1897	\$8, 264. 14
Received from permanent fund.....	121, 000. 00
Received from interest.....	81, 413. 33
Received from posthumous sources	750. 20
Received from pension fund.....	590. 00

The following are the receipts taken up by the treasurer for the year ending September 30, 1898:

Balance on hand.....	\$8, 264. 14
Received from permanent fund.....	121, 000. 00
Received from interest fund.....	81, 413. 33
Received from posthumous sources.....	750. 20
Received from pension fund.....	590. 00
Received from sales	1, 284. 20
Received from other sources.....	612. 34
Total.....	213, 914. 21

The expenditures for the same period were:

Current expenses.....	\$33, 835. 52
Subsistence.....	34, 107. 30
Clothing.....	11, 624. 83
Household.....	17, 874. 42
Hospital.....	18, 590. 34
Transportation	329. 68
Construction.....	43, 817. 04
Repairs	7, 924. 32
Farm	8, 754. 50
Outdoor relief.....	29, 708. 33
	206, 566. 28

Balance September 30, 1898.....	7, 347. 93
---------------------------------	------------

The average cost per capita for the year is reported as follows:

Subsistence	\$44. 53
Clothing.....	15. 18
Household	23. 33
Current expenses.....	44. 17
Hospital	24. 27
Farm	11. 43
Repairs	10. 34
Total per capita.....	173. 25

Compared with last year, there is a decrease of the per capita in subsistence, current expenses, hospital, and farm, and an increase in clothing, household, and repairs; and there is a decrease in the total cost of maintenance per man of \$4.05; a normal increase over 1896 of \$1.54. The per capita cost of the National Home for Disabled Volunteer Soldiers for the fiscal year 1898 is \$121.95.

The statement above, as to the per capita of this Home, does not include the payments made to members on outdoor relief. The average number receiving outdoor relief was (nearly) 354 men, or about 30 per cent of the average present and absent, 1,156 in number, and to these members a total of \$29,708.33 was paid during the year, or an average of \$85.98 per man. Including the cost of these beneficiaries, the cost of maintenance per capita would be reduced to \$145.01. The monthly payments to these beneficiaries ranged from \$2 to \$8, and averaged \$6,998 per man, an increase of 23 cents over the average of the preceding year. The number on outdoor relief at the close of the year was 342, exactly the same number reported the year before, and of these 92 were nonpensioners and 250 received pensions ranging in amounts from \$6 to \$16 per month. Among them are 147 Mexican war veterans, and 48 men who served twenty-five years or over.

EMPLOYEES.

The following table has been received, showing the number of employees and the amount paid them during the year:

3 officers.....	\$2, 975. 82
28 noncommissioned officers.....	4, 860. 40
190 members.....	24, 523. 70
60 civilians.....	27, 876. 60
281	60, 236. 52

Compared with the statement furnished for last year there is an increase of six in the number of employees and of but little more than \$800 in the amount paid them.

The ratios of total expenses to amounts paid for services of employees to average membership and average per inmate, for the past seven years, is shown in the following table:

	1892.	1893.	1894.	1895.	1896.	1897.	1898.
Per cent of total expenses to amount paid for services.....	24. 6	23. 7	31	34. 5	26. 3	28. 3	29. 1
Ratio of employees to average membership.....	28. 6	29. 7	37	40. 7	39. 2	37. 8	24. 3
Average per inmate.....	\$64. 87	\$70. 07	\$79. 44	\$81. 83	\$80. 08	\$75. 68	\$52. 12

It will be seen that while the ratio of employees to average membership has decreased, the ratio of total expenses to amount paid for services has increased somewhat. The extremes and averages of the daily compensations are reported as follows:

Daily pay.	Maximum.	Minimum.	Average.
Officers a.....	\$3. 82	\$2. 50	\$3. 03
Noncommissioned officers.....	1. 67	. 33½	. 47
Members.....	1. 00	. 16½	. 37
Civilians.....	4. 00	1. 25	1. 32

a Not including surgeon, who receives only his army pay.

A few men perform work of a light character without pay, their work being confined generally to the care of the grounds.

SUPPLIES.

All kinds of stores and property were apparently kept in splendid condition and appeared to receive much care and attention, and are kept as low as prudence could dictate. On September 30, 1898, there were on hand subsistence stores valued at \$146.27; quartermaster stores, \$3,260; and of clothing, \$3,671.04. During the year the only property condemned consisted of 2,195 articles that cost originally \$1,353.80, about \$1.17 per man.

Commissary stores for issue are handled in the same manner heretofore reported. There does not seem to be any good reason why all subsistence stores purchased should not be received at and issued from the same storeroom, or why any distinction should exist as to purchase and issue between articles classed as on the regular ration and extra issues, as the amount of supplies purchased for either class is apparently not based on the number of men present.

The clothing issued to the men appeared generally good, but some of them seemed to need better. The amount purchased during the year was valued at \$10,593.81, or \$9.16 per man, which is not so liberal as the amount for the previous year, about \$12. The Home does not yet maintain a repair shop for mending clothes or shoes, so the men still bear this extra expense.

The dining hall and kitchen were found in their usual good condition, and no complaints were heard concerning either the quantity or quality of the food or its service. Exhibit M¹ herewith shows the Home mess bill of fare for the week ending November 24, 1898.

The following table shows the amount of food reported as consumed in the dining hall for the months of December, 1897, and June, 1898:

Month.	Amount issued.	Cost.	Average number of men present.	Amount per man.	Cost per pound.	Cost per man.
	<i>Pounds.</i>			<i>Pounds.</i>		
December	108, 112	\$4, 046. 58	760½	142. 17	\$0. 0374	\$5. 31
June.....	82, 859	3, 017. 50	710	116. 70	. 3644	4. 27

For the preparation, cooking, and service of the meals in kitchen and mess hall required 7 for the kitchen and 29 for the mess hall, the same as for last year. To transients not officially connected with the Home 12,935 meals were given during the year, and the recipients were destitute ex-soldiers. The per cent of crockery reported broken was: Bowls, 8; dinner plates, 8; soup plates, 24; vegetable dishes, 3. The garbage is given to inmates for removing it, except the bones and grease, which are sold to dealers.

LAUNDRY.

The Home has not yet established a laundry of its own, so the washing is still done by contract, and there has been quite a reduction in prices since last year. During the month of September 8,414 pieces of regular and 1,012 pieces of extra washing were done; and during this time 40 per cent of the members washed their own shirts, 53 per cent their own drawers, and 90 per cent their own socks. Exhibit F shows

the contract prices for laundry in force during the year, and the following table shows the reduction in this item of expense for a series of years:

Contract prices for laundry work.

Year ending—	Amount per man per month.	Year ending—	Amount per man per month.
June 30, 1893	\$1. 00	June 30, 1897	\$0. 20
June 30, 1894 50	June 30, 1898 16
June 30, 1895 245	June 30, 1899 14
June 30, 1896 20		

WATER SUPPLY.

The water supply seems to be abundant and good, and in every way adequate and satisfactory. The facilities for protection against fire seem good, and great care appears to be taken to prevent fires. There were none during the past year.

FARM AND DAIRY.

The farm and dairy accounts were consolidated to date from October 1, 1897.

About 50 acres are under cultivation. The force consists of 1 chief farmer, 10 laborers, and 2 herdsmen, 1 of whom is an inmate. The herd consists of 41 milch cows, 3 calves, 1 heifer, and 1 bull. They all seemed to be in good condition. There are 7 mules, 1 of which is unserviceable; 1 horse serviceable and 1 horse unserviceable and not on the papers of the Home. In the stable are 4 cows said to belong to the officers of the Home. The buildings pertaining to the stable are in good condition and were being painted at the time of the inspection. The farmhouse is in fair condition. It would be desirable to have it connected with the sewerage system. A building near the stable now occupied by the upholsterer is in need of renovation and repair.

Exhibit I shows that the farm produced \$3,318.73 worth of vegetables, and Exhibit K shows that of these \$2,388.35 worth were furnished to the Home and hospital mess, leaving \$930.83 worth that went elsewhere. The total product of the farm and dairy was: Vegetables expended, \$3,318.73; vegetables in the ground, \$389.50; total vegetables, \$3,708.23; milk, \$2,175.86; total for farm and dairy, \$5,884.09. In addition to this \$2,144.23 worth of vegetables were purchased for the mess table, and although the farm apparently did well it fell short of the demands of the Home.

The garden, which cares for plants, trees, shrubs, etc., raised in the greenhouse and elsewhere for the ornamentation of the grounds and lawn, expended during the year the sum of \$5,679.07 for labor, fuel, seeds, fertilizers, tools, etc., and is credited with \$2,006.50 for 33,980 plants, trees, and shrubs produced. It seems that no fruits are raised.

The Home reservation contains 502 acres. Of this, 50 are under cultivation, 250 in pasture and hay, 12 in garden, 126 in woodland, 42 in the lawn, and the buildings occupy 22.

HOSPITAL, ETC.

The hospital when inspected was in splendid condition, everything appearing satisfactory and denoting great and scrupulous care on the

part of those having charge of it. There are 85 beds in the hospital, and 74 of them were occupied, as against 79 for the preceding year. The average daily number of sick during the year was 74.91 in hospital and 6.57 at sick call, a slight decrease from the average for the preceding year. The following are the principal diseases and the percentages of each:

Chronic: Rheumatism, 11.69; senile debility, 6.97; tuberculosis, 6.01; pneumonia, 3.17; epilepsy, 2.54; locomotor ataxia, 2.33; bronchial catarrh, 2.12; asthma, heart disease and hemiplegia, 1.67 each.

Acute: Alcoholism, 8.47; diarrhea, 3.18; indigestion, 2.96; malarial fever, 2.54; constipation, 1.90; nephritis, 1.06; cholera morbus, 0.63.

Surgical: Ulcers, 1.90; fractures and sprains, 1.48 each; hernia, 1.27; abscess and wounds, 0.63 each.

The principal disease of local origin was malaria, of which there were 12 cases, as against 18 for the previous year and 26 for the year before that. There were no epidemics or sporadic cases of infectious or contagious diseases during the year. The total number of cases treated for the year in and out of the hospital was 2,870 (as against 2,724 for the previous year), with an average of 58.14 days in hospital and 1 day at sick call, as against 64 and 1 for last year. The total number of members admitted during the year was 393; discharged as cured, 160. Fifty-four members died during the year, being exactly the same number that died during the previous year, showing a death rate of 46.71 per thousand, as against 47.79 for the previous year. During the year 31 members and 6 ex-members were buried in the Home cemetery. The cost of each funeral was \$6.42; the coffins, made at the Home shops, costing \$6.12 of this amount. The members are buried in the Home uniforms. An allowance of \$25 each is made for the funeral expenses of the members dying outside of the Home, and during the year \$160 was expended for this purpose, as against \$350 for last year.

Insane patients are cared for in two small barred isolated rooms when necessary, otherwise in the general wards, or are sent to the Government Hospital for the Insane. During the year 25 members showed indications of disordered minds, and they are classified as follows: Permanently insane, 21; temporarily, 4. Eight of these men are violent, and one is classed as a "crank."

There are also 4 members totally blind, and 10 with impaired vision; all of whom are read to daily, and they are well cared for.

The total cost of extra diet for the year was \$2,835.08, as against \$3,126.91 for the preceding year. The hospital employees consist of 29 members and 3 civilians, whose pay for the year amounted to \$6,693.96, an average compensation of \$209.18 per man, as against \$203.34 for the previous year.

The expense for medicines and druggists' supplies of all kinds during the year was \$1,287.05, as against \$1,348.91 for the previous year, or a per capita per member of \$1.11. Last year it was \$1.85. The medicines most used during the year were codliver oil, 6 gallons; iodide of potash, 35 pounds; rochelle salts, 20 pounds; extract cascara sagrada, 12 pounds; compound licorice powder, 10 pounds; epsom salts, 8 pounds; subnitrate of bismuth, 4 pounds; sulphate of quinine, 35 ounces; sulfonal, 10 ounces; cathartic pills, 15,000.

Attention is invited to the accompanying exhibits for detailed information on various matters.

Respectfully submitted.

J. O. BRECKINBRIDGE,
Inspector-General.

The SECRETARY OF WAR.

LIST OF EXHIBITS.

- A.—Field return of inmates, November 30, 1898.
B.—Recapitulation of expenses, October 1, 1897, to September 30, 1898.
C.—Amount paid to civil employees during September, 1898.
D.—1. Statement relative to members on outdoor relief.
2. Annual report of members on outdoor relief September 30, 1898; rates of relief, pensions, etc.
E.—Statement showing number of inmates present November 30, 1898; length of service, age, pensions, etc.
F.—List of contracts for supplies and services, September 30, 1898.
G.—Amount expended on officers' quarters and permanent buildings, from October 1, 1897, to September 30, 1898.
H.—Garden account from October 1, 1897, to September 30, 1898.
I.—Farm and dairy account from October 1, 1897, to September 30, 1898.
K.—Vegetables furnished Home and hospital mess from farm for year ending September 30, 1898.
L.—Vegetables purchased in addition to those furnished by farm for year ending September 30, 1898.
M.—1. Home mess bill of fare for week ending November 24, 1898.
2. Subsistence stores consumed in the month of December, 1897.
3. Subsistence stores consumed in the month of June, 1898.
N.—1. Clothing washed during the month of September, 1898.
2. Extra washing done during the month of September, 1898.
3. Regular and extra washing done from October 1, 1897, to September 30, 1898.
O.—List of crockery in daily use during year ending September 30, 1898, with per cent of breakage.
P.—Number of horses and mules owned and employed September 30, 1898.
Q.—Hospital diet, special and general.
R.—List of medicines on hand March 31, 1898, and six months' supply received April 2, 1898.

EXHIBIT A.—Field return of the inmates November 30, 1898.

**REPORT OF BOARD OF VISITORS TO THE UNITED
STATES MILITARY ACADEMY**

REPORT
OF THE
BOARD OF VISITORS
TO THE
UNITED STATES MILITARY ACADEMY
FOR THE YEAR 1898.

To the Secretary of War, the President of the Senate, and the Speaker of the House of Representatives:

The following report of the Board of Visitors to the United States Military Academy at West Point for the year 1898 is respectfully submitted:

The Board of Visitors was appointed in accordance with the provisions of the Revised Statutes of the United States, sections 1327, 1328, and 1329. These statutes contain the authority for the appointment of the Board, the purpose for which it is appointed, and the nature and scope of its duties.

The persons constituting the Board are named below:

APPOINTED BY THE PRESIDENT OF THE UNITED STATES.

- | | |
|---|-------------------|
| 1. Hon. WALTER L. BOUVÉ..... | Hingham, Mass. |
| 2. Gen. SIMON B. BUCKNER..... | Rio, Ky. |
| 3. Hon. ASHBEL P. FITCH | New York, N. Y. |
| 4. Hon. WILLIAM T. FAIRCLOTH | Goldsboro, N. C. |
| 5. Mr. ALEXANDER W. HOFFMAN..... | Buffalo, N. Y. |
| 6. Mr. WILLIAM P. WALTON..... | Greensboro, Ala. |
| 7. Gen. CHAUNCEY MCKEEVER, U. S. A..... | Washington, D. C. |

APPOINTED BY THE PRESIDENT OF THE SENATE.

- | | |
|--------------------------------|-----------------|
| 8. Hon. JOSEPH R. HAWLEY..... | Hartford, Conn. |
| 9. Hon. RICHARD R. KENNEY..... | Dover, Del. |

APPOINTED BY THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

- | | |
|--------------------------------|-------------------|
| 10. Hon. JOHN A. T. HULL | Des Moines, Iowa. |
| 11. Hon. ROBERT ADAMS, Jr..... | Philadelphia, Pa. |
| 12. Hon. FARISH C. TATE | Jasper, Ga. |

ROOMS OF THE BOARD OF VISITORS,
West Point, N. Y., June 1, 1898.

The Board met at 10 a. m., June 1, 1898.

Present: Gen. Simon B. Buckner, Hon. William T. Faircloth, Mr. Alexander W. Hoffman, Mr. William P. Walton, and Hon. Robert Adams, jr.

There not being a full quorum, a temporary organization was effected by electing Gen. Simon B. Buckner, president.

At 4.20 p. m. the Board was officially visited by the Superintendent, Col. O. H. Ernst, Corps of Engineers, his staff, the Academic Board, and the officers of the post. The Board was then escorted to the parade ground, while a salute was fired in its honor. The appointed military exercises of the day, the escort of the colors, and the review, then took place.

Afterwards the Board was received most hospitably at the residence of Col. O. H. Ernst, and introduced to the officers and ladies of the post.

ROOMS OF THE BOARD OF VISITORS,
West Point, N. Y., June 2, 1898.

SECOND DAY.

The Board of Visitors to the United States Military Academy for the year 1898 assembled at 10 o'clock a. m. at the call of Gen. Simon B. Buckner, temporary president.

Present: Gen. Simon B. Buckner, Hon. William T. Faircloth, Mr. Alexander W. Hoffman, Mr. William P. Walton, Gen. Chauncey McKeever, and Hon. Robert Adams, jr.

Hon. Robert Adams, jr., was elected temporary secretary.

It was unanimously carried that the Board meet at 8.30 p. m. to-day, and also at 9 a. m. to-morrow.

The Board of Visitors attended the examinations in the Academic building.

ROBERT ADAMS, Jr.,
Secretary pro tem.

ROOMS OF THE BOARD OF VISITORS,
West Point, N. Y., June 2, 1898.

SECOND DAY—SECOND SESSION.

The Board met pursuant to adjournment.

Present: The members who were present at the last meeting. No quorum being present, the Board adjourned.

The Board witnessed the exercises in the school of the troop on the cavalry plain at 5 p. m.

ROBERT ADAMS, Jr.,
Secretary pro tem.

ROOMS OF THE BOARD OF VISITORS,
West Point, N. Y., June 3, 1898.

THIRD DAY.

The Board met at 9 a. m.

Present: The members who were present at the last meeting. The minutes of previous meetings were read and adopted.

The Board, upon motion, adjourned subject to call of the president.

ROBERT ADAMS, Jr.,
Secretary pro tem.

ROOMS OF THE BOARD OF VISITORS,
West Point, N. Y., June 3, 1898.

THIRD DAY—SECOND SESSION.

The Board of Visitors to the United States Military Academy for the year 1898 assembled at 1.30 p. m. at the call of Gen. Simon B. Buckner, temporary president.

Present: Gen. Simon B. Buckner, Hon. William T. Faircloth, Mr. Alexander W. Hoffman, Mr. William P. Walton, Gen. Chauncey McKeever, Hon. John A. T. Hull, Hon. Robert Adams, jr.

Absent: Hon. Walter L. Bouvé, Hon. Ashbel P. Fitch, Hon. Joseph R. Hawley, Hon. Richard R. Kenney, Hon. Farish C. Tate.

Gen. Simon B. Buckner was nominated as permanent president, and elected.

Hon. William T. Faircloth was elected as vice-president.

Mr. Alexander W. Hoffman was elected as permanent secretary.

On motion it was voted that the president appoint the usual committees.

The chair therefore appointed the following committees:

Appointments and examinations.—Gen. Simon B. Buckner, chairman; Hon. William T. Faircloth.

Discipline and instructions.—Gen. Chauncey McKeever, chairman; Mr. William P. Walton, Hon. Robert Adams, jr.

Armament and equipment.—Gen. Chauncey McKeever, U. S. A., chairman; Hon. William T. Faircloth.

Buildings, grounds, and lights.—Hon. John A. T. Hull, chairman; Hon. Robert Adams, jr.

Fiscal affairs, supplies and expenditures for cadets.—Hon. Robert Adams, jr., chairman; Mr. Alexander W. Hoffman.

Hygiene and athletics.—Hon. William T. Faircloth, chairman; Gen. Simon B. Buckner.

On motion of General McKeever it was voted to adjourn until 9 a. m. to-morrow.

ALEX. W. HOFFMAN, Secretary.

ROOMS OF THE BOARD OF VISITORS,
West Point N. Y., June 4, 1898.

FOURTH DAY.

The Board met at 9 a. m.

Present: The members who were present at the last meeting.

The minutes of the preceding meeting were read and approved.

The Board then adjourned to meet at 9 a. m. on Monday, June 6.

The Board visited the drawing academy.

The following communication was received, read, and filed:

HEADQUARTERS UNITED STATES MILITARY ACADEMY,
West Point, N. Y., June 4, 1898.

SIR: I have the honor to acknowledge the receipt of your communication of this date notifying me of the organization of the Board of Visitors

I shall be happy to afford the Board every facility for a thorough inspection of the workings of all the departments of the institution, administrative as well as academic, and in general to do everything possible to assist the Board in its labors.

A programme of the examinations has already been furnished each member. Notice will be given from day to day of such military exercises as are ordered for the Board of Visitors.

Second Lieut. William M. Cruikshanks, First Artillery; Second Lieut. Charles W. Castle, Sixteenth Infantry; Second Lieut. Francis L. J. Parker, Fifth Cavalry, and Second Lieut. Charles H. Paine, Thirteenth Infantry, have been detailed to attend the Board of Visitors during their stay at the Academy.

I hope the Board will communicate with me freely, both personally and officially, upon any subject connected with the Military Academy which may be of interest to its members in connection with their official visit to West Point.

Being under orders to take the field, it is possible that I may be compelled to delegate some parts of this duty to the next in command, Lieutenant-Colonel Hein.

Very respectfully, your obedient servant,

O. H. ERNST,
Brigadier-General of Volunteers, Superintendent.

The SECRETARY OF THE BOARD OF VISITORS,
West Point, N. Y.

ALEX. W. HOFFMAN, *Secretary.*

ROOMS OF THE BOARD OF VISITORS,
West Point, N. Y., June 6, 1898.

FIFTH DAY.

The Board met pursuant to adjournment.

Present: The members who were present at the last meeting.

The minutes of the preceding meeting were read and adopted.

On the invitation of the president of the Board, the Superintendent United States Military Academy, Gen. O. H. Ernst, appeared before the Board and gave an account of the improvements which have been effected for the Academy during recent years, and also stated further improvements which were necessary in the library and commissary

buildings. The suggestions of General Ernst were referred to the proper committees for investigation.

The Board adjourned until 9 a. m. to-morrow.

After adjournment the Board went to inspect the cadets' hospital.

ALEX. W. HOFFMAN, *Secretary*.

APPOINTMENTS AND EXAMINATIONS.

The committee on examinations and appointments reports that the individual members here attended the different examinations, and that they were impressed with the accuracy of knowledge which the cadets showed therein; the work done was strong testimony to the thoroughness of the instructors' work, as well as to the diligence of the students.

SIMON B. BUCKNER, *Chairman*.

WILLIAM T. FAIRCLOTH.

The Board renews the recommendations of previous Boards, and urges upon Congress the passage of an act which will permit the appointment of the following number of cadets:

Twenty for the President, one for each Senator, one for each Representative or Delegate.

There is ample room in the cadet barracks for this increase. The plant is there, in full running order.

The average maximum attendance of cadets as now authorized by law is about 80 per cent. The additional number graduating each year from this increase would not be too large to fill up the vacancies yearly occurring in the Army.

DISCIPLINE AND INSTRUCTION.

Your committee has investigated the subject within its province, and is unable to suggest any improvement in the methods of discipline at the Military Academy.

The most able and intelligent administration of the affairs of the Military Academy by the superintendent and staff, the commandant of cadets and his assistants is worthy of the highest commendation. All infractions of the rules are certainly and promptly punished with absolute justice and impartiality.

The committee is pleased to observe that a very high degree of respect is entertained by the cadets toward the officers and professors, and also that these gentlemen fully reciprocate this feeling and use all proper effort to impress the cadets with their confidence in them, all of which tends to increase manliness and self-respect on the part of the cadets.

The methods of instruction as followed at the Academy are the result of many years of experience of accomplished and painstaking officers, and are as nearly perfect in their result as it seems possible to make them. The able, efficient, and satisfactory manner in which

Lieut. Col. Otto L. Hein, commandant of cadets, has discharged the duties of that position deserves special notice and commendation.

CHAUNCEY MCKEEVER,
Brigadier-General, U. S. A., Chairman.

WILLIAM P. WALTON.

ROBT. ADAMS, Jr.

ARMAMENT AND EQUIPMENT.

SEACOAST BATTERY.

Your committee recommends that in this battery the five 8-inch converted rifles be replaced with guns of modern type, one of which should be a disappearing gun.

In addition to these five converted rifles this battery contains one 8-inch modern gun, which at present can not be used on account of danger to surrounding towns and railroads.

With the installation of modern high-power, long-range guns, some means must be employed to retain the projectile on firing to prevent danger. The longest range available here is now about 2,100 yards, and the projectiles are fired against the face of a rock in the adjoining mountain. These projectiles are liable to glance on striking and endanger the neighboring towns or the railroads. To prevent this a tunnel or butt should be constructed at the end of the range, which will retain them. Lieut. Col. O. L. Hein, commandant of cadets, has prepared an estimate of the cost of such tunnel or butt, and places the amount at \$1,398.

Your committee considers that the construction of this tunnel or butt is a necessity.

SIEGE AND MORTAR BATTERY.

The guns and howitzers of this battery, with the exception of two, are obsolete, and your committee recommends that these old guns and howitzers be replaced with those of a modern type.

The light battery used in the instruction of the fourth class consists of four guns. This number does not permit of the entire class being drilled together, which is a disadvantage causing much loss of time.

Your committee recommends an addition of two guns to this battery.

CHAUNCEY MCKEEVER,
Brigadier-General, U. S. A., Chairman.

WILLIAM T. FAIRCLOTH.

BUILDINGS, GROUNDS, AND LIGHTS.

Your committee on buildings, grounds, and lights have the honor to report as follows:

Your committee made a general examination of all the buildings and grounds. We commend highly the care that is taken of the buildings and grounds of the reservation.

The committee find the cadets' barracks in good condition, and the cadets well quartered. The mess hall is adapted to its purpose, but

the officers' mess is somewhat cramped in space for the number stationed at the post.

The new academic building is probably as well fitted for its purpose and appropriate in design as could be well devised.

The gymnasium also meets with high commendation.

The riding hall and stables are in good condition. The latter would be improved by new feeding troughs and painting inside and outside.

The committee is impressed, as has been former committees, as to the desirability of refitting and remodeling the interior of the library building, so as to make it more suitable for the purposes of a library, and fireproof for the preservation of the valuable books and pamphlets therein contained.

We do not consider the estimates submitted of \$63,100 for said alteration, and of \$6,900 for removing and returning the books, and other contingencies as excessive. The great value of the collection makes their absolute preservation a work of necessity.

The committee have examined with particular care the commissary storehouse. Its present location is too remote for convenience.

Your committee recommend an appropriation of \$8,000 to refit the old army service barracks into a commissary storehouse.

Your committee examined with especial care the new cavalry barracks, and recommend an appropriation of \$4,200 for a porch to be erected around said barracks.

The reservoir of the water supply next claimed the attention of your committee, and, upon completion of the present filter plant, for which appropriation has already been made, we consider the question of water supply for the post will be completed for many years to come.

The cemetery was found to be in good condition, but showed a want of proper attention to the grass, flowers, plants, and trees, the better care of which would show a patriotic reverence to this last resting place of so many heroic dead, and your committee recommend an appropriation of \$720 for a keeper to preserve the same in better repair.

The committee recommend that the usual appropriation of \$500 for the continued construction of the breast-high wall in dangerous places on the roadway be continued.

Other wants of the post have been called to our attention, but your committee have only recommended those which appear to be most urgent in consideration of the heavy expenditures imposed upon the Government by the existing war.

J. A. T. HULL, *Chairman.*

R. ADAMS, Jr.

FISCAL AFFAIRS, SUPPLIES, AND EXPENDITURES FOR CADETS.

The committee on fiscal affairs, supplies, and expenditures for cadets have completed their personal inspection of the affairs of Capt. Charles B. Hall, Nineteenth Infantry, treasurer of the Military Academy and quartermaster and commissary of cadets.

The methods and accounts were fully explained to them and they find them to be kept in so simple a manner that your committee could easily determine on their completeness. They especially commend the system of individual accounts kept with each cadet, by which he can learn at a glance what expenditures he has already made and what balance of his pay remains to his account.

The quartermaster and commissary storehouses were also inspected. The supplies contained in both departments were found to be ample in quantity and excellent in quality, with prices at retail in due proportion to the wholesale price.

Your committee commend in every way the efficient and economical administration of these two departments.

ROBT. ADAMS, Jr., *Chairman.*

ALEXANDER W. HOFFMAN.

HYGIENE AND ATHLETICS.

Your committee find that the sanitary condition of the Academy is excellent. A thorough examination of the cadets' hospital was made, and too much can not be said of the order, system, and neatness which we found, and due credit should be given to Maj. George H. Torney, surgeon in charge.

We find the condition of the gymnasium all that can be desired, and the careful training here given to the cadets most efficient.

WILLIAM T. FAIRCLOTH,
Chairman.

SIMON B. BUCKNER.

MASTER OF THE SWORD.

The sword master is also the instructor in gymnastics and swimming. He is a civilian appointed by the Secretary of War. The present incumbent has worked up an admirable course of gymnastics for the corps of cadets. His system of calisthenics has been adopted by the War Department for the use of the Army. He is required to preserve discipline and to exercise control of the cadets while under his instruction. It would greatly strengthen his hand if he should have military rank, and in view of the great and increasing importance of his department, the Board urges upon Congress the passage of an act giving the master of the sword the rank, pay, and emoluments of a first lieutenant of infantry.

The Board approves of and indorses the reports of the different committees, and urges upon Congress the appropriations suggested by the committee on buildings, grounds, and lights, and also of the amount mentioned by the committee on armament and equipment for the construction of a safe target in the mountain side for the use of the 8-inch modern gun in the seacoast battery.

The Board also urges upon the War Department a compliance with the recommendations made by the committee on armament and equipment in the changes and additions to the different batteries.

The Board is of the opinion that the cadets should receive instruction in the handling, and have imparted to them a thorough knowledge of modern high power, long range guns. As the batteries are at present constituted it is impossible that such instruction should be given them, and hence they are forced to enter the service upon graduation with little knowledge of the modern high-power gun.

Respectfully submitted.

SIMON B. BUCKNER,

President.

WILLIAM T. FAIRCLOTH,

Vice-President.

ALEXANDER W. HOFFMAN,

Secretary.

WILLIAM P. WALTON.

CHAUNCEY MCKEEVER,

Brigadier-General, U. S. A.

JOHN A. T. HULL.

ROBERT ADAMS, Jr.

UNITED STATES MILITARY ACADEMY.

1061

ANNUAL REPORT

OF THE

SUPERINTENDENT UNITED STATES MILITARY ACADEMY.

HEADQUARTERS U. S. MILITARY ACADEMY,
West Point, N. Y., September 19, 1898.

SIR: As Acting Superintendent of the United States Military Academy, I have the honor to submit the following report for the year ending September 1, 1898. Upon the departure of Brig. Gen. O. H. Ernst, United States Volunteers, to join the Army in the field, I assumed command of the Military Academy and post of West Point on June 11, 1898, and am still in the exercise of this command, the new Superintendent, Col. A. L. Mills, not having yet reported for duty.

PERSONNEL.

The number of officers and instructors present for duty at this post on September 1, 1898, was as follows: 7 professors, 1 associate professor, 44 commissioned officers, 1 chaplain, 1 master of the sword, and 1 teacher of music; a total of 55. See roster appended, marked "A."

The number September 1, 1897, was 64. This difference is accounted for by the following: Superintendent, surgeon, cavalry instructor, instructor of practical military engineering, and two instructors in department of modern languages not yet joined; one assistant instructor practical military engineering, in the field at Santiago; and one instructor department of philosophy, and one assistant to the quartermaster not appointed.

The number of cadets present and absent September 1, 1898, was 325, including one foreigner under instruction by special authority of Congress. The number in 1897 was 338, including one foreigner.

During the year 47 men were discharged for deficiency in studies, 1 discharged for deficiency in discipline, 8 resigned, and 59 were graduated, a total loss of 115, while there were admitted in all at the examination held in March, June, and August, 101, and 1 admitted by reappointment.

In the three examinations referred to there were appointed 311 candidates, including 117 alternates; of these 42 failed to appear and 159 were found not duly qualified, either mentally or physically, or both. Of the remaining 110 who passed, 15 were alternates whose principals also passed, and for whom there were, therefore, no vacancies, leaving 95 who were regularly admitted. Of those rejected by the medical board, 6 were subsequently admitted, 4 of whom were on probation.

The first class was graduated on April 26, by order of the War Department, in consequence of the war with Spain, and did not undergo the final examination prior to receiving their diplomas.

The number of cadets now authorized by law is 371, and the number of cadets at present 325, which leaves 46 vacancies, and this latter number as usual will be increased considerably during the present school year. The average number of vacancies in the corps of cadets at the beginning of the second term of the academic year (after the January examination) during the past five years was 74, from which it will be seen that in order to have the corps of cadets contain at all times the maximum strength (approximately) now authorized by law, and for which there are sufficient instructional and barracks facilities, a slight increase in the number of the annual appointments of cadets would be necessary. This has been recommended in many previous annual reports of the Superintendent of the Military Academy and by the recent and former Boards of Visitors, and is again recommended for your consideration.

ACADEMIC DEPARTMENTS.

There have been but few important changes in the operations of the various departments of instruction during the past year. Where improvements have been introduced they are noted in the appended reports of the various heads of departments.

In the department of tactics the scope of the course of instruction was considerably widened, and it was placed upon a more practical basis. Attention is invited to the report of the commandant of cadets, hereto appended and marked "B."

In the department of law two new text books, Fisher's Brief History of the Nations and Flanders's Manual of the Constitution, were substituted for Fisher's Outline of Universal History and for Andrews's Manual of the Constitution, which were not found to be well adapted to the needs of the Academy after full trial.

In the department of practical military engineering it was found necessary to suspend the usual course on April 26, on account of the departure of the instructor, his assistant, and Company E, Battalion of Engineers, for the seat of war. A supplementary course in practical military engineering was therefore outlined for the instruction of the cadets of the first and third classes during the summer encampment, under charge of Second Lieut. George Blakely, Second Artillery. In this course the cadets were taught the practical use of the new portable intrenching tools with which the battalion was equipped during the latter part of the summer, and subsequently had practice in the construction of hasty intrenchments in a tactical field exercise, carried out while on practice march.

The report and supplementary report of the instructor of practical military engineering are herewith appended and marked "C."

INSTRUCTION IN MILITARY HYGIENE.

During the summer encampment a course of lectures upon the subject of military hygiene was introduced. These strictly practical lectures were delivered to the first class by the surgeon, on days which could not be used for outdoor drills and exercises, and comprised the following subjects: Anatomy and physiology of the circulating and respiratory systems, hemorrhage, antiseptic surgery, the use of the first-aid packet, fractures and dislocations, and the emergencies requiring prompt non-medical attendance. Attention is invited to the report of the surgeon, hereto appended, marked "G."

THE LIBRARY.

During the year ending August 31, 822 volumes were purchased for the library and 838 volumes were presented to it, making an increase of 1,660 volumes. One hundred and twenty duplicate Government publications were returned to the Superintendent of Public Documents. The net gain during the year was 1,360 volumes, besides 380 pamphlets, making the total number of books in the library September 1, 1898, 41,638 volumes and 6,889 pamphlets. This is exclusive of a large number of maps and charts; these, it is proper to state, are almost entirely unavailable on account of lack of space in which to properly store or display them.

The pressing necessity for enlarging and reconstructing the library building has been emphasized in former reports, and full plans, specifications, and estimates for the work have been prepared.

The urgency of this work becomes greater each year, as is fully set forth in the report of the librarian, which is appended hereto and marked "D."

The recommendation contained in former reports that the salary of the assistant librarian be increased from \$1,200 to \$1,500 is renewed.

DISCIPLINE AND DRILL.

The discipline of the corps of cadets has been generally very good, with some exceptions, and the usual high standard of drill has been maintained.

ACCOUNTS AND SUPPLIES.

Attention is invited to the report of the quartermaster and commissary of cadets, hereto appended and marked "E."

The cost of subsistence during the year averaged 53 cents per cadet per day, which is slightly in excess of the cost of the past fiscal year, due to the advance in the cost of flour, etc., occasioned by the war. The quality and quantity of the food furnished has been satisfactory in every respect. The other supplies furnished to cadets were very satisfactory as to quality and cost.

During the summer encampment, campaign hats, leggings, gray flannel shirts, and rubber blankets were furnished to the entire battalion of cadets for the purpose of equipping them more suitably for field exercises and practice marches.

The present foot gear has not been found entirely satisfactory, and patterns of a more serviceable and comfortable shoe are now being carefully examined, with a view to improvement in this respect.

The plant of the cadet laundry has not been found satisfactory, and needs considerable improvement to make it perform well and promptly all of the work required during the summer months. An estimate of the cost of these necessary improvements has been carefully prepared, and is included in the annual estimate for the fiscal year.

BAND.

It is earnestly recommended that the Military Academy band, which is the only military band recognized and directly supported by the Government, be restored to the numbers and pay which it had before its reduction in 1877, and that the leader be given the pay and emoluments of a second lieutenant of infantry.

At the time of its reduction the band consisted of 1 teacher of music and 40 enlisted musicians, 10 of whom received \$34 and the remainder \$30 per month, with the usual allowances of enlisted men. Its present authorized strength comprises 1 teacher of music and 24 enlisted men. Of the latter, 6 receive \$34 per month, 6 \$20 per month, and the remaining 12, \$17, with the usual allowances of enlisted men. As these musicians must depend entirely upon their pay, having no facilities for increasing their meager compensation by engagements away from West Point, it is extremely difficult and almost impossible to obtain accomplished musicians for our only national military band.

MASTER OF THE SWORD.

Attention is invited to the recommendation submitted in the last annual report of the Superintendent and in the report of the Board of Visitors of 1898, concerning the status and pay of the very efficient and capable master of the sword and instructor of gymnastics and swimming, Mr. H. J. Koehler.

It would be wise to give this instructor, who is required to exercise control and maintain the discipline of cadets under his instruction, proper military rank, in order to strengthen his position and authority, and I recommend that Congress be requested to give him rank and pay of a first lieutenant of infantry.

WATER SUPPLY.

Work on the new reservoir and filter beds, except some minor improvements, was interrupted on April 28, on account of the departure of the officers and overseers connected with the work for the war; it was again resumed upon their return on September 4.

Estimates are submitted for the completion of the dam and filter beds, and of the roadways, fences, keeper's dwelling, and other improvements connected with these works.

Attention is invited to the report of the instructor of practical military engineering, hereto appended and marked "C."

BUILDINGS AND GROUNDS.

The erection and completion of the following public works were made during the year: New guardhouse at the south gate, public latrine, coal suspension cable way worked by electric motors from coal shed to new dock, ordnance boathouse, iron stairway at engineer barracks, besides other improvements and repairs from special appropriations proper for such purposes. The new dry dock and ferry slip will be completed by December 5 of this year.

It is recommended that the extra-duty pay of the men of the army service detachment, which was discontinued on April 26 last, under the provisions of section 6, act of Congress, published in General Orders No. 29, A. G. O., April 29, 1898, abolishing extra-duty pay, be restored not only for the future but for the period of the war with Spain, during which time it was discontinued. These men were enlisted to do specific work, for which, at the time of enlistment, they expected to receive additional compensation, and are deserving of the same. Attention is invited to the report of the quartermaster, hereto appended and marked "F."

MEMORIAL HALL.

Work upon the Memorial Hall is finished with the exception of the interior decoration and artificial lighting of the building by gas and electricity, funds for which are still available.

Before this magnificent edifice is ready for occupation it will be necessary to suitably furnish it, for which an estimate is now being carefully prepared and will be shortly submitted as a supplement to the annual estimates.

HEALTH.

The health of the command during the past year has been generally very good. Attention is invited to the report of the surgeon, hereto appended and marked "G."

COMPANY E, BATTALION OF ENGINEERS.

Company E, Battalion of Engineers, performed its usual multifarious and important duties most efficiently at this post until April 30, when it was ordered into the field. It participated in the Santiago campaign and returned here September 4.

CAVALRY DETACHMENT AND HORSES.

The cavalry detachment has performed the usual duties and is in a very good state of drill and discipline. It lost 23 enlisted men during the war by transfers, at their own requests, to cavalry regiments engaged in active service in the field, but these losses have since been made good and it is now up to its maximum strength.

At present the total number of horses available for cavalry instruction is 98, but 48 of this number are also required to furnish teams for the carriages of the field battery of instruction. This unavoidable use of the same horses for both saddle and draft purposes unfits them for both cavalry and artillery instruction, and should be remedied by the provision of 48 artillery horses and a detachment of artillerymen for noncommissioned officers and drivers, to be used for battery instruction only.

ARTILLERY MATERIAL.

It is recommended that all of the obsolete artillery material in the siege and seacoast batteries of instruction, part of which has already been discarded on account of its unserviceableness, be replaced by modern guns and that the field battery, comprising only four 3.2-inch guns and carriages, be increased by two guns, as the present battery of instruction is inadequate for the standing gun drills of the fourth class, which averages about 100 cadets.

For further details on this subject, attention is invited to the report of the commandant of cadets, marked "B."

ESTIMATES.

The estimates for the next fiscal year do not differ materially from those of last year. The most important items comprise the amounts needed for the improvement and reconstruction of the library building, for completing the construction of the filter beds and connecting them

with the new reservoir, completing necessary improvements to the water supply system, and for repair and remodeling the old army service barracks into a commissary storehouse.

MANEUVER TERRAIN.

The use of the ground on the reservation between the post proper and Highland Falls as a vegetable garden for the cadet mess has been discontinued, as this was not found to be profitable, and the ground, which is admirably adapted for maneuver terrain for the tactical exercises of cadets, will be gradually put in condition for that purpose.

I am sir, very respectfully, your obedient servant,

O. L. HEIN,
Lieutenant-Colonel of Cavalry, Commandant of Cadets,
Acting Superintendent.

The ADJUTANT-GENERAL UNITED STATES ARMY,
Washington, D. C.

LIST OF APPENDIXES.

- A.—Roster.
- B.—Report of commandant of cadets.
- C.—Report of instructor of practical military engineering.
- D.—Report of librarian.
- E.—Report of quartermaster and commissary of cadets.
- F.—Report of quartermaster.
- G.—Report of surgeon.

A.

UNITED STATES MILITARY ACADEMY.

WEST POINT, NEW YORK.

SUPERINTENDENT.

Col. ALBERT L. MILLS, captain and assistant adjutant-general, United States Volunteers; first lieutenant, First Cavalry. Absent; not yet joined.

Lieut. Col. OTTO L. HEIN, commandant of cadets; acting superintendent.

MILITARY STAFF.

Second Lieut. SAMUEL C. HAZZARD, First Artillery, adjutant of the Military Academy and of the post; recruiting officer; commanding post noncommissioned staff and band and detachment of field musicians; assistant to the quartermaster, and officer of police.

Maj. WILLIAM F. SPURGIN, Twenty-third Infantry, quartermaster of the Military Academy and of the post; disbursing officer; director of gas works; commanding detachment of army service men, quartermaster's department.

Capt. CHARLES B. HALL, Nineteenth Infantry, treasurer of the Military Academy and quartermaster and commissary of cadets.

First Lieut. GEORGE F. LANDERS, Fourth Artillery, commissary and treasurer of the post; in charge of post exchange.

Maj. WILLIAM L. KNEEDLER, brigade surgeon, United States Volunteers; captain and assistant surgeon, U. S. A., surgeon.

First Lieut. DOUGLAS F. DUVAL, assistant surgeon, U. S. A.

ACADEMIC STAFF.

Professors whose service at the Academy, as professor, exceeds ten years have the assimilated rank of colonel, and all other professors the assimilated rank of lieutenant-colonel.

DEPARTMENT OF TACTICS.

Lieut. Col. Otto L. Hein, captain, First Cavalry, commandant of cadets and instructor of tactics (June 15, 1897).

Capt. Edward Anderson, assistant adjutant-general, United States Volunteers (first lieutenant, Seventh Cavalry), assistant instructor of tactics.

First Lieut. Granger Adams, Fifth Artillery, senior instructor of artillery tactics; commanding company of cadets.

First Lieut. Samson L. Faison, First Infantry, senior instructor of infantry tactics; commanding company of cadets.

Capt. Robert L. Howze, assistant adjutant-general, United States Volunteers (first lieutenant, Sixth Cavalry), senior instructor of cavalry tactics (joined September 2, 1898).

First Lieut. William Lassiter, First Artillery, assistant instructor of tactics.

Second Lieut. David M. King, Fourth Artillery; on temporary duty; commanding company of cadets.

Second Lieut. Julian R. Lindsey, Ninth Cavalry, assistant instructor of tactics; commanding company of cadets; commanding detachment of cavalry

DEPARTMENT OF CIVIL AND MILITARY ENGINEERING.

Gustav J. Fiebeger, professor (May 4, 1896).

First Lieut. Francis R. Shunk, Corps of Engineers, assistant professor.

First Lieut. Chester Harding, Corps of Engineers; First Lieut. Jay J. Morrow, Corps of Engineers, instructors.

DEPARTMENT OF NATURAL AND EXPERIMENTAL PHILOSOPHY.

Peter S. Michie, professor (February 14, 1871).

Maj. Henry C. Davis, Third Regiment United States Volunteer Engineers (first lieutenant, Seventh Artillery), assistant professor.

First Lieut. Wilmot E. Ellis, Fourth Artillery; First Lieut. Joseph T. Crabbe, Ninth Cavalry, instructors.

DEPARTMENT OF MATHEMATICS.

Edgar W. Bass, professor (April 17, 1878).

Wright P. Edgerton, * associate professor (July 1, 1893).

Second Lieut. George Blakely, Second Artillery, assistant professor.

Second Lieut. Frank W. Coe, First Artillery; Second Lieut. William M. Cruikshank, First Artillery; Second Lieut. David M. King, Fourth Artillery; Second Lieut. Harry H. Stout, Sixth Cavalry; Second Lieut. Thales L. Ames, Third Artillery; Second Lieut. Samuel V. McClure, Seventh Infantry; Second Lieut. James W. Hinkley, jr., Fifth Artillery, instructors.

DEPARTMENT OF CHEMISTRY, MINERALOGY, AND GEOLOGY.

Samuel E. Tillman, professor (December 21, 1880).

First Lieut. Richmond P. Davis, Second Artillery, assistant professor.

First Lieut. George F. Landers, Fourth Artillery; First Lieut. Edward D. Anderson, Tenth Cavalry; First Lieut. Palmer E. Pierce, Thirteenth Infantry, instructors.

DEPARTMENT OF DRAWING.

Charles W. Larned, professor (July 25, 1876).

Second Lieut. Jens Bugge, Third Infantry, assistant professor.

Second Lieut. Charles H. Paine, Thirteenth Infantry; Second Lieut. Frederick W. Lewis, Twenty-second Infantry, instructors.

DEPARTMENT OF MODERN LANGUAGES.

Edward E. Wood, professor (October 1, 1892).

First Lieut. Charles H. Hunter, First Artillery, assistant professor of the Spanish language.

Second Lieut. Samuel C. Hazzard, First Artillery, assistant professor of the French language.

Second Lieut. James M. Williams, Seventh Artillery; Second Lieut. Joseph L. Knowlton, Second Artillery; Second Lieut. Girard Sturtevant, Twenty-fifth Infantry; Second Lieut. Eugene P. Jervey, jr., Fifth Cavalry, instructors.

DEPARTMENT OF LAW AND HISTORY.

George B. Davis, lieutenant-colonel and deputy judge-advocate-general, U. S. A., professor (August 20, 1895). By assignment under act June 6, 1874.

First Lieut. Frank G. Mauldin, Seventh Artillery, assistant professor.

Second Lieut. Mathew C. Smith, Second Cavalry; Second Lieut. Samuel Hof, Sixth Cavalry; Second Lieut. Herbert A. White, Sixth Cavalry, instructors.

DEPARTMENT OF PRACTICAL MILITARY ENGINEERING.

Second Lieut. George Blakely, Second Artillery, senior assistant instructor.

Second Lieut. Charles H. Paine, Thirteenth Infantry, assistant instructor.

DEPARTMENT OF ORDNANCE AND GUNNERY.

Capt. Lawrence L. Bruff, Ordnance Department, instructor (August 17, 1891).

Second Lieut. Jay E. Hoffer, Third Artillery, senior assistant instructor.

Second Lieut. William R. Smith, First Artillery, assistant instructor.

CHAPLAIN.

Rev. Herbert Shipman (April 22, 1896).

Herman J. Koehler, master of the sword (February 1, 1885).

George Essigke, teacher of music (October 15, 1895).

* Associate professor, with the rank of captain.

PERSONNEL.

The following-named officers were detached or wholly relieved from duty at the Military Academy, upon the outbreak of the war with Spain or during the recent campaigns, to join the army in the field:

AT THE FRONT.

Brig. Gen. O. H. Ernst, United States Volunteers, colonel of engineers, Superintendent.

Associate Professor Wright P. Edgerton.

Maj. George H. Torney, surgeon, U. S. A. Relieved.

First Lieut. Charles H. Hunter, First Artillery.

First Lieut. Thomas H. Rees, Corps of Engineers. Relieved.

First Lieut. J. J. Pershing, Tenth Cavalry.

First Lieut. P. E. Traub, First Cavalry. Relieved.

First Lieut. Edgar Russel, Seventh Artillery. Relieved.

First Lieut. E. E. Winslow, Corps of Engineers.

First Lieut. Charles P. Echols, Corps of Engineers.

First Lieut. W. A. Bethel, Third Artillery (captain of volunteers).

First Lieut. P. E. Pierce, Thirteenth Infantry.

Second Lieut. J. T. Crabbs, Eighth Cavalry.

Second Lieut. H. M. Reeve, Third Infantry. Relieved.

Second Lieut. W. M. Cruikshank, First Artillery.

Second Lieut. W. R. Smedberg, jr., Fourth Cavalry.

Second Lieut. Samuel Hof, Sixth Cavalry. Relieved.

Second Lieut. F. LeJ. Parker, Fifth Cavalry. Relieved.

Second Lieut. Joseph Wheeler, jr., Fourth Artillery. Relieved.

Additional Second Lieut. H. B. Ferguson, Corps of Engineers.

ON DUTY AT CAMPS.

Maj. A. C. Girard, surgeon, U. S. A. (lieutenant-colonel of volunteers). Relieved.

Capt. James L. Lusk, Corps of Engineers (lieutenant-colonel of volunteers). Relieved.

Capt. James Parker, Fourth Cavalry (major of volunteers).

Capt. W. E. Wilder, Fourth Cavalry (colonel of volunteers). Relieved.

Capt. J. B. Bellinger, assistant quartermaster, U. S. A. (lieutenant-colonel of volunteers). Relieved.

Capt. F. A. Winter, assistant surgeon, U. S. A. Relieved.

First Lieut. J. H. Beacom, Third Infantry (captain of volunteers).

First Lieut. J. T. Thompson, Ordnance Department (lieutenant-colonel of volunteers). Relieved.

First Lieut. H. C. Davis, Seventh Artillery (major of volunteers). Relieved.

First Lieut. William Weigel, Eleventh Infantry. Relieved.

Second Lieut. E. B. Cassatt, Fourth Cavalry. Relieved.

Second Lieut. C. W. Castle, Sixteenth Infantry. Relieved.

RELIEVED ON ACCOUNT OF EXPIRATION OF TOUR OF DUTY.

Capt. Charles F. Mason, assistant surgeon, U. S. A.

Capt. William B. Gordon, Ordnance Department.

B.

HEADQUARTERS UNITED STATES CORPS OF CADETS,
West Point, N. Y., September 18, 1898.

The ADJUTANT, UNITED STATES MILITARY ACADEMY.

SIR: In compliance with instructions in Circular No. 35, current series, headquarters United States Military Academy, I have the honor to submit the following report on the work of the department of tactics during the year ending September 1, 1898. This, in general terms, embraced instruction in drill and tactics, instruction in discipline, and instruction in military administration.

INSTRUCTION IN DRILL AND TACTICS.

(a) *Practical*.—The course of practical military instruction embraced the drill of infantry, cavalry, light and horse artillery, and siege and seacoast artillery; tactical and minor tactical exercises of infantry and cavalry; practice marches of infantry, cavalry, and light artillery; target practice with rifle and revolver, and with field.

siege, and seacoast guns; fencing with the foil, broadsword, and bayonet; gymnastics and swimming; instruction in castrametation; cavalry and artillery stable duties, and practice in some of the duties especially devolving upon these arms.

The effort was made, and I believe successfully accomplished, to widen the scope of the course of practical military instruction—especially that held during the summer encampment—and to place it upon a more practical basis; also to carry out the principal and most important aim of this department, the promotion of the self-reliance and confidence, sense of responsibility and development of character of cadets, in order to prepare them more fully for the performance of the duties devolving upon the young officer when he first joins his regiment or corps, and which he is expected to be able to enter upon at once.

To effect this, it was found necessary to rearrange the summer programme of military instruction so as to give more time for the work to be accomplished and to give more opportunities for cadets, especially the privates of the first class, to exercise the command and responsibilities devolving upon officers and noncommissioned officers. This was done by suspending troop parade, except on Sundays, and by postponing guard mounting until immediately after evening parade; by dividing the forenoon into two drill periods, first, from 7.10 to 8.30 a. m., and, second, from 9 to 10.45 or 11 a. m., or even later, if desirable or necessary to obtain the best results, and by making the instruction in these drill periods interchangeable; by reserving an entire day of each week for a practice march, and by placing the privates of the third class on the roster for corporal of the guard and those of the first class on the permanent roster for officer of the day and guard, and requiring the latter to frequently act as captains and lieutenants at the various drills and exercises of each arm.

More time and attention were given to exercises in applied tactics and minor tactics, on varied ground in and beyond the reservation, and the practice marches were generally combined with field exercises. These exercises and practice marches were as follows:

June 21.—Cavalry practice march of 11 miles, and exercises in minor tactics, stable duties performed on return (first class); duration about nine hours.

June 24.—Cavalry reconnaissance (first class); duration about nine hours. Exercise in infantry outpost duty (third class); duration about two hours and twenty-four minutes.

June 27.—Outpost duty and patrolling (third class); duration three hours and thirty-five minutes.

June 28.—Advance guard and rear guard duties (third class); duration three hours and thirty-five minutes.

June 29.—Infantry practice march (third class); about seven and one-half miles.

June 30.—Advance guard exercise and infantry attack (third class); duration two and one-third hours.

July 1.—Light-battery practice march of about 12 miles and target practice with projectiles (first class). All duties pertaining to harnessing, hitching, and care of horses (grooming, watering, feeding, and bedding down) were also performed by the first class. On this march the cadets acted as drivers, noncommissioned officers, and officers. Infantry practice march of three hours (third class).

July 8.—Infantry practice march, with exercise in advanced and rear guard (first and third classes); duration, four and three-fourths hours.

July 15.—Infantry practice march, with exercises in minor tactics and castrametation (first, third, and fourth classes); duration, seven and three-fourths hours.

July 22.—Infantry practice march and field exercises (first, third, and fourth classes); duration, four and one-half hours.

August 8.—Infantry practice march and field exercises (first, third, and fourth classes); duration, four and one-half hours.

August 21.—Infantry practice march to Camp Townsend, Peekskill, where a bivouac was established and field exercises carried out, consisting of an attack of three companies against one in an intrenched position and attack of a defile held by one company by three companies (first, third, and fourth classes); duration, twenty-seven hours.

As a preparation for practical field work, cadets had been given preliminary instruction in the duties of advanced guard, rear guard, outposts, etc., having been supplied with a manual of exterior guard duty, which they were required to read and study in camp.

Proper instruction in extended-order drill of infantry and in minor tactics has been attempted, with but little success, during the autumn and spring drill terms, on account of the insufficiency of time available and the lack of a suitable maneuver terrain in the vicinity of the post for this purpose; but the first-mentioned difficulty can be overcome by giving this instruction during the summer encampment, and the latter inconvenience be met in the future by the utilization of the ground formerly used as a cadet garden, which is now being put in order for this important instruction.

The course in rifle firing for all classes was extended and more systematically and progressively carried out than heretofore.

This instruction was facilitated by the preparation and issue to cadets of a small manual, *Outline of Instruction in Small-arms Firing*, based on *Small-arms Firing Regulations*.

Instruction in aiming, pointing, and gallery practice began and ended with the fourth class during the summer encampment; the third class had short and mid-range practice, and the first class mid-range practice only, the target range not having been yet prepared for long-range and group firing. Work on the range is now being done, however, and it will be ready for this practice during the autumn and spring terms.

The idea followed in this course was to give cadets a complete outline course of the target practice carried out in the service, and also some preparation for the duty of musketry instructors.

Revolver practice (dismounted) was given to cadets of the first class, it being impracticable to have mounted practice, on account of the limited time available for this purpose.

SPECIAL CAVALRY INSTRUCTION OF THE FIRST CLASS DURING THE SUMMER ENCAMPMENT.

Theoretical.—Saddles and saddling; bits and biting; the saddle packed; age of horses to 20 years; nomenclature of horse; points of the horse; blemishes and defects, etc.; the foot and its shoe (seven lessons—lectures and explanations).

Practical.—Manual of the carbine mounted; folding saddle blanket; rolling overcoat; making packs; packing saddle; troop inspection armed with carbine; saber and pistol practice; march from 9 a. m. till 4 p. m., 11 miles, and practical care of horses (grooming, watering, feeding, and bedding down) on return; outpost duty; fighting on foot; age of horses.

At each drill cadets were required to saddle and bridle their own horses and to unsaddle and unbridle on their return. All theoretical instruction was followed by such practical application as would impress the subject on their minds.

(b) *Theoretical.*—The theoretical instruction imparted in the department of tactics comprised recitations in the drill regulations of infantry, cavalry, and artillery, according to the following programme as laid down in the regulations United States Military Academy:

First class, fourth year, cavalry drill regulations. Every other week day, Saturdays excepted, from November 1 to March 31, alternating with drawing. Ten lessons each of one hour.

Second class, third year, infantry and artillery drill regulations. Every other week day, from November 8 to January 1, alternating with chemistry.

Ten lessons in infantry drill regulations and 10 lessons in artillery drill regulations, each of one hour.

The allotment of 10 lessons only for theoretical instruction in infantry, cavalry, and artillery drill regulations merely permits of hurried and insufficient instruction in these branches, and in my opinion is totally inadequate in comparison with the importance and extent of these subjects.

Some theoretical instruction in minor tactics to supplement that taught in the drill regulations was imparted during the summer encampment (on days not available for outdoor work) by means of lectures, by reading the *Manual of Outposts*, *Advanced and Rear Guards*, etc., prepared for this purpose for the use of cadets, and by the solution of simple tactical problems.

The theoretical artillery instruction imparted here is devoted entirely to field artillery, and the equally important subject of coast artillery is neglected. There is now an authorized manual of coast artillery, and this instruction should be considered as necessary for cadets as any other part of their military education.

The theoretical course is far from satisfactory in this department owing to the insufficiency of time for the work prescribed and the unsuitable time of the year designated for this instruction.

The text-books used are the *Drill Regulations of Infantry, Cavalry, and Artillery*, comprising matter much of which is duplicated in the department of military engineering. The theory and practice of tactics and minor tactics should go hand in hand; theory should precede practice, or at least not follow it, as is the case now.

It would seem to be a better and more logical arrangement, if the department that has entire charge of the practical work in these branches, should alone be intrusted with the theoretical work, and the advisability of transferring so much of the course of the art and science of war as embraces organization, tactics, and minor tactics and marches, to what is known as the course of infantry, cavalry, and artillery drill regulations, which course comprises the only text-books on those subjects really authorized by the War Department, for the information and guidance of the Army, is in my judgment worthy of consideration.

Some little knowledge of the theory of musketry instruction is also a necessary preliminary to target practice, and this has been acquired by cadets by means of a little pamphlet (*"Outline of instruction in target practice"*) prepared for their use.

GYMNASTICS, SWIMMING, AND FENCING.

GYMNASTICS.

The physical training of cadets consisted, as usual, of a progressive and systematic series of exercises and combinations, in which all movements of questionable value are eliminated, and in the execution of which the chance of bodily injury and over-exertion are minimized.

The course for the fourth class was arranged as follows:

First period, October 1 to December 31.

Second period, January 1 to April 1, three lessons weekly, each of forty-five minutes duration.

The members of the upper classes received no physical training, except those who at the annual anthropometric measurements failed to reach the required standard and were given anthropometric deficiency cards. Of these, 16 were members of the first class, 25 of the second class, and 18 of the third class.

In my opinion, all cadets should be required to attend a physical drill of from ten to fifteen minutes daily, as soon after reveille as practicable before the beginning of the day's work. That this would be of great benefit, particularly to those cadets who take no exercise whatever, is beyond question.

The master of the sword, in his report to me upon the advisability of a short daily physical drill for cadets of all classes, says:

"The fact that cadets of the upper classes do not receive sufficient physical exercise to offset the drain on their mental faculties has often been commented upon.

"Probably at no time are cadets in better physical condition than at the close of their first year. This, together with the fact that it requires but little exercise to keep men who are in sound physical condition in that condition, is a strong argument in favor of the instruction of this drill.

"The main object, then, of a drill of this kind is a hygienic one rather than one of physical development. To obtain the best results the drill should be conducted in such a manner that its effect will be stimulating and exhilarating, but never fatiguing.

"Though but of short duration, it is long enough to accelerate the circulation, stir up the organs of secretion, quicken the mind, and bring relief to a brain made heavy by an evening's close application to study. Furthermore it is believed that it would materially decrease the number of slight, yet annoying ailments, which are directly traceable to sluggish circulation and stagnant secretory organs."

SWIMMING.

Instruction in swimming was given to the entire fourth class, and to 9 members of the third class and 3 members of the first class who had failed to qualify in their first and third years.

FENCING.

Instruction in fencing was imparted to the members of the fourth class only, as usual, according to the following programme:

First period (October 1 to December 31). Fencing with foils, three lessons weekly, each of forty-five minutes.

Second period (January 12 to March 15). Fencing with sabers, two lessons weekly, each of forty-five minutes.

Third period (March 15 to May 1). Fencing with bayonet, two lessons weekly, each of forty-five minutes duration; with foils, one lesson every other week, each of forty-five minutes duration; with saber, one lesson every other week, each of forty-five minutes duration.

Fourth period (May 1 to May 31). Fencing with foil, saber, and bayonet, each one lesson per week of forty-five minutes duration.

ADMINISTRATION.

The course in military administration consisted of—

Two lectures on instruction of recruiting officers and reports and returns pertaining to recruitment.

Two lectures on duties of post adjutant, post treasurer, and post exchange.

Two lectures on company records.

Two lectures on the ration.

Two lectures on duties pertaining to the Quartermaster's Department.

Two lectures on Subsistence and Ordnance Departments.

Two lectures on company organization.

One lecture on money accountability, etc.

One lecture on personal reports; or

One lecture on each subject to each half of the second class, divided into two sections for this purpose.

There is a pressing need for correct instruction to cadets in reference to the requirements of military etiquette, customs of the service, etc., which has hitherto not been given sufficient attention, but which will be imparted hereafter in a series of lectures to the first class. This work would be greatly facilitated if a reference manual could be prepared for this purpose, not only for use at the Military Academy, but also to assist the young graduate before and after he joins his corps or regiment.

ARTILLERY MATERIAL.

Field.—The field battery of 3.2-inch breech-loading rifle guns, used for the standing gun drill of the fourth class, has only four guns and should be increased by two guns, and at least four 3.6-inch breech-loading rifle field mortars should also be provided for use in the instruction of the fourth class.

Siege.—The two 5-inch breech-loading siege rifles on hand should be provided with proper platforms, and the carriages of these guns be completed by the addition of hydraulic recoil checks.

It is also recommended that the present siege armament be increased by two 7-inch breech-loading rifle mortars and by two 7-inch breech-loading rifle howitzers, in order that the instruction in siege artillery may be had with each type of siege guns.

The armament of the seacoast battery should be increased by one 8-inch breech-loading rifle mounted on a disappearing carriage, and one 12-inch breech-loading rifle mortar on a Gordon carriage, in order that cadets may receive instruction in all types of modern guns and mortars.

ARTILLERY HARNESS.

It is recommended that a set of artillery harness of leather of natural or russet color may be made for the field battery at this post. This leather is more easily kept clean and in proper condition than black leather, a matter of considerable importance here, on account of the very limited number of men and small amount of time at their disposal for such work.

HORSES FOR CAVALRY AND ARTILLERY INSTRUCTION.

The total number of horses at present available for cavalry instruction is 98, of which 48 are also required in order to furnish teams for the field battery of instruction. The system in vogue here, of using the same horses for saddle and draft purposes, is radically wrong and should be abandoned. This could be accomplished by providing 48 artillery (draft horses), and a small detachment of noncommissioned officers and enlisted men of the artillery arm, to care for and train these horses, and to furnish instructed noncommissioned officers and drivers for cadet drills, so that the light artillery instruction can be made more thorough than is possible under existing conditions.

My senior assistant in charge of artillery instruction, First Lieut. Granger Adams, Fifth Artillery, reports as follows on this subject, and I fully concur in his opinion:

“One great fault arising from the present system is the lack of instructed noncommissioned officers to teach individual drivers and act as chiefs of carriage at the drivers’ drills. It is impracticable to instruct drivers at the same time as cadets, and at other drills there are at present no chiefs of section to control the drivers of the separate teams. It is impossible for one instructor to properly observe and control the 24 drivers of the battery, unassisted either by chiefs of platoon or noncommissioned officers. The duties of the men of the cavalry detachment are, and have always been, so heavy that the only separate instruction which can be given drivers is on the drill days for cadets, during the hour just preceding the cadet drill; and during those months when cadets do not receive artillery instruction neither men nor horses receive any artillery training whatever. Under such conditions properly trained drivers and horses are impossible.

“In service it requires months of continued practice, under the constant supervision of an instructed noncommissioned officer, to make what is considered a competent driver from a recruit.

“In the cadet instruction battery it is a common occurrence, unavoidable under existing conditions, for a man to appear mounted as a driver at a cadet drill, who never before sat in an artillery saddle, who knows nothing of artillery driving, and nothing even of the meaning of the commands he hears.

“Other plans may be formed whereby the present system may be changed without additional men and horses, but they are only makeshifts and not of real value, resulting either in separating the horses from the men who should care for and

drive them, or in using the horses for purposes foreign to their intended uses and for which they should be in constant training.

"The high state of efficiency attained by men and horses under proper conditions and training was well shown by a platoon of light artillery at the military tournament in New York last winter, an efficiency impossible except where men and horses both are trained continually for their proper work and not even imagined by cadets, whose only experience is with the improvised battery with which they are familiar.

"The matter of the increased expense is not worthy of consideration in comparison with the benefits to be gained.

"If this instruction is to be given to cadets, it should be of the best and on a par with that in other branches at the Military Academy.

'Under the present system cadets graduate from the Military Academy never having seen an artillery horse or an artillery driver. As already noted, they continually see recruits sent to drill as drivers, and because from extreme care and the slow gaits necessarily maintained no accidents occur, it follows naturally that they should get the opinion that no special training is necessary; that any horse which will work in a collar is good enough for an artillery team horse, and any man who can ride fully capable of driving a pair in an artillery team.

"It is needless to say that such impressions formed by cadets, and carried away with them, are hurtful to the service, since many do not have the opportunity later to observe how untrue were the object lessons in field artillery which were presented to them as cadets."

DISCIPLINE.

The discipline of the corps of cadets was strictly enforced, in accordance with the requirements of the Regulations, United States Military Academy, and though there have been but very few serious breaches of discipline, and though there was a marked improvement in discipline in general, still the highest standard has not yet been reached, in my opinion.

Its proper maintenance depends in no small degree upon the conscientious cooperation of the cadet officers, noncommissioned officers, and privates of the first class (who are more frequently required to act as officers than heretofore) with the officers of the department of tactics; and in fact the discipline of the corps has been placed more in the hands of the former than has formerly been the case, but the increase in responsibilities has been properly attended with increased privileges.

The discipline has also been improved by intrusting the preliminary instruction of the new cadets entirely to the officers of the first class, best qualified to carry out this most important work under the constant and ever-watchful supervision of the tactical officer in charge, and their preparatory physical training has been handed over to the master of the sword, who is best qualified to impart it.

The very considerable license permitted cadets for many years in certain entertainments, known as the "Color-line entertainment," "Hundredth-night performance," etc., has been very properly curtailed, by excluding at such entertainments all reference, either in disapprobation or praise, to commissioned officers on duty at the Academy or elsewhere, all of which has been very injurious to discipline.

Vigorous measures have been taken to repress any and all attempts at any form of hazing.

After many years of experience at the Military Academy as a cadet, tactical officer, commandant of cadets, and Acting Superintendent, and careful study and observation of the system of discipline enforced here, I am of the opinion that there is an urgent necessity for a careful revision of the schedule of punishments now in force, and that the cancellation of punishment by means of pledges should be abolished. By the present system some of the punishments awarded for offenses are so mild as to be even nondeterrent; and many, especially those adjudged for the most serious offenses against discipline—as disrespect, hazing, insubordination, disobedience, neglect of duty, etc.—are entirely inadequate, and give the cadet a wrong impression of their gravity. In my opinion cadet officers and privates of the first class, acting as assistant instructors or officers at drill and other practical instruction, ceremonies, etc., as officer of the day and officer of the guard, *should be marked for their efficiency, attention to duty, and soldierly qualities. Proper credit, based on marks, should be given them in their class standing, and this, together with the value given to discipline in the general merit roll and to the drill regulations of the three arms, should be raised to at least the relative value of mathematics.*

CONCLUSION.

In conclusion, I wish to express my highest appreciation of the earnest, intelligent, and faithful assistance I have received from the officers of the department of tactics, more especially First Lieut. Granger Adams, Fifth Artillery; First Lieut. J. H. Beacom, Third Infantry; First Lieut. S. L. Faison, First Infantry; Second Lieut. J. R.

Lindsey, Ninth Cavalry, and Second Lieutenant George Blakely, Second Artillery, in charge of instruction in practical military engineering during the summer encampment.

I am, sir, very respectfully, your obedient servant,

O. L. HEIN,
Lieutenant-Colonel, and Commandant of Cadets.

C.

WEST POINT, N. Y., *September 8, 1898.*

The ADJUTANT, UNITED STATES MILITARY ACADEMY,
West Point, N. Y.

SIR: I have the honor to submit the following report upon the different branches of work in this department during the year from September 1, 1897, to August 31, 1898, as far as it came under my cognizance. This work was under the charge of Capt. James L. Lusk, Corps of Engineers, detached from the Military Academy August 31, with me as his assistant. As we both left the post with Company E, Battalion of Engineers, for service in the field, April 30, 1898, and continued absent during the remainder of the period covered by this report, it, in all matters except those relating to the company, pertains only to the time prior to April 30, 1898.

COMPANY E, BATTALION OF ENGINEERS.

This company until April 30, 1898, furnished a daily guard detail of 10 men, kept its barracks and vicinity in repair and police, cultivated its garden, kept the ponton trains and cadet boats in repair, constructed two new ponton boats, and kept the siege, seacoast, and mortar batteries with Fort Clinton and Battery Knox in good order and repair. In connection with the waterworks and filter, it furnished field parties for the surveys and construction, and two noncommissioned officers as overseers of civilian working parties; and at critical times the company furnished fatigue parties to prevent overflow of jetties and to repair breaks and stoppages in pipe lines.

It furnished three teachers for the post school for soldiers' children and the same number for the post school for enlisted men.

The company left this post with 3 officers and 100 enlisted men on April 30, 1898, for duty in the field. Joined the Fifth Army Corps at Tampa, and as a part of that corps participated in the entire Santiago campaign, embarking at Santiago to return to the United States on August 22, and returned to this post September 4, 1898.

PRACTICAL MILITARY ENGINEERING.

During October, 1897, and April, 1898, the classes of 1898 and 1899 were under instruction and received instruction in the following classes of work:

Signaling with flag and heliograph.

Ponton bridge by successive pontoons.

Making fascine.

Making brush gabion.

Making hoop-iron gabion.

Making hurdle.

Abatis.

Making and planting palisade.

High and low wire entanglements

Barrel revetment.

Brush gabion revetment.

Hoop-iron gabion revetment.

Sand-bag revetment.

Breech-loading gun epaulement, full scale.

Breech-loading gun epaulement, scale of one-sixth.

Flying trench, full scale.

Flying trench, full scale, one-sixth.

Shelter trenches, various forms.

Double sap, scale one-sixth.

Single sap, scale one-sixth.

Siege-gun platform.

Howitzer platform.

Mortar platform.

Profile and defilade.

NEW FILTER BEDS.

Work on these was in operation September 1, 1897, and was continued until stopped by cold weather, December 18, 1897; however, during this period masonry work was much delayed by the slowness of the contractors in delivering cement. Work was resumed March 18, 1898, and continued until stopped, April 28, by orders requiring the departure for the war of all the officers and overseers connected with the work. At that date all excavation had been completed. The north, west, and south walls were completed. The foundation of valve chambers and clear-water wells and the walls around them had been laid, and these walls commenced, and the valves and piping of these chambers placed in position. Part of the filling had been placed against outside of walls.

Owing to the cessation of the work when in full operation, for the reasons mentioned above, about \$7,200 of the appropriation of \$25,000 for the fiscal year ending June 30, 1898, remained on June 30 unexpended, and will have to be turned back into the Treasury. To complete these filters a reappropriation of this amount will be necessary, and also an additional amount of about \$800 for the care and preservation of the unfinished work during the coming winter.

NEW SUPPLY MAIN.

Work on this was in operation September 1, 1897, under charge of post quartermaster, and was soon completed.

NEW CROW-NEST PIPE LINE.

Work on this was commenced upon completing the above, and was completed before cold weather. This line connects the new Crow-Nest reservoir and the old Crow-Nest pipe line, joining the latter near Sinclair pond.

Both these lines have been covered for their entire length with a frost protection of not less than 4 feet of earth. This required, in the case of the new supply main, considerable work at the creek crossing below the new reservoir, along the banks of this creek, through the Kinsley orchard, and at the descent to the main road near the Kinsley gate.

NEW RESERVOIR.

On September 1, 1897, the height of water in new reservoir was 324.4. During the early part of this month the waste valve was kept open a few turns to lower the water so as to be out of the way of work on siphon pipe and spillway, and it was until October 1 kept open a little at nights so as to about balance the inflow. Height October 1, 320.8; November 1, 320.5; December 1, 322.6.

The water rose to height of weir of spillway 326 and overflowed for the first time December 20, and continued to overflow until March 20, reaching the maximum overflow of 4 inches deep February 20. After the reservoir cleared of ice, samples of the water were taken from different depths. All samples were free from taste or odor and clear and transparent except those from extreme bottom, which contained a small amount of matter in suspension; accordingly the waste valve was opened and kept open so as to waste water from the bottom rather than the top. As the water ceased to overflow, the waste valve was partly closed, and was for the remainder of the period until April 28 kept so as to about balance inflow and keep water a few inches below weir. Upon cessation of work this valve was left closed. The water in reservoir at that date was apparently in the finest condition and fit for use.

During the period September 1 to April 30 the work on the reservoir and vicinity consisted in—

The completion of spillway, the unfinished masonry work being laid and pointed and the slopes sodded.

The completion of paving of dam and the arrangements for draining at the ends.

The grading of west approach to dam and the road over spillway culvert and the sodding of banks at this point.

The construction of a siphon pipe line to draw water from different depths and its connection with service main. The connections of this siphon within reservoir for drawing water at low levels have not yet been placed, as it was not considered desirable to draw water down for this purpose only.

The grading of slopes below dam and the arrangement of a channel to carry off swamp drainage and waste from spillway without washing away earth covering of service main.

Replacing the temporary jetty channel through old swamp site by a permanent

channel under which the swamp drainage is carried in a pipe culvert, connecting this new jetty channel with reservoir by a masonry entrance basin.

Raising the grade of road along west side of reservoir where it was but little above flow line.

The work still to be done at reservoir consists in the erection of fences and parapet walls over dam and in dangerous places, grading of east approach, and the removal of shallow flowage along east side.

WATER SUPPLY.

During the period from September 1 to April 30, owing to abundant rains, it was not necessary to draw on Round Pond, the supply of water being obtained from Cascades and Crow-Nest streams with the slight assistance during part of September and October of a small amount from the new reservoir.

A new reservoir of small capacity, with dam, culverts, spillway, intake, valve chamber, etc., complete, has been constructed on the Crow-Nest stream about a quarter of a mile above the old one; this in order to get above the flow line of new reservoir and thus to be able to turn this, the best water on the post, into the new reservoir. This has been connected by a new 8-inch pipe line with the old pipe line, and hence is now available for use.

During the month of February the intake at Cascades, which had been injured by stones and boulders, became stopped by leaves and sticks in the heavy flow after a sudden thaw. After vain attempts to clear it at the spot Round Pond was turned on for a few hours and the back pressure apparently cleared away the obstruction by pushing it back into the Cascades stream. However, as was afterwards discovered, part of the matter in the pipe was washed down the pipe and lodged in the branch leading to new reservoir. While the Cascades was kept running into Delafield no further trouble was experienced, but upon attempting to turn it into the new reservoir the material which had lodged in that pipe jammed and the increased pressure burst the Cascades pipe line, opening an old crack about 1,000 feet west of Delafield Pond. This break was first repaired and then attention was given to the jam which, by alternating pressure and heat, was washed down through the old filter house and was found to consist of leaves, sticks, trash, and lumps of ice. Both of these operations were performed by the enlisted men of the engineer company.

During March and April work was in operation on the frost protection for the line from new reservoir to Delafield and the pipe lines westward. The retaining walls for this fill were nearly completed, and considerable earth had been put in place when work was stopped.

-Very respectfully, your obedient servant,

E. EVELETH WINSLOW,
Lieutenant of Engineers, U. S. A.,
Instructor Practical Military Engineering.

WEST POINT, N. Y., *August 27, 1898.*

The ADJUTANT, UNITED STATES MILITARY ACADEMY,
West Point, N. Y.

SIR: I have the honor to submit the following report of the instruction in practical military engineering, signaling, and mechanical maneuvers conducted by me during the summer encampment of the corps of cadets of 1898.

Instruction was given in practical military engineering and signaling to the first and third classes, and in mechanical maneuvers to the first class only. The ponton train was not available, nor were tools for field work at hand during the early part of the summer. Lectures and work with models were resorted to therefor, that the course of instruction might be carried through on the usual lines.

PRACTICAL MILITARY ENGINEERING AND SIGNALING.

The following is a detailed account of the instruction given in these branches:

June 24.—The entire first class was taken on a mounted reconnaissance. The purpose of the reconnaissance was to select defensive positions, and locate sites for camping and maneuvers. One-half the class reconnoitered on the right bank of the Hudson River for a radius of from 12 to 15 miles from West Point; the other half crossed the river and examined the left bank. Each half of the class was subdivided into four parties, which operated independently, under charge of a cadet selected for

his skill in topographical drawing. The work on the West Point side of the river was under the direction of Lieut. W. R. Smith, First Artillery, and I supervised the work on the Garrison side. Each cadet made his own sketch of the road, and the leaders of parties turned in written reports in addition to sketch. The parties set out at 7.45 a. m., and returned at 5 p. m.

July 5.—Lecture to first and third classes (separately) in Academic building on shelter trenches. Profiles of trenches given on blackboard (one hour to each class).

July 6.—Examined first class on foregoing lecture, and explained regular field works (in Academic building). (One hour.)

July 12.—Third class in cordage. The cadets were individually instructed and examined in the more important knots, lashings, and splicings. (Time, three and a half hours.)

July 13.—First class in cordage. Instruction on same lines as above. (Time, three and a half hours.)

July 18.—Third class in engineering. The class was taken to engineer storerooms and instructed by models in the character, dimensions, and construction of revetments used in field works, in the obstacles employed, and in the profile of the trenches used in siege work. This was supplemented by an explanation of trenches, revetments, and obstacles from the material in Fort Clinton.

The ponton bridge of the United States advance-guard train and United States reserve train was constructed from models. Spar bridges were also constructed by cutting sticks and using cord for lashings. (Time, three and a half hours.)

July 26.—The first class was instructed in advance-guard formations, and simple problems were set and worked out by sections of the class using the Kriegspiel map and blocks. Instruction also given in signaling, assisted by Lieut. C. H. Paine, Thirteenth Infantry. (Time, three and a half hours.)

July 27.—The third class was instructed on precisely the same subjects and in the same manner as the above (July 26). (Time, three and a half hours.)

August 2.—First class in signaling, with Lieutenant Paine assisting. (Time, three and a half hours.)

August 3.—Third class in signaling, with Lieutenant Paine assisting. (Time, three and a half hours.)

August 15.—One-half third class in intrenchments. The shelter trench for one rank kneeling was thrown up, using the intrenching tools which had been furnished the corps. (Time of drill, one hour and forty minutes.)

August 16.—The second half of third class in intrenchments. The trench already constructed was widened to 5 feet to accommodate two ranks kneeling. (Time of drill, one hour and forty minutes.)

August 17.—Entire first class in intrenchments and in signaling. Shelter trenches were constructed for one rank kneeling, two ranks kneeling, one rank standing, and one rank lying down. (Time of drill, one hour and forty minutes.)

August 22.—While in camp at Peekskill during a practical march, Company A of the battalion under my direction threw up a trench for one rank kneeling at one extremity of the State camping grounds, making the trench about 125 feet in length. This trench was defended against an attack by the other three companies of the battalion, the attacking companies starting near the other end of the grounds, about three-quarters of a mile distant. The trench was constructed in three-quarters of an hour with the intrenching tools carried by the cadets as part of their equipment. In constructing this trench the fourth class, though without previous instruction, was employed along with the other classes. The trench was $1\frac{1}{2}$ feet deep and $2\frac{1}{2}$ feet wide, a berm of 1 foot was left, and the mound made $1\frac{1}{2}$ feet high. The side towards the enemy was covered with green weeds, branches, and soda, to make the line of intrenchments indistinguishable at a distance. This device succeeded.

MECHANICAL MANEUVERS.

Instruction in mechanical maneuvers was given to the first class only. This work was conducted in Fort Clinton, and, besides instruction in cordage, blocks, and tackle, it included the practical use of the siege and garrison gin, hydraulic jacks, gun lift, truck, and way planks.

The time given to these maneuvers was as follows: July 7, three and one-half hours; July 14, three and one-half hours; July 21, three and one-half hours; July 29, three and one-half hours; August 4, three and one-half hours; August 12, one hour and forty minutes; August 18, one hour and forty minutes.

Very respectfully, your obedient servant,

GEORGE BLAKELY,
Second Lieutenant, Second Artillery.

D.

LIBRARY UNITED STATES MILITARY ACADEMY,
West Point, N. Y., August 31, 1898.

The ADJUTANT, UNITED STATES MILITARY ACADEMY.

SIR: I have the honor to submit the following report in accordance with the provisions of Circular No. 35, Headquarters United States Military Academy, West Point, N. Y., August 11, 1898.

The increase of the library during the past year is exhibited in the following statement:

Number of volumes in library August 31, 1897.....	40,098
Number of volumes purchased up to August 31, 1898	822
Number of volumes presented to the library to August 31, 1898.....	838
	<hr/>
Making a total of.....	41,758
Number of duplicate Government publications returned to Superintendent of Public Documents	120
	<hr/>
	41,638
Number of volumes added by binding pamphlets and periodicals.....	300
	<hr/>
Making a total of bound volumes of.....	41,938
	<hr/>
Number of pamphlets in library August 31, 1897.....	6,509
Number of pamphlets added during year.....	380
	<hr/>
Making a total of pamphlets.....	6,889

The card cataloguing of the books and pamphlets of the library has been continued, especial attention having been paid to the Government publications, which had heretofore received but little attention.

The attention of the Superintendent is respectfully called to the pressing necessity of the renovation of the library building in accordance with the plans proposed and already prepared. The defects of the present building have been specified in my last report, to which I respectfully refer. At present, with the very limited force of two attendants—the assistant librarian and the private soldier—it is difficult to carry on the work successfully so that all the benefits of the library may be properly utilized by cadets and officers. I renew my recommendation for an increase in the compensation for the assistant, Dr. Otto Plate, and recommend that the soldier attendant be made a noncommissioned officer. The attendance required of the latter is ten hours daily for the whole year, excluding Sundays only.

Very respectfully, your obedient servant,

PETER S. MICHIE,
Professor, United States Military Academy, Librarian.

E.

OFFICE OF TREASURER,
QUARTERMASTER, AND COMMISSARY OF CADETS,
West Point, N. Y., September 1, 1898.

The ADJUTANT, UNITED STATES MILITARY ACADEMY, *West Point, N. Y.*

SIR: In compliance with instructions contained in Circular No. 36, C. S., headquarters United States Military Academy, I have the honor to make the following report of the work done in the departments under my charge, viz, (1) treasurer United States Military Academy, (2) quartermaster of cadets, (3) commissary of cadets, during the fiscal year ending June 30, 1898.

On the 6th of May last, in compliance with special order No. 70, paragraph 7, C. S., headquarters United States Military Academy, I relieved Maj. William F. Spurgin, Twenty-third Infantry, of his duties as treasurer and quartermaster and commissary of cadets, Major Spurgin having performed the duties from the beginning of the fiscal year up to that time.

TREASURER UNITED STATES MILITARY ACADEMY.

During the fiscal year the work of the office has consisted in keeping the separate accounts shown in Statement No. 1, and rendered necessary for the proper accounting for the very large sum of money, amounting approximately to \$200,000, received and disbursed by the treasurer.

In addition to all these accounts the treasurer is required "to keep an account with each cadet, in which he shall credit him with his monthly pay and charge him with the sums paid to his creditors." The financial standing of each cadet can thus be seen from his account at any time.

Accounts Nos. 2, 4, 6, 10, 12, 14, 16, 20, 22, 23, 25, and 28 show the total amounts received and expended under each out of the pay of the corps of cadets for its support and authorized expenses.

All of the accounts are settled by the treasurer every two months and afterwards inspected by an officer detailed for the purpose. The books of the office are kept by Mr. J. E. Wilson, who for twenty-six years has performed the work in the most creditable manner and to the satisfaction of all interested.

Statement No. 1.

	Disbursements.	Receipts.
1. Assistant treasurer	\$174, 094. 42	\$171, 234. 22
2. Athletic association	1, 132. 22	1, 342. 22
3. Balances paid	20, 429. 73	20, 546. 67
4. Barber	571. 55	571. 55
5. Cadet cash	11, 792. 09	11, 773. 50
6. Hospital	3, 047. 78	3, 047. 73
7. Cadet laundry	10, 471. 76	10, 545. 81
8. Cadet quartermaster department	72, 926. 20	70, 214. 93
9. Cadet subsistence department	60, 557. 58	62, 059. 13
10. Confectioner	219. 00	219. 00
11. Corps of cadets	197, 302. 21	195, 805. 34
12. Damages, ordnance	37. 97	37. 97
13. Dancing	521. 37	521. 37

		Miscellaneous items	230. 10
		Periodicals	7. 40
		Young Men's Christian Association..	53. 26
	36, 442. 35		36, 442. 35

Owing to the breaking out of the war with Spain it became necessary to graduate the members of the first class on the 26th of April last, and they were paid at settlement of accounts the sum of \$15,718.45, an average to the 59 graduates of \$266.42 each; the 60 members of the furlough class were paid, prior to departure, the sum of \$5,750, an average of \$95.83.

Ninety-three new cadets entered at the commencement of this academic year, of this number 89 deposited \$7,978.63, an average of \$85.79 each; four cadets made no deposit. The smallest individual deposit made was 60 cents and the largest, \$196. This class was in debt on settlement of accounts June 30 last, \$4,520.21.

I desire to call attention to the fact that the requirement of a deposit of \$100 with the treasurer before a candidate is admitted to the Academy has not been complied with in all cases. The impression seems to prevail with many that this deposit is not necessary, and many instances are known where cadets believed to be well able to make the deposit have not done so.

I respectfully recommend that the treasurer be instructed to insist upon the deposit being made, and that no candidate be admitted without it unless under special instructions.

During the year there was paid to discharged cadets and to those resigned the sum of \$1,055.53, of which \$448.50 was for travel pay and \$180.33 for transportation, the latter amount having been received from the Quartermaster's Department for the purpose.

CADET QUARTERMASTER'S DEPARTMENT.

During the year this department has fully supplied the articles required by the corps of cadets, and, it is believed, to the satisfaction of all.

The following list shows the large number of articles manufactured and repaired in the department:

Articles.	Manu- factured.	Repaired.
Dress coats.....	258	319
Overcoats.....	184	256
Fatigue coats.....	513	774
White jackets.....	276	20
Gray trousers.....	578	1, 014
White trousers	1, 012	1, 457
Flannel trousers	195	96
Riding trousers	80	50
Officers' trousers.....	72	80
Officers' white trousers	19	
Officers' blouses.....	52	24
Officers' riding trousers.....	8	
Civilian dress coats	1	
Civilian dress vests	1	
Civilian dress trousers	1	
Officers' overcoats.....	2	4
Officers' dress coats	1	4
Officers' cape.....	1	
Waiver jackets	80	24
Chevrons sewed on		504
Civilian suits repaired		1, 024
Shoes repaired.....		

CADET SUBSISTENCE DEPARTMENT

I believe the quantity and quality of the food furnished satisfactory in all respects. Since I assumed charge I possible, to vary the bill of fare and to improve the service.

The cost of subsistence at the mess has been 53.5 cents per day to each cadet for the subsistence of cadets in hospital. The total cost of subsistence in both mess and hospital has been per day; the same cost for the fiscal year ending June 30, increased cost this year has been caused by the great increase, etc., during the late war.

CADET LAUNDRY.

The following statement exhibits the articles laundered during the year:

Bathing suits	10	Pillowcases ..	
Belts, shoulder	18,987	Sheets	
Belts, sword	3,171	Shirts, white ..	
Belts, waist	21,073	Shirts, night ..	
Blankets, single	223	Shirts, under ..	
Blouses	5	Socks, pairs ..	
Clothes bags	1,809	Towels	
Collars	106,604	Trousers, gray ..	
Comfortables	117	Trousers, white ..	
Cuffs, pairs	72,596		
Drawers	31,189	Total pieces ..	
Gloves, pairs	40,933		
Handkerchiefs	67,148		
Jackets, white	1,309		

The following shows the articles laundered for the cadets:

Bandages	36	Shirts, hospital ..	
Blankets, single	8	Towels	
Napkins	3,533		
Sheets	3,054	Total pieces ..	
Tablecloths	326		
Bedspreads	681		
Mattress covers	5		
Pillowcases	2,607		

No account has been kept of the articles laundered for the working capacity of the laundry is now taxed to properly care for the immense wash received each week promptly, it will be necessary to make improvements in the drying room. The latter is in very bad condition and perform the labor required of it. In consequence the work is very much delayed.

The number of pieces received for laundry is increased from report. Steps are being taken to ascertain the cost in satisfactory condition.

On account of the very large and increasing number weekly for laundry, I respectfully recommend that white at parade, guard mount, and inspection only.

Very respectfully, your obedient servant,

Captain, Nineteenth Infantry, Treasurer of
Quartermaster's Department

F.

OFFICE OF THE QUARTERMASTER AND
West Point

The ADJUTANT, UNITED STATES MILITARY ACADEMY,
West Point, N. Y.

SIR: In compliance with instructions from your office, the 11th instant, I have the honor to submit herewith the report of the operations in the quartermaster's department and as director of the gas works for the fiscal year ending

QUARTERMASTER'S DEPARTMENT, UNITED STATES ARMY.

The duties pertaining to this department are enumerated in paragraph 972, Army Regulations, 1895.

The amounts received, disbursed, etc., under the various heads of appropriation are shown in accompanying statement, marked "A."

The following contracts for furnishing fuel, forage, and straw were entered into and satisfactorily fulfilled:

Gertrude Harnden, 150 cords hard and 60 cords soft pine wood.

Dickson & Eddy, 600 tons egg, 1,100 tons stove, and 300 tons chestnut coal.

O'Brien & Kellogg, 700,000 pounds oats and 40,000 pounds bran.

William E. Dante, 460 tons hay.

Chas. L. Rickerson, 40,000 pounds middlings and 110 tons straw.

DETACHMENT ARMY SERVICE MEN, QUARTERMASTER'S DEPARTMENT.

This organization is composed of men employed on extra-duty to perform labor as mechanics, laborers, and teamsters.

These men are enlisted to do specific work, for which, at time of enlistment, they expected to receive additional compensation, known as extra-duty pay, which pay they received up to April 26 last, when it was discontinued under provisions of section 6, act of Congress, published in General Orders, No. 29, A. G. O., April 29, 1898, abolishing extra-duty pay.

The men of this detachment are, in my opinion, deserving of extra compensation. When required to do so they work in all kinds of weather, and much more is expected of them than of enlisted men elsewhere.

In view of the requirements imposed on them, I earnestly recommend that efforts be made to have the extra-duty pay restored, not only for the future, but for the period of the war with Spain, during which time it was discontinued.

QUARTERMASTER'S DEPARTMENT OF THE UNITED STATES MILITARY ACADEMY.

My duties in this branch are defined in paragraph 15 of the United States Military Academy Regulations, 1894.

Contracts entered into during the year, and made in previous years and remaining in force in the fiscal year to which this relates, were as follows:

No.	Contractor.	Date.	Purpose.
1	Probst Construction Co.....	May 22, 1896	Memorial hall.
2	Westmoreland Coal Co.....	May 22, 1897	2,000 tons of gas coal.
3	Dickson & Eddy.....do	4,600 tons coal.
4	Trenton Iron Co.....	July 28, 1897	Pier for coal-handling plant and wire rope.
5	Tacony Iron and Metal Co.....	May 13, 1898	Iron stairs, Engineer Barracks.
6	B. F. Jones.....	June 8, 1898	New dock and ferry slip.

The contract of the Probst Construction Company, for Memorial Hall, is being completed by its bondsmen, the American Surety Company; the contract has been extended to November 1st next. All other contracts, with the exception of that for new dock and ferry slip, have been completed. It was originally contemplated to have the new dock and ferry slip constructed by July 1 of the current year, but owing to the construction interfering with the steamboat traffic at the south wharf during part of the summer, and upon the request of the steamboat lines interested, contract was, with approval of the Superintendent, made to take effect September 23 next, work to be completed by December 5, this year.

The erection and completion of the following public works were made:

New guardhouse at south gate.

Public latrine.

Coal cableway.

Ordnance boathouse.

Iron stairway at engineer barracks.

The following improvements and repairs have been made by special appropriations or from appropriations proper for such purposes:

Continuing breast-high wall, maintaining and improving post cemetery, repairing interior cadet mess building, cadet laundry and store, cadet barracks, exterior and interior, cadet hospital, soldiers' hospital, hospital steward's quarters, ordnance laboratory, new leg guard for riding hall, repainting riding hall, feed boxes for cavalry stable, interior and exterior of cavalry barracks, removing rock for distance of 25 feet north of same; quartermaster's stables, roof and gutters of gymnasium; new granolithic sidewalk on east and north side of cadet mess hall, also south and west side of Academic building.

Repairs were made to the following buildings: Nos. 1, 3, 4, 5, 7, 8, 10, 10 A and 10 B, 13, 15, 19, 21, 22, 22½, 23, 24, 25, 27, 31, 32, 33, 34, 36, 37, 39, 40, 63, 65, and officers' mess.

The steam heating apparatus in all public buildings was overhauled and necessary repairs were made.

Six hundred feet water pipe, 6-inch, were laid from quarters No. 40 to the south gate guardhouse, near which point a culvert was constructed to protect pipes from freezing.

Stone walls were built at the following places:

West end of quartermaster's stables, 1,000 feet long, 6 to 20 feet high, and 5 feet in thickness.

South end of cemetery, 300 feet long, 10 feet high, and 3 feet in thickness.

At south gate guardhouse, 400 feet in length, of same dimensions as walls adjoining.

An arched culvert, 42 feet long, composed of stone and brick, was constructed under the road at Goose Pond.

Two thousand five hundred cubic yards granite stone were crushed for repairs to roads and for concrete pavements.

Roads were drained and macadamized at the following places:

From headquarters to southern boundary of the reservation, quarters No. 45 to the Goose Pond, and from Library Hill to the riding hall.

Statement of the receipts and disbursements for the fiscal year ending June 30, 1898, accompany this report, marked "B."

GAS WORKS, UNITED STATES MILITARY ACADEMY.

As director of the gas works, I am charged with providing the necessary illuminating gas for the needs of the post.

Officers and the civilians residing on the post, connected with the Academy, pay 75 cents per thousand feet for the gas they consume, which charge is taken as the cost of the manufactured gas. Each cadet pays 35 cents per month for the use of gas, which is taken as the cost of the manufacture of the gas.

The quartermaster's department pays 75 cents per thousand feet for gas consumed in lighting buildings devoted strictly to the use of that department.

The sums received, added to the appropriation of Congress for gas coal, sustain the gas works.

During the year 16,405,900 cubic feet gas were manufactured; 3,974,700 pounds Westmoreland gas coal and 4,732 gallons oil were used for this purpose.

One bench of six retorts was renewed.

The receipts and disbursements are shown in statement of special contingent fund, marked "C."

SPECIAL CONTINGENT FUND, UNITED STATES MILITARY ACADEMY.

This fund is derived from the rent of certain buildings, etc., on the post.

Expenditures for the repairs of the buildings which pay rent are made, under direction of the Superintendent, out of funds derived from rental.

This fund is also used for subscription to periodicals and for incidentals not provided for otherwise.

Statement of the receipts and disbursements under this head are included in statement marked "C."

Very respectfully, your obedient servant,

WM. F. SPURGIN,
Major, Twenty-third Infantry, Quartermaster, Disbursing Officer,
and Director of Gas Works, United States Military Academy.

A.—Statement of funds pertaining to the Quartermaster's Department, United States Army, for the fiscal year ending June 30, 1898.

G.

SURGEON'S OFFICE, UNITED STATES MILITARY ACADEMY,
West Point, N. Y., August 25, 1898.

The ADJUTANT, UNITED STATES MILITARY ACADEMY.

SIR: In compliance with the requirements of Circular No. 35, United States Military Academy, August 11, 1898, I have respectfully to submit the following statement of the work done in the medical department of the post of West Point, N. Y., during the fiscal year ending June 30, 1898.

The strength of the command is shown in the following table:

Officers	47.98
Cadets	268.67
Enlisted men	312.95
Civilians, officers' families, etc	208
Civilians, soldiers and employees' families	514.75

The number of sick treated during the year is as follows:

Officers in quarters	19
Cadets in hospital	1,149
Cadets in quarters	2,481
Enlisted men in hospital and quarters	379
Civilians and officers' families who have received treatment from the cadet hospital	1,049
Civilians and soldiers' families who have received treatment from soldiers' hospital	2,625
Number of recruits examined	162
Number of recruits accepted	125
Number of recruits rejected	37
Births	18
Discharged for disability	4
Deaths:	
Officers	0
Cadets	0
Enlisted men	3
Civilians	8

The cases reported as having been treated from the cadet and soldiers' hospital represent only those for whom prescriptions were written. The unrecorded calls for attention and observation have been very much more numerous than those of which note is made. There was a daily average of 1,300 persons entitled to medical treatment.

Under the supervision of the Superintendent the medical officers have had a care to the whole sanitary condition of the post. Generally speaking, the health of the command has been excellent. Cases of diphtheria, scarlet fever, measles, and mumps have all been treated during the year. These cases of contagious diseases have been rigidly quarantined. This precaution has prevented any spread of the disease. Malarial fever, generally of the tertian intermittent type, has prevailed at certain seasons. The fever has yielded readily to treatment. The luxuriant growth of underbrush throughout the reservation is being cut away wherever practicable. It is probable that this will diminish the amount of malarial disease. The water supply for West Point has been carefully and scientifically studied; it is excellent in quality and of ample quantity.

Lectures to the first class have been given by the surgeon on duty at the cadet hospital. The lectures were strictly practical. The subjects discussed were: The anatomy and physiology of the circulating and respiratory systems; hemorrhage; antiseptic surgery; the use of the first-aid packet; fractures and dislocations; also, the emergencies calling for prompt nonmedical attention.

Very respectfully,

WILLIAM L. KNEEDLER,
Captain and Assistant Surgeon, U. S. A.

**SIXTH REPORT OF THE BOARD OF ORDNANCE
AND FORTIFICATION.**

WAR 98—69

1089

REPORT OF THE BOARD OF ORDNANCE AND FORTIFICATION.

WAR DEPARTMENT,
Washington, D. C., October 31, 1898.

The SECRETARY OF WAR.

SIR: In compliance with the provisions of the act approved February 24, 1891, the Board of Ordnance and Fortification has the honor to submit, for transmission to Congress, its annual report for the year ended October 31, 1898.

PERSONNEL.

A change was made in the personnel of the Board during the year by the relief of Capt. James C. Ayres, Ordnance Department, on April 6, as recorder, and the appointment of Lieut. I. N. Lewis, Sixth Artillery, in his stead.

Captain Ayres had served as recorder of the Board since July 1, 1894, and, as an expression of its appreciation for his services, the following extract from the proceedings of April 12, 1898, is inserted:

Capt. J. C. Ayres, having been relieved as recorder of the Board of Ordnance and Fortification, the Board desires to place on record its high appreciation of his intelligent, efficient, and faithful assistance in the performance of its duties.

NEW LEGISLATION.

The only new legislation affecting the Board was contained in the fortification act, approved May 7, 1898, which made an appropriation for the work of the Board during the year ending June 30, 1899, as follows:

Board of Ordnance and Fortification.—To enable the Board to make all needful and proper purchases, experiments, and tests to ascertain, with a view to their utilization by the Government, the most effective guns, small arms, cartridges, projectiles, fuses, explosives, torpedoes, armor plates, and other implements and engines of war, and to purchase or cause to be manufactured, under authority of the Secretary of War, such guns, carriages, armor plates, and other war material as may, in the judgment of the Board, be necessary in the proper discharge of the duty devolved upon it by the act approved September twenty-second, eighteen hundred and eighty-eight; to pay the salary of the civilian member of the Board of Ordnance and Fortification provided by the act of February twenty-fourth, eighteen hundred and ninety-one, and for the necessary traveling expenses of said member when traveling on duty as contemplated in said act; for the payment of the necessary expenses of the Board, including a per diem allowance to each officer detailed to serve thereon when employed on duty away from his permanent station of two dollars and fifty cents a day, and for the test of experimental guns, carriages, and other devices procured in accordance with the recommendation of the Board of Ordnance and Fortification. one hundred thousand dollars: *Provided*, That before any money shall be expended in the construction or test of any gun, gun carriage, ammunition, or implements under the supervision of the said Board, the Board shall be satisfied, after due inquiry, that the Government

of the United States has a lawful right to use the inventions involved in the construction of such gun, gun carriage, ammunition, or implements, or that the construction or test is made at the request of a person either having such lawful right or authorized to convey the same to the Government.

That all material purchased under the foregoing provisions of this act shall be of American manufacture, except in cases when, in the judgment of the Secretary of War, it is to the manifest interest of the United States to make purchases in limited quantities abroad, which material shall be admitted free of duty.

APPROPRIATIONS AND ALLOTMENTS.

In compliance with the act of February 24, 1891, which requires the Board to "give a detailed statement of all contracts, allotments, and expenditures made by the Board," an exhibit, marked Appendix A, is attached to this report, giving this detailed statement from October 31, 1897, to October 31, 1898.

No contracts are entered into by the Board, as they are made by the chief of the department to which the work pertains, under the direction of the Secretary of War.

The following table gives a summary of the balances of appropriations at the date of the last report, the appropriation and allotments made during the year, and the balances remaining on hand October 31, 1898.

Summary.

Act.	Balance Oct. 31, 1897, and appropriated during the year.	Net allotments during the year.	Balance available for allotment.
Fortification act of—			
Sept. 22, 1848.....	\$5,302.00	\$5,302.00
Mar. 2, 1887.....	14,775.00	14,775.00
Aug. 18, 1890.....	10,305.00	\$2,895.63	7,419.37
July 25, 1892; Feb. 18, 1893; Aug. 1, 1894; Mar. 2, 1895; June 6, 1896, and Mar. 3, 1897.....	123,248.47	96,375.01	126,873.46
May 7, 1898.....	100,000.00		
Total.....	253,721.76	99,270.64	154,451.12

GENERAL OPERATIONS.

The general operations of the Board have been largely influenced by the war with Spain, officially declared April 21, 1898.

A majority of the members have been called to duty in the field during the summer, and it has been necessary to meet at longer and more irregular intervals than usual. A very large number of instruments and devices for coast defense, together with many plans and suggestions pertaining to offensive and defensive weapons, have been carefully considered, but comparatively little new work of experimental character has been undertaken, the Board directing its work in the emergency to making effective existing methods and means of national defense rather than in experimenting with the new and untried. However, no suggestion or device which, in the opinion of the Board, gave sufficient promise of future military value to warrant it, has failed to receive a suitable allotment for development and test.

SUBJECTS CONSIDERED.

A greater number and variety of subjects than usual have come before the Board. A list of these subjects, with a brief statement of action in each case, is given in Appendix B.

CONTRACT GUNS.

The hundred-gun contract.—Under this contract, twenty-five 8-inch, fifty 10-inch, and twenty-five 12-inch guns are to be made by the Bethlehem Iron Company. The following report of the company, dated October 4, 1898, shows that excellent progress is being made toward the completion of this contract:

MACHINE TOOLS AND EQUIPMENTS.

Several additions have been made to the assembling plant during the past year, including two No. 4 Universal milling machines and two 14-inch lathes.

PRESENT CONDITION OF GUNS BEING MANUFACTURED UNDER CONTRACT.

Twenty-five guns, 8-inch caliber.

Guns No. 1 to 25, inclusive.—Shipped.

Fifty guns, 10-inch caliber.

Guns No. 26 to 40, inclusive.—Shipped.

Gun No. 41.—Accepted and ready for shipment. In use in shop for gun-carriage tests.

Guns No. 42 to 50, inclusive.—Shipped.

Guns No. 51 and 52.—Proof fired and ready to ship.

Guns No. 53 to 55, inclusive.—Assembled and breech mechanisms being fitted.

Guns No. 56 to 58, inclusive.—Assembled, finish-bored in main bore, and partly finish-turned outside.

Gun No. 59.—A hoops assembled; B hoops machined ready for assembling.

Guns No. 60 and 61.—All forgings excepting C hoops passed test and machined ready for assembling; C hoops forged and rough machined.

Guns No. 62 to 75, inclusive.—Of the 154 forgings (exclusive of breech mechanism parts) required to complete these guns, there are passed and machined for assembling eight tubes, four jackets, two B2, two B3, three D, and ten trunnion hoops; in addition there are forged and rough machined one tube, one jacket, three A1, one A3, and two C hoops.

Breech mechanisms for guns No. 56 to 65, inclusive, about half finished. For guns No. 66 to 75, inclusive, about one-third finished.

Twenty-five guns, 12-inch caliber.

Guns No. 76, 77, and 80.—Shipped.

Gun No. 79.—Accepted and ready for shipment. In use in shop for gun-carriage tests.

Guns No. 78, 81, and 82.—Assembled, finish bored, rifled, and finish turned.

Gun No. 83.—C hoops assembled; A, B, and D hoops passed and machined for assembling. Jacket forged and rough machined.

Guns No. 84 and 85.—Of 22 forgings (excluding breech-mechanism parts) required to complete these guns there are passed and machined for assembling one tube, two A1, two A2, two A3, two B2, two B3, two C1, two C2, two D, and two trunnion hoops.

Breech mechanisms for guns Nos. 78, 81, 82, 83, 84, and 85 are more than one-half completed.

EXPERIMENTAL GUNS.

The 8-inch Gatling cast-steel gun.—This gun has been constructed under a special act of Congress, approved June 6, 1896, appropriating \$40,000 for the purpose.

In August, 1897, the Board witnessed the casting of the gun at the works of the Otis Steel Company, Cleveland, Ohio, and in the following March was present during an attempt to mandrel it.

Dr. Gatling reports that the gun is now completed and ready for shipment to Sandy Hook for test.

The 10-inch Brown segmental-tube wire-wound gun.—Under date of September 30, 1898, the trustees of this gun report that progress during

the past year has not been as rapid as was desired, on account of the difficulty of getting steel from the manufacturer. It is now reported that the gun is now in the lathe and part of the first layer of wire partly wound.

It is hoped this gun will be ready for test early in the next year.

GUNS FOR THROWING HIGH EXPLOSIVES

The only material progress made during the year has been in the construction of guns for safely throwing charges of high explosives. It has been confined to light field guns of the smaller calibers, and to powder pneumatic.

Two systems of construction are under consideration.

(1) *The Sims-Dudley system.*—The Sims-Dudley system was brought to the attention of the Board by the Sims-Dudley Company, New York, in January, 1896. The Board witnessed the firing of a 4-inch gun at the company's proving ground on April 13, 1896, and a description of the gun test is given in the sixth annual report. A number of improvements have been made, and the Board, believing that this system of throwing explosives gives promise of considerable military use, at its meeting of June 29, 1898, an allotment of \$7,500 was made by the Ordnance to procure for test one 5-inch gun of this system with fifty rounds of ammunition.

The company reports that the gun is now ready for firing tests and the official tests of this gun may be completed in the next sixty days.

(2) *System proposed by the Dynamite Ordnance Company.*—An allotment was made by the Board at its meeting of June 29, 1898, of \$5,000 to procure for test one 3-inch gun of this system proposed by the Dynamite Ordnance and Armament Company, with one hundred rounds of ammunition.

The gun and ammunition have been delivered and the necessary tests will be completed as soon as the gun is ready.

The essential principle of operation in this system is the same as that employed in the Sims-Dudley. The details of construction are, however, different. No auxiliary chambers are used. The explosive is carried in the tailstock of the projectile, a fuse being inserted in the breechblock being used to ignite the explosive. The air contained in the bore space surrounding the projectile, when seated, acts as a cushion in starting the projectile. When the powder is violently compressed by the powder gases the projectile is forced forward.

HEAVY RAPID-FIRE GUNS.

The Driggs-Seabury 4.72-inch rapid-fire gun.—This gun, originally known as the "Seabury 4.72-inch gun," was completed in an entirely new and much improved breech mechanism. It was received back at the proving ground, Sandy Hook, on February 17, and its test was begun February 17. Twenty-four rounds were fired in the general test of the new mechanism. The results were very satisfactory. It is expected that the tests will be completed in the next few days.

Five-inch rapid-fire built-up gun.—This gun, for which an allotment was made March 12, 1896, was completed and tested at the proving ground, when it burst, at the severe test.

abnormal action of the powder charge. An experimental smokeless powder, blended, was employed, and the character of the rupture showed the development of an abnormal pressure. There was no evidence of weakness in the design of the gun, nor defect in the quality of the metal used.

Six-inch rapid-fire gun.—This gun was proposed by the Board, and an allotment was made July 13, 1897, for its construction according to a design submitted by the Chief of Ordnance. It has been completed during the present month, but has not yet been tested.

Three-inch rapid-fire gun.—In September, 1897, and in March, 1898, the Board made allotments to enable the Chief of Ordnance to procure two type 3-inch 15-pounder rapid-fire guns, with suitable mounts, for the purpose of protecting mine fields. The guns have not yet been purchased.

MOUNTS FOR RAPID-FIRE GUNS.

Mount for 3-inch gun.—Two types of mount are to be procured for test with the two type 3-inch rapid-fire guns—one casemate and one parapet mount, the latter to be of the balanced pillar or masking type.

Pillar mount for 5-inch gun.—The 5-inch barbette carriage on balanced pillar mount was completed, with the exception of the shield, March 14, 1898, and in the emergency then existing was issued direct to Fort Hancock. The shield has since been attached, and the carriage is now undergoing test.

Mount for 6-inch gun.—The six-inch disappearing carriage, model of 1898, is now under construction. Its completion is expected within the coming year.

RAPID-FIRE FIELD GUNS.

Under allotment by the Board, the Chief of Ordnance has ordered from abroad a Maxim-Nordenfelt field gun and a Darmancier field carriage, but they have not yet been received for test.

MISCELLANEOUS.

Maxim-Nordenfelt 75-mm. mountain gun.—This gun is completed, but not yet received in this country.

Hotchkiss 1-pounder balloon gun.—The Board made an allotment February 15, 1898, to enable the Chief of Ordnance to procure for test one Hotchkiss 1-pounder balloon gun, with mount. A special mount for this gun has been ordered constructed at the Rock Island Arsenal.

Wilder machine gun.—On March 16, 1898, the Board made an allotment to enable the Chief of Ordnance to test this gun. The company controlling the gun has not yet presented it for test.

POWER APPARATUS FOR HEAVY GUNS.

The necessity for suitable power apparatus in the service of our new coast armament being generally recognized, the Board at its meeting in May made an allotment to cover the cost of a type electrical equipment for one of the 10-inch guns at Fort Wadsworth.

This equipment includes a motor for traversing, one to operate the elevating gear and the retraction gear, and one for operating the ammunition hoist, together with the necessary wiring, switches, and controllers. This plant is already partly installed.

GUN CARRIAGES.

The Emery 12-inch elevating carriage.—This carriage was contracted for under a special act of Congress approved February 18, 1893, appropriating \$110,000 for the purpose, and an additional appropriation made June 6, 1896, of \$10,000 for a loading apparatus.

The expenditures to date upon this carriage amount to \$84,821, of which \$12,500 has been expended in purchase of the ammunition for test.

The following letter from Mr. Emery shows the progress made during the past year:

STAMFORD, CONN., *September 29, 1898.*

GENTLEMEN: In reply to your letter of September 24, in regard to progress on my contract for 12-inch elevating gun carriage, of date March 17, 1893, which was modified by a provision of the act approved June 6, 1896, in such a manner as to permit the actual construction of this carriage, I would say work in the shops was commenced in the fall of 1896, and has proceeded during the past two years, but not with such rapidity as I had hoped and expected.

The drawings for this carriage had been made prior to this date, but many modifications of these drawings have been and are still being made, many of which were found desirable for the general utility and use of the carriage, and some to meet the exigencies which have arisen as the work progresses.

I spent three months in Washington in the spring and early summer in endeavoring to get contracts for guns which I felt would be of great advantage to our Government, if ordered. The time thus spent somewhat delayed this work, but a source of much greater delay has been caused by the great pressure of other Government work being done in the shop upon which I rely for the final finishing of a large part of my carriage.

Another source of very great delay is that much of the work is tentative and can not be decided and ordered until much other work is done, so that some of the rough material could not yet properly be ordered, some experiments having yet to be made first.

There are an unusually large number of different parts, each of which must be particularly looked after, some of which have required several shops to produce and finish a single piece.

Notwithstanding all these difficulties, there has been put into the different shops material for the metal work of this carriage amounting to more than 420,000 pounds, from which parts have been finished covering over 222,000 pounds of finished weight. The rest of this material is in the various stages of construction, with the exception of the material which could not yet be ordered, for the reasons above given. Besides this, there has been finished and delivered for the preliminary and proof tests of the carriages upwards of 92,000 pounds of ammunition.

I have a good force at work on the carriage pushing the work as fast as I can consistently with the great necessity of seeing that all the different parts of an entirely new machine are so made that they will properly fulfill the functions required of them, and so that the whole may be successful when done.

I remain, your obedient servant,

A. H. EMERY.

The BOARD OF ORDNANCE AND FORTIFICATION,
War Department, Washington, D. C.

The second 10-inch pneumatic carriage.—This carriage has been constructed under a special act of Congress approved August 1, 1894, appropriating \$50,000 for the purpose, and is now mounted at the proving ground, Sandy Hook, New Jersey. Owing to unexpected mechanical difficulties, the contractors have not yet reported the carriage ready for test. Of the total appropriation available, \$40,000 has already been expended.

The 10-inch Howell counterpoise carriage.—The firing tests of this carriage are now in progress at the proving ground, under the supervision of the Board.

The 10-inch disappearing carriage all-around fire.—This carriage was completed at the Watertown Arsenal September 21, 1898. In principle it is similar to the limited-fire carriages for guns of the same caliber.

It is intended to issue it directly to the emplacement prepared for it at Galveston, Tex., where the usual firing tests will take place.

The 12-inch disappearing carriage.—This carriage was completed at the Watertown Arsenal May 8, 1897. It has since passed a very satisfactory test at the proving ground and has been issued to the service.

EXPERIMENTAL PARAPET.

Steel-rail parapet.—In October, 1897, the Board made an allotment of \$10,000 for the purpose of constructing an experimental parapet to demonstrate the value of steel rails for the protection of guns and magazines.

The Chief of Engineers reports that the parapet has been constructed, but test has been delayed owing to the fact that the gun which was to have been used for the purpose was temporarily removed for use in the defenses at Fort Washington.

HIGH EXPLOSIVES.

The Board at its meeting on February 16, 1898, recommended the adoption of emmensite and wet gun cotton as types of high explosives to be used in charging shells, and on April 12 this action was supplemented by the addition of Joveite to the list. These recommendations were approved by the Secretary of War.

AUTOMOBILE DIRIGIBLE TORPEDOES.

No material progress has been made during the year in the development of a serviceable dirigible torpedo of moderate cost.

The Halpine automobile torpedo, for which an allotment was made by the Board July 1, 1896, has not yet been presented for test. On August 25, 1898, the inventor requested permission to make a preliminary trial of his first torpedo at Willets Point, in order to demonstrate certain points which would be of advantage to him in the construction of a second torpedo for delivery to the Board. This request has been granted, and it is expected that the value of this invention will be determined during the coming year.

RANGE AND POSITION FINDERS.

Emergency type position finder.—At its meeting April 12, 1898, the Board recommended that the instrument adopted as the emergency type position finder should have an accuracy of 1 per cent of range up to 6,000 yards when the vertical base is 60 feet; when greater than 60 feet, the accuracy should be 1 per cent of range up to 8,000 yards, and the instruments should be so constructed in several classes as to admit of being adjusted to varying lengths of base within certain limits. This proceeding was approved by the Secretary of War.

Both the Rafferty and the Lewis instruments comply with these requirements, and the question as to which will be procured should be determined by the cost.

Rafferty range finder to be attached to gun carriage.—This instrument was constructed under an allotment by the Board and sent to the Artillery School at Fort Monroe for trial. The board of artillery officers, which convened at that post to test the instrument, reports that—

The board is of the opinion that an emergency range finder is very desirable for use at the gun when the regular range-finding system fails from any cause; that the depression principle with stable mount in some suitable place in the gun emplace-

ment capable of being quickly adjusted and the adjustment of the bench-marks as the target changes its distance, and easily kept level, will give great satisfaction. The board does not regard the present instrument as a form practicable for the artillery.

The Barr and Stroud fortress range finder.—Purchased under an allotment of the Board, has been used during the past year at the proving ground and the Ordnance factory for service use.

The alternating current range finder.—In December, 1897, Lieut. Geo. C. Crehore, of Dartmouth College, and Lieut. Geo. W. Artillery, proposed the construction of an "alternating current range finder," for use with a long horizontal base, in which the Wheatstone bridge were to be used for the plotting arms. Drawings and estimates of the cost were submitted, and the Board made an allotment for the construction of this type. Under the allotment an instrument was constructed and installed at Fort Monroe, where it was inspected by the Board on the Regulation of Seacoast Artillery Force, June 16, 1898. From the report it appears that the inventors, during construction, introduced characteristic electrical features, and in the form finally adopted the instrument is purely mechanical. The Board, from its inspection of the instrument and its working results, and will be a very satisfactory instrument.

The Ruckman-Crosby range finder.—Lieut. J. H. Ruckman, that, owing to other exacting duties during the year, has been unable to devote but little time to the further develop-

BOARD ON THE REGULATION OF SEACOAST

The operations of this board have been confined to the revision and correction of proof of the text and publications for Coast Artillery, which have been approved by the Secretary of War and distributed to the service; the calculation of the range scales for all the different types of the coast armament, and in examining into and reporting on various special devices which have been submitted.

The typical artillery station at Fort Wadsworth is now being equipped under its supervision, with the exception of the auxiliary defenses.

The routine work of the Board has been much increased by the detail of its several members on active duty in the field, and it has been practicable to make exhaustive tests of the

ESTIMATES FOR THE COMING YEAR

In order to carry on the work of the Board for the coming year an estimate of one hundred thousand dollars was submitted at the meeting.

It is recommended that the appropriation be in the form of a single amount to enable the Board to make all necessary purchases, experiments, and tests to ascertain, with the sanction by the Government, the most effective guns, projectiles, fuses, explosives, torpedoes, armor plates, and engines of war, and to purchase or cause to be made under authority of the Secretary of War, such armor plates, and other war material as may be necessary in the proper discharge of the duties of the Board. The act approved September 22, 1888, to pay the

member of the Board of Ordnance and Fortification provided by the act of February 24, 1891, and for the necessary traveling expenses of said member when traveling on duty as contemplated in said act; for the payment of the necessary expenses of the Board, including a per diem allowance to each officer detailed to serve thereon when employed on duty away from his permanent station, of \$2.50 a day; and for the test of experimental guns, carriages, and other devices procured in accordance with the recommendation of the Board of Ordnance and Fortification, the expenditure of which shall be made by the several bureaus of the War Department heretofore having jurisdiction of the same, or by the Board itself, as may be approved by the Secretary of War.

The Board desires to call especial attention to the change recommended above in regard to expenditures. The Board believes it to be for the best interests of the service that it should more directly control the appropriation made for its work, subject always to the approval of the Secretary of War.

CONCLUSION.

While types of all the more important engines and appliances of war for our coast defenses have already been developed and adopted under the auspices of the Board, much remains to be accomplished in order to make the armament truly effective. It is the aim of the Board to keep in touch with the best inventive talent of the country in all that pertains to war material, to encourage the development of every suggestion and device of value presented, and to use the funds at its disposal to secure for our service the best products of American genius.

NELSON A. MILES,

Major-General Commanding the Army, President of the Board.

ROYAL T. FRANK,

Colonel, First Artillery, U. S. Army.

PETER C. HAINS,

Colonel, Corps of Engineers, U. S. Army.

JOSEPH H. OUTHWAITE.

Civilian Member, Board of Ordnance and Fortification.

I. N. LEWIS,

First Lieutenant, Sixth Artillery, Recorder of the Board.

I concur in the above, except as to the proposed change in the manner of making disbursements, believing the method prescribed by Congress at the creation of the Board is still for the best interest of the Government.

FRANK H. PHIPPS,

Lieutenant-Colonel, Ordnance Department, U. S. Army.

APPENDIX A.

TABLE SHOWING ALLOTMENTS AND EXPENDITURES MA ORDNANCE AND FORTIFICATION FROM OCTOBER 31, 18 INCLUDING STATEMENT OF UNEXPENDED BALANCES UN PRIATIONS.

Act of September 22, 1888.

APPENDIX B.

Subjects considered during the year.

Subject.	Proposed by—	Action.
Aerial blasting apparatus	Arthur John Worrall.....	Not recommended.
Electric revolver.....	F. H. Caldwell.....	Do.
Land battery	M. Bennett	Do.
Field gun, 75 mm., complete, ammunition, etc.	Maxim-Nordenfelt Gun and Ammunition Co.	Recommended. *
Mountain gun, 75 mm., complete, ammunition, etc.do	Allotment.
Depression position finders, on tripods	Lieut. W. C. Rafferty.....	Do.
Air-navigating machine	James Seldon Cowdon	Not recommended.
Shell for projecting frozen dynamite	H. W. Blair and H. P. Hurst.	Do.
Fuse.....	H. P. Hurst.....	Do.
Projecting high explosives	Arthur Foster.....	Do.
Submarine boat.....	C. O. Rude.....	Referred to Secretary Navy.
Under-sea battery	F. Rossi	Not recommended.
Range-finding devices	Tokiwa Matsuo.....	Do.
Booms for harbor defense.....	Cornelius O'Brien	Do.
Combination shotgun and rifle.....	F. G. Smith	Do.
Observation stations in batteries, position of....	Board on Regulation of Seacoast Artillery Fire.	Deferred for test.
Wireless telegraph	Lieut. I. N. Lewis.....	Allotment.
Coast defense, comments on.....	Jacob Maunee.....	Filed.
Data necessary in laying seacoast guns, instrument for finding.	Lieut. Wm. S. McNair	Estimates called for.
Tests of explosives, etc	Chief of Ordnance	Allotment.
High-explosive shell, Gathmann	G. W. McMullen.....	Do. *
Disappearing war ship.....	F. Rossi	Not recommended.
Armored car	J. A. F. Brownwell.....	Do.
Coast defense.....	Wm. D. Elting.....	Do.
Explosive shell	C. A. Amundson	Do.
Mortars, position in battery	Board on Regulation of Seacoast Artillery Fire.	Under consideration.
Lewis azimuth indicators for 8 and 10-inch guns at Fort Wadsworth.do	Recommended.
Field carriage, minimum recoil.....	Driggs-Seabury Gun and Ammunition Co.	Allotment. .
Iron fortifications, casting of	James Acton Miller	Not recommended. .
Micrometer range finder.....	Capt. D. D. Gaillard.....	Allotment.
Explosive shell	J. Byron Roney.....	Not recommended.
Range-finding system	Frank O. Weary	Do.
Air-navigating device	Charles Fiesse.....	Do.
Cavalry equipment, changes in	S. E. Chamberlain.....	Do.
Rapid-fire gun, 15 cm., with mount and ammunition.	Aktiebolaget Bofors-Gullspång.	Allotments.
Torpedo gun, 24-inch.....	Hudson Maxim.....	Not recommended.
Hotchkiss 1-pounder balloon gun and mount....	Chief of Ordnance	Allotment.
Armored turret.....	C. H. Adams	Not recommended.
Device for quick computation of measurements.	J. H. Jackson	Do.
Rapid-fire gun and submarine boat	C. P. Labatt.....	Do.
Instrument for observation of fire	Board on Regulation of Seacoast Artillery Fire.	Allotment.
Steel plates for fortifications.....	Clark W. Fish.....	Not recommended.
Air ship	G. Berger.....	Do.
Torpedo system, transfer to artillery arm.....	Board on Regulation of Seacoast Artillery Fire.	Postponed.
Ammunition for testing typical artillery station.do	Recommended.
Packing ammunition for small arms.....	Lieut. J. A. Penn	Not recommended.
High explosives, emmensite, and gun cotton....	Board of Ordnance and Fortification.	Adopted as types.
Wilder machine gun, test.....	R. O. Surbridge	Allotment.
Schmidt chronograph	Chief of Ordnance	Do.
Transporting artillery, suggestions for	Geo. W. Fisher.....	Filed.
Small arms, rest for	B. N. Firmin	Not recommended.
Repeating bombshell	Thos. B. Ashford	Do.
Torpedo system	J. M. E. Hall	Do.
Suggestions in case of war	Will Ellsworth	Filed.
Armor-plate ball-bearing fort.....	W. H. Fitzgerald	Not recommended.

* Not approved by Secretary of War.

Subjects considered during the year—Continued.

Subject.	Proposed by—	Action.
Air ship	Therese Schaetzi	Referred to Chief Signal Officer.
Wire-wound gun	T. Reynolds	Not recommended.
Steel fortification	F. Rossi	Do.
Wire-wound, segmental-tube 12-inch mortar	Brown & Munsell	Postponed.
Method of manufacturing ordnance and projectiles.	J. A. Potter	Under consideration.
Telephones, whether satisfactory	Chief Signal Officer	No changes recommended.
Bomb-dropping device	F. Peale	Not recommended.
Coast defense by petroleum	D. G. Wood	Do.
Torpedoes, offer to supply	G. H. Selleck & Co.	Referred to Chief of Engineers.
Observation tower	Geo. S. Kyle	Not recommended.
Portable breastworks	Elmer E. Van Wie	Do.
Harbor defense	B. C. Monroe	Do.
High-explosive shell	W. A. Scott	Do.
Torpedo system	Albert Bierstadt	Do.
Torpedo defense	J. C. Schuler	Do.
Practice bullet	Paul Alexander	Do.
Data for laying guns, device for obtaining	Capt. Sedgwick Pratt	Estimates called for.
Air ship	William Auberlin	Not recommended.
Automatic range finding sight, Rafferty	American Artillery Range Finder and Relocator Co.	Insufficient data.
Three-inch 15-pounder rapid-fire gun, complete, Vickers & Maxim.	Chief of Ordnance	Allotment.
High-explosive shell	J. A. Bremner	Not recommended.
Automobile torpedo	Jno. H. Patrick	Postponed.
Automobile torpedo	John L. Lay	Do.
Projectile for smooth-bore guns	Weaver & Leedy	Not recommended.
Bomb-dropping device	James A. Hill	Do.
Smoke-producing shell	Joseph Dister	Do.
Harbor defense	J. M. Case	Do.
Torpedo system	J. A. Bower	Do.
Projectile	C. C. Henley	Do.
Coast defense by petroleum	John Coe field	Do.
Range finding	J. W. Scott	Do.
High-explosive shell	R. J. McKeone	Do.
Smoke-producing shells, suggesting	George F. Cole	Filed.
Flying machine	Charles E. Morgan	Not recommended.
Wireless telegraph	Lieut. Geo. O. Squier	Allotment.
Combination horizontal base and depression position finder.	Board on the Regulation of Seacoast Artillery Fire.	Do.
Revolving rapid-fire 12-inch gun	D. S. Haynes	Not recommended.
Rocket	Charles White	Do.
Range finder	Nicholas Tobin	Do.
Air ship	Martin Braun	Referred to Chief Signal Officer.
Submarine mines, suggestions	T. P. Sleeper	Filed.
Submarine mine	J. J. Rusterholz	Not recommended.
Aerial torpedo	G. H. Stout	Do.
Inventive faculty, offering time and	John Wilde	Filed.
Torpedoes, operation of	A. Osterloh	Not recommended.
Cast-iron projectile	F. Schmidt	Do.
Aerial torpedo	J. A. Murphy	Do.
High-explosive shell	E. L. Manhayfer	Do.
Torpedo system	Wm. F. Brewster	Filed.
Position finder and bomb dropper	Theo. F. Krueger	Not recommended.
Coast defense, projectile for	James A. Hentz	Do.
Revolving turret	Thomas H. Scott	Do.
Air navigating machine	A. W. Barnard	Referred to Chief Signal Officer.
Automatic loading mechanism for small arms	A. B. Harmon	Not recommended.
Range-finding device	W. G. Caffrey	Do.
Circular floating battery	Thomas L. Sturtevant	Do.
Fort	Chas. La Due	Do.
Shell for throwing inflammable oil	F. L. Seely	Filed.
Coast defense, system of	C. W. Dutton	Referred to Navy Department.
Range finders, emergency	Lieut. I. N. Lewis and Lieut. W. C. Rafferty.	Price to determine selection.
Dirigible torpedo	Richard Lamb	Not recommended.
Automatic loading of small arms	A. B. Harmon	Do.
Conversion of 15-inch smoothbore guns	A. H. Emery	Do.
Joveite, high explosive	Joveite Manufacturing Co.	Adopted as a type.
Searchlights	General Electric Co.	Allotment.
Lewis position finder, repair of	Chief of Ordnance	Do.
Installation of photochronograph, expenditure do	Do.
Long base depression range finder	Lieut. D. W. Ketcham	Not recommended.
Torpedo	James Mackintosh	Do.
Range and azimuth transmitter, Prentiss Clock Co.	Board on Regulation of Seacoast Artillery Fire.	Allotment.

Subjects considered during the year—Con

Subject.	Proposed by—
Gatling cast-steel gun, data relative to manufacturing.	Capt. W. W. Gibson
Projectile for smoothbore guns	W. J. Holman.....
Dirigible torpedo	J. E. Trimble
Seacoast forts, necessary work in, recommendations.	Board on Regulation coast Artillery Ft
Torpedo-dropping device	George C. Short
Ammunition cart	Capt. W. C. Manning
Wire-wound gun, further test.	W. E. Woodbridge.
Explosive compounds.....	T. L. Abbott.....
Packing ammunition, method of	F. L. Hagadorn
Magnetism in warfare	E. H. Ropes

**NATIONAL HOME FOR DISABLED VOLUNTEER
SOLDIERS.**

NATIONAL HOME FOR DISABLED VOLUNTEER SOLDIERS.

WAR DEPARTMENT, INSPECTOR-GENERAL'S OFFICE,
Washington, D. C., November 30, 1898.

SIR: I have the honor to report that, under instructions from the Secretary of War, I made the annual inspection of the National Home for Disabled Volunteer Soldiers, its records, disbursements, management, discipline, and condition, as required by the act of August 18, 1894, covering a period of almost uninterrupted application from August 9 to November 12, 1898. On this tour I was accompanied by Mr. William T. Kent, the accountant of this department.

The government of this institution is vested in a board of fourteen managers, of whom three—the President of the United States, the Secretary of War, and the Chief Justice—are members by virtue of their office, and eleven are elected from time to time by Congress for a term of six years. The Board of Managers elects its officers, consisting of a president, two vice-presidents, and a secretary, from its own members; and all but the president and secretary serve without compensation. The Board elects, in addition to these officers, from persons not members of the Board, an inspector-general, an assistant inspector-general, and a general treasurer. The president has his headquarters in Hartford, Conn., and the secretary is located at Princeton, Ill., and the Board meets from time to time at such places as may be agreed upon.

The National Home for Disabled Volunteer Soldiers is composed of eight Branch Homes—the Eastern, Central, Northwestern, Southern Western, Pacific, Marion, and Danville—located in as many different States and each under the immediate charge of its own officers appointed by the Board of Managers, and has a population in the aggregate of over 19,000. The last-named Branch was authorized by the act of June 4, 1897, and is still building, and at date of inspection was not yet ready for the reception of disabled volunteers.

At one of the Branches—the Central, which is the largest—a general depot is maintained for the manufacture and distribution of uniform clothing, underwear, bedding, tableware, and blank forms.

The tour of inspection began with a visit to the Eastern Branch and terminated with the examination of the disbursements of the general treasurer of the Home at the Hartford office. A report of inspection of each Branch and of the general depot and various statistical information in tabular form are appended, and attention is respectfully invited to these reports for detailed information or special phases affecting individual branches.

OFFICERS.

A praiseworthy desire for an economic administration of affairs pervades the entire institution, and, indeed, excellent results have been obtained without uniform methods. The Branch officers have shown commendable zeal and efficiency, and their efforts seem directed with

kindly consideration toward the welfare of the nation's wards and a strict compliance with the laws and regulations, and they generally maintain a very satisfactory state of discipline.

Under section 4829, Revised Statutes, the officers are appointed by the Board of Managers from honorably discharged officers and soldiers, and shall consist of a governor, a deputy governor, a secretary, and a treasurer, and such other officers as the managers may deem necessary. This law is mandatory, but neither a deputy governor nor a secretary was found at any of the Branch Homes; and the appointments do not seem to have been made on definite lines. For instance, one Home only has an inspector, two have an adjutant, five have a quartermaster who is also commissary of subsistence, and at one the treasurer performs the duties of quartermaster and commissary; and in the matter of compensation the chaplains receive an annual salary through six intermediate grades ranging from \$500 without quarters to \$1,500 with quarters, apparently with little regard to the population of the Branch.

It is thought that if a deputy governor or inspector were added to each Branch to make daily inspections of all matters affecting the comfort and care of the men and look after their conduct and cleanliness, it would promote discipline and contentment. Frequent and careful inspections tend to remedy or prevent evils and allay restlessness by inspiring the men with the confidence of personal attention by some one in authority.

BENEFICIARIES.

The purposes of the Home are well understood and are a striking illustration of the paternal care which this Government generously bestows upon those who came to her rescue in the hour of need and now in turn require assistance.

The records of the several Branches show that the average number of officers and members present and absent during the past fiscal year was 23,345, which is a gain of 664 over the number reported for the previous year. Of these an average of 18,553 was constantly present and 4,792 constantly absent. Some of the absentees have not lived at the Home for years, and apparently remain on the rolls for the purpose of having the Branch treasurer collect and remit their pensions or reserving a convenient place at the Home for future emergency, and thus swell the figures in the aggregate. As the Home has been established for the purpose of receiving and caring for veterans who are unable to earn a living by reason of their disability, it seems fair to fix a limit after which such unaided absentees shall be dropped from the rolls, in order that their places may be assigned to others more urgently in need of the benefits of the Home. About half of the men present were seen in line at review.

Section 4832, Revised Statutes, as subsequently supplemented by the act of July 5, 1884, establishing the Western Branch, the act of March 2, 1887, establishing the Pacific Branch, and the act of July 23, 1888, establishing the Marion Branch, define the persons entitled to the benefits of the Home. Since then the Spanish-American war has been fought, and doubtless the time is not far distant when the more unfortunate survivors of that war will be compelled to look to the Government for shelter, food, and clothing. It is therefore recommended that the necessary legislation be enacted to admit honorably discharged soldiers and sailors of the Spanish-American war to the Home for Disabled Volunteer Soldiers, and that timely provision be made for their reception. The number of veterans applying vainly for admission and

now waiting anxiously to have the doors of the new Branch at Danville, Ill., thrown open to them will, it is thought, more than fill that Home, and while easing the pressure somewhat, applications for admission must be expected to continue for some years. The recent war will probably change the situation considerably, and no doubt Congress in its wisdom will make suitable provisions for any emergency that may arise.

Should it be found necessary to establish another Home, it is suggested that recognition be given the South, which, on account of its mild climate and economy in construction and fuel and other expenses, offers advantages over many Northern States.

The members seem generally well behaved and contented, and complaints were remarkably few, considering the large number of men of different nationalities, creeds, and temperaments, and those made were mostly trivial or personal or the result of perverted conception.

THE SICK.

In a Home composed of men disabled by wounds, sickness, or otherwise the sick rate must be expected to be large and constantly increasing, and this fact should be borne in mind in establishing new Homes. The hospitals, therefore, are growing and gradually absorbing other available room. The older Branches have already been compelled to add numerous extensions and annexes for the reception and care of the sick, and quarters for convalescents and extremely old men have been found necessary.

The records show that during the past year the average daily number of sick was 2,010 in hospital, 883 in quarters for convalescents, and 471 at sick call, which is about 18 per cent of the average present. They seem to receive proper care and attention from an excellent corps of surgeons and nurses. It was noted that at the hospitals female nurses had been introduced, who gave a decided air of cleanliness and solicitude for the sick, the old system of having the veterans nurse their sick brethren having been abandoned. It seems a decided improvement to have none but trained female nurses employed for these men. How well they can do this work the recent war furnishes ample proof. But what these Homes need most is a central medical authority, either as a salaried member of the Board of Managers or an assistant to its president, to supervise medical administration, especially in the purchase and use of the medical supplies, and effect uniformity of methods. Specially good features of one hospital under the present system are lost to the others, and each chief surgeon is left to his own devices, though he seems to do the best he knows how in his own way. With over 3,000 daily sick and more than 700 hospital employees at seven different Branch Homes, the necessity of a central medical supervision is apparent. This is a matter that seems to require Congressional action for its consummation.

The mortality during the year has been 50.9 per 1,000 of the average present and absent, which is slightly less than for the previous year (as was also the sick rate), and speaks well for the medical administration, as with the advancing age of the veterans and lack of infusion of young blood a higher sick and death rate from year to year seems natural until the last has passed away.

Attention is invited to the desirability of making the last resting place of these old soldiers national in name and methods. Each of the Branch Homes has a burying ground on its reservation, except the

Southern, which buries its dead, like that of the Home for Regulars, at a neighboring national cemetery. Evidently, the branch of the Government which has charge of the national cemeteries is best fitted to take care of the last resting place of these veterans and relieve the Home of that duty. In the end it must do so.

DISBURSEMENTS.

There are four distinct classes of funds relating to the Home:

1. *The general fund*, which consists of the annual appropriations made by Congress for the support of the Home, the receipts from the sale of condemned stores, clothing, and other articles purchased from this fund, and the effects of deceased members. This fund is accounted for by the treasurers through the War Department to the Treasury Department.

2. *The post fund* arises from the sale of beer, cigars, and merchandise at the beer halls and Home stores. This fund is accounted for by the Branch treasurers to the president of the Board of Managers, and does not come to the War or Treasury Departments.

3. *The pension fund* consists of the pensions of the members sent to the Branch treasurers by pension agents for distribution to the pensioners. While vouchers are taken for disbursements of this fund, only an account current is sent to the Hartford office.

4. *The special funds*.—These are the balances now remaining of certain legacies to the Home and a sum paid by the heirs of the late General Butler to satisfy a claim of the Home against his estate. This fund is in the custody of the president of the board. Vouchers are taken for disbursements, but there does not seem to be any further accounting.

There is also another fund, known as the State-aid fund, arising from annual appropriations made by Congress for the support of the various State Homes. This fund is disbursed by the general treasurer of the National Home and is accounted for by him in the same manner as the general fund.

The balances of all these funds for which the treasurers are accountable are deposited with authorized depositories, but the special funds are kept in a safe-deposit box.

The general treasurer is bonded to the United States, but the Branch treasurers, by whom about 82 per cent of the appropriations for the Home, amounting to over \$2,000,000 last fiscal year, was disbursed, are bonded only to the general treasurer. The funds advanced to these Branch treasurers are public funds, and they should therefore be bonded to the United States.

At some Branches the practice prevails of sending out checks before the vouchers are properly signed. This may cause delay in the transmission of accounts and leaves the disbursing officer without proper evidence for the disbursement until the receipted voucher has been returned to him. In other departments of the Government vouchers are invariably signed and received by the disbursing officers before they make payments.

The best business methods suggest that all checks should be promptly forwarded for deposit as soon as received. Section 3620, Revised Statutes, provides that it shall be the duty of every disbursing officer having any public money intrusted to him for disbursement to deposit the same with the Treasurer or some authorized depository. At the recent inspection of the general treasurer over \$100,000 was found in his personal possession, consisting of checks, some of which were nearly a month old, issued in his favor by the several Branch treasurers.

It is believed that it is possible for an arrangement to be made, as now obtains at some of the Branch Homes, with all the railroad and steamship companies, under which a member traveling at his own expense may be able to purchase his ticket at half fare direct from the transportation company, and do away with the cumbersome method now in use at some of the Homes.

At some of the Branch Homes the amount transmitted for the payment of employees in the early days of the fiscal year was insufficient, and caused some inconvenience.

The absence of a system of property accountability, it seems, could be improved. After the money is expended and the articles purchased are presumed to come into the possession of the Home, there does not appear to be any further supervision, and the officer charged with its custody may or may not charge himself with it or with all apparently received. Altered requisitions and requisitions for unusual amounts appeared; and the effort seemingly in view was to have the record agree with the property rather than that the property should agree with the record.

The shop and internal accounts are apparently a system of vouchers of debit and credit entries and of bookkeeping in which no money is involved. Doubtless they are considered of some practical or theoretical value, else so much actual labor and money would not be expended on them. The internal accounts assume to show how much money expended under one head has accrued to the advantage of another; thus when the Home teams do some hauling for the mess hall the farm account is credited with an assumed, not the actual cost of the work, and the subsistence account is charged with a like amount. In the shop accounts the shop is charged with all labor and material furnished it by the Home, and credited with all labor and material expended for the Home, and 10 per cent added to show the apparent profit the shop has been to the Home.

GROUND AND BUILDINGS.

The general condition and police of the grounds and buildings was exceptionally good, and there is an evident effort on the part of the officers to make and keep them attractive. The difference in construction between the younger and the older Branches is notable. At the former the dormitories are uniformly modern, well arranged, and sanitary. At the latter, a number of old wooden buildings, built over and illy arranged and in need of constant repair, are still in use beside modern barracks of later construction. It would be desirable to tear down these unsanitary frames and replace them with modern bricks. Overcrowding was noted at several Homes and at a time when the membership is usually lowest. So it seems additional barracks are urgently needed, unless it is deemed preferable to ease the crowded condition by extending the outdoor relief authorized by section 4833, Revised Statutes, and now granted to a limited number of veterans, but desired by many more. This system is in successful operation at the Home for Regulars in the District of Columbia, where nearly one-third of its members receive such relief.

At some of the Branches the storage facilities are inadequate, and clothing and other property have to be stored in cellars and other unsuitable places.

The value of real and personal property held by the National Home for Disabled Volunteer Soldiers now amounts to many millions, and is constantly increasing. The National Government appropriates annu

ally several millions for the maintenance of this property, which goes toward the acquisition of new property, but the title to this vast estate is vested, under the Statutes, in the Board of Managers, with power to convey, and sue and be sued in courts of law and equity.

SUPPLY DEPARTMENTS.

These embrace the quartermaster's department, which has charge of the buildings, clothing, bedding, and subsistence department, which looks after the property at the Central Branch each of these departments is under the charge of a special officer; at the other Branches, where there is no separate officer, the quartermaster has charge of the property. The importance of these departments is due to the amount of property handled and of food consumed, and careful attention to insure the greatest possible economy and a divorce of the two and the appointment of a committee at each Branch Home.

The dining halls are noted for their neatness and the food seems well prepared and served, though it is not adapted for feeble old men. At one of the Branches the members are housed in a barrack by themselves with special diet and contentment and comfort of those members. I have seen an expert cook familiar with the elements of physiology superintend the culinary department, and that the food be added to the daily ration and served once a day as a meal. At present this luxury is confined mostly to the Central Branch.

The large per cent of crockery annually broken is due mainly to its brittleness and not nesting properly, so that it would be economical to supply a better quality.

The main features of the quartermaster's department are the amount and variety of property and its voluminousness, which could perhaps be advantageously simplified by a system of accountability, especially in the system of requisitioning issued to members. The public property at the Branches is all marked for ready identification, though it is mixed by side with private property, and no return is made of property purchased or acquired, remaining on hand at stated intervals, as is customary with the Government, except in the case of tableware, and stationery received from the Government, and bedding, which directly affect the comfort of the members, are generally satisfactory and of good quality. A desirable improvement were some distinctive marks on the summer wear, and the trousers made at the Branches be wider in the waist for heavy men. The barracks are but 2½ feet in width, are occasionally too narrow, and the issue hereafter of a 3-foot cot only, like those in hospitals, is recommended. It will add largely to the cost without a corresponding increase in cost.

The utmost economy seems exercised in the handling of the large amount of property, and the wear gotten out of it is phenomenal, and the efforts of the office are commendable.

CONCLUSION.

In closing this report, it seems appropriate to invite attention to the commendable and earnest efforts of the Home officials to make this admirable institution a home indeed for the homeless, the sick, and the feeble old veterans. They not only receive acceptable shelter, food and clothing, and careful medical attention, but their spiritual welfare is diligently looked after, and numerous innocent amusements and ample reading matter are provided. And such as are able and willing may be employed under pay; and no pains seem to be spared to make the men contented, as it is the intention of the Government they should be.

The work of the inspector was materially advanced by the courteous assistance of the officers of the Home, and to them my sincere thanks are due.

Respectfully submitted.

C. H. HEYL,
Major, Inspector-General.

The INSPECTOR-GENERAL,
United States Army.

APPENDIX A.

No. 1.—REPORT OF AN INSPECTION OF THE EA AUGUST 11 TO AUGUST 14,

This Branch Home comprises 1,754 acres, situated on the Merrimack River, about five miles from Randolph, Me. Its officers are a governor, a treasurer, a quartermaster and commander and a surgeon, who seem efficient and painstaking. Samuel H. Allen, was appointed November 1, 1897. Mr. Stephenson resigned.

The Home is overcrowded; every available room was filled, and cellars and closets were used for hospital, too, needs enlargement; it had but two barracks are in need of repairs, painting and gas. Sanitary closets should replace the old and obsolete. It would be well to erect a temporary light structure with two companies for use during summer while the barracks are being put in proper condition, or, if necessary, tents, framed and floored, for that purpose. A refrigerator were added during the year.

The average number of officers and men during the year was 2,042. The highest attendance was 2,137 and the lowest attendance was 1,487 per day, the greatest number absent at one time was 349. On June 30, 1898, 644 members were present, of whom 123 had been absent one year.

The total number cared for during the year is 2,042. The average age of the members is 61 years.

At date of inspection there were present 2,137 and absent 506 members, showing a total of 2,643. There were 10 temporary members. There were then two in the hospital and none in the barracks.

On August 14, 1898, a review of the members was held, the command present being in line. The appearance was good and made a favorable impression.

Discipline seems to be fairly good. The principal offenses consist of drunkenness without leave, and the penalties are from ten to sixty days' labor without pay. Unruly members are sent to the guardhouse, but ordinarily no member is confined more than four hours. There were none in confinement at the date of inspection. The reports show that 73.3 per cent of the average have been punished. Passes are freely granted to those of good behavior.

The records in the adjutant's office show improvement. The record of applications by letter were sent to the local managers.

record be simplified by omitting the personal description, social condition, and religious matters that have no bearing on the eligibility for membership? If the applicant is admitted, this data is recorded in the military history; if he is not admitted, the record is without value. Would not the entry in the record of military history of the number of the grave in which the deceased member is interred dispense with the burial record, as that book contains no other data than is already recorded in the history?

It is suggested that possibly much time would be saved in searching the record of persons discharged from other Homes, if that record were kept as the State register is kept, instead of alphabetically.

Amusements. These include theater, band, and clubhouse; billiard, smoking, card, and reading rooms, and a library. The seating capacity of the theater has been increased from 1,100 to 1,200. Its management is under the charge of the council of administration of the post fund. There were 48 performances during the year, mostly comedies and melodramas. The expenses for these performances amounted to \$8,175; and the revenues from admission, which is 10 cents for members and 25 cents for others, were \$1,242.38. Under recent orders no admission fee is now charged to members. The theater was in good condition.

The band was maintained during the entire year with an average of 21 musicians. It gave 276 concerts, of which 140 were indoors, all well attended. The programmes comprise standard overtures, marches, and popular and national airs. The total cost of the band for the past year has been \$8,413.09.

The library was in good condition and contained at date of inspection 9,213 volumes. The circulation reported during the year was 29,977 books, giving an average of nearly 15 books per member. Books taken from the library must be returned in one week, and no member can have more than one book in his possession at any one time.

There are no outdoor games nor boating; the indoor games embrace billiards, pool, cards, checkers, and dominoes.

Religious services. Protestant services are held every Sunday, and Catholic on Sundays or holy days in the Home chapel, which has a capacity of 400. The services are reported well attended. None of the chaplains live on the Home grounds.

Farm. The farm comprises 500 acres, with 4 stables for horses, 4 barns for cows and hay, and 2 sheds for carts; 40 public vehicles, including 8 wagons, 10 carts, 14 sleds, 1 hearse, 2 carriages, 4 sleighs, and 1 barge; 13 horses and 70 cows, 23 heifers, 6 calves, 2 oxen, and 1 bull. The farm stock on June 30, 1898, was valued at \$6,400. Animals no longer required are condemned and sold at public auction. The principal products were:

Milk (35,980 gallons).....	\$7, 209. 00
Hay and oats	3, 202. 70
Ensilage	1, 750. 00
Vegetables.....	913. 90
Total	13, 075. 60

The cost of maintaining the farm proper is reported as \$7,444.02.

DISBURSEMENTS.

The accounts and disbursements of the treasurer were examined from July 31, 1897, the date of last inspection, to August 13, 1898, and involved \$688,846.26 pertaining to the general, pension, and post funds.

The transaction concerning these funds may
be as follows:

On hand July 31, 1897:

General fund.....
Pension fund.....
Post fund.....

Received since:

General fund.....
Pension fund.....
Post fund.....

Total to be accounted for

Expenditures:

General fund.....
Pension fund.....
Post fund.....

On hand

which was all on deposit in bank, except \$156.88.

The receipts during the year
General fund. account of this fund were \$268
tures \$259,589.52, or about \$1
average present. At the inspection of this
for \$1,063.54, for which no vouchers were pre-
that the checks for this amount, represented by
sent out, with vouchers for receipts, and had
rule in the service is that no money shall be
receipt for the same.

The ready inspection of the accounts was a
practice of one of the depositories reporting
order of payment instead of serially, as is usual.

The receipts from posthumous sources during
and the disbursements \$2,650.39. The policy
of claims presented by heirs for the effects of
a sufficient sum to pay them has been received
other member or members during the same year
made seems to work hardship to needy claimants
why, since the Home authorities have received
paid them. The law does not seem to contemplate
even under the construction placed upon it rather
than the use temporarily of funds for the purpose
the appropriation for clothing from funds appropriated.
While all claims should be promptly met, they
should receive more consideration. A large number
the previous year compelled under the rule adopted
to wait eleven months for payment.

The number of employees authorized
Employees. fund, including officers and civilians
and the average employed as 2
cent of the average present. The compensation
23 per cent of the disbursements and average
which is higher than at most of the other Bureaus.

The clerical force in the treasurer's office seen
and the accounts and records so far as the time
for them in good shape.

Purchases. The reports show that 373 purchases, aggregating \$9,894.64, were made in open market, and included such articles as fruits, fresh vegetables, lamb, turkey, etc. The principal articles of food bought under contract were obtained from dealers in Maine, Massachusetts, and New York. The price of coffee and tea bought in Boston was generally lower than at the other Branches, and that of fresh beef obtained from Augusta, Me., higher.

Pension fund. At the close of the year there were 2,332 pensioners on the rolls, of whom 1,744 were present. Their pensions ranged from \$6 to \$45 per month. The disbursements on account of pensions during the year amounted to \$307,026.81, leaving a balance due the pensioners of \$10,857.62.

A more liberal policy in the payment of the pension money to the members seems to obtain here, and, it is said, without detriment to the discipline and to contribute more to the contentment of the members. At date of inspection the balance to the credit of this fund was \$10,488.18, of which only \$361.83 was due to members then in the Home, and \$5,184.50 was due to members at the Government Hospital for the Insane and others whose present addresses were not known; and the remainder, \$4,941.85, represented accrued interest on the bonds in which the pension fund had formerly been invested. Against this a shortage of \$600 coming over from the former treasurer's account was charged.

Post fund. The principal revenues accruing to this fund are derived from sales at the Home store, restaurant, and beer hall, and of tickets at the theater. The receipts from the sale of beer amounted to \$34,748.05, which gave a profit of 171 per cent on the outlay. It is reported that 61,168 gallons of beer were consumed during the year, which gives an average of about two-thirds pint of beer per man per day.

The vouchers taken for the disbursements of this fund are not made in duplicate, and as those for the quarter ending June 30, 1898, were reported absent in Hartford, Conn., the inspection of the accounts for that quarter was defeated.

The number of men employed under this fund averaged 54, which was about 2.6 per cent of the members present during the year. The average compensation paid these employees is reported higher than that of the employees under the general fund.

SUPPLY DEPARTMENTS.

Barracks. The dormitories are generally too crowded, and those on the third floor too high for old men. There were 138 men sleeping on floors, 75 in attics, and over 200 in places not originally intended for sleeping. The floor space per man averages about 51.4 square feet, and in one company is reported as low as 41.2 square feet. There are no bath tubs in barracks. A general bathroom with 29 bath tubs is located on the second floor of the laundry building, where all of the men bathe once during the week. Each tub averages about sixty men. There is also a general toilet room over the laundry, containing 33 hoppers and 16 urinals, for use during the day, the hoppers and urinals in the several barracks being used chiefly at night. More dormitory room seems needed.

The barracks are heated by steam, mostly coils or circulation, with a few radiators, and lighted by electricity, furnished by the Augusta Light and Heat Company under contract.

The lockers in use are mostly common ch room than the lockers used elsewhere.

There is no record kept of the amount expe

Supplies.

The supplies and stores on h ity, but the storage facilities are in other respects objectionable, construction, safety from fire, and dampness, however, occurred on account of poor storage.

Inventories of property and stores are rep terly and yearly, but returns are not made to of property received from the general depot, th the property received from other sources is com are the invoice values of property received dur eral depot, \$28,821.71; by purchase, \$179,713. The usual method is to inspect all supplies b and then to take them up on the property books and kinds of stores, and issue them on properl which become vouchers of the transaction.

The Home property is not all marked, and t memorandum receipt from officers and others i in their possession. The ultimate elimination of is accomplished by the action of an inspector.

A clothing account is kept with each membe ons articles being issued according to regulati man, who is held accountable for each and eve or worn the prescribed length of time. If it is at the end of the time allowed, it is retained b service. Members going on furlough are requ ing into the quartermaster, who holds it r following statement shows the clothing accoun

The following is the bill of fa
Food. ending June 25, 1898:

Sunday.—Breakfast: Baked beans, brown bread, b Beef fricasee, potatoes, bread, butter, sirup, coffee. bread, butter, sirup, tea.

Monday.—Breakfast: Salt mackerel, potatoes, bread ner: Beef soup, vegetables, bread, butter, sirup, tea butter, sirup, tea.

Tuesday.—Breakfast: Meat hash, bread, butter, sir beef, cabbage, beets, potatoes, bread, butter, sirup, co bread, butter, sirup, tea.

Wednesday.—Breakfast: Baked beans, Graham bread ner: Mutton stew, crackers, pickles, bread, butter, si bread, butter, sirup, tea.

Thursday.—Breakfast: Sausage, potatoes, bread, b Roast veal, potatoes, beet greens, bread, butter, sir cheese, apple sauce, bread, butter, sirup, tea.

Friday.—Breakfast: Codfish and cream, potatoes, bread, butter, sirup, coffee. Dinner: Fish chowder, bread pudding, bread, butter, sirup, coffee. Supper: Corn-meal mush, bread, butter, sirup, tea.

Saturday.—Breakfast: Bacon, potatoes, bread, butter, sirup, coffee. Dinner: Boiled ham, potatoes, lima beans, bread, butter, sirup, coffee. Supper: Prune sauce, bread, butter, sirup, tea.

To prepare and serve the food there are permanently employed in the kitchen about 21 men and in the dining hall about 43, supplemented by an average temporary detail of 17 men. The dining hall and kitchen were in good condition. It is reported that they are inspected weekly by the governor, the treasurer, and the surgeon, and almost daily by the quartermaster and commissary of subsistence. The capacity of the dining hall is 1,424, and tables have to be set twice for each meal. A few more sinks and steam kettles seem needed.

Swill and garbage, which amounted to about 8 or 10 barrels per day, were sold during the year at the rate of 10 cents per barrel, the total receipts being \$240.25.

The reports do not show that any of the members at this Branch received outdoor relief during the year.

From the labor expended on the shop accounts it would seem that they were regarded as of some value, but at this Branch they were found in a somewhat confused condition, owing, it was reported, to a change in the employees. Many erasures were noted, and in one account a considerable sum was credited apparently to make a more satisfactory showing. After stock is issued to the shops there seems to be no further accountability.

Clothing is sent weekly to the laundry from each company in charge of the ward master, with a list, which is verified and signed by the foreman of the laundry, who is held responsible for the return of the clothing to each company. Ordinarily each man is permitted to send one shirt, one pair of drawers, and one pair of socks. Private underwear is laundered outside of the Home. To do the laundry work during the year required the services of 14 men and nearly a barrel of soft soap per day, and an expenditure for labor and material of \$2,116.

An examination of the laundry list furnished shows that during the past year the wash list per man per month averaged about 4 pillowcases and bed sheets, $3\frac{1}{2}$ shirts, $3\frac{1}{4}$ pairs drawers, slightly less than 1 pair of socks, $5\frac{7}{10}$ hand towels, and four-fifths of a roller towel.

The protection against fire consists of 12 hydrants, with sufficient hose and abundance of water, supplied by the Augusta Water Company; and each barrack is supplied with standpipes, hose, chemical pails, etc. The apparatus is reported adequate and in good condition, and tested monthly or oftener. The fire organization is composed of 12 men. There were no fires during the year.

The steam plant of the Home consists of six 40-horsepower boilers in the main boiler room, used for heating, cooking, hot water, and power; one 25-horsepower boiler at the opera house (run as low-pressure boiler), for heating the opera house, chapel, and clubhouse; two low-pressure boilers at the hospital, for heating purposes; one high-pressure 40-horsepower boiler in convalescent ward of hospital; and nine small low-pressure boilers located in barracks G and M, the headquarter building, and six sets of quarters occupied by officers or employees. Its cost is reported as \$5,600, and its cost of maintenance for the past year as \$23,304, or \$40.78 per horsepower.

Lighting plant. There is no lighting plant at the Home. The grounds and buildings are lighted by electricity, furnished by the Augusta Heat and Light Company, under contract, at the rate of \$7,000 per annum. There are 9 arc and 2,196 incandescent lights.

Cold storage. There is no cold storage, ice being harvested from a pond on the Home grounds, which, during the past year, furnished 649 tons of ice, at a cost of 37½ cents per ton.

MEDICAL DEPARTMENT.

The hospital is composed of one brick and two frame pavilions connected by covered passages and having a capacity for 288 patients. Adjacent to it is a small building used by convalescents, and capable of accommodating 40. The average daily number of sick during the year was 273 in hospital, 38 in convalescent company, and 75 at sick call. The total number of patients treated during the year was 2,680, and each case was treated an average of 43 days. The cost of the hospital ration, including extra diet, averaged 19.15 cents per day per man.

The principal diseases of local origin were pneumonia, acute bronchitis, and inflammatory rheumatism, aggregating 53 cases, and there were 11 cases of influenza and 6 of erysipelis.

Insane members are cared for in special wards in the hospital, provided with iron gratings in doors and windows and separate toilet facilities. There were 116 members showing indications of disordered minds during the year, of whom 48 were considered permanently insane and 14 were sent to the Government Hospital for the Insane. Occasionally the wards are crowded with these patients.

Nine members were reported totally blind, and 41 with an impaired eyesight, so as to be unable to read. One of the hospital attendants is employed to read daily to these blind members.

There were 105 deaths during the year, of which 20 occurred outside of the Home, giving a mortality rate of about 41.5 per 1,000 of the average present and absent. About 66.7 per cent of the members who died were buried at the Home cemetery, at a cost of \$23.99 per man, which is the highest reported by any of the branches. No allowance is made for funeral expenses of members dying outside of the Home.

The hospital force, including clerks, cooks, waiters, drivers, funeral escorts, cleaners, laborers, etc., averages 85, of whom 12 are civilians, which gives about one employee for every four patients.

There were 352 different kinds of medicines and preparations used in the dispensary, the principal ones being purgatives, diuretics, tonics, and cardiac and other stimulants. The expenditures for this purpose were \$6,275.11 during the year.

NO. 2.—REPORT OF AN INSPECTION OF THE NORTHWESTERN BRANCH, MADE AUGUST 18 TO AUGUST 21, 1898.

This Branch Home contains 382½ acres of rolling and well-shaded ground, situated about 4 miles from Lake Michigan near the city of Milwaukee. Its principal officers are a governor, an adjutant, a treasurer, a quartermaster and commissary of subsistence, and a surgeon, who have continued on duty during the year and seem to be capable and thorough in their duties.

This Home seems to be filled to its capacity. There were but 56

vacant beds in the barracks at date of inspection and 4 in hospital, while the reports showed 556 men absent, of whom 63 were absent without leave and fully as many more with leave for only one month. Should these men return suddenly, congestion must result. The conversion of the old hospital building into a barrack for convalescents will relieve the situation somewhat.

Population The average number of officers and members present during the year was 2,364. The greatest number present was 2,507 and the lowest number 2,160, showing a fluctuation in the average attendance of 347. The absentees averaged 434 per day, the greatest number absent at one time being 595 and the lowest 323. On June 30, 1898, 480 members were reported absent, of whom over 70 were absent on furlough for over a year, the longest term of absence being ten years. These men are carried on the records of the office and included among the number present and absent and go to swell the roll, while they seem to have no connection with the Home, except possibly to have the treasurer collect and remit their pensions.

The total number cared for during the year is reported as 3,518, and the average age of the members as 61.5 years.

At date of inspection, there were present 2,285 officers and members and absent 556 members, showing a total of 2,841 on the rolls, exclusive of 50 temporary members.

On August 23, 1898, a review of the members was held by companies. The ceremony was well performed, and about 72 per cent of the men present were seen in line, which is a larger proportion than noted at the other Branches.

Discipline. Breaches of discipline consist almost exclusively of drunkenness, absence without leave, and fence jumping, and these seem to be the principal evils that the officers here and at other Homes have to contend with. None of the members were confined during the year, the sentences imposed being labor without pay for varying periods, which may be commuted at the rate of 20 cents per day. The moneys accruing from this source, and which amounted to \$147.85 during the year, are credited to the post fund. The reports show that 81 per cent of the average present were not punished.

Passes are granted in the discretion of the governor. Ordinarily, permission to be absent from 8 a. m. to 6 p. m. is given to members sixty days after admission who have not violated any of the Home rules, and privileged passes good for all hours after 8 a. m. are given to all members who by good conduct prove themselves worthy of trust and confidence. Bad conduct forfeits the pass privilege for three months. A second forfeiture extends over a period of six months, and a third forfeiture over an indefinite period.

Amusements. Facilities for amusements and recreation comprise band concerts and theatrical performances, a library, social club, boating, billiards, cards, and other games.

The theater, which is at present being remodeled to increase its capacity, will, it is reported, seat about 850 persons when completed. Its management is confided to the chief clerk of the treasurer, under the direction of the council of administration of the post fund. There were 14 performances given during the year, chiefly light drama, the expenses for which were met from the post fund and amounted to \$1,425.18. As members are admitted free of charge, and outsiders are

not admitted, there is no revenue from the sale of seats. Occasionally the theater is used for lectures.

The band was maintained during the entire year with an average of 20 members, all civilians. It gave 411 concerts, of which 359 were out of doors, all reported well attended. The repertoire is varied, but popular music predominates, and national airs are included in every programme. The total cost of the band during the year has been \$7,770.69. No charges are made for admission to concerts.

The library was in good condition and contained 8,934 volumes at date of inspection. Books may be taken from the library, one at a time, to be returned in good condition within two weeks. The circulation reported for the year was 35,904 books, or an average of about 15 books per member. Books of fiction and travel and works relating to the war of the rebellion seem to be in greatest demand. The basement of the library is used as a card room. Other indoor games played are chess, checkers, and billiards, and facilities seem to be ample for all who desire to play.

There are no outdoor games; but there are 7 boats, which are at the disposal of members free of charge, and may be used by civilians at a rate of 5 cents per half hour for each person. The receipts from this source were \$79.90 and the expenditures \$19.13.

Religious services are held from seven to eight times per week in the Home chapel, which is reported suitable and has a capacity of 350. The services are reported well attended. The Protestant chaplain lives on the Home grounds, and the Catholic chaplain in Milwaukee. Services are also held by others interested in the spiritual welfare of these men.

The farm comprises 250 acres under cultivation with 17 different buildings, as employees' quarters, stables, barns, sheds, shops, etc., most of which are in need of reshingling; and there are 31 vehicles of all kinds, 22 public animals, 42 cows, and 43 sheep and lambs, and a number of fowls. The farm stock on hand June 30, 1898, was valued at \$3,500. Cattle, when no longer required, are condemned and sold; chickens are supplied to the hospital on requisition.

The principal products of the farm were:

Milk (32,335 gallons)	\$4, 203. 55
Hay, ensilage, oats, etc	1, 879. 17
Vegetables.....	1, 010. 15
Cows, calves, and sheep.....	812. 69
Ducks, chickens, and eggs.....	80. 21
Flowers	14. 65
Total	8, 000. 42

Of these products the table was supplied to the value of \$5,293.91, and the remainder represents what was fed to the stock or sold. The cost of maintaining the farm proper is reported as \$3,960.

DISBURSEMENTS.

The accounts and disbursements of the treasurer were examined from July 31, 1897, the date of last inspection, to August 20, 1898, and involved \$692,889.72, pertaining to the general, pension, and post funds. The accounts and records of the treasurer's office were found in a very satisfactory condition, and admitted of ready inspection. Some inconvenience was experienced here, as at other Branches, on account of delay in not having approved contracts for necessary supplies available

at the beginning of the fiscal year, which entailed much additional labor and resort to unusual methods of purchase. The transactions concerning the various funds may be briefly stated as follows:

On hand July 31, 1897:	
General fund.....	\$2, 926. 40
Pension fund	33, 268. 31
Post fund.....	10, 353. 47
	<hr/> \$46, 548. 18
Received since:	
General fund.....	291, 917. 66
Pension fund	307, 921. 27
Post fund.....	46, 502. 61
	<hr/> 646, 341. 54
Total to be accounted for	692, 889. 72
Expenditures:	
General fund.....	287, 586. 22
Pension fund.....	319, 398. 25
Post fund	46, 543. 25
	<hr/> 653, 527. 72
On hand August 20, 1898	39, 362. 00

which was all on deposit in bank, except \$1,182.10.

The receipts during the past fiscal year on account of this fund were \$271,353.40, and the expenditures \$264,430.55, which is about \$111.43 per member of the average present.

Under the head of subsistence for the last fiscal year there were two vouchers amounting to \$935.90, outstanding and unpaid for want of the necessary funds from the general treasurer. The failure to send the amount to meet these bills does not seem to be due to a lack of funds, as only \$126,100 of the \$129,000 appropriated for that object was sent to the Branch treasurer, leaving \$2,900 in the hands of the general treasurer, against which was a charge of \$675.19 for articles received from the general depot. Under the system of prorating the disbursements for depot purchases, without reference to the cost of the goods actually sent to each Branch Home, possibly a much larger sum may have been charged than the item referred to, and a deficiency thus created by diverting the funds appropriated for one Branch to the use of another. It would seem to be in the interests of the Home to see that its accounts with dealers are promptly met and not unreasonably delayed.

The receipts from posthumous sources during the year were \$7,035.78 and the disbursements \$4,321.98.

The number of employees authorized under the general fund, including officers and civilians, is reported as 892, but the number actually employed averaged 405, or about 17 per cent of the average present. The compensation paid them was about 28 per cent of the disbursements, and averaged \$181.49 per employee. An average of 71 men per day worked without pay, not as a penalty.

These are mostly made under contract. The reports show but 64, involving \$406.08, made in open market. The principal articles of food supply for the last quarter of the year were nearly all bought in Milwaukee, except fresh beef, in Chicago, salt pork, in Cudahy, Wis., and potatoes, in Sheridan, Wis. The price of fresh beef and of tea was generally lower than at the other Branches, and that of sugar higher.

At the close of the year there

The clothing, it seems, could be improved wi
 issued. The quartermaster reported that 75 pe
 during July by the tailor was shortening the leg
 to the members. This was due to the fact that
 to the Branches do not seem to contemplate i
 men grow older, they may increase in girth w

increase in the length of their legs. A size between the No. 6 and No. 7, as issued, would be found advantageous and of some economy. It might also be an improvement if the system adopted for the issue of clothing to members could be simplified.

At this Branch, it is stated, that an average of eighty separate requisitions are made each month, and each requisition is signed by the captain of the company to which the member is assigned and then by the quartermaster and approved by the governor. It would seem as if the clothing requisition for each company could be made on a properly prepared roll, and thus reduce to some extent the paper work which is so much in evidence in these Branch Homes. And another source of this paper work is due to the transfers of clothing from one Branch to another with members. This should be avoided as far as possible, as at the Eastern Branch, as it involves much labor in making out receipts and internal vouchers. Much of the labor incident to the keeping of the members' clothing accounts, issue, transfer, etc., might possibly be avoided and greater accuracy obtained, as well as impress the member with his responsibility for clothing issued to him, if each member, on his admission, were furnished with a clothing book, in which would be entered, under proper date, all issues to him and all articles turned in. This book to be in the custody of his company commander and follow him when transferred to another company, to the hospital, or to another Branch.

The following is a statement of the clothing accountability for the year:

On hand July 1, 1897.....	\$11,577.63
Received from depot	20,374.48
	<hr/>
To be accounted for.....	31,952.11
Issued during the year	24,743.01
	<hr/>
On hand June 30, 1898.....	7,209.10
Reported on hand.....	6,073.14
	<hr/>
Difference	1,135.96

which is accounted for by the difference in the invoice value of articles.

The clothing issued during the year was reported according to the invoice value of the last issue, which was less than former invoices, and the difference of \$1,135.96 seems to represent a depreciation in the cost of the clothing.

The bedsteads are only 2½ feet in width, which seems narrow for heavy men; but the men here are given 4 blankets. The mattresses are cotton and reported to weigh 13 pounds.

Unserviceable clothing, sold as rags, brought from 1½ to 10 cents per pound, the total amounting to \$1,546.52.

The following is the bill of fare furnished for the week ending June 25, 1898.

Food.

Sunday.—Breakfast: Fried bacon, boiled eggs, bread, butter, coffee. Dinner: Roast beef, gravy, mashed potatoes, horse-radish, macaroni, cheese, apple pie, bread, coffee. Supper: Cheese, crackers, bread, butter, tea.

Monday.—Breakfast: Rolled oats and milk, bread, butter, coffee. Dinner: Boiled shoulders, boiled spinach, catsup, potatoes, pickles, bread, coffee. Supper: Head-cheese, catsup, bread, butter, tea.

Tuesday.—Breakfast: Meat hash, bread, butter, coffee. Dinner: Barley soup, boiled beef, pickles, bread pudding and sauce, crackers, bread, coffee. Supper: Milk, crackers, bread, butter, coffee.

Wednesday.—Breakfast: Corn mush and milk, bread, butter, coffee. Dinner: Stewed beef, gravy, potatoes, lima beans, horse-radish, bread, coffee. Supper: Stewed peaches, biscuits, bread, butter, tea.

Thursday.—Breakfast: Boiled ham, potatoes, bread, butter, coffee. Dinner: Boiled shoulders, boiled spinach, catsup, potatoes, bread, coffee. Supper: Boiled rice and milk, sirup, bread, butter, tea.

Friday.—Breakfast: Boiled beef, boiled eggs, cake, bread, butter, coffee. Dinner: Pea soup, boiled beef, boiled mackerel, potatoes, horse-radish, crackers, bread, coffee. Supper: Rhubarb sauce, gingerbread, bread, butter, tea.

Saturday.—Breakfast: Meat hash, bread, butter, coffee. Dinner: Mutton stew, lima beans, pickles, crackers, bread, coffee. Supper: Boiled rice and milk, sirup, bread, butter, tea.

It requires about 13 men in the kitchen and 34 in the dining hall and an additional detail of some 53 men as helpers, etc., for the preparation and serving of the food. Kitchen and dining hall were in good condition, and facilities for receiving and taking care of supplies and for cooking and serving meals seemed ample. The reports show that these places are inspected daily by the commissary of subsistence and the officer of the day, and also frequently by the governor and surgeon. There are enough tables to seat about 950 men at one time, and they have to be set twice for each meal.

About half of the swill and garbage is sold at the rate of \$20 per month and the other half used on the farm. None of the members received outdoor relief in subsistence or other allowances.

The system of keeping the shop accounts seemed to have been changed during the year, so that the profits of the past year show a large reduction from the previous one. This is due to the shops not charging the Home such a large percentage on the labor and material furnished by the Home to the shops for the use of the Home. It is suggested that it would be more satisfactory to the officers in charge of these accounts if a standard book, or set of books, in which to keep these accounts were furnished them. If these accounts are worth the labor and time expended on them, they are worth keeping well and accurately, and with a definite purpose clearly set forth. As it is, each officer is left to his own device, and the widely varying results obtained emphasize their inutility for comparative conclusions.

Clothing is sent to the laundry at specified times in charge of authorized men, with duplicate wash lists which are verified by count going and returning, and receipts therefor given by and to the laundry clerk. Each member is allowed to send to the laundry weekly one shirt, one pair drawers, and one pair socks, and other clothing as occasion requires. To do the laundry work required the services of 15 laundrymen and one soap maker and an expenditure of 294,080 pounds of soap. The cost for labor was \$1,416 and for materials \$747.90.

The laundry list indicated about 5 sheets and pillow slips, 3 shirts, 3.3 pair of drawers, 1.1 pair of socks, 3.6 roller and 6.9 hand towels per man per month.

This Home has a regular fire engine, which is stationed near the main building and kept ready for use, and its fire-alarm system is connected with the fire department of Milwaukee City. There are also 27 fire hydrants for double line of 2½-inch hose with a constant pressure of 50 pounds per square inch and connected with a fire pump located in the central boiler plant where the pressure can be increased to 120 pounds in less than a minute, supplying 1,000 gallons per minute at this point. The water is obtained from the mains. Another pump in the main building will give an additional stream of 250 gallons per minute, taking the supply of water either from the mains or the reservoir. These pumps are manned by the citizen firemen of the fire department. There are

also standpipes, with hose attached and fire buckets, in all of the buildings, manned by members of the various companies, and fire extinguishers have been distributed for instant use.

Three fires occurred during the year for which the fire department was called out, viz, convalescent company October 19, band quarters October 31; and main building annex December 10. The total loss is reported as \$240.

The chief engineer at the Home has general charge of the machinery, water supply, steam and electric plant, sewerage, etc., and employs about 43 men as engineers, firemen, masons, steam fitters, plumbers, laborers, etc. The steam plant consists of two Babcock & Wilcox water tube and five tubular boilers, and is used for heating all public buildings—over 4,000,000 cubic feet of air—for cooking, supplying hot water, running engines, dynamos, elevators, and pumps, and for all purposes requiring steam. The plant is reported to have cost \$35,000, and its cost of maintenance for the past year was \$17,850, or \$22.31 per horsepower.

The electric-lighting plant consists of 2 Edison dynamos and 1 75 horsepower engine, and cost \$4,400. It provides a current for 4 arc lights and 800 incandescent lights, and was maintained during the year at a cost of \$1,159, or about \$1.44 per light. The plant is supplemented by 1,750 gas burners, fed from the city gas works.

The water supply is reported satisfactory in every respect, water being furnished from the Milwaukee City Waterworks. The sewerage system also is satisfactory.

MEDICAL DEPARTMENT.

The hospital plant consists of 1 three-story central administration building, with kitchen and dining room to the rear, connected by corridors with 3 two-story brick pavilions, constituting wards A, B, C, D, E, F, and G, and convalescent company and restraint ward. It has a capacity of 200 beds for patients in hospital and of 112 beds in quarters for convalescents. Each ward is provided with a porcelain-lined bath tub, and the convalescent company with 2, and there are 2 extra for special baths, with a hot-air sweat bath, an electric bath, and a shower bath. Three tubs are set aside for use of surgeons and extra-duty men. The bathing of patients is regulated by the surgeons. In companies the men are required to bathe at least once a week, and company commanders keep a record and are held responsible. Ventilation is effected by shafts and chimneys, with floor and ceiling openings.

The average daily number of sick during the year was 161 in hospital, 85 in convalescent company, and 70 at sick call. The total number of patients reported treated during the year was 4,410, with an average of forty-seven days to each case. The cost of the hospital ration including extra diet averaged 17.8 cents per man per day. The surgeon reports there were no diseases incident to the climate or location, but grip and erysipelas were mentioned among the contagious or infectious diseases.

There were 72 members showing indications of disordered minds during the year, of whom 10 were considered permanently insane. They are cared for in special wards, under charge of male nurses only. Three are quartered in the hospital basement, 1 with a nervous cough and 2 with bad integumentary eruptions. Their quarters are reported dry and comfortable. Facilities to properly care for the insane are reported inadequate, and a ward seems needed with several isolation

rooms and so situated that the noise and shouting of the demented will not disturb other patients.

The annual insane at the Home averages 15, and none have been sent to an asylum for the past three years. The surgeon believes that it would be better and cheaper to have these patients cared for at the county insane asylum at Wauwatosa, which is only 3 miles from the Home and easily reached by carriage.

Twenty-five members were reported totally blind and 21 with an impaired eyesight so as to be unable to read. Two members are employed to read to them daily.

There were 152 deaths during the year, of which 17 died absent on furlough and 135 at the Home; of the latter, 5 committed suicide and 3 died from the results of accidents. The death rate was about 54.3 per 1,000 of the average present and absent, which is somewhat higher than reported at most of the other Branches. About 72.4 per cent. of the members who died were buried at the Home cemetery, at a cost of \$12.30 per man, which is less than at most other Homes.

The hospital employees of all kinds averaged 104, of whom 18 were civilians, giving about one employee for every three patients.

The records of the convalescent company are kept in the hospital, so when men are transferred from the hospital to that company he is dropped from the hospital records and taken up on the convalescent record, and so from one to the other a new record each time, though he is still under the same officer. It was reported that a man's name was entered nine times when admitted to the hospital and seven times when he died.

No record is kept of drugs after they reach the dispensary. Such a record would be possible, as at some of the Homes, if prescription blanks were constantly used, filed in book form and then tabulated. The office files at the hospital were not kept as well as those in the adjutant's office.

NO. 3.—REPORT OF AN INSPECTION OF THE MARION BRANCH, MADE AUGUST 28 TO AUGUST 31, 1898.

This Home is situated on the Mississinnewa River, a few miles from Marion, in the gas region of Indiana, and covers about 300 acres; and in addition 120 acres are leased by the Board of Managers so long as gas is found in paying quantities, for which an annual rental of \$300 is paid. The buildings are mostly brick, economically and well designed, and in very good condition throughout. Grounds also were in excellent order. The principal officers are a governor, treasurer, and surgeon, who seem efficient and thorough in their duties. There is no quartermaster or commissary of subsistence, though the membership is larger here than at the Pacific Branch, where there is one. The general condition of the Home reflects credit upon the administration and management.

There was added to the Home during the past year a new barn, lodge, and gateway and electric plant, at a cost of \$19,262.99, and a chapel and new gas well and connections have been authorized for the present fiscal year, at a cost of \$11,775. The needs reported for the next fiscal year are a building for the electric-light plant, a greenhouse, nurses' quarters, surgeon's quarters, carpenter and paint shop, and a steam pump, for which an estimate of \$14,450 has been made.

The average number of officers and members present during the year was 1,717. The greatest number present was 1,897 on February 22, 1898, and the lowest 1,486 on June 8, 1898, showing a fluctuation in the average attendance of 411.

Population.

which is generally greater than at the other Branches. The absentees averaged 488 per day, the greatest number absent being 704 on June 10, 1898, and the lowest 378 on February 15, 1898. None of the members of this Branch were reported absent over one year.

The total number cared for during the year is reported as 2,817, and the average age of the members as 59.94, which is the lowest average age reported from any of the Branches.

At date of inspection there were present 1,638 officers and members, and absent 638 members, showing 2,276 on the rolls, exclusive of 27 temporary members. There were then 200 vacant beds, which is far more than found at any of the other Branches.

On August 31, 1898, a review of the members was held, about half of the members present being seen in line. The ceremony was well performed, and the men looked contented and well taken care of.

Discipline seems well maintained. The principal offenses are fence jumping, intemperance and disorderly conduct, and absence without leave; and the penalties attached are confinement to the limits of the camp or light room, or labor without pay for ten to forty-five days, or both, depending mainly upon the character of the offender and nature of the offense. The system of passes is liberal, and members are frequently excused for absence without leave when good reasons can be given. This is the only Branch Home (not considering the Danville Branch, which had not yet been opened at date of inspection) at which alcoholic stimulants or beverages are not sold to the members. The reports show that 92 per cent of the average present were not punished during the year; and the offenders' docket compares very favorably with that at other Branches.

Amusements. Among the amusements mentioned are theater, concerts, library, billiard hall and club room.

Theatrical performances, indoor concerts, lectures, etc., are given in Stinson Memorial Hall, which has a capacity of 500 and was in excellent condition. There were eleven performances during the year. Of these, ten were free, and one was a paid performance, for which an admission fee of 5 and 10 cents for members and of 50 cents for others was charged. As these receipts were turned over to the company for their services, no expenses were incurred by the Home for the performance. The amusement committee, under direction of the governor, has charge of theatrical entertainments.

The band was maintained during the entire year, with an average of 22 musicians, of whom 20 were civilians and 2 members of the Home. At date of inspection it consisted of 21 musicians, all civilians. It gave 220 concerts during the year, of which 88 were given indoors, all reported well attended. The programmes comprise classical and popular music and national airs. There are no charges of admission to concerts. The cost of the band, including subsistence and other allowances of civilians, was \$8,342.13 during the year, and is met from the post fund.

The library, which is located over the new dining hall, was in good condition and contained at date of inspection 3,341 volumes. Books can only be taken from the library by actual members of the Home. The circulation during the year was over 32,000, giving an average of nearly 19 books per member, which is more than reported by any of the other Branch Homes. Fiction and history seem to be in greatest demand. The Protestant chaplain of the Home acts as librarian.

The billiard and card rooms are also over the dining hall, and the tables are constantly in use during the hours allowed for play. Check-

ers, chess, and dominoes are also played. Facilities for these indoor games are reported ample. The only out-of-door game reported is quoits.

There are several societies among the members, with a total membership of 937, and their effect upon discipline is said to be excellent.

These are held twice a week by each denomination in Religious services. Stinson Memorial Hall, which is not considered suitable for the purpose. Divine services are reported fairly well attended. None of the chaplains live on the Home grounds.

Farm. There were 124 acres under cultivation during the year, which produced \$4,715.07 worth of vegetables and forage, the principal items being cabbage, horse-radish, onions, peas, radishes, rhubarb, tomatoes, oats, and straw. The cost of maintaining the farm proper is reported as \$3,106.23. The buildings pertaining to the farm—barn, carriage-house, and hay shed—are mostly old and in bad condition, and were on the land when the Home was organized. A new barn is now being erected, and when completed and accepted by the Home officials it is contemplated to tear down the old buildings. The transportation consists of twelve vehicles of all kinds, and twelve public animals. Cows are not kept.

DISBURSEMENTS.

The accounts and disbursements of the treasurer were examined from September 17, 1897, the date of last inspection, to August 29, 1898, and involved \$488,889.27 pertaining to the general, pension, and post funds. The transactions concerning these funds may be briefly stated as follows:

On hand September 17, 1897:

General fund.....	\$11,351.84	
Pension fund.....	3,099.56	
Post fund.....	2,227.22	
		<hr/> 16,678.62

Received since:

General fund.....	193,430.11	
Pension fund.....	248,970.92	
Post fund.....	29,809.62	
		<hr/> 472,219.65

Total to be accounted for..... 488,889.27

Expenditures:

General fund.....	172,286.81	
Pension fund.....	245,256.79	
Post fund.....	29,737.74	
		<hr/> 447,281.34

On hand August 29, 1898 41,607.93

Which was all on deposit in bank except \$111.41.

The depository for this Branch is in Indianapolis, Ind., some 68 miles distant, compelling the treasurer to make his remittances through a local bank, not an authorized depository, at Marion, Ind., and subjecting the Home to the cost of express transportation for currency and specie required for pension and pay rolls. At the other Branch Homes the depository is in the adjoining city.

The receipts during the year ending June 30, 1898, General fund. on account of this fund were \$177,613.64, and the expenditures \$160,371.93, which is about \$93.40 per member of the average present.

The cashbook and vouchers as presented were in proper form, according to prescribed methods, and showed care and diligence in their keeping. Checks for payment of vouchers were drawn by the treasurer and held until the return of vouchers properly signed. This

would seem to be an improvement on the practice of sending the check out with the unreceipted voucher and awaiting the pleasure of the creditor to return the voucher signed. But why not wait for the return of the voucher before drawing the check? There does not seem to be any compensating advantages in the keeping of a signed check on hand.

The receipts on posthumous accounts were \$2,363.85, and the disbursements \$960.25.

The employees authorized under the general fund were 3 officers, 252 members, and 67 civilians, which is about 1 employee to 5 members of the average present. The compensation paid them averaged per day \$6.59 for officers, \$1.03 for noncommissioned officers, \$0.54 for members, and \$2.70 for civilians; and aggregated for the year \$60,753.04, or slightly over three-eighths of the disbursements.

The pay rolls for July could not be promptly paid, much to the discomfort of the civilian and other employees, who are obliged to depend more or less upon their monthly salary for the necessaries of life. This condition, it was alleged, was due to the failure to receive from the general treasurer sufficient funds under the appropriations needed, while funds were sent for which there was no immediate need.

The reports show that 902 purchases, aggregating \$7,786.72, were made in open market, and all other purchases were made under contract. A comparison of contract prices prevailing for the last quarter of the year shows that this Branch paid slightly more for coffee, bacon, sirup, and granulated sugar than most of the others, and less for tea, potatoes, beans, and butter. It paid 1½ cents per pound less for codfish than the Eastern Branch, though both obtained their supply of codfish from Gloucester, Mass., and the Eastern Branch bought in greater quantity.

On June 30, 1898, about 87 per cent of the membership, or 1,896 members, were on the pension roll, of whom 1,250 were present. Their pensions ranged from \$6 to \$30 per month. The following is a summary of the transaction of this fund for the year:

Balance June 30, 1897	\$1,491.63
Received during year	246,178.34
Total to be accounted for	247,669.97
Paid to pensioners	245,466.11
Balance July 1, 1898.....	2,203.86

which stood to the credit of 36 pensioners. The same liberal policy in paying to the members their pension money noted at the Eastern Branch was observed here.

This Home has no beer hall, and relies almost entirely upon the profits at the Home store for its post fund. The cost of the band is met from this fund. The following is a summary of the transactions of this fund reported for the year:

Cash on hand June 30, 1897	\$1,858.24
Receipts :	
Sales, Home store.....	\$24,391.17
Transportation	7,560.00
Amusements	213.29
Other sources.....	3.00
	<hr/>
	32,167.46
To be accounted for.....	<hr/>
	34,025.70

Expenditures :

Stock for store.....
Transportation
Amusements
Insurance.....
Clerks and other purposes

Cash on hand June 30, 1898.....

The net profits for the year were reported :
This Home has the smallest post fund, per of beer, but the sales at the Home store are other Branches, and are almost as large as the and beer hall of the Pacific Branch.

The average number of employees under the past year, which is about 2.2 per cent of the the year.

The vouchers for the post fund for the quarter were absent, as at the Branches previous incomplete inspection could be made of that same.

The transportation lines throughout the country at half rate for carrying of all members of the Home travel at their own expense. When this condition the several Branch treasurers sold to the members upon, transportation orders serially numbered by the officer issuing them. These orders, proper ticket office, were taken up by the agent transportation between the points named issued there was required for each railroad or steamship subsequently sent by the transportation company from which they were issued, with the receipt which was made upon duly receipted voucher number of members leaving the Homes on "pension day," the issuing of these request account grew to large proportions, and it was that steps be taken to have the transportation direct to the members upon a proper certificate by the Home, and thus save to the company a great deal of accounts and accounting.

At some of the Branch Homes the officers induce some of the railroad and steamboat companies to sell certificates, thus mutually lightening their labor. Western Branches all the railroads sell tickets direct. At some of the Branches the agent transportation, including the sale of the orders of members of the Home, and, as was pointed out under insufficient safeguard; but confidence to be sufficient. That this confidence may be demonstrated at this Branch, where the clerk is capable not only to embezzle the funds but also for his own use. Would it not be possible by those to perfect a method that would be acceptable to the companies for the sale of tickets direct to the members sold to members of other organizations at the same upon?

SUPPLY DEPARTMENT.

There is neither a quartermaster nor a commissary of subsistence at this Branch, and the duties usually pertaining to these officers are performed by the treasurer.

Barracks. There are 12 barracks at this Branch, each two stories in height, with basement and attic and slate roof. These quarters seem less crowded and better ventilated than at other Branch Homes, and urinal and toilet facilities seem to be greater. The basements are used as storerooms and shops, and one as a mess room for clerks. The attics are used for sleeping purposes, being occupied at date of inspection by 125 men, and as baggage rooms. Six of the barracks are heated by open fireplaces and six by hot-air furnaces and open fireplaces, and all are lighted by natural gas—which, however, will be gradually superseded by electric lights now being installed.

Beds, bedding, and lockers seemed in good condition. The mattresses for both barrack and hospital use are made of cotton, but the latter is the heavier by about 9 pounds. All bedding is aired at least once a week, and cots and mattresses examined as to vermin and condition, and general house cleaning occurs twice each year. The lockers in use are constructed of yellow poplar, about 2 feet wide, 14 inches deep, and 3 feet high over all, with a panel door extending to a height of 2½ feet, and a lid sloping back, with a small door opening out from the top and forming, when open, a writing desk and bookcase combined.

Supplies. The supplies and stores on hand seemed of good quality, but the storage facilities are reported inadequate, and basements have to be used for that purpose. No loss or deterioration, however, occurred on account of storage, and supplies appeared to be well taken care of.

Clothing, when received, is entered on the property ledger, and issued on properly made and approved requisitions, and charged in the clothing ledger to the member to whom issued; secondhand clothing is issued on requisition or order, and record made of same. New clothing is not issued unless the old clothing is sufficiently worn out and unfit for further service. Members on furlough do not receive any clothing, and when they have been absent one year, their clothing left at the Home, with the exception of greatcoat and dress coat (if the term of using same have not expired), if found fit for reissue, is taken up on the ledger and the rest placed on the secondhand shelf for issue or condemnation, according to condition.

The supply of clothing on hand seemed sufficient, except as to shoes, of which there were no Nos. 6, 7, or 8 on hand. A requisition made July 1 had not been filled. In the total accountability for clothing on June 30, 1898, the secondhand clothing did not seem to be accounted for.

While the accounts at the quartermaster's office were apparently correct, the data upon which the entries were made did not seem to justify them. An effort was seemingly made about the close of the fiscal year to bring the balances shown by the books into closer accord with the actual balances on hand. This was noted more especially with regard to forage, and may have been due, as stated, to lack at the barn where forage is kept and issued of proper facilities for weighing it in and out. There was also some confusion noted between the quartermaster's account of issues and hospital account of drugs received.

In the keeping of the shop accounts 10 per cent profit was charged for all material expended and services rendered, except at the shoe shop,

where the shop was credited with 40 cents per iceable property is eliminated from the service inspector-general of the Home, and destroyed. The sales are those of rags, and there is a stamp for all kinds of rags. The receipts from during the year.

The property of the Home is not all marked public property.

Food.

The following is the bill of fare ending June 25, 1898:

Sunday.—Breakfast: Fried ham or fried bacon or bread, butter, and coffee. Dinner: Roast mutton or mashed potatoes, pickles, pie, bread, butter, and cheese, cookies, bread, butter, and tea.

Monday.—Breakfast: S. C. shoulder, baked potato. Dinner: S. P. shoulder, baked navy beans, baked pie, bread, butter, and coffee. Supper: Apple sauce, corn sirup, bread, butter, and tea.

Tuesday.—Breakfast: Corned beef hash, bread, butter, and soup, beef with gravy, pickles, crackers, bread. Dinner: Ginger cake or hominy, stewed peaches or currants, and coffee.

Wednesday.—Breakfast: Beef fricassee, fried potato. Dinner: Roast beef with gravy, mashed potatoes or bread, butter, and coffee. Supper: Apple or peach sauce, bread, butter, and tea.

Thursday.—Breakfast: Boiled ham or Irish stew, potatoes, bread, butter, and coffee. Dinner: S. C. or S. P. shoulder, stewed navy beans, pickles, bread, butter, and coffee. Supper: Stewed fruit, bread, butter, and tea.

Friday.—Breakfast: Mackerel or fried bacon, potatoes, bread, butter, and coffee. Dinner: Fried fish or codfish cake with egg sauce, potatoes, bread, butter, and coffee. Supper: Cold corned beef, bread, butter, and tea.

Saturday.—Breakfast: Corned beef hash, bread, butter, and coffee. Dinner: S. C. or S. P. shoulder, stewed navy or lima beans, potatoes, bread, butter, and coffee. Supper: Fresh or stewed fruit, rice with raisins, sirup, and bread.

A standard bill of fare is made up once a week as the opportunity may present or require.

To prepare and serve the food there are per kitchen about 24, and in the dining hall 14 men. The average temporary detail of 84 men. The men were in good condition, and are inspected monthly at least once a week by the governor. The cost is 1,072, and tables are set twice for each meal for extra-duty men. Facilities are reported ample for care of supplies and for cooking and serving. During the year to transients not in the Home, mostly relatives of deceased soldiers, the funerals, or disabled soldiers not entitled to care.

The breakage of crockery during the year was 58 per cent for pepper bottles to 58 per cent for butter plates reported as due to their not nesting properly.

The reports show 28 men receiving out of \$5.20 per man per month; of these 12 are civilian employees. There are also 25 commandants, to whom rations in kind, at 20 cents per day.

Swill and garbage were not sold or utilized but given away for the hauling.

Laundry.

All soiled underclothing is sent to the laundry, and certain days are set for clothes from each company and no fixed amount as to how much each man may send.

underwear is received at the laundry in lieu of Home articles. The following is the average number of pieces of clothing reported laundried per month:

Blouses	7	Vests	4
Trousers	60	Shirts, white	811
Shirts, knit woolen	3, 731	Shirts, red flannel	13
Drawers, cotton	4, 647	Drawers, red flannel	11
Socks	1, 423	Overalls	124

This gives for an average present of 1,717 members about 2.7 shirts and drawers, and less than one pair of socks per man per month.

There were 20 men employed in the laundry during the year, and 57,950 pounds of soft and 5,040 pounds of chip soap used, and the expenses were \$2,865 for labor and \$428.71 for material.

Protection against fire consists of a steel standpipe, 18 feet in diameter and 125 feet high, holding 238,000 gallons of water, which is kept full at all times, and gives a sufficient pressure to throw water over the highest buildings. The fire organization consists of a volunteer company of 16 members, who meet every Saturday. The large hose is tested every thirty days and the small hose every ninety days, and in addition, a certain portion of the hose is tested on Saturday afternoon of each week. The apparatus was reported adequate and in good condition. There were no fires during the year.

There is no central steam plant at this Branch, and all buildings are heated by natural gas, open fireplaces, furnaces, and stoves. The following are the steam boilers in use: Two horizontal tubular boilers at pump station of 50 horsepower each, two horizontal tubular boilers at laundry of 60 horsepower each, two horizontal tubular boilers under dining hall of 60 horsepower each, one horizontal tubular boiler at hospital of 35 horsepower, one upright boiler at garden pump of 15 horsepower, and one Gorton upright boiler in each of the twelve barracks; those of barracks Nos. 1 to 6 being of about 2 horsepower each, of Nos. 8 and 9 of 3 horsepower each, and of the other four barracks of about 4 horsepower each. They are all high-pressure boilers, and required the services of 14 men to run them, and an expenditure of \$1,655.53 for salaries, repairs, and inspection, or an average of \$3.94 per horsepower, or of \$0.97 per member of those present.

The water supply is pumped from seven gravel wells, 87 feet deep, and from one well 345 feet deep, and distributed by standpipe pressure. It is reported satisfactory, except that one old pump should be replaced by a new one.

Sewage is carried off through a 10-inch vitrified pipe to the Mississinnewa River, a distance of 4,000 feet, and is reported in good condition. Drainage could be improved by a 24-inch tile drain to carry the surface water from low places back of the officers' quarters to the river.

There is no cold-storage or ice plant, and the installation of the electric-light plant, for which provision has been made, had not yet been completed at date of inspection.

MEDICAL DEPARTMENT.

The hospital is composed of a central administration building, with a north and south wing, and a building to the rear constituting the dining room and kitchen. It has a capacity of 215 beds for patients. The

convalescents are quartered in the two lower v and 8, which have a capacity of 90 beds.

The average daily number of sick during the hospital, 78 in convalescent companies, 2 in 1 call; and the total number of patients treated acute diseases the principal ones were malaria; and among the chronic diseases, rheumatism, disease, bronchitis, and tuberculosis. The erysipelas.

Patients are given a bath as soon as admitted weekly thereafter, unless exempted by the surgeon. Their beds receive a sponge bath once a week. Patients to each bath tub in the hospital. The ration, including extra diet, averaged 14.82 cents. Total paid for extra diet amounting to \$1,052.54.

Insane members are cared for at the hospital requiring constant surveillance being placed in wire screens on the windows. The more vicious in the guardhouse until they can be transferred to the Hospital for the Insane. Padded cells would be for this class of patients. There were 23 members with disordered minds during the year, of whom 3 were violently insane and sent to the Government Hospital for the Insane.

Nine members were reported totally blind, rendering them unable to read; and a nurse's assistance, as in keeping their clothing clean and their food, etc. One man is employed to read.

There were 92 deaths among the members during the year. 14 died outside of the reservation, giving a mortality of 14 per 1,000 of the average present and absent, a rate for the entire Home. The average age at death was 46 years. Sixty-six members were buried at the cost of \$9.64 per funeral, which is generally higher than in the Branches, but the cost of the coffin is higher. The funeral expenses of members dying out of the reservation are paid by the government.

The hospital employees of all kinds average 100. They are civilians, which gives about one employee for every 100 members.

The amount expended for medicines during the year was \$5,451.73, which is more than at some of the other Branches. Those most used during the year were alcohol, opiates, purgatives, potassium, iodide, bromide.

The surgeon makes a monthly inspection of the grounds, regarding their sanitary and hygienic condition, and reports thereon to the governor.

NO. 4.—REPORT OF AN INSPECTION OF THE HOME MADE AUGUST 26 TO SEPTEMBER 1, 1890.

This Branch Home contains 578 acres in its area, which is exceeded by several Branches in area, is by far the most beautiful situated on a commanding site near Dayton, and the grounds are well kept and attractively landscaped. The architecture, the fine landscape gardening, especially the decorations at the principal entrance, artificial lakes, and the other features of this Home. Its principal officers are a warden, a treasurer, a quartermaster, a commissary, an assistant adjutant-general, an inspector, and a chaplain, all of whom are thoroughly familiar with their duties, and efficient.

A new hospital out-ward has been built during the year at a cost of \$5,243.92, and wings have been added to three frame barracks. But these additions seem hardly sufficient to give the room needed. At date of inspection there were no vacant beds in barracks, and but 15 in the hospital, though 996 members were absent from the camp, mostly by permission. A new brick barrack, to cost \$25,000, and a brick water-closet, to cost \$3,300, have been authorized for the present fiscal year, and another brick barrack and enlargement of the electric-light plant and of the laundry building have been estimated for at a total cost of \$43,493.70.

A handsome new conservatory was nearly completed at a cost of \$10,000, paid from the post fund, but a noticeable lack of sidewalks was noted, compelling the members to walk on the graveled roadways. As this exercise in good weather is one to be enjoyed by all, would it not be well to make it attractive and pleasant, as at the Marion and Southern Branches?

Population. The average number of officers and members present during the year was 4,972. The greatest number present was 5,108 on December 8, 1897, and the lowest 4,728 on April 15, 1898, showing a fluctuation in the average attendance of 380. The absentees averaged 934, the greatest number absent at one time being 1,187 and the lowest 766. On June 30, 1898, there were 414 men reported absent, whose terms of absence ranged from one to over ten years.

The total number cared for during the year was 7,092, and the average age of the members was reported as 63.7 years.

At date of inspection there were present 5,027 officers and members and 996 absent, showing a total of 6,023 on the rolls of this Branch, exclusive of 24 temporary members.

On September 4, 1898, a review of the members was held, nearly half of those present being seen in line. The ceremony was well performed and the men presented a good appearance.

Discipline. Discipline seems to be fairly well maintained. The principal offenses are intemperance and absence without leave, including fence jumping, and the penalties attached are work without pay and restriction of passes. Fines are not imposed. At date of inspection there were 4 members in confinement in the guardhouse. The reports show that the greatest number of men drunk on one day was but 13, which is less than 1 man in every 300, and that 68 per cent of the average present have not been punished. Passes are conditioned on good behavior, and three kinds are in use: First, the card pass, on which members go and come at will between 6 a. m. and 6 p. m.; second, transportation pass, not to exceed nine days, used by members going beyond Dayton, and, third, the ordinary pass, good for a day or more, used when transportation is not required. It is reported that the various societies existing among the members are not aids to discipline.

Records. In the adjutant's office the records were well kept and indexed. In the offenders' docket are entered only the names of those upon whom sentence has been imposed, and not the number of those arrested.

Amusements. These include theatrical performances, band concerts, a library and current literature, a veterans' clubhouse, with billiards and kindred games, shovelboards, chess, cards and other games, boats, quoits, and a deer park. Two additional shovelboards and two hydrocycles were added during the year.

The theater has a seating capacity of 1,500 and is entertainments are under the charge of the am There were 45 performances given at an expense of printing of programmes, which amounted to \$1 from the sale of seats during the year were \$2,140 1898, members have been admitted free of charge, ian employees pay 15 and 25 cents and outsiders 2. building used as a theater is known as Memorial E condition.

The band was maintained during the entire year 34 musicians, of whom 30 were civilians. It g which 69 were indoors, all reported well attended. for admission to the concerts. The cost of mainta ing the year was \$11,651.82. The first floor of reserved for the use of the civilian musicians, at same allowance of clothing, fuel, and rations as me with the exception of greatcoat, dress coat, and rations and clothing are paid for from the post fun

The fine open-air concerts given by the band the campus were well attended by the members of benches, very many were obliged to sit on th side, with their feet in the gutter, as the most comf them, willing to take the chances of rheumatis ments. A liberal outlay for benches and sidewal appreciated by the members as much as a new con

The library is a fine three-story brick and was in contained at date of inspection 21,485 volumes an papers and periodicals, which are partly subscribe nished free. Books taken from the library must two weeks and can not be taken from the Home. were taken from the library during the year, or an per member. Fiction and history seem to be in g

The veterans' clubhouse is a fine two-story and was especially built to meet the wants of the mem for meetings, a reading room, a billiard room, car the basement are shovelboards, bagatelle, and othe no charges for games, and the various tables are use when the rooms are open. At times the fa inadequate.

The boats at the Home include two hydrocycles free of charge by the members.

There are two chapels at this Br Religious services. of Protestants and the other, of rec the use of Roman Catholics. The Home reside on the reservation. The Roman Cat services daily and the Protestant six times per w frequent visits to the members in the quarters as pital. Services are reported well attended.

The farm comprises 285 acres and Farm. ings, which were generally in fairly farm hands number about 17, and in the vegetable garden, 16 in teaming, and 39 i and on the lawn. The transportation consists kinds and 26 public animals. There is also a he farm stock on hand June 30, 1898, was valued horses kept on the farm not entitled to forage are

rate of 25 cents each per day for their keeping, exclusive of care of horse. Animals no longer needed on the farm are condemned and sold.

The value of the farm products during the year was:

Vegetables, chickens, and eggs for table	\$2, 822. 56
Milk (18,643 gallons).....	1, 864. 30
Fodder, hay, etc., fed to stock	1, 607. 95
Animals, grain, etc., sold	1, 660. 56
Total.	7, 955. 37

The cost of maintaining the farm proper is reported as \$4,641.98.

The vegetable garden does not seem to be a profitable undertaking, and might be abandoned with advantage. The average amount of garden vegetables raised at these Homes, while they may be appreciated in the hospital and other messes, do not seem to be of much service to the general mess, and their continuance as a source of possible benefit to the Home is a matter that might be taken under advisement.

Among the items of products sold were flowers to the value of \$322.35, which might have served a useful purpose on a table in the sick room. We have in very many of our cities "flower missions," whose kindly work it is to supply the public hospitals, as far as possible, with flowers, and thus bring to those sufferers who are debarred from it something of the life and beauty of the outside world; and should not this be one of the principal aims of the culture of flowers at these Homes? Then there would be no surplus for sale to outsiders, but a place would be found for all.

DISBURSEMENTS.

The accounts and disbursements of the treasurer were examined from September 25, 1897, the date of last inspection, to August 31, 1898, and involved \$1,403,540.21, pertaining to the general, pension, and post funds and to the fund for an additional chapel. The transactions concerning these funds may be briefly stated as follows:

On hand September 25, 1897:

General fund.....	\$65, 060. 13	
Pension fund.....	87, 379. 05	
Post fund	19, 216. 85	
Chapel fund	6, 088. 32	
		\$177, 744. 35

Received since:

General fund.....	511, 844. 01	
Pension fund.....	577, 477. 55	
Post fund.....	136, 474. 30	
		1, 225, 795. 86

Total to be accounted for 1, 403, 540. 21

Expenditures:

General fund	523, 362. 67	
Pension fund.....	594, 618. 80	
Post fund.....	133, 021. 67	
Chapel fund	6, 088. 32	
		1, 257, 091. 46

On hand August 31, 1898 146, 448. 75

All of which, except \$221.04, was deposited in bank.

The accounts and records inspected were found accurately and correctly kept, except as to the monthly list of paid checks from the National Bank of Commerce, where a portion of the pension account is kept. On this list the checks were reported in order of payment,

instead of the serial number of the check, as of all Government depositories.

The receipts during the year
 General fund. account of this fund, were \$541

tures \$502,589.13, or about \$14

officials to enforce a law of the State of Ohio, known as the mile-and-a-half-limit law. A number of vouchers were not submitted for inspection, as they were reported absent for signature with the checks.

The number of employees under the post fund averaged 151, which was about 3 per cent of the members present. Their average compensation is less than reported from the other Branches.

A large amount of transportation is sold at this Branch, but there does not seem to be a sufficient check in the issue of the transportation orders. While at some of the Branch Homes only four time books are used, at this five are used, in each of which the names of all the employees are written once each month. One is kept in the treasurer's office, two in the quartermaster's office, one for each alternate week, and two kept by the foreman of the shops and those in the immediate charge of the employees, one for each alternate day. If the book kept in the treasurer's office were made up in the quartermaster's office from the daily reports and certified at the close of the month to the treasurer by the quartermaster, would not the same end be obtained, and thus save the time and labor expended in keeping the two books now kept by the quartermaster?

At the close of the year there were 5,472 pensioners on the rolls, of whom about 4,507 were then present. Their pensions ranged from \$6 to \$72, nearly one-half receiving \$12 per month. The following is a summary of the transactions concerning this fund for the year:

On hand June 30, 1897	\$92, 746. 73
Received during year	749, 154. 78
Total to be accounted for.....	841, 901. 51
Paid to pensioners.....	757, 793. 24
Due pensioners June 30, 1898.....	84, 108. 27

which about equaled the balances carried by all the other Branch treasurers together, and represented the amount due to 516 pensioners in sums ranging from less than \$100 to over \$1,000.

The balance of the pension fund at date of inspection, August 31, 1898, was \$70,237.80, a reduction of nearly 20 per cent since last inspection, September 25, 1897, with disbursements during that period of nearly \$600,000.

The balance was distributed as follows :

Personal accounts.....	\$62, 474. 81
Premium on bonds	2, 296. 68
Interest on bonds	5, 266. 31
Total	\$70, 237. 80

Of the amount due on personal accounts, \$7,738.78 is due to members in the Government Hospital for the Insane and to others whose present address is not known. Possibly the address of some of the latter, if living, might be obtained from the Pension Office, and, if any are reported as dead, the amount due them carried to the posthumous fund.

SUPPLY DEPARTMENT.

There are 32 barracks at the Home, of which 17 are frame structures. None of the barracks have a basement, but 12 have cellars which are used for the storage of property. Nearly all are occupied by more men than was originally

intended, and 57 members were sleeping on floors. barracks are sadly in need of repair, or should be to with more air space on approved plans. Some of the located in wings and corners of the barracks wereitary condition, though it is apparent that every effortfulness, cleanliness, and paint to keep them in as possible. Only one barrack is provided with bath general bath house containing 31 tubs, where the men to bathe once a week. Each tub averages about 1. siderably more than reported by the other Branch. number of men to each hopper and urinal is general

The barracks are heated by steam and lighted by generated on the grounds. The condition of beds, beds reported good. The mattress is made of cotton and 2 ounces.

Ventilation is effected mostly by doors and windows be considered satisfactory for all seasons of the year the apartments are crowded.

Supplies and stores on hand seen but storage facilities are reported inadequate of the quartermaster and commissary be stored in cellars and other places. No loss of ever, occurred on account of poor storage.

The invoice value of property received during the

From general depot
By purchase
By transfer

Property purchased, on arrival at the Branch officer appointed by the governor, after which an account made up and the accounts charged accordingly. Property to the Branch from the general depot or other sources and receipted for by the quartermaster as per invoice the goods so received. Issues are made only on bearing the governor's approval. Issues to companies are charged in book of issues of imperishable property responsible officials. Worn-out property is held until condemned by an inspecting officer of the Navy or destroyed property is acted on by a board of review cost of the property condemned during the year \$55,287.34, and \$3,682.81 was realized from the property. The sale of rags brought \$3,155.84, and \$1.00 pound from 1½ cents for mixed rags to 15 cents for blue. Old hats brought \$11.81 and worn-out shoes

The property accounts of articles relating to food as satisfactory as it would be possible to keep requiring explanation, and the requisitions appear correct. It was stated that an increase from an average of 100 pounds of ship stuff to one of 848 pounds was due to a decrease from the dining hall. A saving of 120 pounds of quite an economy, but what can be said of the method a saving possible?

The stock on hand of clothing in the sizes in requisition was very low. The last requisition of July 1 was

The following is a summary of the clothing accountability for the year:

	<hr/>	51, 410. 95
Total to be accounted for		73, 511. 95
Issued during year	56, 035. 31	
Transferred to other Branches.....	4, 014. 56	
Difference in price	4, 129. 02	
	<hr/>	64, 178. 89
On hand June 30, 1898.....		9, 333. 06

An individual clothing account is kept with all members, and no articles are exchanged before they are worn out, and none are issued to men who go on furlough or while so absent.

Food. The following is the bill of fare furnished for the week ending June 30, 1898:

Friday.—Breakfast: Mackerel, potatoes, bread, oleomargarine, coffee. Dinner: Codfish with egg sauce, tomatoes, mashed potatoes, bread, oleomargarine, coffee. Supper: Stewed peaches, cake, bread, oleomargarine, tea.

Saturday.—Breakfast: Corned-beef hash, bread, oleomargarine, coffee. Dinner: S. P. shoulders, navy beans or cabbage, potatoes, bread, oleomargarine, coffee. Supper: Rice pudding, sirup, biscuits, bread, oleomargarine, cheese, tea.

Sunday.—Breakfast: Cold sliced ham, potatoes, bread, oleomargarine, coffee. Dinner: Mutton stew, apple pie, bread, oleomargarine, coffee. Supper: Raspberries, cookies, bread, oleomargarine, tea.

Monday.—Breakfast: Pork and beans, bread, oleomargarine, coffee. Dinner: Roast beef, vegetable soup, potatoes, pickles, crackers, bread, oleomargarine. Supper: Rice pudding, sirup, biscuits, bread, oleomargarine, cheese, tea.

Tuesday.—Breakfast: Irish stew, bread, oleomargarine, coffee. Dinner: S. P. shoulders, navy beans, potatoes, bread, oleomargarine, coffee. Supper: Stewed apples, ginger cake, bread, oleomargarine, tea.

Wednesday.—Breakfast: Corned-beef hash, bread, oleomargarine, coffee. Dinner: Cold roast beef, cabbage, potatoes, bread, oleomargarine, coffee. Supper: Cold corned beef, pickles, bread, oleomargarine, tea.

Thursday.—Breakfast: Beef fricassee, pearl hominy, bread, oleomargarine, coffee. Dinner: Roast beef, navy beans, potatoes, apple pie, bread, oleomargarine, coffee. Supper: Mush, sirup, biscuits, bread, oleomargarine, cheese, tea.

To prepare and serve the food there are permanently employed in the kitchen about 62, and in the dining hall about 89 men, supplemented by an average temporary detail of 210. There are sufficient tables in the double dining room to seat 2,044 members simultaneously, but it requires two settings of the tables to accommodate all. Both kitchen and dining hall were in good condition, and they are frequently inspected by various officers of the Home. Facilities for receiving and taking care of supplies, and for cooking and serving meals seemed to be ample. The breakage of crockery used on the table, which is said to be due to constant use and accident, ranged from 2 per cent for saltcellars to 89 per cent for deep round plates.

Swill and garbage, amounting to about 177,000 pounds per month, were sold during the year, the receipt from this source being \$4,682.68.

None of the members were reported on outdoor relief.

Laundry. Soiled clothing is put in bundles in barracks and sent to the laundry each Monday morning. Each member is permitted to send one set of underclothes per week, and other clothing and bedding when necessary; but private clothing of members is not laundered at the Home under any conditions. To do the laundry work of the Home required the services of 44 men and an expenditure for labor and material of \$5,762.70, which is less than \$1,50

per man per annum and seems very reasonable. the laundry, and instead, a solution containing 10 20 pounds of soda to 150 gallons of water is used, one-third of a cent per gallon. In this way 1 were used.

The wash list indicated about 4½ shirts, 4 pairs pair of socks, 4½ bed sheets, 3 pillow slips, and towels per man per month.

The chief engineer of the Hon
 Engineer depart- heating, lighting, water, and se
 ment. employs a force of about 74 m
 members of the Home.

The steam plant consists of 29 high-pressure steam for heating all buildings and for cooking for shops, pumping station, gas and electric-light cost about \$103,000, and its cost of maintenance about \$65,000, or about \$31 per horsepower. The feet of air space to be heated.

The cost of the electric-light plant is reported gas works as \$40,000, exclusive of the distributi mos furnish a current for 16 arc and 2,227 incand run at an expenditure of about \$4,600 during the \$2 per light. The gas works supplied 5,238 burn \$6,200, which is but little over \$1 per light. Ga and electric lights in the hospital, chapels, t quarters, mess hall, club house and stable. Th by gas.

The cold-storage and ice plant consists of 1 erating and ice-making machine, including Cor acting ammonia compressing pumps; freezing cans, and the necessary machinery for providi making ice. There are 7 cold-storage rooms a feet of air space cooled. Its cost of operation about \$4,600. It has a capacity of making 30 or 50 tons refrigeration. The cost of making ice ton. This plant cost about \$29,000.

The system of water supply and of drainage an satisfactory and in good condition.

A fire, caused by the blowing out of a gas seal 5, 1897, made it necessary to call out the fire depa extinguished without loss. No other fires occu The following are the rules and regulations for the

Hereafter the Home fire company shall consist of the ei department, which shall be organized by the chief engin under his immediate charge and direction, or, in case assistant.

An engineer and fireman shall be assigned to the fire st for each ladder truck and hose reel, as well as for the fire as bucket and ax men, all of whom shall be thoroughly in as firemen.

1. In case of fire the man who may first see it shall at central boiler house and notify the chief engineer's cler

by causing the whistle to be blown for at least five minutes, and shall promptly notify the chief engineer, or his assistant, and the stable. The stable sergeant will immediately harness the steamer horses at the sound of the fire alarm, and send them to the engine house with the greatest possible speed. Should the fire alarm be sounded at night or during the absence of the sergeant of the stable, the stablemen will execute this order. Should the fire alarm be sounded while the team of horses are out at work, the driver will be instructed to unhitch at once and hasten with the horses to the engine house.

2. After receiving notice the chief engineer's clerk shall go or send to the office of the captain of the guard and give the locality of the fire. The captain of the guard or the sergeant in charge at the time, will promptly cause the bell of the mess hall, to be rung, then order the engineer at the pump house to start up both pumps, in order to keep a full head in the standpipe, and also send a man to notify the governor and officers of the fire. The Home guard, as soon as the alarm is given, will go to the fire and form a cordon about the burning building, to keep back the crowd and prevent them from interfering with the fire company.

3. On the sounding of an alarm the fire company will go promptly to the fire-engine house, man the hose reels and ladder trucks, and take them to the fire.

4. The engineer and fireman of the steamer will at once start the fire under the boiler, and as soon as the steamer shall have reached the cistern nearest the fire shall attach the suction, have hose run out from the steamer to the fire, and put the steam in service. On reaching the fire the hose shall be run out from the hose reels and attached to the nearest hydrants and the water turned on. Fire ladders will be placed where needed to carry hose or extinguishers to the upper stories, or to reach the roofs of adjacent buildings, in order to protect them with wet blankets or to pass up a line of buckets.

5. The chief engineer shall detail one or more men, as may be necessary, who shall inspect frequently the hydrants and all the standpipes or supply pipes in barracks and shops, and find by actual trial whether they are in good working order and in such condition that the water can be easily and quickly turned on. Captains of barracks and foremen of shops will be held responsible that no meddling with or handling of fire hose be allowed, except in case of fire.

6. Captains of barracks will detail upon each floor two men, one of whom shall be the corporal of the floor, who shall in case of fire take charge of and run out the hose from the barrack standpipe and turn on the water. Foremen of shops shall in like manner detail two men from the shop employees, whose duty shall be to go at once, in case of fire, and take charge of the fire appliances at the shop. Both captains and foremen will report promptly to the chief engineer any defect in the hose or water pipes in the barrack or shops, and shall carefully inspect the same at least once a week.

7. No pass will be given any member of the fire company until after an acceptable substitute shall have been provided, and until the pass shall have first received the signature of the chief engineer or of his assistant.

MEDICAL DEPARTMENT.

The hospital plant comprises a main building containing executive offices, kitchen, dining room, 7 wards, and the dispensary department; 1 double two-story brick building, 1 two story brick building, 2 two-story frame buildings, 4 one-story frame buildings, and the nurses' cottage. It has a capacity of 650 beds for patients. The convalescents are quartered in barracks Nos. 21, 24, and 26, and on the first floor of barracks 15 and 28, which are capable of accommodating 335 men. There are sufficient bath tubs in each ward to give about one to every 34 patients. Bathing is regulated by the ward surgeons. The hospital basements and attics are mostly used as storage and baggage rooms and as quarters for employees, except the attics in the main building, which are not used.

The average daily number of patients during the year was 566 in hospital, 302 in convalescent companies, and 127 at sick call. The total number of patients treated during the year was 6,354, and each case was treated an average of fifteen days, which is much less than reported at some of the other Branches. The cost of the hospital ration, including extra diet, which amounted to \$7,138.13 during the year, averaged 17.58 cents per day per patient.

Demented members are quartered in frame ward hospital under the care of special attendants. The care for them are reported inadequate, and new seem needed. There were 204 members with minds during the year, of whom 59 were co-insane. The principal classes of dementia are senile, and alcoholic, and acute and chronic mania. patients were sent during the year to the Government Insane.

Fifty-four members were reported totally blind so impaired as to be unable to read. Over 1 require assistance. Two men are employed to read hour in the forenoon and one in the afternoon.

There were 337 deaths among the members during the year. 64 died outside of the Home. Of those who died were 6 suicides, and the deaths of 246 are reported as natural causes. The death rate per 1,000 of the average was 57.06, and is higher than reported at the Government. One hundred and forty-two members were buried during the year, at an average cost per funeral. Burials are made at the Home carpenter shop at a cost of \$1.00. There is no allowance for funeral expenses of member of the Home.

The hospital employees of all kinds average 1 one employee to every four or five patients. Many of them, however, are not charged directly with the care of the patients, but are employed as drivers, waiters, dishwashers, cleaners, janitors, funeral escort, gravediggers, etc.

The amount expended during the year for medical purposes was \$12,013.43. Those most used were alcohol, opium, phenacetin, acetanilid, and purgatives.

No. 5.—REPORT OF AN INSPECTION OF THE HOME MADE SEPTEMBER 15 TO SEPTEMBER 16, 1898

This Home is located near Hampton, Va., at Monroe, and covers an area of 69 acres; but only 34 have been acquired by purchase, the other 35 being obtained with privilege of renewals for similar periods, though it has been improved by valuable buildings, roads, water, etc. It is perhaps the only instance, at least so far as the Government has made permanent improvements on a reservation; and it is the most densely populated reservation in the South. There is a great variety in construction and design of the frame structures predominate. The farm of the Home is off, and consists of land leased for that purpose. The Home has a governor, a treasurer, a quartermaster, who take care of the subsistence, and a surgeon, who seem efficient in the discharge of their duties.

The average number of officers during the year was 3,376. The population. The present was 3,480 on March 16, 1898 on July 10, 1897, showing a fluctuation of 249 in number. The absentees averaged 1,237 per day, absent being 1,397 on June 20, 1898, and the low

31, 1897. The number of absentees averaged over 300 more than at the Central Branch, which has the largest population. The following statement of members on furloughs June 30, 1898, was furnished:

Number absent.	Term of absence.
124.....	30 days.
189.....	60 days.
536.....	90 days.
370.....	180 days.
80.....	1 to 2 years.
52.....	2 to 3 years.
36.....	3 to 4 years.
8.....	over 5 years.

The total number cared for during the year was 5,305 and the average of the members 64 years.

At date of inspection there were present 3,255 officers and members and absent 1,397 members, showing a total of 4,652 on the rolls, exclusive of 31 temporary members. There were then 70 vacant beds in barracks and 20 in hospital.

On September 18, 1898, the members of the Home were reviewed, and 44.7 per cent of those present were seen in line. This proportion is smaller than attended this ceremony at the other Branches visited.

Discipline. The principal breaches of discipline consist of intemperance, bringing whisky into camp, fence jumping, and absence without leave, and are punished by revocation of any pass privileges, restriction to the limits of the camp, labor on the roads, or dishonorable discharge for gross and repeated offenses. The last-named punishment was inflicted during the year on five members only, which seems small considering the large membership, and is much less than reported by the other Branch Homes; but the per cent of members given the lighter punishments is greater here.

The pass system seems to be liberal, and all members upon admission are allowed "daily" passes good from 9 a. m. to 6 p. m. At some of the other Homes the first passes to newcomers are granted only after they have been at the Home a month or two. After six months "weekly" passes are given good to go and come at pleasure from 7 a. m. to 7 p. m., except Sundays; and after a year "red card" passes are given good for every day, except Sunday, from 7 a. m. to 8.30 p. m. Violation of the Home rules forfeits pass privileges in proportion to the extent of the offense.

Amusements. Facilities for amusement include theater, library, billiards and pool, card and smoking room, lectures, concerts, chess, checkers, baseball, boating, etc., and seem to give very general satisfaction.

The theater is a good-sized structure seating 1,400 persons, and was in very good condition. There were 52 performances given at an expense of \$9,865. Members were charged 5 and 10 cents for admission and others 25cents to \$1, according to location; but under a recent order no admission fee is now charged to members. The revenues from the sale of seats were \$3,394.77. The number of plays given at this Branch during the year, as well as the expenses for the same and revenues from admission fees, were greater here than at any of the other Branches, and the entertainments given were reported of an excellent character. The theater is also used for celebrations by soldier organizations and encampments and for Sunday school exhibitions and public meetings. The billiard hall and amusement room are also in the theater building.

and there are ample facilities for all who desire games. The rooms are open from 8 a. m. to 8 p. m. and reported well frequented, especially in the winter.

The band was maintained during the entire year by 24 musicians, of whom 22 were civilians. It was reported well attended and a success throughout the year. The civilian musicians are quartered in frame cottages. The cost of maintaining the band is less than at most of the other Branches.

The library was in very good condition and it contained 9,846 volumes. Books taken from the library are returned in good condition in two weeks. The circulation for the year amounted to 43,650, or nearly 13 books per member on average present. Books of fiction and war romance are in greatest demand. The average daily attendance was 185 during the year.

Much amusement is derived from boating, and the members have their own boats, which they keep in their own basins. A small ferry to Hampton.

Divine services are held regularly. Religious services are very frequently on week days and are reported well attended. The pastor, who resides on the Home grounds, held 474 services during the year. One who lives at Old Point, Va., 230 religious services. The place of worship is reported suitable for the purpose.

The farm, which is all leased to the Branch, per annum, is located about a mile from the Home and contains a herd of 33 cows and 230 hogs or pigs. The latter are usually sold at the Home. About 65 acres of the farm are under cultivation. The values of the farm products reported for the year are as follows:

Vegetables for table	
Milk (17,985½ gallons)	
Fresh pork and lard for table	
Forage and vegetables fed to stock	
Sold (flowers, \$394.55; calves, \$12)	
Total	

The cost of maintaining the farm properly for the year was \$1,000. The eight buildings on the farm, used as a slaughterhouse, quarters for employees, tool frames and in good condition, except the kitchen and mule shed, which were originally on the Home grounds. The brick stable and carriage house on the Home grounds are considered part of the farm.

DISBURSEMENTS.

The accounts and disbursements of the Branch for the year from October 20, 1897, the date of the last income statement, 1898, and involved \$952,749.60 pertaining to the various post funds. The transactions concerning the same are stated as follows:

On hand October 20, 1897:	
General fund	
Pension fund	
Post fund	

Received since:	
General fund.....	\$319, 047. 62
Pension fund.....	508, 974. 64
Post fund	68, 761. 19
	<hr/> \$896, 783. 45
Total to be accounted for	952, 749. 60
Expenditures:	
General fund.....	329, 964. 11
Pension fund.....	489, 691. 69
Post fund.....	67, 297. 54
	<hr/> 886, 863. 34
Balance, 1898.....	65, 886. 26

which was all on deposit in bank except \$651.81.

The records in the treasurer's office submitted for inspection were found in very good form and creditable condition, and admitting of prompt inspection. The distance from the local depository at Norfolk and the time consumed in making personal trips there were reported as accounting for the large amounts of cash on hand pertaining to the post fund. These deposits averaged about two per month, and in amount were sometimes over \$7,000 and \$8,000 at a time, and many were over \$3,000. There was cash on hand of the post fund at date of inspection, September 18, \$544.03, and the date of last deposit was September 14, 1898.

The expense of transporting specie and currency from Norfolk to the Home is sometimes paid to a local banking firm and sometimes to Adams Express Company from the post fund.

The receipts during the year on account of this fund were \$332,479.75 and the expenditures \$320,441.27, which is about \$94.92 per member of the average present.

The appropriation for the hospital expressly limits the purchase of furniture to "bedsteads, bedding and bedding materials, and all other articles necessary for the wards," and to "hospital, kitchen, and dining-room furniture," but quite a sum seems to have been expended here from that appropriation for the purchase of bedsteads, carpets, and rugs for the quarters of the assistant surgeon and for the nurses' cottage.

The receipts from posthumous sources during the year were \$5,153.54 and the disbursements \$4,390.51.

The number of employees authorized under the general fund, including officers and civilians, was 533, and the average daily number employed 531, which is about 15.7 per cent of the average present. The compensation paid them was about 23.7 per cent of the disbursements and averaged \$143.08 per employee, which is less than paid at the other Branches.

The failure to receive the amount necessary to meet the monthly pay roll, found at other Branches, was met here. The treasurer one month could not be paid, and the next month the surgeon had to go without his pay that others of more limited resources could be paid. This was not due to a lack of funds, as the fiscal year had just been entered on. The salary had been earned under authority, the employee was entitled to it, and there was money available to pay it, therefore there does not seem to be any good reason why these employees should be thus inconvenienced.

There were no special improvements made during the past fiscal year, except completing the sewage pumping works and other improvements begun during the previous year. The improvements authorized for the present year are

two frame barracks and furniture, for which priated. The needs reported for the coming master's building for receiving, storing, and quartermaster supplies.

Purchases. There has been no change in ket or contract purchases. Tl during the year amounted to 4 prices, which, for the principal articles c the last quarter of the year are given in the reasonable. The prices of coffee, corned b sugar are generally lower, and of tea, beans, most Branches.

Pension fund At the close of the year th on the rolls, which was about bership. Of these 2,991 wer Their pensions ranged from \$6 to \$72 per concerning this fund during the year were as

On hand June 30, 1897.....

Balance June 30, 1898.....

The earning capacity of the restaurant at this Branch seems to have been somewhat crippled since the employment of civilian waiters was discontinued, although waiters of this class are employed at the hotel of another Branch, for the alleged reason that it is not possible to obtain members having the necessary qualifications for such service.

The post fund, it appears, was called upon to help out the general fund to the amount of \$308.25 by paying the bill of the Newport News Water Company for water from June 16, 1897, to June 30, 1897, there not being sufficient funds to the credit of proper appropriation to pay the bill for the full month of June. This deficiency, as well as that in another Branch, possibly could have been avoided if the appropriations for the Branch Homes were disbursed for the benefit of the Branch for which the appropriation was made. An estimate is now made of the cost of heating and lighting the post-fund building, and that amount is charged to that fund. Whether the ratio was equitable could not be ascertained.

The buildings pertaining to the post fund are the band quarters (6 cottages), chapel, library, pavilion, social hall, theater, hotel, beer hall, and two quarantine cottages; and all are used for post-fund purposes, exclusively, except the chapel, library, and quarantine cottages.

SUPPLY DEPARTMENT.

Barracks. There are 19 barracks at this Branch, ranging from poorly ventilated buildings of questionable sanitary condition to well-arranged modern structures. Three of the barracks have basements and three have attics, which are all in use as dormitories, the former housing 137, and the latter 145 members. The dormitory air space per man ranges from 320 cubic feet, which is less than reported by any other Branch, to 1,039 cubic feet. The barracks are all heated by steam and mostly lighted by gasoline gas, generated at the Home. Bathing facilities seem to be sufficient to give one bath tub to every 69 men; but the rules governing bathing do not seem uniform. The men in some companies are required to bathe weekly, and in others it is left to their own discretion. The beds, bedding, and lockers are all reported in good condition, but thin mattresses are still in use.

The barracks, as well as all other buildings, were given a number during the year, by which they are to be known in future. The following order was issued by the governor on November 11, 1897:

The designation of the buildings on grounds of this Branch, numerically, is hereby announced to the command. Hereafter in all communications and reports, where reference is made to any particular building or buildings, the designation shall be by number, as per this order.

Number of building.	Kind of structure.	By whom occupied and for what use.

The system of designating buildings by number and posts and has been found convenient and useful.

Supplies and stores on hand and properly cared for, but storage is inadequate. Besides the two storerooms for quartermaster and brick No. 31 for commissary, the first floor of barrack No. 50, the cellar under the hospital building, the cellar under barrack No. 44, and the cellar under the mortuary are used as storerooms. But no loss has occurred in storage, and the stock on hand seems to be sufficient. The supply of clothing on hand was sufficient for the year, especially Nos. 6 and 7. The invoice value of purchases during the year was \$30,624.57 from the government by purchase, and \$760.09 by transfer. Retained

higher authority are not made, except in the case of that received from the general depot.

Requisitions for forage seem to be made to cover issues made. Would it not be possible to have a forage return upon which to base issues and insure some approximate accountability for such expenditures? Some closer supervision is suggested over the coal supply. As soon as coal is received it is charged off the property book upon a requisition signed by the engineer, and no further account is kept of it. At no time does the record show whether there should be 10 or 500 tons on hand. It also seems possible, from a test made, that property may be received, paid for, and expended without leaving a trace in the property books; and such a condition is not confined to this Branch, but is equally possible under the methods at the other Branches.

The following is the bill of fare for the week ending June 30, 1898:

Food.
Friday.—Breakfast: Mackerel, potatoes, bread, oleomargarine, coffee. Dinner: Clam chowder, rice pudding, bread, oleomargarine, coffee. Supper: Prunes, cheese, bread, oleomargarine, tea.

Saturday.—Breakfast: Cold meat, potatoes, bread, oleomargarine, coffee. Dinner: Roast beef, tomatoes, potatoes, bread, oleomargarine, coffee. Supper: Bologna sausage, bread, oleomargarine, tea.

Sunday.—Breakfast: Breakfast bacon, baked beans, bread, oleomargarine, coffee. Dinner: Roast mutton, rice pudding, potatoes, bread, oleomargarine, coffee. Supper: Stewed apples, bread, oleomargarine, tea.

Monday.—Breakfast: Smoked shoulder, potatoes, bread, oleomargarine, coffee. Dinner: Beef stew, bread, oleomargarine, coffee. Supper: Stewed peaches, bread, oleomargarine, tea.

Tuesday.—Breakfast: Smoked shoulder, potatoes, bread, oleomargarine, coffee. Dinner: Beef stew, bread, oleomargarine, coffee. Supper: Stewed peaches, bread, oleomargarine, tea.

Wednesday.—Breakfast: Hash, bread, oleomargarine, coffee. Dinner: Corned beef, cabbage, potatoes, bread, oleomargarine, coffee. Supper: Stewed apples, bread, oleomargarine, tea.

Thursday.—Breakfast: Cold meat, potatoes, bread, oleomargarine, coffee. Dinner: Roast beef, lima beans, potatoes, bread, oleomargarine, coffee. Supper: Hominy, sirup, bread, oleomargarine, tea.

To prepare and serve the food there are some 36 men permanently employed in the kitchen and 29 in the dining hall, and a large number of men is detailed additionally in rotation as kitchen and dining-room help. Kitchen and dining hall were in good condition. The latter contains 22 tables, which will seat comfortably 1,144 men and have to be set twice, and several tables three times, for each meal. Facilities for receiving and taking care of supplies and for cooking and serving meals are reported ample.

The breakage of crockery runs from 8 per cent for saltcellars to 85 per cent for coffee cups, and is said to be due to its not nesting properly, quality, and handling. The following is a summary of the crockery reported on hand, received, and expended:

Pieces on hand July 1, 1897.....	39, 114
Received during year	3, 408
	<hr/>
	42, 522
Broken and condemned	18, 672
	<hr/>
On hand June 30, 1898.....	23, 850

Swill and garbage are fed to the hogs and pigs at the farm, and what is not required there is sold at 30 cents per barrel of 30 gallons each. The receipts from this source were \$560.10 for the year.

Sales of commissary supplies are made to about 30 persons, which includes civil employees and members with families living outside the

MEDICAL DEPARTMENT.

The hospital consists of a large brick building with basement and attic and two frame annexes, having a capacity for 450 patients. Both basement and attic are used as wards for patients and for quartering attendants. The convalescents are quartered in three old buildings, one brick and two frame, all connected into one, and having a capacity for 274 patients. The bathing facilities of the hospital consist of 16 bath tubs, located in the different wards, with an average of 27 patients to each tub.

The average daily number of sick during the year was 441 in hospital, 225 in convalescent company, 58 in barracks, and 69 at sick call. At date of inspection, September 18, 1898, there were 421 in hospital, 267 in convalescent company, and 56 at sick call. The total number of patients treated during the year is reported as 2,885, with an average of 5.5 days to each case, which seems low compared with the figures given by other Branches. The surgeon reported 45 cases of diarrhea during the year, caused by drinking impure water or eating improper food. The cost of the hospital ration, including extra diet, averaged 19.69 cents, and the cost of the extra diet is given as \$916.43, which is less than that given by some of the smaller Branches.

There were 155 members showing indications of disordered minds during the year, of whom 23 were considered permanently insane. They are quartered in the hospital under the care of the attendants, 8 being in the hospital basement. Facilities for their proper care seem inadequate, and a special building and separate grounds are said to be needed. Seven were sent during the year to the Government Hospital for the Insane.

Sixteen members were reported totally blind and 55 with an impaired sight so as to be unable to read. One of the hospital attendants is employed to read to them twice a day.

There were 230 deaths during the year, of which 209 occurred at the Home. Among them were two suicides, one who died from violence, and five from the results of accidents; the death of the others is ascribed to natural causes. The number of deaths give a mortality rate of about 49.86 per 1,000 of the average present and absent. Burials take place at the neighboring national cemetery, unless the bodies are sent home for burial. The cost of a funeral is \$8.99, including coffin, band, grave, and all other expenses, which is the lowest reported from any of the Branches. The coffins also cost less. No allowance is made for funerals of members dying outside of the Home, but bodies sent home for burial are clothed in uniforms.

The hospital employees of all kinds averaged 98, of whom 24 were civilians, giving about 1 employee for every 8 patients.

About 292 different drugs and preparations were used in the dispensary, and the amount expended for the same during the past year was \$6,265.94. The hospital seemed in good condition and well managed.

The surgeon usually makes personal reports daily to the governor on the sanitary condition of the hospital, the sick, the quarters, and the command generally, and written reports as occasion requires. The governor makes a monthly inspection report to the president of the Board of Managers. The principal needs of the Home for improving its sanitary condition, as reported by the surgeon, are more quarters to relieve overcrowding and better ventilation for dormitories in winter.

No. 6.—REPORT OF AN INSPECTION OF THE HOME MADE OCTOBER 6 TO OCTOBER 11, 1898.

This Branch covers 640 acres of fine ground, the Missouri River, within easy reach of Leavey or street car. Most of the buildings are of brick all similar in design and structure. A guardhouse the year. The general condition of the Home is good. The handsome band stand near the headquarters chapel, and the admirable dining-room service at the Branch. Its principal officers are a governor and a master, who is also commissary of subsistence, and efficient and attentive to their duties.

The average number of officers during the year was 2,480. The population. present was 2,599 on January 28, 1898, on July 1, 1897, showing a fluctuation in the average. The absentees averaged 728 per day, the greatest time being 971 and the lowest 597. About 300 for periods ranging from one to six years. The average during the year is reported as 4,020 and the average members as 63.49 years.

At date of inspection there were present 2,541 and absent 828 members, showing a total of 3,369 of 36 temporary members. There were then no racks and but 16 in the hospital, and 46 men and over 300 in basements. So it seems the Home is severely taxed, notwithstanding 800 or more on furlough.

Most of the members present—about 65 per cent at review, which was well performed. The governor gave the following order preparatory to the ceremony.

I. On Monday, October 10, 1898, at 9 o'clock a. m., march inspected and reviewed by Col. C. H. Heyl, Inspector-General.

II. Captains will form their companies near the rear fifteen minutes before the parade hour, and take positions directed by the adjutant.

III. Members too much disabled to march but desiring inspection will form in front of the dining hall, proper place above stated.

IV. Officers of the Home will report at headquarters one hour for parade.

V. All labor except such as is essential will be suspended; who can be excused by the foreman will join in the parade until after inspection and review.

The appearance of the men was good and made a fine display.

Discipline. Discipline seems well maintained. Offenses are intemperance, absence without leave, and neglect of guard of orders, and neglect of duty.

Penalties imposed are labor without pay or discharge for 30 days. If not imposed, nor are the members confined in the hospital. Sixteen members were dishonored the year, and 84 per cent of the average passes were good from 7 a. m. to 8.30 p. m. Permanent passes good from 7 a. m. to 8.30 p. m. in good standing, and other passes are issued for shorter periods.

A new guardhouse was erected during the year, the basement heretofore used as such.

Amusements. These include entertainments in the amusement hall, theatrical performances, band concerts, library and current literature, billiards and pool, cards, checkers, dominoes, quoits, and boating and fishing.

The second floor of the dining hall, and which is known as Franklin Hall, is fitted up as a theater, but does not seem well arranged for the purpose, as it lacks acoustic properties and does not give a good view of the stage, as the seats are on a level, and in case of fire a perplexing problem would confront the Home officials, as there is no other place available for feeding so large a number of men. A recent improvement was noted in the erection of two large outside stairways as a means of exit from the theater. However, it is reported that the erection of a new theater building is now under contemplation. Theater entertainments are under charge of an amusement committee appointed by the council of administration. There were 25 performances during the year at an expense of \$2,245, which is met from the post fund. Members are admitted free of charge, but officers and others are charged from 25 to 50 cents.

The band was maintained during the entire year with an average strength of 17 musicians. At date of inspection it contained 19, of whom 18 were civilians. It gave 357 concerts during the year, of which over half were out of doors, all reported well attended. The programs consist of classical and popular music and national airs. The civilian musicians are quartered in one of the barrack basements, and receive dress uniforms and the same rations as members. Their average compensation per month is \$22.50. The total cost of the band for the past year, including subsistence and other allowances of the civilian members, was \$7,024.17, which is met from the post fund.

The library is located on the second floor of the headquarters building, which is known as the Ward Memorial building. It was generally in fair condition, but the furniture needs repairing and renovating and a number of books need rebinding. At date of inspection it contained 9,179 volumes and a fair amount of current literature. The circulation reported during the year was 20,505, which gives about 8.3 volumes per member of the average present, and is less than reported by the other Branches. Fiction and history seem to be in greatest demand.

The billiard and similar tables are reported in frequent demand, but there is no special card room except in the hospital, compelling the men to play on the tables in the barracks.

Outdoor amusements consist of boating, fishing, and quoits. The boats are on the artificial lake in front of the hospital, and the quoiting ground is in the ravine in rear of the barracks.

Religious services. Religious services are held daily in the Home chapel, which is an artistic structure and well suited as a place of worship. The Roman Catholics occupy the basement and the Protestants the ground floor. Services are reported well attended. The Protestant chaplain lives on the Home grounds and the Roman Catholic near the reservation.

Farm. The farm comprises 122 acres under cultivation, and contains 1 large handsome brick and stone stable, 1 wagon house, 1 vegetable shed, and 3 greenhouses. The transportation consists of 23 vehicles of all kinds and 16 public animals, which are used for general farm and road work. No other animals belonging to the Home are kept on the farm. The employees of the farm and garden, including those employed in teaming and on the

lawn, average about thirty. The products are turnips, sweet potatoes, onions, beets, spinach, vegetables, and apples and grapes. The vegetables were sold at \$3,271.59, the apples at \$612.18, and the grapes were turned into the commissary department. Fodder was not raised on the farm. The cost proper during the year was \$1,533, and of the improvements including trees, shrubbery and seed, \$1,632.77.

DISBURSEMENTS.

The accounts and disbursements of the treasury from September 9, 1897, the date of last inspection, involved \$788,129.80, pertaining to the general, pension and improvement funds. The following is a summary of these funds:

On hand September 9, 1897:

General fund	
Pension fund	
Post fund	
Improvement fund	

Received since:

General fund	
Pension fund	
Post fund	

Total to be accounted for

Expenditures:

General fund	
Pension fund	
Post fund	
Improvement fund	

On hand October 8, 1898

which was all on deposit in bank, except \$50.

The receipts during the year on the account of this fund, were \$274,000.00, which is about the same as the average present.

The receipts on posthumous account were \$6,000.00, \$1,587.28.

The improvements made during the year were of new steam boilers, a guardhouse, the paint shops, for which \$14,000.00 was expended. The improvements authorized for the present year are the electric-light plant, the erection of a storeroom, the basements of barracks now used for storage for female nurses, at a cost not exceeding \$15,000.00. The improvements reported needed are two barracks, ice plant, hall, cow barn, blacksmith shop, and hospital, for which an estimate of \$62,251 has been made. Among these needs are the barracks, for which a room is needed. The overcrowded condition here seen in the barracks room, and the request should be granted to enlarge this Home.

Employees. The number of employees authorized under the general fund, including officers and civilians, is reported as 444, and the average number actually employed as 378, which is about 15 per cent of the average present. The compensation paid them was about 28 per cent of the disbursements, and averaged about \$194 per employee.

Purchases. These are usually made under contract, but 502, involving \$8,358.26, were made in open market. The principal items among the open-market purchases were hardware and agricultural implements, \$2,029.23; transportation, \$1,768.87; furniture, carpets, etc., \$971.76; fruit, etc., \$759.91; freight and express, \$404.08; horses, \$360; oil, glass, paint, etc., \$272.84; lumber, doors, etc., \$248.27; books, typewriters, etc., \$236.75; and trees, shrubbery, seeds, etc., \$201.49. The principal articles of food for the last quarter of the fiscal year were mostly bought in Leavenworth, Kansas City, and Omaha. Compared with the corresponding period of the previous year, there has been an increase in the cost of fresh beef, corned beef, tea, bacon, fresh fish, and sugar; and a decrease in coffee, salt pork, codfish, lima beans, ham, oleomargarine and cheese.

Pension fund. At the close of the year there were 2,921 pensioners on the rolls, which was about 85.5 per cent of the membership. Of these, 2,115 were present at the Home. Their pensions ranged from \$6 to \$50 per month. The transaction concerning this fund during the year was as follows:

On hand June 30, 1897	\$12, 788. 47
Received during year	375, 768. 10
Total to be accounted for	388, 556. 57
Paid to pensioners	378, 718. 04
Balance June 30, 1898	9, 838. 53

which was due 91 pensioners in sums ranging from less than \$100 to over \$500.

Post fund. The principal revenues accruing to this fund are derived from sales at the Home store, restaurant, and beer hall, and the profits from these sales are disbursed in the interest of the members for improvements, amusements, salaries, and other purposes. The band, for instance, is paid from this fund. The beer hall gives the largest revenues, the gross profit during the past year being nearly \$14,000. The consumption of beer amounted to 60,992 gallons, which seems large in the aggregate, though it is but slightly over one-half pint per man per day.

The following is a summary of the transactions of this fund reported for the year:

On hand June 30, 1897	\$4, 626. 10
Receipts during year:	
Sales, Home store	\$9, 608. 05
Sales, beer hall	25, 038. 55
Sales, restaurant	1, 499. 75
	36, 146. 35
Transportation	516. 61
Amusements	33. 15
Other sources	1, 343. 21
	1, 892. 97
To be accounted for	42, 665. 42

Expenditures:

Stock, Home store.....
 Stock, beer hall.....
 Stock, restaurant.....

 Clerks and other help.....
 Fixtures.....
 Amusements.....
 Transportation.....
 Insurance.....
 Construction.....
 Other purposes.....

Total expenditures.....

Balance June 30, 1898.....

This fund gives employment to about 45 men of the average number of members present. It is provided with a cash register. The check on the hall is similar to that of the Northwestern Branch, which is exchanged for tickets only, which must be purchased.

This is a special fund, and was Improvement fund. of Leavenworth for the improvement of the Home was established. It was disbursed at the rate of about \$5,000 per annum and a fund was expended during the year.

SUPPLY DEPARTMENT.

The barracks appeared to be
 Barracks. are thirteen of them, each a two-story building with a basement and attic. They were originally designed to accommodate 124 men each, but are at present occupied by about 100 men. The basements, of which eight are used as storerooms, and five basements are used for storage purposes, but upon the occupancy of the new storehouse. The floor space seemed low, and averaged less than 40 feet high, and the lowest reported was about 40. The barracks have a special system of ventilation shafts in each barrack with registers near the floor and in halls. They are also provided with bath tubs, averaging one bath tub for every 82, one shower bath for every 100, and one urinal for every 20 men.

Thin mattresses have not yet been entirely replaced. The old kind, weighing 8 pounds, are still in use. The bedding, and lockers was generally good, and the men are required to air their bedding and keep their beds clean. The barracks are 10 feet high, 2 feet wide, and 1 foot deep, and provide one drawer.

The storage facilities for quartermaster stores have been unsatisfactory. On account of no loss or deterioration of supplies on account of poor storage, except of 680 pound storehouse, it is believed, will remedy this evil. The property received during the year was \$25,000 at the depot, \$172,367.13 by purchase, and \$2,860.12 from the property received from the general depot,

tableware, clothing, and bedding, are made quarterly to the president of the Board of Managers, and of all other property monthly to the governor of the Home, and inventories are taken semiannually. Furniture and other property is reported, marked as nearly as possible, and taken up as public property.

Clothing when received is inspected and taken up on the property books, and thereafter issued on approved requisitions and charged to the individual clothing accounts. Clothing turned in, if still serviceable, is cleaned and reissued, and care seems exercised to get the longest possible wear out of it. When unfit for further use, it is condemned and sold as rags, the prices obtained during the past year ranging from one-half cent per pound for blouse linings to 12 cents per pound for dress coats, the whole amounting to \$793.61.

The following is the bill of fare furnished for the week ending June 25, 1898:

Food.

Sunday.—Breakfast: Boiled ham, bread, butter, and coffee. Dinner: Roast mutton, potatoes, pickles, pudding, bread, and coffee. Supper: Stewed fruit, cold roast beef, bread, butter, and tea.

Monday.—Breakfast: Beef fricassee, bread, butter, and coffee. Dinner: Boiled salt pork shoulder, potatoes, stewed tomatoes, bread, and coffee. Supper: Stewed currants, beef rumps, bread, butter, and tea.

Tuesday.—Breakfast: Beef hash, bread, butter, and coffee. Dinner: Roast beef, stewed navy beans, potatoes, bread, and coffee. Supper: Stewed fruit, cold roast beef, bread, butter, and tea.

Wednesday.—Breakfast: Pork and beans, bread, butter, and coffee. Dinner: Beef stewed, crackers, bread, and coffee. Supper: Sweet buns, cold roast beef, bread, butter, and tea.

Thursday.—Breakfast: Beef hash, bread, butter, and coffee. Dinner: Roast beef, pickles, potatoes, stewed tomatoes, lima beans, bread, and coffee. Supper: Bologna sausage, hominy grits, bread, butter, and tea.

Friday.—Breakfast: Boiled mackerel, potatoes, bread, butter, and coffee. Dinner: Codfish, roast beef, potatoes, pudding, pie, bread, and coffee. Supper: Stewed apples, cold roast beef, cheese, bread, butter, and tea.

Saturday.—Breakfast: Beef hash, bread, butter, and coffee. Dinner: Roast beef, young onions, potatoes, stewed tomatoes, bread, and coffee. Supper: Beef rumps, bread, butter, and tea.

To prepare and serve the food requires about 16 men in the kitchen and 15 in the dining hall, and an additional detail of about 71 men. The kitchen and dining hall were in good condition, the latter especially being a model of neatness and arrangement, and facilities for receiving and taking care of supplies and for cooking and serving the food seemed ample. The commissary department is conveniently located in the basement under the dining hall. The tables have room for 1,080 men, and require to be set twice for each meal. The breakage of crockery averaged about 40 per cent, being largest in coffee bowls and lowest in mustard pots, and is said to be due to the old age of the members handling it and the quality of the ware.

The refuse of the kitchen, amounting to about 60,000 pounds per month, is given away for hauling it from the grounds. At some of the other Branches it is sold or otherwise utilized.

Outdoor relief is not given to any of the members.

Clothing is sent to the laundry on Mondays and returned Thursdays and Fridays. Receipts are given and taken both going and returning, to guard against loss. Members may send whatever articles of bedding and clothing may be necessary, but private underwear of members is not laundered by the Home. The laundry list indicated about 3.3 shirts, 3.8 drawers, 1 pair of socks, 2.4 hand towels, 0.2 roller towels, 5 sheets, and 5.4 pillowcases per man per month.

Laundry.

To do the laundry work required the services and 64,350 pounds of soap, at an expenditure of \$1,769.20, which seems very reasonable, and a man per year.

Protection against fire consists of plugs with hose and nozzle attached at suitable intervals over the ground, throwing a stream of water over any of the building plug. Each plug with its attachment is placed in a structure not unlike a sentry box in appearance, and contains hose and fire extinguishers and fire buckets constantly filled. There is no fire engine. A civilian employee is instructed in using and responding to the alarm. Two men are employed to clean the fire hose, which has been in use for many years, and need renewing. One small fire occurred during the year, causing any loss.

The chief engineer has general charge of the machinery and repairs, and of the heat service, and employs in his department.

The steam plant, located in the boiler house in the barracks, consists of two 200-horsepower and two 100-horsepower boilers, which are used for heating the barracks, quarters, and greenhouses; for cooking, and for power for the electric-light plant, the laundry, and the engineer shop. The plant is reported to have cost \$100,000. Its cost of maintenance for the past year was \$10,000 per horsepower. There are 3,173,441 cubic feet of steam generated annually.

The electric light plant is also located in the barracks, and furnishes a current for 30 arc lights for lighting the buildings. The buildings are lighted by gas, furnished by the city, but an extension of the electric plant has been planned.

The system of water supply is reported satisfactory. Water being furnished by the Leavenworth City.

Sewage and surface drainage empty through the Missouri river. It is reported that the construction of a new culvert now building will improve the system.

MEDICAL DEPARTMENT

The hospital plant consists of a main 3-story brick building, with three wings, a 1-story building for the insane, and a morgue. The convalescent hospital is one of the barracks. These buildings are a part of the barracks. The capacity of the hospital for patients is 198, for convalescents 152.

The basement of the hospital is used as dormitory for sick call, for storage, and for various other purposes. It is used for nurses and for some of the patients. It is equipped with 11 porcelain-lined bath tubs, with hot and cold water, which gives an average of about 25 patients treatment. The dieting of the patients is regulated by the surgeon. The required to bathe on admission and weekly thereafter. The average of the hospital seems to be satisfactory.

The average daily number of sick during the year was 132 in convalescent company, 46 in barracks.

The total number of patients reported treated during the year was 3,770, with an average of thirty-five days to each case. The cost of the hospital ration, including extra diet, averaged 16.81 cents per man per day, and the expenditure for extra diet was \$876.90 for the year. The surgeon reports 115 cases of malarial and kindred fevers as caused by the proximity of the Missouri River.

There were 50 members showing indications of disordered minds during the year, of whom 41 were considered permanently insane. They are quartered in a building specially erected for the purpose, with all necessary conveniences, and are cared for the same as patients in the hospital. Facilities to take proper care of these patients seem to be ample. Seventeen insane members were sent during the year to the Government Hospital for the Insane at Washington.

Eighteen members were reported to be totally blind and 56 with an impaired eyesight so as to be unable to read. One member is employed to read to them daily.

There were 172 deaths during the year, of which 31 occurred outside of the Home; of these, 3 committed suicide, 1 died from violence, 8 from the results of accidents, and 160 died a natural death. The death rate was about 53.62 per 1,000 of the average present and absent. About 82.6 per cent of the deceased members were buried at the Home cemetery, at a cost of \$12.73 per funeral. Nothing is allowed for funeral expenses of members dying outside of the Home. Coffins are made at Leavenworth, Kans., at a cost of \$4.50 each, which is less than reported by most of the other Branches.

The hospital employees of all kinds averaged 95 during the year, which gives about one employee for every four or five patients.

The amount expended during the year for medicines, drugs, etc., was \$4,400.39, which is less than was expended at one or two other Branches with a smaller population.

The surgeon reports that, in order to improve the sanitary condition of the Home, the water-closets should be improved or renewed and the drainage completed.

NO. 7.—REPORT OF AN INSPECTION OF THE PACIFIC BRANCH, MADE OCTOBER 15 TO OCTOBER 18, 1898.

This Home is located about 3 miles from Santa Monica, Cal., on the Southern Pacific Railroad, between the ocean on one side and mountains on the other, occupying about 630 acres of ground, improved by fruit and other trees and tropical vegetation. The buildings are generally frames, and the style of architecture, with broad verandas, gives them a Southern air. Its principal officers are a governor, a treasurer, a quartermaster, who is also commissary of subsistence, and a surgeon. This Home is older than the Marion, but somewhat less populous.

The average number of officers and members present during the year was 1,602. The greatest number present was 1,768, on December 13, 1897, and the lowest 1,476, on June 30, 1898, showing a fluctuation in the average attendance of 292. The absentees averaged 484 per day, the greatest number absent at one time being 604 and the lowest 415. Some of these have been absent for several years, and it seems that a limit might well be set beyond which unaided absentees are to be dropped from the rolls.

The total number cared for during the year is reported as 2,447, and the average age of the members as 61.58 years.

At date of inspection there were present 1,517 officers and members,

and absent 588 members, showing a total of 2,1 of 6 temporary members.

On October 19, 1898, the members were reviewed of those present being seen in line. The ceremony and the members presented a good appearance.

The principal breaches of discipline without leave and drunkenness and 60 cases, respectively, re-imposed are confinement to the limits of the aggravated cases labor without pay for short grounds, etc. There were 18 cases of gross in the penalty was dishonorable discharge. Sent the guardhouse were not imposed, unruly members merely to prevent them from disturbing the comrades. One member was undergoing a labor without pay at date of inspection. The 90 per cent of the average present were not present.

Short passes are granted by company commander on the governor's approval. Card passes, entered and come at will from morning until 8 p. m., are present at inspections and answer all details, and in good standing.

Facilities for amusements command where theatrical performances library, and indoor games.

The new amusement hall, for which the Board appropriated \$8,000 from the post fund and \$6,000 from the fund, is about completed, with the exception of the roof. It will seat about 750 persons and meet a long demand for entertainment is in the hands of an amusement authority, however, is limited to making recommendations to the governor deciding as to the class and character of the entertainment to be given. The new hall will be under the administration, consisting of the commission. There were but five performances given during the year in the assembly hall, which is a temporary frame building unsuitable, and had to serve for all assembly purposes, entertainments, and meetings of the Grange and Societies of the Home. A uniform charge of 15 cents is levied for theatrical entertainments, the receipts going to the benefit of the Home. There were, therefore, no expenses which at other Homes are borne by the post fund.

There is a singing club at the Home, composed of civilian employees; and some of the amateurs at times take part in entertainments arranged for the benefit of the societies. The Women's Relief Corps, Ladies' Christian Temperance Union, and the Grange take special interest in the welfare of the Home frequently.

The library occupies the second floor of the head building, well arranged and satisfactorily conducted, but in need of more reading matter of every description. There are 2,029 volumes in the library at the close of the year. The average members present and absent. Before the library for one week at a time and renewed.

lation reported for the year was 14,900, which is an average of a fraction over nine books per member.

The band was maintained during the entire year with an average of 12 bandsmen, of whom 9 were civilians. Its cost, including subsistence and other allowances of civilians was \$4,032.61. It gave 364 concerts during the year, all out of doors and well attended, playing each afternoon on the balcony of the general mess hall, whence the music can be heard on the porches of adjacent barracks.

There are no billiard or similar tables owned by the Home, the only table of this kind at the Home belonging to the Keeley Club, located in one of the hospital basement rooms. Cards, chess, checkers, and backgammon are played in the barracks and the hospital, there being about 37 tables for this purpose, which, it is believed, give fair opportunity to all who desire to play. There are no outdoor games, though it seems the balmy climate and ample room on the grounds should encourage them.

These were held in the frame assembly hall, which Religious services. is entirely too small and unfit for the purpose. The new hall, now about completed, it is thought will give ample opportunity for all who may desire to attend. But a chapel should be given this Branch, as more satisfactory than holding divine services in a hall primarily intended for amusements. There is no resident chaplain at the Home, the Roman Catholic chaplain living at Santa Monica, 4 miles distant, and the Protestant at Los Angeles, 14 miles distant. Services are also held by others interested in the spiritual welfare of the members.

There are 469 acres under cultivation at this Branch, Farm. which is more than at most of the other Branches, and considerable attention is given this feature of the Home. The farm contains 18 different buildings and sheds, most of which are temporary structures in poor condition; 26 vehicles of all kinds, 20 horses, 2 mules, 31 cows, 1 bull, and 360 pigs, and employs about 40 hands. The farm stock on hand June 30, 1898, was valued at \$4,900. Horses or cattle no longer required on the farm are inspected and condemned and sold at public auction; hogs are slaughtered and turned into the commissary department at market value. There are 6 private horses kept on the farm. A charge of 15 cents per day is made for the keeping of all such not entitled to forage.

The following were the principal classes of products of the farm and their value:

Forage	\$3,894.20
Pork	3,496.02
Vegetables	3,492.70
Milk	2,129.70
Fruit.....	725.73
Chickens and eggs.....	381.22
Total.....	14,119.57

Over \$10,000 worth of this produce went to the table. The cost of maintaining the farm proper is reported as \$5,333.64.

DISBURSEMENTS.

The accounts and disbursements of the treasurer were inspected from August 27, 1897, the date of last inspection, to October 17, 1898,

and involved \$579,997.28, pertaining to the general fund, and the Ward fund. The following is a summary of actions concerning these funds:

On hand August 27, 1897:

General fund	
Pension fund	
Post fund	
Ward fund	

Received since:

General fund	
Pension fund	
Post fund	

Total to be accounted for

Expenditures:

General fund	
Pension fund	
Post fund	
Ward fund	

On hand October 17, 1898.....
which was all on deposit in bank, except \$125.55.

The receipts during the past year of this fund were \$212,173.75, \$209,593.08, which is about \$13 average present. The liabilities reported at fiscal year 1898 were \$2,474.29, under the head of hospital.

The receipt on posthumous account amounting to \$1,167.51.

The improvements effected during the year were of putting in two Sterling boilers each, at a cost of \$2,971; sinking 3,360 feet of new pipe line, at a cost of \$4,202.97, to connect the Home with the Water Company's pipe line for conducting water to the system of water supply.* Further improvements contemplated are a bakery, at \$8,450; oil tanks; and alteration of hospital attics for nurses' quarters. Contracts for these improvements had not yet been made. For the year ending June 30, 1900, estimates for treasurer's quarters, \$7,933.45; two additions to church, \$14,074.75; addition to electric-light plant to six barracks, \$7,770, and quarters in hospital, \$5,174.47; total estimated cost, \$87,100.87.

The number of employees authorized for the fund, including officers and civil servants, is 100, but the number actually employed is about 18 per cent of the average present. The

* A contract was made with this water company to develop a reservoir constructed by the company for \$825,000. The reservoir is reported as 100,000 gallons, and is located on the ground back of the bakery and about 383 feet above the Home grounds to be maintained by the water company. The grounds will be maintained by the Home.

The old water system from the canyon and Lake Brown is to be maintained in connection with the new in case of fire.

amounted to \$59,494.27, which was about 28 per cent of the disbursements and averaged \$205.86 per employee. An average of 82 members worked daily without pay—not as a penalty—performing such duties as waiters in the mess hall, kitchen help, picking fruit, etc.

These are generally made under contract. The reports show that 268 purchases, involving \$4,983.85, were made in open market. Among them were such items as furniture, stores, lard, drugs, canned fruits and vegetables, powder for blasting graves, lumber, live stock for farm, seeds and plants, and stable equipments. The principal articles of food for the last quarter of the year were all bought in Los Angeles, which is about 15 miles distant and connected with the Home by rail.

At the close of the year there were 1,634 pensioners on the rolls, which was about 78.5 per cent of the membership. Of these, 1,165 were present at the Home. Their pensions ranged from \$6 to \$24 per month. The transactions concerning this fund may be briefly stated as follows:

On hand June 30, 1897.....	\$9, 107. 23
Received during year	216, 708. 51
Total to be accounted for	225, 815. 74
Paid to pensioners during year	220, 028. 79
Balance June 30, 1898	5, 786. 95

which remained due to 104 pensioners in sums ranging from less than \$100 to \$500. About one-fifth of the disbursements of this fund went to absent pensioners.

The principal revenues accruing to this fund are derived from sales at the Home store and beer hall, which amounted to \$29,344.12 during the past year. The expenditures for stock at these places were \$19,008.44, showing a gross profit of \$10,335.68. The consumption at the beer hall averaged about one-half pint per man per day, which is less than at most of the other Branches. The canteen building should be made more attractive; and the Home store, too, could be improved and a more general line of salable articles kept. The post fund is disbursed in the interest of the members for amusements, improvements, salaries, and other purposes. It gives employment to about twenty-five men, which is slightly over 1½ per cent of the average membership. Among the improvements partly paid for from this fund is the Ward Memorial Hall, which was nearing completion and is intended primarily for amusements.

SUPPLY DEPARTMENT.

There are eight barracks at this Branch, all frames, with broad verandas, and two stories and attic in height. The latter are unfinished in all but two sets of barracks. An estimate has been submitted for finishing these attics for dormitory purposes, though all are occupied, whether finished or not. All the barracks have basements, but only four are used for storage purposes; the others are not used. These buildings were originally intended to hold 100 men each, but averaged at date of inspection about 165, and had 94 vacant beds; and the floor space per man, generally, is reported higher here than at other Branches. The barracks are heated by steam, indirect radiation, and lighted by incandescent lamps, for which the current is supplied from the power house.

Ventilation seems to be satisfactory, being of places and registers in floors and near ceiling vided with sufficient bathing and toilet facilities, tub for every 60, one closet for every 68, and men.

Supplies.

There are no storehouses at t are stored in basements, which capacity and in good condition Ventilation and light were reported poor, but tion of articles on account of storage. The i received during the year was \$15,704.20 from \$120,700.19 by purchase. Returns of this pro are not made, except in the case of that re depot made quarterly to the general treasure however, are taken annually, and a personal v articles of property is made monthly by the q plete tour of all the shops, barracks, etc., e furniture of the Home is not all marked, but l erty, and the quartermaster has a memorand and others for property continuously in their erty is received it is taken upon the prop inspection, and thereafter issued on requi governor. Lost and destroyed property is acc of a board of survey, and unserviceable pro acted upon by the inspector-general of the Hc

In the matter of clothing the quartermas whether it is in use or not, until it is condem board of survey. The following is a statement bility for the year:

On hand July 1, 1898.....

Which includes the value of clothing issued to members, whether they are present at the f without leave. Members going on furlough a clothing in their possession, unless permitted l portion with them. If there should be a sho matter is submitted for the action of a board is issued to members on furlough, except up order.

Beds, bedding, and lockers were generally i bedsteads are reported to be 30½ inches in wid

Unserviceable property is condemned and original value of property condemned during and \$753.07 was received from its sales. Wo raga, except the buttons, which are cut off an depot, where they are used again in the n Apparent discrepancies in the clothing accoun to a want of proper returns from the hospita lack of full accountability, the discrepancies c that source.

Food. The following is the bill of fare furnished for the week ending June 25, 1898:

Sunday.—Breakfast: Fried bacon, potatoes, bread, coffee, butter. Dinner: Roast beef with brown gravy, or roast pork with plums, apple or peach butter, potatoes, celery, bread, pickles, tea, apple pie. Supper: Rusk loaves, bologna, butter, tea.

Monday.—Breakfast: Beef stew, bread, coffee. Dinner: Boiled mutton, potatoes, stewed tomatoes, pickles, bread, butter, tea. Supper: Head cheese or mush, hot biscuits, butter, tea.

Tuesday.—Breakfast: Hash (meat, potatoes), bread, butter, coffee. Dinner: Wiener-wurst and kraut, potatoes, stewed onions, lima beans, bread, pickles, tea. Supper: Baked beans, bread, butter, tea.

Wednesday.—Breakfast: Fried sausage, potatoes, coffee, bread, butter. Dinner: Boiled beef, cabbage, parsnips, pickles, bread, butter, tea. Supper: Rice, sirup, buns, butter, tea.

Thursday.—Breakfast: Beef stew, coffee, bread. Dinner: Vegetable soup, pork and beans, or boiled mutton, carrots, mashed potatoes, pink beans, bread, pickles, tea. Supper: Bread duff, bread, butter, tea.

Friday.—Breakfast: Beef or mutton stew, coffee, bread. Dinner: Baked or fried fish, potatoes, bread, butter, pickles, catsup, butter beans, tea. Supper: Coffee cake, bread, butter, tea.

Saturday.—Breakfast: Hash, bread, butter, coffee. Dinner: Shoulder and cabbage or kraut, stewed tomatoes, potatoes, bread, pickles, tea. Supper: Stewed peaches, bread, butter, tea.

Changes are made weekly in the general-mess-hall bill of fare; the hospital bill of fare is prescribed by the surgeon. It requires about 22 men in the kitchen and 4 in the dining hall, and an additional detail of about 76 men as waiters, helpers, etc., for the preparation and serving of the food. The kitchen was in fair condition, and the dining hall was undergoing repairs at date of inspection. Both these places are inspected nearly every day by the governor and commissary of subsistence, and at irregular intervals by the surgeon. Facilities for receiving meats are reported inadequate, and all the tables have to be set twice, and some of them three times, for each meal.

Swill and garbage, which amount to about 18,000 pounds per month, are fed to the stock on the farm. None of the members received outdoor relief in subsistence or other allowances.

Laundry. Clothing and bedding are collected weekly by room orderlies, counted and hauled to the laundry, and after being washed, returned to the companies and distributed.

There is no limitation as to how much a member may send, but private clothing is not washed at the laundry. The laundry list indicated about 3.6 shirts, 3.5 pairs drawers, 0.8 pairs sock, 4.6 sheets and pillowcases, and 0.8 hand and 1.7 roller towels per man per month. To do the laundry work required the services of 12 men, including soapmakers, and an expenditure of \$2,438.70 for labor and material.

Engineer department. The chief engineer of the Home has general charge of the shops, construction, machinery, plumbing, repairs, etc., and employed during the past year about 32 men, of whom 9 were civilians.

The water supply, which has given much trouble at this Branch, is now reported very satisfactory. The West Los Angeles Water Company supplies daily 500,000 gallons of water, and 20,000 more can be obtained from Mandeville Canyon.

The sewerage system consists of four separate lines of 6-inch vitrified sewer pipe; one takes the sewage from the main kitchen, one from eight barracks, one from the hospital, and one from residences of officers and other buildings. The terminals of these sewers are concentrated and empty upon a sandy and gravelly piece of land. The

sewage has been used for irrigation in the veg practically no system of drainage. Drains of been laid to carry the water from roofs to a buildings. Both drainage and sewerage could

The steam plant consists of five 50-horsepower boilers, one 100-horsepower and one 200-horsepower tube boilers, used for heating buildings and for steam for kitchens, laundry, electric-light boilers of 25 and 40 horsepower, respectively. The plant cost, approximately, \$12,425, and was past year at an expenditure of \$23,237.85.

The electric-light plant, which furnishes lights, consists of one 55-kilowatts dynamo and watts dynamo, and gives a current for 12 arc lights. It cost \$10,500, and was operated at a cost of \$5,257.64, or about \$3.86 per light. The steam plant is in the power house, which is on the grounds.*

The ice and cold-storage plant is of the ammonia type, with ammonia compressor, ice tank, four cooling pump, pipe coils, and condenser. It cools space, and can make 1,200 pounds of ice daily per ton.

Protection against fire was required, but inadequate, consisting of fire apparatus, grenades, and fire buckets, and about 125 men, composed of a local organization of civilian employees. The inflammable nature of the Branch requires specially good fire protection during the past year.

MEDICAL DEPARTMENT

The hospital is a two-story and attic frame, with an administration building, with a north and south wing, dining hall, and two lavatories, all connected together. It has room for 146 patients without crowding a larger number. The convalescents occupy one wing, No. 7 and part of the attic in the north wing. The other available attic space is mostly used by the patients. The basements are used principally for storage. A portion of the basement of the south wing, and the attic for "sick call." Ventilation seems to be satisfactory. Facilities seem to be inadequate, and the need has been reported. Increased hospital room also has been reported.

The average number of sick during the year was 23 in convalescent company, and 6 at the hospital. The number of patients treated was 2,649, with an average of 114 days for each case. The principal acute diseases were gastritis, bronchitis, enteritis, and pneumonia. Chronic diseases, general debility, heart trouble, gastritis, tuberculosis, and hemiplegia. No other contagious diseases reported.

*A new dynamo seems to be required for additional work. The present one is alleged to be sufficient, but another engine of about the same size in connection with the dynamo, and thus equipped it is fully meet the demand.

There were 25 members showing indications of disordered minds during the year, of whom five were considered permanently insane and sent to the Southern California State Asylum for the Insane. Facilities to care for the insane are inadequate, but all those requiring close confinement or restraint are at once committed to an asylum. Ten members were totally blind, and 11 had impaired eyesight, rendering them unable to read. They are given whatever assistance they may need by the nurses in their wards, and one member is employed to read to them daily in the forenoon.

There were 101 deaths during the year among the members, of which 16 occurred outside of the Home, giving a death rate of 48.4 per 1,000 of the average present and absent. Ninety-seven of these died of natural causes, one committed suicide, and the death of three resulted from accidents. Their average age was 63.49 years. About 86 per cent of the deceased members were buried at the Home cemetery at a cost of \$13.40 per funeral. The coffin is made at Los Angeles at a cost of \$5.95. No allowance is made for funeral expenses of members dying outside of the Home.

The number of hospital employees of all kinds averaged 73, of whom 10 were civilians, which gives about one employee to every three patients of the average daily number of sick.

The increasing responsibilities thrown upon the head nurse of this Branch in matters that require no professional skill, but are duties that more properly pertain to that of a matron, suggests the advisability of the employment of a matron here in the interests of the better administration of the hospital department, as at the majority of the other Branches.

The expenditures for medicines amounted to \$3,225.07, which is the lowest, next to the Northwestern Branch, reported by any of the Branch Homes. The medicines mostly used during the year were antipyrine, cascara, quinine, potassium bromide, and iodide, phenacetin, opium, strychnine, and pepsin.

NO. 8.—GENERAL DEPOT.

This depot is located at the Central Branch and is efficiently managed. It has charge of the manufacture of blank forms, bedding, uniform clothing and underwear, and the purchase of tableware, for distribution to the several Branch Homes, and occupies the basement, second floor, and attic of the large property building for manufacturing purposes and storage, also part of the cellar under Company No. 19 for crockery. It employs about 260 persons, of whom 39 receive a regular salary, amounting in all to \$8,352.94 for the year; and 221, of whom 74 are members and 147 civilians, are employed on piecework in the manufacture of bedding, uniform clothing, and underwear. Their compensation ranged from 2 cents for a pillowcase to \$1 for making a dress or greatcoat, and amounted to \$43,347.11 for the year. The rates paid to members for piecework was lower than those paid to civilians. Purchases and contracts for the depot are made by the general treasurer, who is located at Hartford. All goods purchased are inspected before acceptance as to measure, weight, strength, and color, according to specifications, and again after manufacture as to their being well and neatly made.

The stock of material on hand was reported as low, owing to the delay heretofore referred to in completing the contracts; and to this is probably due the delay experienced by the Branch Homes in having

their requisitions filled for needed clothing and other supplies now furnished, no longer direct, but through this depot. There may be a possible economy in this depot system of distribution of manufactured articles, such as bedsteads, crockery, caps, and shoes, but it appears to be more than absorbed in the extra cost of freight and handling at the depot, for which there is no specific appropriation made; and it further appears that the appropriations of some of the Branch Homes are charged with the cost of articles never received by them. Possibly the limitations placed by law upon these, as upon all other public disbursements, may be irksome and not in accord with conceived advantages due to centralization by the consolidation of the appropriations and of disbursements from one point; but as Congress has clearly indicated its policy in another direction, should it not be the aim of all to endeavor to conform to that policy?

It was reported that about two quarters' supply of crockery was on hand, and at least one quarter's supply of stationery.

The cost of material furnished for fabrication to the several shops, the amount paid for services in each, and the cost of the articles fabricated, were reported as follows:

Shop.	Cost of material.	Paid for services.	Cost of fabricated articles.
Tailor.....	\$84,884.81	\$35,091.87	\$121,038.89
Underwear and bedding	25,046.79	8,352.46	34,157.63
Knitting	8,839.51	4,258.15	13,448.00
Suspender	2,201.49	159.58	2,444.37
Printing	1,484.93	639.25	2,287.87
Total.....	122,457.53	48,501.31	173,376.76

Clippings are carefully gathered and sorted and finally sold. The following table shows the amount of each kind sold and prices obtained:

Kind of clipping.	Amount sold.	Price.	Receipt.
	<i>Pounds.</i>	<i>Pound.</i>	
Dark blue.....	5,276	\$0.17	\$896.92
Sky blue	3,484	.18	627.12
Aberdeen and red flannel	689	.09	62.01
List.....	926	.09	83.34
White cotton	9,620	.03½	312.65
Mixed.....	3,246	.02½	73.03
Blue and white wool yarn.....	299	.12	35.88
Total.....	23,540	2,090.95

There was some complaint at the Branch Homes about the inferior quality of the stockings furnished, while the shoes appeared to be of a better quality as to material and shape than those previously furnished. The need of another size of trousers more proportionate to the wants of many of the men was referred to, and it was stated that a new size, to be known as No. 5½, 38 inches waist and 32 inches seam, would be hereafter furnished on requisition.

For summer wear, especially in the Branch Homes in the more southern latitudes, an unlined or lighter blouse than that worn the year round, or a substitute for it, is believed would add much to the comfort of the men and with economy to the Home.

Quite recently a circular governing the issue and care of uniform

clothing has been promulgated to supersede the regulations of April 30, 1883, heretofore in force. It is as follows:

[Circular.]

HARTFORD, CONN., *December 17, 1898.*

Regulations to govern the issue of clothing to members of the Home, dated 30th April, 1883, are hereby amended to read as follows:

1. The clothing is the property of the Home and no issue shall be construed as a surrender of the right of the Home to control at all times such clothing. It will be issued free to all members of the Home, and will be of Home standard, pattern, and quality, not to be altered, except by order of the president of the Board of Managers.

2. Clothing shall consist of: Cap, hat, greatcoat, dress coat, blouse, vest, trousers, shoes, knit-wool shirts, canton-flannel drawers, woolen socks, white cotton gloves, and suspenders.

3. The allowance on admission shall be: One hat, 1 greatcoat if between 1st of October and 1st of April; 1 blouse, 1 pair trousers, 1 pair shoes, 2 knit-wool shirts, 2 pairs canton-flannel drawers, 2 pairs woolen socks, and 1 pair suspenders. Three months thereafter: One cap, 1 greatcoat if not previously issued; 1 dress coat, 1 vest, 1 pair trousers, 1 pair shoes, 1 knit-wool shirt, 1 pair canton-flannel drawers, 2 pairs woolen socks, and 1 pair white cotton gloves. The allowance thereafter will be such as may be required to replace articles actually worn-out. A time limit for the use of clothing will no longer be recognized, and all clothing shall be issued and reissued until worn-out.

4. Issues shall be made weekly in exchange for articles worn-out or satisfactorily accounted for to the governor. Any member of the Home failing to produce or satisfactorily account for any article shall pay to the Home its value at the time of issue either in money or labor, and shall suffer such other reasonable punishment as may be directed by the governor. If a member sell, or in any other way dispose of the clothing issued to him or to any other member of the Home, he shall be reported to the president of the Board of Managers for dishonorable discharge.

5. To members of the Home "present sick" such articles of clothing as the surgeon deems necessary shall be issued, such issues to be made upon his requisition, approved by the governor, provided that extra issues when no longer required shall be turned into the quartermaster's storeroom, thoroughly renovated and reissued.

6. The clothing statement of members transferred shall be forwarded with the order transferring them, and no clothing shall be issued until such statement is received.

7. Clothing of members furloughed shall be turned into the quartermaster's storeroom before leaving the Branch. All such clothing shall be fumigated, cleaned, and repaired, and if not called for by the furloughed member within three months shall be taken up and reissued to readmitted members and members returning from absence of more than three months. Members furloughed or discharged shall, when necessity demands it, be allowed to retain such articles as they may require.

8. Weekly inspections shall be of the most rigid character, and every article of clothing shall be examined with a view to detecting damage, dirt, or loss. The inspectors-general are instructed to give this subject careful attention, and to condemn no clothing unless worn out, and to report every dereliction on the part of responsible officers.

9. These regulations enable the members, except those "present sick," to have at all times 1 cap, 1 hat, 1 greatcoat, 1 dress coat, 1 blouse, 1 vest, 2 pairs trousers, 2 pairs shoes, 3 knit-wool shirts, 3 pairs canton-flannel drawers, 4 pairs woolen socks, 1 pair white cotton gloves, and 1 pair suspenders. With proper care from officers and noncommissioned officers this allowance should keep the members well and comfortably clothed.

W. B. FRANKLIN,

President Board of Managers, National Home for Disabled Volunteer Soldiers.

That the quality of the crockery furnished the Home is of an inferior grade is probably true, but doubtless the question has been decided by those in authority that, in view of the large percentage of breakage, it is cheaper to break an inferior grade than a better one. On the other hand would not a better grade have a longer life and secure from those who handle it greater care. The price paid for that used in the Regular Army is almost three times as much, but the percentage allowed for breakage, which is seldom reached, is more than proportionately less.

The exhibits appended give in detail the transactions at the depot during the year, showing the prices paid for piecework; the amount of material and articles on hand, and fabricated and expended during the year; cost of material and of manufacture; amount and value of articles sent to Branch Homes and sold to State Homes, and the average quantity of goods and old material used in the manufacture of the various articles.

TABLE 9.—Amusements, recreation, etc.

Branch.	Facilities for amusement.	Efforts made to enlarge the scope of amusements.
Eastern	Opera house, club house, billiard, smoking, card, and reading rooms, and library	Increase in the seating capacity of the opera house and the organization of a social club.
Northwestern	Card room, billiard room, social club, theater, beer hall and boating on the lake.	Not any special efforts have been made.
Marion	Theater, band, library, billiard hall, and club room.	None.
Central	Theater, veterans' clubhouse, boats, etc.	Two additional shuffle boards and two hydrocycles have been purchased during year.
Southern	Theater, billiard room, pool room, card and smoking room, boating, etc.	Present facilities satisfactory.
Western	Entertainments in amusement hall, billiard room, library, band concerts, fishing in lake.	Erection of a new theater building is now under contemplation.
Pacific	A small temporary structure, seating capacity about 250, not equipped as a theater or amusement hall, was the only place provided for amusements at this Branch during the past year. The Board of Managers, however, appropriated \$14,000, viz., \$8,000 from post fund and \$6,000 from Ward memorial fund, for an amusement and assembly hall, which is about completed, with the exception of some inside furniture. It will seat about 1,000 persons and give ample facilities for amusements in the future.	Erection of new amusement and assembly hall.

TABLE 22.—*Quartermaster's department*—Continued.

Branch.	Has quartermaster a memorandum receipt from officers and others for property continuously in their possession?	Is all property and furniture belonging to the Home marked and taken up as public property?	To whom and how often is return made for property received from the general depot?	To whom and how often is return made for all other property received by purchase or otherwise?
Eastern.....	No.....	Not all marked, but all taken up on property books under various heads and kinds of stores.	On receipt of supplies they are inspected by committee appointed by the governor, inspection report containing each item, as per invoice, and the report forwarded to office of president Board of Managers. Receipt signed and forwarded to general depot.	No return made. Taken up and accounted for on property books.
Northwestern.....	Yes.....	All taken up, partly marked. ^b	President Board of Managers, quarterly	None.
Marion.....	Yes.....	Taken up, but not all of it marked. ^c	President of Board of Managers, National Home for Disabled Volunteer Soldiers, as often as property is received.	To governor of Home when received, and to president of Board of Managers, National Home for Disabled Volunteer Soldiers, quarterly.
Central.....	Yes...	Yes.....	To Branch treasurer immediately upon its receipt.	To Branch treasurer immediately upon its receipt.
Southern.....	Yes...	Partially.....	Reported to office Board of Managers within a few days after receipt.	None made, only for clothing, etc., received from general depot.
Western.....	Yes....	As nearly as possible.	To president of Board of Managers, quarterly.	Inventories made semi-annually, and monthly returns made to governor.
Pacific.....	Yes.....	All taken up as public property. Furniture not marked, but all other property is marked as far as practicable.	To general treasurer, quarterly.	None rendered

A record is kept by each Branch (except the Eastern) of amount expended on each building.

^a Unless the requisition made by them, certified to by the quartermaster and approved by the governor, can be considered as such.

^b Has 2 horses, not public and authorized.

^c Has 1 cow, not public and authorized.
